For the dash of five furlongs, for two-year-olds, eight out of the nine entries faced the starter, namely, Eulister, Finewort, Holbrook, Warmister-Rebel, mare colt, Scramble, Aristides, and the Betty Ward colt. No better lot of competitors has been seen this season, several of them being remarkably good looking. The run up the stretch was a fine one, especially by Babylon, the Warmister and Betty Ward colts. Aristides won by half a length in 1:04½, with Finewort second a half length in front of Babylon, who beat the Warmister and Betty Ward colts by a half; Eulister was sixth, Scramble seventh, and Holbrook eighth.

The dash of a mile and a half for all ages had nine entries, all of whom went to the post at the course, viz., Sanford's Kadi, with 106 pounds; Bowie's Picolo, 90 pounds; Lewis & Co.'s Bessie Lee, 106 pounds; Lawrence & Lorillard's Kallio, 102 pounds; McCormack's Spindrift, 113 pounds; Hunt Reynolds's Whisper, 103 pounds; McGrath's Jury, 106 pounds; Puryear's Grinstead, 95 pounds; and McDaniel's Harry Bassett, with 118 pounds. Grinstead, to the surprise of most all present, won a handsome race by two lengths in 2:49—good time for the weight—with Kallio second, and the runner-up Bessie Lee by half a length for second place just at the finish. Bessie beat Picolo a length for third place.

The day's sport ended with a steep chase over the usual course, with seven starters, viz., Terrence's Trouble (a recent importation from Canada), carrying 150 pounds; Tully's Vesuvius, with 142 pounds; Jackson's Buckshot, 140 pounds; Cull, Sanford's Impudence, 140 pounds; Lewis & Co.'s Chief Engineer, 140 pounds; Green's Daylight, 138 pounds; and Lawrence & Lorillard's Lady Bruce, 125 pounds. The race was a most excellent one, as all the horses took the leaps in fine style. Trouble came in victor by two lengths in 5:53½, Daylight second, Vesuvius third, and Lady Bruce fourth. This was the last exercise for the day, which were interesting in the highest degree.

—The third day of the Jerome Park races was characterized by some splendid running and close contests between the best horses on the continent. The first race of the day was the dash of a mile and a half for all ages, the winner to be sold at auction. This had six entries, viz., D. McDaniel's ch. c. Galway, 4 years; F. Morris's b. c. by Leanington, out of Rebecca, 4 years; Cull, Sanford's b. g. Kadi, 6 years; Lawrence & G. Lorillard's ch. c. Resolute, 4 years; J. G. Bethune's b. f. Red Bud, 4 years; and Joseph Donahue's b. c. Scratch, 3 years. All of these came to the post, and the speculation on the result was somewhat heavy, especially as the track was heavy in places, and the result seemed uncertain. Kadi, however, had the best admirers, and he proved the correctness of his backers' views, having come in first in 2:48, Galway second, and Leanington third. After the race the winner was sold to Mr. Shed, of Boston, for \$1,150.

The second race on the card was the Grand National Handicap Sweepstakes, of \$100 each, half forfeit, and \$20 if declared, \$1,000 added. This had eighteen nominations, three of whom were declared out, and nine paid forfeit. Those that came to the post were M. H. Sanford's br. h. Mate, L. Wood Strifed's b. c. Shylcock, D. McDaniel's ch. h. Abdel Korca, A. B. Lewis & Co.'s b. m. Bessie Lee, A. M. Burton's ch. c. Jack Frost, and James Donahue's gr. f. Lizzie Lucas. In the betting Mate was a great favorite, and sold for more than the entire field. The contest seemed to be between Mate, Bessie Lee, and Shylcock, but in the homestretch the former burst to the front, and made her two and a quarter miles in 4:13, Shylcock second, and Bessie Lee third.

The third event was the Annual Sweepstakes for three-year-olds, two miles and an eighth, which closed with seven nominations, but only four entered, viz., A. B. Lewis & Co.'s b. f. Vandallite, Thomas Puryear & Co.'s ch. c. Rutherford, and W. Cottrill's b. f. Bannerette and ch. c. Plauter. Vandallite won in 4:00½, Rutherford second, and Bannerette third.

The card presented for the fourth contest, the Champagne Stakes for two-year-olds, three quarters of a mile, closed with twenty-two nominations, out of which number the following nine started, viz., Wood Strifed's b. c. Ravena, P. Lorillard's b. c. James A., D. McDaniel's ch. c., by Australian, out of Betty Ward, Lawrence & G. Lorillard's b. c. Hyder Ali, D. D Withers' imp. b. f., by Gladiator, F. Morris's b. c. Baymaster, J. H. Hunt Reynolds's ch. f. Anella, M. H. Sanford's br. f. Finewort, and John Hunt's ch. f. Australe. This was an exceedingly fine lot of youngsters, and puzzled the speculators to pick the winner. The betting on the result was very heavy, and some of the knowing ones were badly bitten. Hyder Ali came in victor in 1:20, James A. second, and Finewort third.

The concluding race of the day was the ever popular one of mile heats for all ages, which proved to be a magnificent race and created great enthusiasm. The entries were John H. Stone's b. c. Col. Milligan, M. H. Sanford's b. h. Preakness, H. P. McGrath's b. m. Jury, F. Stearns' gr. c. Frunk, H. Gaffney's ch. c. Spendrift, and John F. Chamberlain's b. c. Survivor. This was indeed a splendid field for this kind of a race, and although Preakness was the favorite, it was by no means considered a sure thing for him. Preakness won the first and third heats, and Spindrift the second, the remainder having been ruled out, except Survivor, who was distanced. Time—1:47½, 1:48½, and 1:53½.

The second autumn trotting races of the Prospect Park Association opened last week quite brilliantly, the principal stables in the country being represented. The first race was for a purse of \$500, for horses that never beat 2:50; \$300 to the first, \$150 to the second, and \$50 to the third heat; mile heats, best three in five, in harness. There were some twenty-four entries, the favorite being Falmouth Boy, but J. H. Phillips's mare Adelaide captured the money and race; best time, 2:31½. The second match was for a purse of \$500, for horses that never beat 2:28; \$450 to the first, \$250 to the second, and \$100 to the third heat; mile heats, best three in five, in harness. For this there were nine entries. The first and second heats were won by G. B. Daniels, the third by Mary Whitney, Annie Collins the fourth, and Daniels the fifth, the last heat being made in 2:24.

The third day of the Prospect Park Autumn meeting was one of the best. The first race was the unfinished one of the previous day, for a purse of \$600, for horses that never beat 2:36; \$550 to the first, \$150 to the second, and \$50 to the third heat; mile heats, best three in five, in harness. The following started: Lady White, Mary Bird, Black Crook, W. Walsh, Phil O'Neil, Rosa Souberg, Mausany, Belle Cleveland, and Lottie. The trotting was quite spirited, as one after another came in winner of a heat, but the victory finally fell to Lady White, who won the last heat in 2:37½, May Bird being second. The second race was for a purse of \$500, for teams; \$300 to the first, \$150 to the second, and \$50 to the third heat; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crowder, and Lizzie and Ad. The latter an exciting contest the former team won; best time, 2:42½. The third and most important trot of the day was for a purse of \$1,000, for horses that never beat 2:36; \$550 to the first, \$350 to the second, and \$100 to the third heat; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crowder, and Lizzie and Ad. The latter an exciting contest the former team won; best time, 2:42½. The third and most important trot of the day was for a purse of \$1,000, for horses that never beat 2:36; \$550 to the first, \$350 to the second, and \$100 to the third heat; mile heats, best three in five, in harness. The following started: Lady Woods and Carrie N., Ella Madden and Regulus, Frank Ferguson and Crowder, and Lizzie and Ad. The latter an exciting contest the former team won; best time, 2:42½.

The trotting at Prospect Park on the

7th instant was spirited. In the race for a purse of \$1,000, for horses that never beat 2:34; entrance, ten per cent. of the purse; mile heats, best three in five, in harness; \$550 to first, \$300 to second, and \$150 to third, there were five competitors, but Thos. L. Young won the race. Best time, 2:23.

The trotting at Prospect Park on the 12th instant was very spirited, as quite a large field completed. Bruno was the winner of the 2:20 race, but the 2:42 race had to be postponed after five heats had been trotted, so hotly was it contested.

The races of the Nashville, Tennessee, Blood Horse Association, which opened auspiciously last week, terminated in the most satisfactory manner. The first race was for the Peyton Post Stake, for all ages; \$50 entrance, play or pay, the association to add \$600; second horse to have \$100; closed with five subscribers; two mile heats. The contest brought out Arizona, Big Fellow, Haizem, Jack of Trumps, and Sallie Gun. Big Fellow was the favorite before the start, but after the first heat Arizona was 5 to 1 against the field. He won in two straight heats; time, 3:41½, 3:48½. The second race was for a purse of \$250, mile heats all ages. Five horses entered, and after a most exciting contest was won by Joannine, who came in leader in the second and third heats. Mue being second. Time, 1:48, 1:48½, 1:50.

The sixth and last day of the Nashville Blood Horse Association closed last Saturday with a very large attendance. The first race was for the Maxwell House Stake for three-year-olds for a purse of \$400. The entries were Vanderbilt, King Pin, Modoc, Orphan Girl, Bowman, and Valentine. The former won in two straight heats, King Pin second. Time—1:40½, 1:48½.

The second race was a mile and a half dash for a purse of \$200, brought Arizona, Elkhorn, Nurse, and Haizem to the stand, the former winning. Time—2:42½.

The third race was for the consolation purse of \$200, mile heats, for beaten horses. Astral, Velocipede, Kilburn, Red Jackson, and Lady Kilburn completed. Astral won the second and third heats. Time—1:47½, 1:49, and 1:49½.

The Nashville races, held on the same day, were replete with excitement, as they were the best ever run at that course. The first race was for the Young America Stakes No. 2, for two-year-old colts and fillies; mile dash; \$25 entrance fee, the association to add \$220; \$50 to second horse. There were thirty entries, and the following started: Asteroid, Ventilator, and Katie earce. The former won in the excellent time of 1:46½. The second race, for a purse of \$400, was contested by Arizona, Granger, and Egypt. Heats, best three in five. Won by former. Time—1:47½, 1:46½, 1:49, 1:51½. Egypt was distanced. The third race, for a purse of \$125, brought Elkhorn and Lady Greenfield to the post. Former the winner; time, 1:47½.

The third day of the Nashville races brought out a large field. The first race, a dash of two miles, with stakes valued at \$250, was won by Wagner in 3:43 and 3:48½; the second, a dash of two miles, by Elkhorn in 3:45, and the third, a dash of a mile and a quarter, for a purse of \$150, by Egypt in 2:16.

At Dexter Park, Chicago, October 7th, Goldsmith Maid trotted against time for a special purse. She was accompanied by a running horse, and was allowed three heats. The first heat was trotted in 2:19, and the second in 2:17, beating her previous record on this track a half second. Gloster and Judge Fullerton then trotted for a division of the gate money, and Gloster won in three straight heats. Time—2:22, 2:23½, 2:22½.

An interesting contest was trotted at Charter Oak Park, Hartford, Conn., last Saturday afternoon, for a purse of \$1,000, between Curick's stallion Hamilton, and the Boston stallion Arthur. The latter won the first heat, but the contest was decided in his rival. Time—2:40½, 2:33, 2:34½, 2:36.

The racing at the Dayton, Ohio, fair last week was attended by 50,000 people. The first race was between Gloster and Fullerton, the latter winning in three straight heats. Time—2:24½, 2:23, 2:22½.

Goldsmith Maid came next. Never was such interest taken as when the queen of the turf came on, with Budd Doble holding the lines. She was cheered most enthusiastically, the entire crowd trying to get a glimpse of the wonder of the turf. She was allowed to run with Gloster and Fullerton, but this was changed to run against time. She made her first heat in 2:21, and her second in 2:18. This is the fastest time ever made on a half mile track. The running race resulted as follows: War Jig took the first money, Lady Washington the second, and Jack of the Highway the third. Time—2:24½, 2:23, 2:21½.

The races at the Galesburg, Iowa, fair last week were quite spirited. The first running race, for a purse of \$250, brought Rocket and Armas, but the former won in 1:46½.

The second race, one mile and repeat, for four-year-olds, for a purse of \$500, was

contested by Emma M., Ella Hankins, Ural, Veto, and George Rice. Ella won, gaining the first and third heats. Time—1:46, 1:47½, 1:52½.

The third race, a two mile dash free to all, for a purse of \$800, was competed by Disney and Roxelle, the latter winning. Time—1:40½.

THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY, traversing a fine country, affords views of grander scenery, and passes through more business centres and pleasure resorts than any other north-western line. Its forests, prairies, lakes and streams, abounding with game, present unequalled attractions in the votaries of Nimrod and Walton. It is the only railway route through the valley of the Upper Mississippi. It is also the shortest, as well as best route, between the great metropolitan centres of the S. & W. Chicago, Milwaukee, St. Paul and Minneapolis. Track and equipment unequalled, and its trains of palace coaches and sleeping cars run through without change.

SPORTING BOOKS.

HIRAM WOODRUFF'S "THE TROTTER HORSE
OF AMERICA." New edition (the 18th), with nearly
100 pages of entirely new matter by CHAS. J.
Foster, bringing the work down to July, 1874,
with a new record of performances, giving the best
times made in the last fifty years, and with seven
new full-page engravings of celebrated horses,
black, blood and gold, \$2.50. This is the standard
book on the subject, and the additions just made
add greatly to its value and interest. Every horse
lover should own a copy.STONEHENGE'S "THE HORSE IN THE STABLE
AND THE FIELD." 114 management in health
and disease. By J. H. Walsh, F. R. S. V. ("Stone-
henge"). Thoroughly revised and Americanized by
ROSE, McCLELLAN, M. D., V. S., and with an essay
on the Training, Harnessing, and Taming,
and with full tables of pedigrees. Illustrated with
nearly 100 engravings. \$2.50. This is universally
admitted to be the best horse book ever published.DR. McCLELLAN'S "THE AMERICAN GENTLE-
MAN'S STABLE GUIDE." Giving full directions
for the management and care of stables, horses,
and carriages and harness. By ROSE, McCLELLAN, M. D.,
V. S. A practical manual for every stable owner.THADDEUS NORRIS' "THE AMERICAN AN-
GLER'S BOOK." The Natural History of "Sporting
fish," of the art of taking, with instructions in Fly
fishing, Fly making, and Rod making, &c., &c.
With 50 engravings. 8vo. cloth, 125. \$2.50A classic on fishing by the best fisherman in Amer-
ica. Should be in the hands of every sportsman.THADDEUS NORRIS' "AMERICAN FISH CUL-
TURE." Embracing all the details of Pisciculture.
12mo. Cloth. Illustrated. \$1.75.STONEHENGE'S "ENCYCLOPEDIA OF RURAL
SPORTS." Comprising Shooting, Hunting, Cours-
ing, Fishing, Hawking, Adrover, Yachting, Boat-
ing, Racing, Pedestrianism, and the various rural
games and amusements. By J. H. WALSH, F. R.
S. V. ("Stonehenge"). Illustrated by 200 engrav-
ings. Revised and Americanized. A sine qua non
to sportsmen. Crown 8vo. Cloth, black and gold,
\$5.

BREECH LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our
entire assortment of

Breech-Loading Shot Guns,
Manufactured by the following celebrated makers:
Messrs. W. & C. SCOTT & SONS, winners at the In-
ternational Gun Trial of 1873; P. WEBLEY & SON,
W. W. GREENBL, WESTLEY RICHARDS, J. HOL-
LIS & SONS, and other makers.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
DIXONS & HAWKLEY'S SHOOTING TACKLE.
To insure good shooting from breech-loading guns,
we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co.,
Bridgeport, Conn. These shells are the cheapest and
best in the market, being easily re-capped with ordi-
nary caps, without the use of the implements neces-
sary in priming all other styles of shells.

RUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.
This Vest affords the best ar-
rangement yet in-
vented for car-
tridges. It is
evenly distrib-
ed, and is
easily carried
in this vest, which is
worn when in the
field, and when
as when carrying
head up the weight
on the back, and
bad shooting is the
result.

In ordering send measurement around the chest.
Price \$7.50.

Remington's Long Range, Breech Loading, Target Rifle.

Diagram of First target made by Henry Fulton, Civil Engineer, Lieut. 12th Regt., N. G. S. N. Y., of Brook-
lyn, at Montreal, Can., Aug. 14th, 1874, with a "Remington Breech Loading, Long Range, Challenge Rifle," 21
inch barrel, 44-100 calibre, W. T. 1012 cartridge containing 30 grains powder, 550 grains bullet. Price of rifle,
\$100, including pistol grip stock, vernier gauge, orthographic, and wind gauge fore sights; extra for spirit level, \$5;
extra for disks for fine sight, \$2.50 each; cartridges, \$4.50 per 100.

Distance, 500 yards. No rest. Position, prone.
Special Telegram to "Commonwealth Advertiser," Montreal, Can., Aug. 14, 1874.
"Remington shot at long range. I have taken one first and one second prize to day at 500 and 600 yards.
In one match I made a clean string of seven bull-eyes, and in another fifty-four out of a possible fifty-six, and
am ahead for the aggregate. I am tied second and Omand fourth prize in one match at 800 yards. Three of
the first four prizes taken by Remington rifles. To-morrow we shoot the small-bore championship match."
(Signed) HENRY FULTON.

Extract from the "Army and Navy Journal," Official Report, Dated Oct. 3, 1874.
"The match decided several disputed points, as near as they can be decided; first, that there is no percep-
tible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the
best, as they are certainly the quickest; second, that in our clear climate we may look for even better shooting
in the future; third, that the Remington rifle stands at the head of all others for accuracy, as it does in simpli-
city of mechanism. The Remington rifle in the match scored thirteen points ahead of the same number of
muzzle loaders, and twenty-two points ahead of the Sharp's breech loaders in the same team."
In the international match, six muzzle loaders, three Remington, and three other breech loaders were
used. Lieut. Fulton, Col. Bodine, and E. J. Reppert used the three Remingtons.
For full official report, see Army and Navy Journal, Oct. 3d, 1874.

HOMES!
HEALTHFUL, CONVENIENT, LOVE-
LY! Just think! Only 23 minutes, and seven
cents fare, commutation, to Liberty street, New York,
from FARMHOP, whose gently receding land, from
the crown to the shore of New York Bay on the one
side, and Newark Bay on the other, unfolds a pan-
orama of such exquisite beauty, such charming sun-
sets, and ocean views far in the distance, that for a
traveller, one finds it, in its every sense, of fancy and
reality, in this lovely place. Removed from the noise
and dust of the great city, yet, so near that the time
and expense of transit thereto is less than from Wall
to Bleecker street. Fishing, boating and bathing
unobscured. Let us the most beautiful locations
rapidly sold; the choicest will soon be taken up, while
the cost of purchase will again be far advanced, owing
to the rapid appreciation of property here. They in-
volve two losses: First, the choice of a building site;
second, the price at which it can now be obtained—on
\$25 monthly instalments. When \$500 is paid, a fine
house will be erected at cost for the lot purchaser,
and only the same amount of monthly instalment re-
mains. This you own your home and lot for less
than you are paying rent. JOS. HALLOCK,

Miscellaneous.

This arm was subaluted in competition with over
one hundred different systems, American and Euro-
pean, to the Board of United States Officers, appoint-
ed by Act of Congress, March 1872, for the pur-
pose of selecting the best arm for the service, and of
which Brig. Gen. A. H. Terry was President. It suc-
cessfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for
the military service by all nations is only a question
of time; that whenever an arm shall be devised which
shall be as effective as a single breech-loader, as the
best of the existing breech-loading arms, and shall at
the same time possess a safe and easily manipulated
magazine, every consideration of public policy will re-
quire its adoption."

Resolved, Further, That the experiments before the
Board with the Ward-Barton Magazine System have
so impressed the Board with the merits of this gun,
that they consider it as more nearly fulfilling the con-
ditions above specified than any other tried by them
or of which they have any knowledge, and it does
recommend that a number of magazine rifles be
made on the plan for further trial in the field." (See
Ordinance Report.)

We are now receiving orders for these guns, and due
notice will be given in this paper when they are ready
for delivery.

The following is our scale of prices: Special Maga-
zine for large game, carrying from 3 to 8 cartridges,
70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10
lbs. weight, from \$40 and upward, according to finish.
Special Long-range Magazine Rifle for Creedmoor
shooting, 20 grs. of powder, 480 grs. of lead, carrying
3 to 8 cartridges, weighing 10 lbs. from \$100 and up-
ward. Magazine guns for general use, carrying 3 to
9 cartridges, 60 grs. powder, 350 grs. lead from \$40
and upward. Single Breech-Loader, Creedmoor
shooting, for long range, 90 grs. powder, 480 grs. lead,
from \$50 and upward. Single Breech-Loader for
general use, 8 to 7 lbs., 60 grs. powder, 350 grs. lead,
from \$30 and upward. The calibre of all our rifles,
unless otherwise ordered, will be 45-100. In

THE NEST.

BY H. H.

UNDER the apple tree, somebody said,
"Look at that robin's nest overhead!
All of sharp sticks, and of mud and clay—
What a rough home for a Summer day!"
Giant stood the apple tree, gaunt and bare,
And creaked in the winds which blustered there.
The nest was wet with the April rain;
The clay run down in an ugly stain;
Little it looked, I must truly say,
Like a lovely home for a Summer day.

Up in the apple tree, somebody laughed,
"Little you know of the true home craft.
Laugh if you like, at my sticks and clay;
They'll make a good home for a Summer day.
May turns the apple tree pink and white,
Sunny all day, and fragrant at night.
My babies will never feel the showers,
For rain can't get through these feathers of ours.
Sing under my wing they will cuddle and creep,
Said the robin mother, flying away
After more of the sticks and mud and clay.

Under the apple tree, somebody sighed,
"Ah me, the blunder of folly and pride!
The roughest, small house of mud or clay
Might be a sweet home for a Summer day,
Sunny and fragrant all day, all night,
With only good cheer for fragrance and light;
And the bitterest storms of grief and pain
Will beat and break on that home in vain.
Where a true-hearted mother broods all day
And makes the whole year like a Summer day."

—St. Nicholas for October.

ONWARD!

Let me go on!

I know the way behind me seemeth fair;
I know the sun shone brightly, warmly there;
And on before lieth a broad corn meadow;
And what waits me there is draped in shadow,
And yet I would press on.

Not back, but on!

I know the past was full of pleasant things:
The songs of birds, the rustle of their wings.
I know the future holds no sounds of singing,
No sounds of laughter, nor of glad tones ringing,
And yet I would go on.

Steadily on!

What though the past was a smooth, even road;
What though the present holds no heavy load,
And all the future way is rough and lilly,
Whose snows are endless, and whose winds are chilly,
But yet I would keep on.

Aye, up and on!

I hate this even, uneventful life;
I hate the scenes of labor and of strife,
My path is rugged, but it is ascending;
And I shall stand exalted at the ending,
And so I will press on.

For Forest and Stream.

Santa Monica.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILSTON.

THE storm was increasing in intensity. Every fresh gust appeared to bring the low flying scud closer to us, and my horse, scrambling and stumbling among the boulders which lined the beach, threatened every moment to come down. Looking ahead, the huge mountains, seamed with black ravines, came nearer and nearer to the sea, and promised to cut off what little of road was left. Oceanward the huge rollers, their crests torn and scattered by the wind, were dashing in grand confusion against the rock-bound coast, each succeeding wave throwing a foaming line of water closer to where steed and rider struggled against the gale.

I had followed closely the directions given me at Santa Barbara, and after making a short detour inland had struck the old stage road at the charming little village of Carpen-

tiera. Leaving its groves of olives and shady oaks, the road, as had been described, gradually approached the coast, and after fifteen or twenty miles of as hard riding as circumstances would permit, all prospect of further progress appeared cut off. On one side was the Pacific Ocean, stretching away for six thousand miles to its Asiatic shore; on the other the coast range of Sierras, rising thousands of feet in height, dark and forbidding, their summits obscured in mist. Every little *arroyo*, or gulch, had now become a foaming mountain torrent, roaring and dashing on to meet the breakers which threw them back again. Low in the Western horizon a brighter spot of sky indicated the setting sun, and the darkness of night appeared about to be added to the perplexities of my situation.

"Whoa, Pinto," and the mustang gladly stopped and stood with tail to wind, while I took a pull at my flask and considered what was to be done. To go back and be lost on the beach for the night, and perhaps engulfed by a rising tide, was out of the question; to remain where we were, with a wall of rock on one side and the whole Pacific on the other, was equally so. The only chance was to push on, and trust to finding a break in the mountains, or a friendly shelter where we could pass the night. Pulling the folds of my *serape* closer around me, and sheltering my thighs as well as was possible, with a melancholy attempt at cheerfulness, I shook the jingling bit and heavy rowelled spurs, and urged the *caballo* to a canter. While the good horse was endeavoring to pick his way over the rocks I will briefly explain the causes which led to my present embarrassing position.

A short month before I was lounging in New York, pretending to read law, but in reality nursing an incipient cough, and speculating upon the chances of pulling through the year. A few drops of blood, discovered by my lynx eyed madre on my pocket handkerchief, and the imperative mandate of the family physician, decided the question, and in ten days I was in San Francisco. A trip to Yosemite and Mariposa resulted in my meeting at the latter place with a gentleman who was about proceeding on a horseback trip through the State. Accepting an invitation to join him, I procured the necessary outfit, and invested fifty dollars in a mustang.

"I allow, stranger," said the dealer, one of Mr. Fremont's subjects, "that this yere hoss ain't much to look at, but yer can bet yer bottom dollar he's a good un to go." And so he proved.

Proceeding leisurely by the stage road, and stopping at the stations—which are only twelve or fifteen miles apart—for board and lodging, or sometimes camping for the night under a sheltering oak, and rolled in our blankets, with our horses picketed near; or again, sharing a shepherd's cabin and homely fare, we had reached Santa Barbara after one of the most delightful and health-inspiring trips that can be imagined. Here my companion was detained for several days attending to some business matters, and after "doing" the old mission, and other lions of the place, I became tired of inaction, and longed to be again on the road. Observing this, my friend suggested that I should ride on one day in advance of him, as far as San Buenaventura, fifty miles down the coast. There he could join me, and we could proceed together to Los Angeles, our ultimate destination. Assenting willingly to this proposition, notwithstanding the threatening storm, I had started immediately after breakfast, with the results I am now describing.

Louder roared the wind and fiercer came the gusts as we struggled against the gale. Lifting my eyes, which were almost blinded with the spray, I saw in front a sharp wall of rock rising almost perpendicularly from the water which was washing its base. Beyond it nothing was distinguishable, and there was but the bare chance of finding a better road on the other side. I urged the unwilling horse to enter the water. Gradually and cautiously he felt his way over the sandy bottom until we had passed the point, when, turning at a sharp angle, he scrambled on to the beach again, and gave a neigh of satisfaction. I felt

like cheering myself as I noticed the change in our prospects. Before us was a cañon, or *barranca*, perhaps half a mile in width, running deep into the mountain, its further side forming a wall similar to the one we had just passed. A stream, swollen to a torrent by the heavy rains, was rushing over its tiny bed, and joining its flakes of foam with the salt brine of the ocean. Dividing here and there, it formed little islands, on which were great sycamores and cottonwood trees. The walls of the cañon were covered with tall pines, and on the little bits of *mesa*, or table land, were scattered huge live oaks, their spreading branches covering space enough to afford shelter for a regiment, and the ground beneath them carpeted with soft green turf. But what pleased me most was the sight of a well defined trail, leading directly up the cañon, which promised to lead to shelter at least, if not to supper. Pinto made the discovery at the same time as myself, and pricking up his ears started off with more animation than he had shown for hours. A sharp ride of a mile and we hear the tinkling of a sheep bell, and a few minutes afterwards the bright light of a fire became visible through the trees. Three or four wild looking dogs sprang from the fire as we approached, but were called back by the shepherd, who came from the shadow of a tree. Near by was a large corral, in which a thousand or more sheep were gathered for the night.

"Buenos tardes, amigo," said I, addressing one of the men.

"Buenos tardes, caballeros."

"Adonde estar la casa?"

"The house of the padrone is near by, señor; you will be welcomed there."

"Who is the padrone?"

"Valga a mi Dios, señor; you must have ridden far not to know the padrone."

"Yes, I am a stranger; but what is his name?"

"Don Enrique, señor, and the house is beyond the cañon, on the *mesa*. I will conduct you there."

Following my guide up the stream to where a series of boulders enabled him to cross, he bounded over with the agility of a mountaineer, and my horse managing to scramble over after him we soon struck a path cut in the side of the cañon, which led us gradually to the table land above. It was too dark to distinguish clearly, but at a short distance I could see lights twinkling, which indicated a house of some kind. Now, thought I, for matrimony and phlebotomy. But even the prospect of a night among the fleas on a sheep ranch, was better than spending it on the beach. To my surprise, however, white washed fences came in view, and I could see rows of olive and other trees. The house proved to be one of the long, low, rambling structures peculiar to Mexico and southern California, built in the form of a square, with a courtyard in the centre. Saluted by a chorus of dogs, we approached the main entrance, which was guarded by a pair of immense doors. My guide entered the courtyard, but being uncertain of the reception I should meet with, and not knowing what to do with my horse, I waited without. In a moment I heard a deep bass voice exclaiming "Where is the caballero?" and my prospective host appeared at the door.

"Alight, stranger, and come in the house; Juan will take care of your horse."

I succeeded in getting to the ground, but, sore and stiffened with the long day's ride, my legs refused to perform their office, and had it not been for the strong arm thrown protectingly around me I should have fallen to the ground.

"This way, friend, your wet ride has been almost too much for you, but a little *aguardiente* will set you straight in jiffy. Move, *muchipás*, and let the stranger have some of the fire."

A swallow of the fiery spirit, and the removal of some of my outer garments, restored my scattered senses, and the feeling of intense fatigue gave way to one of astonishment at the quarters in which I found myself. The room was comfortably, even luxuriously, furnished. Two lovely girls, and a buxom lady, evidently their mother, gazed

not rudely, but inquiringly, at the apparition of a half-drowned trader. Seated before an immense wood fire, which roared and crackled up the wide chimney, gave both light and heat to the apartment, the events of the past few hours seemed like a dream. To my host I explained in a few words the mishap which had befallen me, and received an assurance that I was welcome to his house.

"We don't see many strangers in this out of the way spot," said he, "and my girls will be delighted to hear all you can tell them about the Eastern cities and the fashions."

I turned to the "girls" for a confirmation of their father's remark, but beyond a few blushes and shy glances at each other, they continued to busy themselves in preparations for supper. While these were progressing, the old gentleman and myself entered into conversation, and I discovered under whose roof I had found shelter. Col. Forrester—to whom, as luck would have it, I was in possession of a letter of introduction from one of the magnates of San Francisco—was one of the "Argonauts of '49," who, instead of searching for a golden fleece, contented himself with a woolly one, and, leaving Ohio with a band of some five hundred sheep and cattle, after a weary journey across the plains succeeded in reaching California with a larger portion of his herd. Resisting all temptations to go to the mines, he purchased, for a song, a large tract of land in the Santa Clara Valley, and engaged steadily in the raising of sheep. His herds increased with wonderful rapidity, and a few years previous to the time of my visit his land, becoming too valuable for sheep pastures, he had sold it at an enormous profit and moved his flock, now fifty thousand strong, to a newly purchased rancho on the lower coast. Shortly after his arrival in the State he had married a native California lady, daughter of one of the old Rancheros, whose name is identical with the history of the country. His family now consisted of two sons, who were at college, and the two daughters, with whom I was rapidly becoming acquainted. In person the Colonel was a magnificent specimen of physical manhood—tall, broad shouldered, and burned and hardened by exposure to the sun. A heavy beard, a little grizzled by age, concealed most of his face, and fell far down on his chest. His deep blue eyes indicated frankness, and a wide, high forehead bespoke great intelligence.

"You see, Mr. Irving," said he, "like the occupation, and it suits me at my time of life better than anything I could engage in elsewhere. What my boys and girls will do after I'm gone I can't tell, but I'm too old now to change. The boys are away East at college, and the girls ought to be there, too, but their mother won't hear of their leaving home. (It may have been selfish, but I inwardly thanked the seniors.) I was afraid they were growing up very ignorant, but if they marry among our neighbors that won't matter much. (Mentally, I almost resolved that if Miss Anita did not finish her education in New York it would not be for want of an invitation.) You see," continued the Colonel, "although we've been married these twenty odd years, my wife don't speak a word of English, and never will. She understands almost everything, but somehow or other, whether it is pride or not, I don't know; very few of the natives of this country will learn our language, and many of them are as bitter against the 'gringos' as they were in '48; but here's supper; sit to it."

The young ladies, assisted by some dark skinned maidens, placed the smoking dishes of *frijoles* and chickens *colorado*, stewed *chilis*, and platters piled high with water-like *tortillas* on the table, all of which were shared with a traveler's appetite. After supper the Colonel and I filled out pipes, and, drawing around the fire, the charming little family circle made me rejoice again at my lucky star. The roguish, charming, black-eyed Anita and her older but equally lovely sister, Inez, busied themselves with their embroidery, the senora devoted herself to the family repairing and mending, and the Colonel and myself smoked pipe after pipe while he recounted to me his experiences of early days. But fatigued and weary, feeling the better of me, I pleaded it as an excuse, and was shown to a comfortable room, with a bed on which the sheets, pillow cases, and even the snow white spread, were trimmed with the lace so beautifully worked by the native Californian woman. Overhead, a picture of some martyred saint gazed with calm complacency upon my heavy slumbers.

"Una manzana allegro, quando el rosa escachava,
Una pastora, salio de su canana."

The words of the simple Spanish song, describing the little shepherdess coming from her cabin in the first morning, when the dew was on the roses, was the first sound which greeted me when I awoke, and I recognized the voice of my host's youngest daughter, as she sang in the courtyard under my window. Hurriedly I made my toilet and stepped out on the verandah. Miss Anita's back being towards me, I had ample time while leaning over the railing to watch her trimming and tending the plants with which the centre of the courtyard was filled. From her perfect feet, with their high arched insteps and delicate ankles, to her head, covered with heavy braids of black hair, everything about her trim, neat little figure was as lovely as night. She turned and smiling, as though she had just graduated from a fashionable boarding school. Nita and her sister differed, in that the former had large, lustrous brown eyes, and her clearer complexion showed the Anglo Saxon in her origin. Inez resembled more her mother; her eyes were black, and her figure already exhibited a tendency to that embonpoint which, after the *primera jeunesse*, is the fate of the women of the country.

The song finished, she turned and discovered the audience. "Ah! senor, you've been listening, have you? If I had known that I should have sung something not very complimentary to the Gringos."

"You would have been too cruel; and you are half a one yourself you would have had to share the odium."

"Yes, but you know I was born here, so I am a native Californian. Not that I'm very proud of my Spanish blood, for it makes me dreadfully awkward sometimes, and you wickered and with all this loveliness about you? I can't believe it. It seems like fairy land to me."

The orange trees towering above the roof of the house still had a few of the golden fruit peering from among the dark green leaves, and some late blossoms exhaled a delicious perfume. A group of oleanders, grown to the size of small trees, were covered with clusters of fragrant pink flowers. Lemon trees, laden with yellow fruit, and the perfume, while around the fountain in the centre of the courtyard were masses of heliotrope, tube roses, fuschias, and other plants unknown to me by name. On each

pillar of the verandah were climbing roses of different varieties, many of them only standard in less favored climes, here attaining a size and beauty almost incredible.

"Our country is beautiful," said Nita, "but you've seen nothing of it. Come to the roof with me, and after seeing the view from there I shall expect you to say that Santa Monica is the loveliest spot on earth. Of course, I've had no opportunity of comparing it with other places, but all our guests say so, and I quite believe it."

My little friend tripped after me up the steep staircase to the roof covered with asphaltum and pebbles, and pointed out the various beauties of the view in her neighborhood. Nature never painted a fairer picture, and it required no effort to produce the enthusiasm which she expected.

In front of the house, and beyond the enclosed orchards, a smooth, grass-covered plain stretched for a mile or more to the cliff which formed the barrier to the Pacific. The ocean, glistening in the sun, was apparently as smooth as glass. Although not in sight, the hills hidden by the cliffs, we could hear the sullen roar of the surf as it broke upon the coast. To the right the line of dark tree tops, appearing above the level of the plain, marked the line of the cañon where I had found my deliverance the night before. Looking inland, the *mesa*, or table land, on which were scattered with park-like regularity numbers of magnificent live oaks, stretched away for five or six miles, until it gradually joined the foothills of the Sierra Marfies. The gradually inclined foot of the surf as it broke upon the coast, formed a dark green belt for the mighty mountain range, which, scarred and seamed with canons and gulches, rose to the height of six or seven thousand feet. In some of the upper canons, and on the summit of the highest peaks, the snow was still unmelting. In various directions little columns of smoke marked where the sheep herders, in care of the enormous flocks, had their camps, and bands of horses and cattle were feeding at different places on the plain.

About the rancho, or rather about the house—for everything in sight, except, perhaps, the mountains and the sea, comprises the rancho—were orchards of almost every description of fruit. English walnuts, olives, and almonds; oranges, lemons, and limes, as well as the more homely, but none the less valuable, apple, pear, and peach, as also apricots, peaches, and figs, were growing in the greatest profusion. On one side was a vineyard covering many acres of ground, and on the other the stables, outbuildings, and barns, all of which were of a quality very superior to what is common in the country. A ditch of water, brought from the cañon a mile or two above the house, and carried skillfully along at the proper level, supplied the necessary means for irrigating all these trees, for this wonderful growth of orchard and flower garden would come to ruin if left to the care of Nature alone, the ficke dame not providing one drop of rain from May until October.

"Look, Mr. Irving, at that bright spot on the side of the mountains. Every Spring, before the rains have quite left us, it appears there. We call it our flower garden, and, although it seems so near, it is miles and miles away. It is one bed, a mile or so square, of wild flowers. The golden tulip-like *escobilla* predominating, gives it its bright yellow shade. I don't know whether I have gotten the name correctly, but a very learned gentleman from San Francisco, who was here not long since, told me it was named after a celebrated German botanist, who was the first to discover it."

"It is indeed wonderful. And what is that little house I see almost half way up the mountain, at the mouth of the cañon?"

"That is a bee rancho, and the residence of our hunter, old Grizzly Bill, as they call him. You will make his acquaintance before long. Now look up the coast, and you will see a large gray building with a number of little white-washed houses about it. That is the old mission church, and the buildings, together with many little *jardens*, or huts, built of rushes, which you cannot see, comprise the *rancho*, where live a few Mexican families and the Indians, or their descendants, who are still distinguished by the adobe. You can best ride over there and call on Father Antonio. He has been here ever so many years—long before I was born—and he can tell you all about the earlier days of the country, when cattle were valued only for their hides and tallow, and the native families had more dollars than they have *centavos* now. And you can practice your Spanish with some of the *senoritas*."

"Thank you, Miss Anita, but I don't think I'll have to go off the rancho to do that."

"Not with me, senor. I never speak in Spanish when I can get any one to talk English. Inez, now, prefers to, but you must not be too attentive, or you will make Pablo jealous."

"Pablo and who is he, may I ask?"

"Don Pablo de la Cruz, who, I imagine, is to be my brother-in-law, is the son of one of our neighbors. You will probably know him, as he is very clever and handsome."

"And who is to be jealous if I am too attentive to Miss Anita?"

"That, sir, you must discover for yourself; but in the meantime allow me to suggest that if we keep the household waiting for their breakfast they will be jealous, or even worse."

So we descended, and, making my salutations to the family, I entered upon the business in hand with a convalescent's appetite.

The first word I uttered about proceeding on my journey brought out a protest from Col. Forrester, and the discussion ended by my accepting an invitation to remain a week, or perhaps more, at Santa Monica. Said the Colonel: "You will find plenty to amuse you, particularly if you are fond of shooting and fishing. We have a regular hunter about the establishment, who, by the way, is quite a character, and who can take you to where you can kill the ranches every day, looking out for the shepherds, so you must not expect much attention from me, but the girls and Pablo will be glad to ride about the country with you. There is much at the old mission that is interesting and characteristic of the times before the annexation, and if you could get at the records, and translate some of them, I have no doubt that much could be found to throw light upon the early colonization by the Jesuits."

The prospect seemed so well suited to my present condition of mind and body that I immediately arranged to send a message to my traveling companion to go on without me, and prepared to enter with zest into the new life.

[To be Continued next week.]

A PISCATORIAL EXCURSION TO MAINE.

AFTER an all-night ride of 250 miles in a Pullman sleeping car from Boston, I found myself at Bangor, at the head of ship navigation on the Penobscot. The tide rises at this point seventeen feet, enabling vessels of the largest size to reach the city. Bangor being the centre of a large foreign and domestic trade and the home of a number of brothers of the angle, I had good reason to expect pleasure to stop over a day, but my time being limited I pushed onward by rail, reaching Dover and Foxcroft, fifty-two miles further North, in time for dinner. These villages are really but one place, being divided by but a small stream, the Piscataquis River. Having accepted an invitation from that thorough sportsman and unsurpassed rod-maker, Mr. Hiram L. Leonard, of Bangor, to visit the State Fish Works at the head of Sebago Lake, of which he is Superintendent, after partaking of an excellent meal at the Foxcroft Exchange, we started for the lake, four miles distant. Our party consisted of Mr. Leonard and wife, his father-in-law, Henry A. Head, Esq., and myself. The Exchange conveyance carried us comfortably over a good road to the steamboat landing, which is equidistant from the inlet and outlet. Leaving ourselves and luggage in a sailboat, and with a gentle breeze we soon reached the head of this beautiful sheet of water, which is twelve miles long and upwards of 600 feet deep in its deepest part. Although Mr. Head is well on to four score years, I found him as enthusiastic a sportsman as most of the younger members of the fraternity. On our way up the lake he captured and landed in fine style a beautiful fresh-water, haddock, salmon. The morning boat on which we sailed before, my attention was at once given to a careful examination of the fin rays, &c., and to general admiration of his symmetrical outline. Two days were spent pleasantly at the works, during which I succeeded in killing, on my 6½ ounce split bamboo, two salmon. Chartering a conveyance at Foxcroft landing, I reached Monson, sixteen miles, in time for supper; and Greenville, twelve miles further, before the starting time of the morning boat on Moosehead Lake. By this management I saved one day's time, and by the regular train and stage I would not have reached the lake until evening. Moosehead is the largest sheet of fresh water in New England, being about forty miles long, and in its widest part seventeen miles. There are two hotels at the foot, (Greenville) Henry I. Wilson's at the outlet, the Mount Kinross House, half way up the lake, commodious, cleanly, and well situated; and, at the head of the lake, or northeast corner, C. J. Jordan keeps a house. A long wharf has lately been constructed here, so that passengers can at all times be landed without resorting to small boats. For fishing at this time I went to the outlet. The first evening I caught three speckled trout, weighing five pounds; the next day I added seventeen, weighing twenty-two pounds, the largest one of which weighed four pounds, and measured twenty-two inches in length. They were taken on the fly and 6½ ounce bamboo. In the evening I killed my fish, which had been kept alive in cauls, selected fourteen, weighing twenty-three pounds, wiped off with towels all blood and slime, and without dressing them wrapped each fish in a separate piece of paper, so as to exclude the air as much as possible, and packed them in a box with dry ice. For eight hours after the fish were packed, they were eaten, they were the palate apparently as fresh as those just taken out of the water, and the balance, served fourteen hours later, were in equally good condition. I have made many trips to the Adirondacks, but this is my first to Maine, and I hope not my last. I arrived home October 3d, fully satisfied with this closing of my angling season.

Yours respectfully,
Albany, N. Y., Oct. 12, 1874. W. W. HILL.

VACATION RESORTS IN NEW HAMPSHIRE.

IT is not generally known to what extent the old State of New Hampshire is used as a summer resort by the people of Massachusetts, New York and Connecticut. A trip through the State would, I think, reveal the fact that no town in the State is devoid of its quota of city boarders, many, of course, in the small towns being attracted there by the love of childhood homes, while in the more mountainous districts we find the lovers of all that is wild, grand and sublime in nature. The State of New Hampshire, rendered famous by the Museum, when guiding political genius, have seen fit to point their wand towards this Cheshire County, though less world-renowned, is an interesting locality, and as we find on spending a season there, is well known and appreciated by many hundreds. It lies in the southwest corner of the State, having Massachusetts on its Southern border and Vermont on the West, being separated from the latter State by the noble Connecticut River. The Ashuelot River and tributaries drain the county, with the exception of the northeast part, which is reached by the arms of the Merrimack.

The infant City of Keene is the Hub of the County, and by many travellers said to be the prettiest in it; it being laid out in clean, wide streets, and adorned with a profusion of shade trees, many fine residences, churches and hotels. The greatest natural attraction is the Grand Monadnock, twelve miles from Keene, in the eastern part of the county. This is a very high mountain, but stands out alone in the rugged country at its feet, a proud landmark for many miles around, for its head towers thirty-five hundred feet above the sea level. A nice carriage road is built to within one mile of the top, at which place we find the Mountain House, containing forty rooms, well furnished and well kept by Messrs. Newton & Batcheller. The number of people spending the summer at this house, and the number of tourists, is yearly increasing. The distance to the summit, one mile, is made on foot, for with a considerable outlay it has been made but little more difficult of ascent than a flight of stone steps.

The summit affords a view but seldom surpassed. The eye at once rests on a country of hill, valley, field and forest, with sixty ponds and lakes and thirty-eight villages, all mingled in Nature's order, with the summits of the White Mountain range. Kennebec, Piscataquis, Androscoggin and Halloway in the distance, while within view we see Portsmouth Harbor and our own Bunker Hill Monument. All these ponds abound with pickerel and perch; a few only have the "speckled beauty," which, however, is found in nearly every creek. I took a string of twenty

weighing twenty-six pounds from one. Here again comes in the old story of lack of protection, and hence, the result that many of these streams are teamed with species of fish now unknown here. The oldest residents on the tributaries of the Connecticut tell you of the carloads of shad taken years ago, but with restocking and the increasing interest in, and popularity of, game and fish laws, they still have a hope of a shad breakfast of their own catch before they die.

At the foot of the Mountain of the same name lies Monks' Lake, with its pebbly bottom and beautiful trout and surrounding shady groves, and ten miles west of Keene, Spofford Lake, with its transparent water, and its pike that turn the scales at twenty pounds. What can we conceive more grand? These two, were they found in the Adirondacks or the fastnesses of Maine, might well be made the great havens of tourists. With a good dog—not found here—the game season can be made an interesting feature. Ruffed grouse are abundant, also ducks, plovers, foxes, minks, rabbits, raccoons and grey squirrels. Uncle B., of Westmoreland, with his three-dollar musket and a hatchet, has for years boasted his coon skin robes and squirrel coats and caps, sold annually his dozens of mink skins, and grows fat on squirrel pies. His traps, which appear in the ravines as if by magic, are made with a flat rock and a split stick, a la figure four. Besides all this, the country affords the most charming views, charming drives and hospitable people that help to make a country enjoyable to those not wishing to "angle or camp out."

SNIPE AND SNIPE SHOOTING—No. 3.

THE arrival of the Wilson's snipe with us in the Spring is very uncertain, and depends entirely upon the state of the season. If, after a cold and blustering Winter, March suddenly opens warm and genial, which is seldom the case, and the frost is cleared from the ground by the sun's rays, the bird soon to be before us; but not often does he reach us before the middle of the month, and then in small numbers, uneasy in his habits, and scarcely lying to the dog. By the last of March, or the 1st of April, the great flight of birds arrives from the Southern States, and, like the woodcock, the prevalence of a warm rain appears to be chosen for the migration. The average appearance of the snipe from Delaware eastward in the favorable seasons, be set down as about April 1st, but frequently, when the Spring is late, and Winter has lingered into April, we find it passing hurriedly northward, scarcely visiting our meadows, and directing its flight to its breeding grounds. We have always thought the snipe, after tarrying with us until May, are mated, and leave us in pairs ready to begin nesting. In fact, we have on several occasions killed and found in them fully formed eggs as early as the 20th of April, and for this reason oppose the shooting of snipe during their Spring passage northward.

On their return from the North with their young, they pay us a visit before moving South, reaching us in September and October, the first cool weather having prompted them to seek winter quarters, making their autumnal migrations southward in stages in advance of hard freezing, snow and rest.

On our meadows of the Eastern and Middle States, where snipe are comparatively rare, a good dog, thoroughly understanding his business in this particular, is invaluable; but in some portions of the Southern and Western country the bird is so numerous that a setter or pointer is of very little use, unless he be kept at heel and used as a retriever. But we confess our own shooting is to us more enjoyable when fewer are bagged, and the working of a well bred and trained setter is added to the pleasure.

The snipe lies best to the dog on warm, sunny days, when gentle winds are blowing, and if feeding in high tussock meadows will not take flight until almost trodden upon. But during blustery weather, especially if the wind is from the northeast, they are very loath to allow even the most steady dog to come within thirty or forty yards of them. This is more noticeable in the Spring, when the birds have first arrived, and are in whisks and bunches, than in Autumn, when they appear to have made up their minds to stay for awhile previous to moving southward.

The snipe is noticeably the most difficult game we have to kill, although we have seen only medium quail shots that were really brilliant in their shooting on the meadows; but we also noticed that such persons resided adjacent to good snipe grounds, and devoted much more time to it than to any other sport.

Beating for snipe with the wind in one's back has been always advised by experts, as the bird invariably rises against wind, and flies at an angle towards you, either to the right or left, thus presenting a more easy shot than when going straightaway in a zig zag course. Sometimes, however, on account of the many ditch drains that intersect in our tramps over the meadows, the snipe, when it is as convenient by far to take the wind at our backs, and are compelled to breast it; but we should bear in mind that far better chances are given to kill if the advice is carried out, and always endeavor to follow it.

Snipe not infrequently take to swampy thickets of black alder, and what are known as "willow gardens," with springy bottoms, in the Spring, for shelter and food, when, after their arrival, they are shot there, and the snipe, with a snow squall and a touch of the past Winter. We have on two occasions found them in such localities lying like stones, and making capital shooting, and fully as expert in twisting their way through the sprouts and alders as their larger cousin, the woodcock.

The snipe remains with us frequently as late as the latter part of November, and on occasion, when the shooting in the State of Delaware was then open, we shot them on the 13th of December, but the weather during that month and the one previous had been remarkably open and mild, and we doubt not the bird could have been met with on the same ground a week after. We made two memoranda that season, and they appear on reference—"Shot five Wilson snipe on 13th December." "Shot one well conditioned woodcock on the 31st of December."

We noticed in the report of the proceedings of the National Sportsmen's Convention, held at Niagara on the 9th of September, that it was urged that the Spring shooting of woodcock, snipe, and "bay birds," during their sojourn in the Middle and Eastern States, previous to their moving farther North, for the purpose of breeding, should be abolished. Nothing could be more beneficial to the sportsman.

Recollect, every pair of birds thus killed in the Spring makes just three or four less in the Autumn.

In spite of being considered as given to chronic growling, we shall continue to urge, as we have always done, the cessation of the murderous and unsportsmanlike killing of our game birds of passage on their journeys toward their nesting ground, albeit they may not be at the time paired, knowing well the time has arrived when the fast disappearance of all game demands it, and we call on all sportsmen to make it a rule that little selfishness we all are endowed with, and have such laws passed as will benefit the sporting fraternity of every State.

Within our own recollection, snipe ten years ago were far more numerous at Pine Brook, N. J., and other meadows of that neighborhood, and certainly in far greater quantities on the feeding grounds bordering the Delaware and Schuylkill rivers near Philadelphia. Then we could be tolerably certain about making a bag; now we more frequently see none than to get shot at all. The steady destruction of the source of supply in the Spring has brought this about; nothing else. The meadows have not changed, and food is just as abundant.

A fellow sportsman, who had always been able to find game enough in the neighborhood of his city home until within a few years, made the remark to me that, he found it did not pay to set a pointer, for birds were too scarce even to train upon, and that he intended devoting his attention to the little "Basset" for slow chasing of the rabbit, feeling this was all that remained. Hoxto.

× A MINKERY.

AMONG the novel features of the Albany County Fair is the minkery exhibited by Mr. H. Resseque, of Verona, Oneida county, New York. Seven years ago he came in possession of a wild mink, and through her progeny his stock, at some periods during this time, has numbered ninety individuals, besides many specimens disposed of throughout the different States of the Union.

Mr. Resseque's home yards contain twelve stalls, each twelve feet square; the soil is stale, and around the outside of the yard a trench is dug fifteen inches deep, and a plank fifteen inches wide is laid on the bottom, closed to an upright plank nailed upon the fence-post as a base. The dirt is then filled in, and the fence is composed of upright rough boards six feet in height, with a cab projecting over the yard, in order to prevent the mink from climbing outside. In each stall is placed a dry-rocks box, which is indented by a female. This box has two openings opposite each other for ingress and egress, with a door on the top to allow inspection and cleanliness.

Minks are not burrowing animals when in a state of nature, but freely avail themselves of the burrows of the muskrat or some other vermin. They cannot climb a smooth surface, but when there is enough roughness for male and female to hold on, they are not slow to do so. Males are not allowed to run together, excepting during the month of March, which is considered the running season for wild minks. If allowed together for a longer period the male annoys the female by teasing her. The female remains in heat about four days, and all of the females in his yard are ready for the male within a period of ten days' time. One male will serve six females. The female carries their young six weeks, and in kittening they do not vary twelve hours from this time. They average from three to ten kittens at a litter, which, when born, are blind, and remain so for five weeks. They are quite destitute of hair, and are as white as a piece of paper, and devoid of animal shape. Mr. Resseque informs me that they resemble the shape of a finger, and are about the size of his little finger. By the time their eyes are open they are covered with a coat of beautiful glossy hair. The young females develop sooner than the males; the former obtain their growth in ten months, while the males do not until eighteen months of age. The females are capable of bearing young when one year old.

In his yards they are fed exclusively on sound fresh meat. They do not relish tainted flesh. He feeds them once each day in the summer, but in cold weather the food is thrown to them in quantities, and allowed to freeze, so that they can help themselves at pleasure. During the month of February a short allowance of food is then given them, to get them in condition for breeding. When running wild, food at this season is scarce with them. Mr. Resseque, in managing them, attempts as near as possible to imitate nature, and he says that this comparative fasting makes them much more lively and playful.

In a number of kittens one sex or the other is apt to predominate, that is, they do not usually come half males and half females, but are either all males or all females. A grown male mink will weigh about two pounds; the female is heavier than she seems to be, and will weigh from one and a half to one and three-quarter pounds.

They are readily tamed when taken in hand when their eyes are beginning to open; they are not to be allowed the society of any mother or the rest of the litter. By constant petting and handling they become like domestic kittens, and exhibit all of the playful antics of the feline tribe. They can then be handled without fear of being bitten by them, but they are represented as being exceedingly mischievous; their exceedingly sharp scent will enable them to find food which was not intended for them, and their fondness for food will lead them to prompt them to go into an open tea-kettle, or any open vessel filled with water, and while wet will roll and roll themselves in a clothes-basket of freshly ironed clothes, or on a lady's dress. In this way they are troublesome pests.

Mr. Resseque, at several fairs, has been in the habit of exhibiting two female tame minks to the bystanders through the cage, which he hands to the promiscuous crowd, who expressed and uttered their contempt for themselves to be handled from person to person, but it was a noticeable fact that their eyes were constantly on their keeper, and when they came within reach would extend their paws to him like a child wishing to return.

Tame minks make excellent ratters, and hunt with vigor, and speedily exterminate these troublesome pests. The rats will immediately flee from them when first they scent them, and then they are so close and in flight, that they never give battle, but yield at once, and so swift does the mink cut the main arteries of the rat's neck, an observer would scarcely think the deed was done.

During the running season the males fight desperately, and if several are allowed together one always assumes the mastery. About the first of November the young males should be separated from the females. Minks only have

one litter a year, and never breed at unreasonable times. When tame and wild minks are confined together the tame ones always prove victorious, being much stronger than the wild ones. Too much confinement will make their fur look dead and rusty. They require a dark place to roam and exercise. If fish is given them during September and October their fur is much improved; soft water for bathing purposes also improves it much.

Mr. Resseque tells an amusing story of a stray cat that invaded his minkery, no doubt in quest of game, but the minks proved too much. At last the cat gained the outside of the inclosure, the yard was strewn with locks of cat-hair, and for a hundred feet or more in the track of her exit were found tufts of cat-hair; but notwithstanding this, a strange person can go in the minkery with impunity, and observe these sly creatures playing like kittens around him.

Mr. Resseque finds ready sale for all the minks he can spare at \$50 per pair. His prices are, for a female, \$20; for an impregnated female, \$25; for a male, \$10. He informs me he cannot now supply the demand.—*Poultry Exchange.*

THE NORTHWESTERN BOUNDARY SURVEY.—The party engaged in making a survey of our northwestern boundary arrived at Bismarck, Dakota, October 1st, from Fort Benton, all in good health and spirits. The following account of the region through which they passed is given by a correspondent of the New York World:—

"With the exception of a small tract of bad lands along the Milk River and two of its tributaries, the country passed over by the survey is highly spoken of. It is so level that the brakes of the wagon were not once required, and so well watered that not a dry camp was made during the entire season. In the Sweet Grass region the rich bunch grass stands eighteen inches in height, and here buffalo were so thick that they were shot from the wagons, and in some instances with pistols. The train was several times broken by them, and forced to halt while they passed. The buffalo seem to gather in immense numbers and winter here. On every pond their skeletons may be found. In one case a ravine was discovered in which the skeletons lay five deep in some places. The buffalo appear to have tried to cross the ravine when it was filled with snow, and perished in the attempt. The brooks, cool mountain streams, afforded rich sport and many a delicate morsel. They were filled with trout, and from them one could take ten pounds an hour. The country swarmed with black tailed deer; the celebrated mountain sheep were found in abundance, and, though a hard animal to bring down, they were secured. A line 350 miles in length was surveyed, commencing at a point on the forty-ninth parallel, nearly north of Fort Buford, continuing westward to the Rocky Mountains, closing on the work abandoned in 1860. The distance from the Sweet Grass Hills to the Rocky Mountains is 120 miles. The country lying along the edge of the mountains, and eastward to the Hills, Major Twining pronounces the best he ever saw, and susceptible to cultivation, though probably too cold for corn. This region, 1,500 miles northwest of Bismarck, and from there northward throughout the Saskatchewan region, may yet become the granary of North America, for cereals of all kinds will certainly thrive and mature even hundreds of miles north of the forty-ninth parallel. This, probably, because of the modifying influence of the Pacific on the climate. This influence is perceptible even here, and our Westerners are uniformly milder than the Winters of St. Paul, nearly 600 miles southeast of us."

A SPOILING PARTY IN INDIA.—The Pioneer says: "Our Russian visitor, Prince Czeterwytynski and party, consisting of Count Batthyany, Baron Ozezy, Lieut. Howard, R.H.A., and Lieut. Gerard, Central India Horse, started from the neighborhood of Indore on the 14th of April, and up to the 30th of May when the rains came, they had secured 100 spotted and banded seventeen tigers, four panthers, and six bears, besides sambar, cheetah, &c.; five more tigers fired at, escaped, wounded or otherwise, as might be expected when a large number of sportsmen were novices to shikar. When the rain unfortunately terminated proceedings no less than five tigers were marked down, but all decamped. The party had to halt several days before commencing their return, owing to the flooded state of the rivers."

THE REMOVAL OF GLASS STOPPERS.—One of the little things that now and then provoke good-tempered people is the persistency with which glass stoppers in bottles remain inserted when it is desired to take them out. The *Canada Medical Record* tells how to get them out, as follows:—"In most cases when a stopper is fixed, without an intervention of an adhesive substance, it is by turning it as one would drive a screw. The direction is almost invariably from left to right, and thus a thread is formed which is easier to follow backward than to break. The trouble with which the removal of stoppers is usually attended must form my apology for introducing a suggestion of so little apparent importance."

The Paris *Tintamarre* gives the following advice to those who carry loaded guns in the cars: "Make it a point to move the muzzle round in a circle, occasionally put the gun in between your legs and lean your head on the muzzle, or poke it into your neighbor's stomach. Try the locks several times, and be assured that both triggers work evenly. If any body say to you, 'For Heavens sake! now be careful with that gun of yours!' At the you have to reply, 'Why bless your soul! what's the use of fidgeting so? There is only one barrel loaded!'"

—Nothing but a fish diet for eighteen years could enable a man to compose this verse, by which the Cape Codders remember their islands:—

"Nanshon, Noamesset,
Oneatoka and Wesspeket,
Nashawana, Pesquiseque,
Cuttyhunk, and Ponikese."

—What bird is that which is absolutely necessary that we should have at our dinner, and yet need neither be cooked nor served up? A swallow.

—What did Noah's bees do while afloat? They kept the arc-hives.

—A Pueblo lady was bitten by a tarantula recently. Though delicious for a time, brandy cured her.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

IS FISH CULTURE PROFITABLE?

EDITOR FOREST AND STREAM:

In your issue of October 14th, under this head, your correspondent "H." makes this inquiry. I have a rule which forbids replying or answering anyone who uses a *nom de plume* or an initial, but will bend it a little in this case, and ask to what he refers. If he wants to know if it has been profitable to restock the Connecticut and Hudson with shad, I can only give him figures, which he says he does not want.

Fish culture is a broad field, and after all the successes which are on record, there are still skeptics. Of course there are failures. No all business. Perhaps "H." refers to private enterprise; if so, which he does not state, then is the same record of success and failure. One party had not water enough; another could not get food, &c. But there are others who have succeeded by having everything favorable in connection with the required amount of capital. One great drawback on private fish culturists has been, in my opinion, the desire to confine themselves to what are called game fishes. They seem like boys who mingle work and play. The game fishes are more or less cannibals, and it is this that raises the grayling in my estimation far above the brook trout, for the trout are piscivorous as well as omnivorous, while the grayling cannot eat fish, but lives on the refuse of the slaughter house, as well as the trout does. There are but few places suitable for raising trout on a large scale, and it is only on a large scale that it will pay. An ordinary spring will suffice to furnish a few, but to turn out a ton or more a year, requires not only a large flow of water, but also a great quantity of food. There are those who have made it pay, but I do not feel at liberty to publish what little I know of their business, especially in answer to parties who hide behind an initial.

Fish culture for profit and fish culture for sport are distinct things, and the following clipping from another paper gives my ideas on "game fish."

FRED MATHER.

FISH FARMING.—The replies of two correspondents in a recent issue of the *Tribune*, while full of information of value to a beginner with fish, contain a few statements to which I beg leave to take exception, and so will say: 1. I have kept trout at a temperature above 60°, in fact as high as 75° where there was a good flow and consequently a rapid change. 2. Don't dam a ravine for a pond, the wind will blow leaves in, which with the leaves and drift brought down by rains will clog the screens and the floods will carry everything away. 3. If you dam the ravine, the hillside will high up, and lead will wash along the hillside into the ponds and let all floods and surface water go over the dam and down in the old channel. 4. "Spring water cannot be too cold for trout," says one correspondent. I believed this a few years ago, but find that trout kept at the head of my spring where the temperature is 49° do not grow much, while those kept below where it is 60 and 65° grow rapidly, and trout fry if left free will work down where the water is even warmer. 5. Black bass pick where the water is recommended where the water is too warm for trout, but these fish are all cannibals; the first named is good for the table and the sportsman; the second is a gormandizing beast, unfit to associate with decent fishes, and only eat when nothing better can be had; the third is a good little pan fish, but terribly destructive to other fish. 6. If I were asked for a list of fishes to be kept in waters not suitable for trout or grayling, it would comprise white fish, ciscoes, smelts, the large carp of Europe, and the square tailed variety of catfish that is known in the Eastern States as a bull-head, hornpout, &c. The indiscriminate introduction of predaceous fishes to please the sportsman has been carried too far, and many waters are filled with them that will be wanted for a more peaceable and prolific fish in a few years.—*Query:* If you wish to stock a hundred acres of land with animals, what kinds will you choose, lions, tigers, wolves, weasels, &c., or cattle, sheep, deer, and rabbits? And from which class would you expect the greater number of pounds of meat?

FRED MATHER.

FISH CULTURE IN VIRGINIA.

THE LODDOON COUNTY FAIR.

LEESBURG, Loudoun county, Va., October 18th, 1874.

EDITOR FOREST AND STREAM:

Our county fair in progress, and everything seems auspicious for a favorable exposition of our home enterprise. One of our most successful anglers, Mr. Wm. B. Clagett, exhibits some black bass from the Potomac, along with Loudoun trout, in a large aquarium. It will be quite an interesting feature of our fair. The tank is circular, with a diameter of about four or five feet, and will contain six or seven bass and three or four trout and a few other fish. Well, of course I felt like crying long. Some of the fish are Stone's and Green's on Fish Culture will probably be at hand, and an effort will be made to arouse the interest of farmers in this profitable branch of farm work. I essayed to try the bass last Saturday, purely in the interest of science, but owing to sickness in the family where I stayed, could not get off. I mean, however, to try a philosophical experiment or two yet.

SECOND DAY.

LEESBURG, Va., October 19th, 1874.

EDITOR FOREST AND STREAM:

The Loudoun County Fair did better today than yesterday. The aquarium in the "fish" department building attracted considerable attention, so much, in fact, that the finest trout was killed by handling. The black bass and one or two other varieties got along very well. Your humble servant was enabled to attend the fair by the unaccountable behavior of his pupils. He was in school at the appointed time, but there was no boy ready to answer to his name. Well, of course I felt like crying long. I could not take time to try, but finally wiped my weeping eye and went for the trout for philosophical experiment. I filed the barbs off my hooks, and partly by that means, and partly by use of a scoop net, secured some of the spotted inhabitants of our spring.

The trotting to-day was nothing extraordinary. There were some fine cattle, horses, hogs and sheep exhibited. An admirer of Henry Ward Beecher had a magnificent specimen of the bovine tribe, named after that illustrious divine. There were some beautiful game chickens, and a splendid show of pigeons of all colors and varieties. Among the practical men who take an interest in fish culture, and with whom I conversed on that subject, was Dr. Graham Elzey, Professor of Agricultural Chemistry in the Virginia Agricultural College. He is making fish ponds at the college (in Montgomery county), and inquired for the Forest and Stream, the address of which was given him, along with Stone's book on Fish Culture. We hope to excite the farmers here yet to the realization of their own interests in this matter. By the bye, I killed the biggest trout after I found he was going to die, and his flesh was white. Is that news? All I ever ate, previous to this, had pink or salmon colored flesh. He had been in a spring about five feet deep, shaded at all times from the sun for about two years.

The vein of address running through this letter is owing to my not being able to teach to-day!

T. W.

WILL FISH CULTURE PAY?

RICHLAND, N. Y., October 16th, 1874.

EDITOR FOREST AND STREAM:

In reply to the communication by "H." on page 148, I would say that my experience of fish culture leads me to say that "raising for market" under correct business principles can be made "a profitable business" in ordinary years. The panic of last Fall, and consequent necessity for economy the present year, has caused nearly all kinds of business to be depressed, and hardly anyone has made much money. Of course luxuries are effected more than necessities. Last August I made engagements with two of the largest dealers in New York to supply them with one hundred pounds of shad during the season, but owing to the depression they were unable to carry out their agreements. Yet I have had a large number of orders for fish to twenty pounds, and also had a fair attendance of visitors and anglers.

In undertaking any new business a man has to expect to pay something for education in the method of carrying it on. Consequently I did not expect to make more this year than last year. The ponds have been established eight years, and therefore it was more favorable than it would otherwise have been. Notwithstanding the dull time, I have taken in just about enough to cover expenses, and had I dropped in prices could have done a larger business. My experience warrants me in saying that in any ordinary business year it will pay well. Of course such extravagant figures as was made by Mr. Stone's book are calculated to mislead; but a man can do a good business and make a reasonable profit yearly with no very hard work, if he gives a proper amount of attention to it.

W.

HATCHING THE GRAYLING.

CALEDONIA, Livingston county, N. Y., October 14th, 1874.

EDITOR FOREST AND STREAM:

The grayling eggs which Seth Green brought from Michigan last Spring were placed in my care, and were hatched without any trouble; but after hatching, the young fish were badly diseased, and many of them looked so small and frail that I had hardly any hopes of raising them. All possible pains were taken to give them a good start, and we soon had the satisfaction of seeing that they not only lived, but actually grew. Very small they were, and very feebly they wagged their tails, but they kept on growing till—at the present time—they are larger than trout of the same age. Their malady has been pointed out by one of our best anglers, and people there have attended fairs at Rochester, Albany, Oswego Falls and Utica, besides the reception of numerous visitors at home. I am naturally a little proud of having been the first to hatch and raise, artificially, American grayling. But I do not yet see wherein consists their superiority to the brook trout, nor of what particular use they are, anyhow. It is true that they have a "magnificent dorsal fin," but that can't be *tried* to any advantage.

A. S. C.

—Perhaps it may interest some of your readers to know what success has attended the introduction of black bass into the Susquehanna River. Since June the anglers here have been busily engaged with variable success. The river teems with bass, but they are very coy about biting, so that only a few can be taken at any one time. The slightest misadventure of the water prevents them at once from taking any bait, real or artificial. The bait found most successful is live minnows, crabs from our small rivulets, worms, fresh-water mussels, and, who would have believed it! small catfish, used alive and without removing the spines. These latter are now used by all our anglers, and the writer can say from experience that there is no live bait more taking. The bass are now being taken with great success by trolling. But lately the water has been too cloudy, "riley," and but few have been taken. Their weight varies from, say 10 ounces to 1½, 2½ and 3½ pounds. The former, of course, are much more abundant than the latter; but, during two hours trolling a few weeks since four were taken—two of 10 ounces, one of 1½ pounds and one of 2½ pounds. At "Collins' Station," P. R. R., midway between Columbia and Harrisburg, more than 4,000 lbs. have been taken since June last, weighing from two to three pounds. Within five years the economic value of these fishes will have amounted to thousands of dollars annually, to say nothing of the innocent pleasure anglers will feel in taking the fish.

The fishways placed in Columbia dam by our Commissioners in 1873, was only a partial success as regards the transmission of shad. It has failed to keep the trout from passing over, more particularly during the low water. Attention has now been made of such a character as will no doubt allow vast numbers of shad to ascend the river hereafter. Indeed, just now we see at this point (four miles above Columbia dam) thousands of young shad disporting themselves. These will go to the salt water as soon as we have a flood in the river.—*Germananton Telegraph*.

FISH FARMING IN WESTMORELAND.—The large pond of the Big Springs Fishing Club, on their farm, in the Laurel Hill range of mountains, is now completed. The breastwork of the dam is heavy masonry over one hundred feet long and fourteen feet high, and the area submerged is over an acre. Besides this large pond is another extensive one, a few hundred yards below it, provided with a screen to prevent the descent of the fish; and above it, a series of smaller ponds up to the springs themselves, three-fourths of a mile distant. The capacity of the hatching establishment of this farm is reckoned at one million. The condition of the fish at present is reported most excellent. E. J. Keenan Esq., of Greensburg, had several of his finest trout die from some unknown cause. These trout were hatched in his spring, and were brought from New York. The fish pond of Judge Mellon, of Pittsburgh, about three miles East of Greensburg, is reported to be in a flourishing condition.

The Berks County Pa. Game Association have, at a recent meeting, cut out some good work, which it is hoped the members will perform properly. The President stated that the object of the meeting was to take some measures for the protection of bass, and also for the enforcement of the law in reference to other fish and game. A committee was appointed to prepare a summary of the game laws, which duty was attended to promptly, and the summary published. A committee was also appointed to procure three thousand yellow perch to be placed in such streams as the committee may think proper. They would doubt if they will multiply in other streams except the Schuylkill River and Maiden Creek. They may not even in the latter. This is perhaps the best companion for the bass. Pickering might do, and would find shelter in the deep pools of the river.

—The Fish Commissioners have put some black bass in the river, at Curwinstown, Pa. They will put some in Clearfield Creek the coming week. They are excellent fish, and hardy enough to flourish in the streams.

Natural History.

CURIOUS MATING OF PIGEONS.

PHILADELPHIA, October 16th, 1874.

EDITOR FOREST AND STREAM:

Seeing in the columns of last week's issue of the FOREST AND STREAM a communication on the mating of one male pigeon with two females, will add a few lines. The mating of two cocks also is not uncommon. With one year, among the pigeons, their duty as well as if cock and hen. One pair turned out to be mated cocks of the following varieties:—silver pilots, white trumpeters, and common mottled tumblers. The latter I bought for feeders, and for such they were excellent. The red mottled (dark) would generally drive the black gray mottle, though occasionally the order would be reversed. I put two eggs into the nest which had collected, and after performing their duty as well as if cock and hen. One squab was hatched, and before it was feathered the red mottle was removed, when the other continued caring for it as long as necessary. Having raised the squab, the gray mottle then sought a hen for a mate.

Two hens will also mate occasionally. I know of a party that had three hens mated to one cock. To show what may be had from a seemingly worthless bird sometimes, I will relate the following: Last May, having two imported yellow owl hens, from which I desired to obtain some stock, but having tried in vain to find suitable cocks, and one of the hens being very anxious to mate, I put her with an owl, the feathering of which was certainly a curious composite. The ground color was mostly, with red wings, red head, and mottled throughout with black. I regarded the bird as perfectly worthless, but the result proved otherwise. Out of the second nest they raised one black and one dun, and out of the next nest one black. The blacks were of a good, solid color, so also was the dun, but rather darker than was desirable. They have eggs now, both of which have squabs in them, though the shell of one was broken. But as the members were perfect, this was easily remedied by covering the broken part of the shell with sticking plaster. This is a fact which I trust may be of use to some fancier. W. A. B.

LONGEVITY OF THE CARP.—Can any of your readers give any well-ascertained proof of the length of life attained by the carp? When residing as a youth at St. Germain, I was told by an aged Legitimist that his father had watched the same carp throughout the whole of his life, and the son asserted that he had known the identical fish for twenty and thirty years after his father's death, thus giving to them an age of from sixty to seventy years. That remarkable statement is more than substantiated by Lady Clementina Davies, who, in "Recollections of Society" (p. 49), alludes to the longevity of the carp in the moat of the Chateau de St. Germain, one bearing in his gills a ticket proving him to be over 200 years of age; and other at Versailles, bearing silver rings through the gills with the name of the courtier who had inserted it, and testifying to an almost incredible longevity. What amount of truth may we attribute to these statements?

ROBT. RUDOLPH SUFFIELD.

Croydon, Surrey, June 13th.

Last Autumn, being at Fontainebleau, I was told by the servant of the palace that one of the German soldiers, while in occupation of the place during the last war, caught many carp in the pond of the palace garden, called "Jardin Anglais," and that some of these carp carried, attached by silver wire to their gills, little silver plates bearing inscriptions purporting that the plates were attached to the fish in the time of Francis I. and Henry II.—i. e. about 300 years ago.

Some of our German readers could easily ascertain by inquiry of the corps in occupation whether such fish were in fact caught. If it should turn out that they were, then, although the well-ascertained proof desired by Mr. Suffield would not of course be given, yet the fact would be evidence worth noting.—F. G. in Nature.

Gaines, June 28th.

WHAT IS IT?—On Owens Lake, which is sixteen miles long and six wide, and situated in the centre of California, there are, at all seasons of the year, myriads of small water fowl, considerably smaller than the common diver, but for which it is generally taken by casual observers. It is one of the diver species, doubtless, since it is a good diver and swimmer, but in other physical abilities it is different from any other we have ever heard of, if what we are told about it is true, and we believe it is—it can neither walk nor fly! Thousands of them are thrown on the shore by the winds, and there perish, simply, it is said, because they cannot walk nor fly, or even work themselves back into the water again. At such a time, the Indians resort to good luck in stripping them of feathers and down, these products being finer than the same from geese, and command as ready a market. The feathers can be obtained for a dollar a pound in San Francisco. Here, with Indian help, ought to be a profitable business. A specimen of these birds was sent to Washington for classification, but nothing has been heard from it. Its bill is long, sharp, and easily broken—something on the snipe order; the pedal appendages are more like flippers than feet, standing at such an angle to the body that they are useless for any purpose except swimming. Of its habits but little is known, other than its food consists of the billions of worms, the only other indigenous creature in those arid waters. Some think it is propagated from spawn like a fish, since its breeding places have never yet been discovered.

[The bird mentioned is probably the *Poëkops Californicus*, or a kindred species, which some lover of the wonderful has made into a sensational item. Birds being developed directly from spawn like a fish is a piece of Darwinism most startling to scientists.]—Ed.

QUAIL FOOD.—A farmer's boy in Ohio, observing a small flock of quails in his father's cornfield, resolved to watch their motions. They pursued a very regular course in their foraging, commencing on one side of the field, taking about five rows, and following them uniformly to the opposite end, returning in the same manner over the next five rows. They continued in this course until they expended the greater portion of the corn. The boy suspected that they were pulling up the corn, fired into the flock, killing one of them, and then proceeded to examine the ground. In the whole space over which they had traveled he found but one stalk of corn disturbed. This was nearly scratched out of the ground, but the kernel still adhered to it. In the craw of the quail he found one cut worm, twenty-one striped vine bugs, and one hundred clematis bugs, but not a single kernel of corn.

THE AMERICAN DEER.—The precise relationships of certain species of American deer to European analogues, the moose, the reindeer, and the elk especially, have been the subject of critical consideration on the part of naturalists for many years past, some maintaining that they are identical, and others that they are distinct. No one has given the matter more attention than Judge Caton, of Illinois, who for many years has had in his large park near his residence at Jativa, specifically at the north end of the American species, where he has carefully studied their habits.

Quite recently Judge Caton visited the north of Europe for the purpose of examining the Old World forms in life, and has satisfied himself, from careful study, of the absolute identity of the moose and caribou of the two continents, and of the very close relationship between the American elk and the European stag. One character of much importance in the deer consists in the presence and shape and entire absence of a peculiar gland on the metatarsus of the hind leg, this being indicated, if present, by a tuft of hair of a particular shape, and varying with the species. The American representatives of the moose and caribou do not possess such a gland; and as Dr. John Edward Gray asserts its existence in the European species, Judge Caton at one time inferred a specific distinction. However, further study, it is held, shows that the American deer are destitute of the gland, and that there is absolutely no point in which they can be separated.

In regard to the relationship between the European stag and the American elk, he finds the principal difference to be in the smaller size of the former. Fossil remains, however, show a size equal to our variety, with antlers equally large, and with all the distinguishing peculiarities, even the occasional presence of a spur on the brow, which occurs in about five per cent. of our elk; but never, so far as Judge Caton could learn, in the European animal of modern times. The two also breed perfectly well in European forests, with fertile progeny.

This entire subject will probably be thoroughly elucidated by Judge Caton in an exhaustive work on the American cervidae, upon which he has been engaged for some years past.—*Harper's Weekly*.

THE DRIVER ANTS.—Rev. J. G. Wood, in his fascinating book, "Strange Dwellings," describes the habits of the terrible driver ants of Western Africa, so named because no animals can withstand them. Even the agile monkey they have been known to destroy. When they enter a pig sty they soon kill the inmates, who have no chance to escape, and those tough hides are no protection against the enormous jaws and dreadful teeth of the driver ant. As for fowls, they make short work of killing them, murdering a whole hen roost full in a single night, and afterwards digging out the feathers and devouring the birds. All reptiles, and even snakes, are their victims. They commence on a snake by biting its eyes, so that it writhes helplessly on one spot instead of gliding away. They march in armies, curiously arrayed, preferring nights or cloudy days; or if the sun shines hotly, constructing arches over their path, of dirt agglutinated with a fluid exuded from their mouths. This dread of the sun's rays, reported by Dr. Savage, seems strangely inconsistent with the statement of Dr. Livingston, that heat has but little effect upon them. He says that he put the bulb of a thermometer three inches under the soil, in the sun at mid day, and found the temperature to be 132 deg. to 134 deg. The anties placed upon the surface ran about a few seconds and retired. But this boiling heat only augmented the activity of the ants. (Perhaps Livingston here refers to another species, though Mr. Wood quotes the passage in his description of the driver ants.) They have no vestige of external eyes, nor does the microscope detect in them any visual organs whatever. The horny head covering is, however, translucent, and they may recognize through it at least the difference between light and darkness. The first which will frighten almost any creature, has no terrors for the driver ant, which will dash at a glowing coal, fix its jaws in the burning mass, and shrivel up in the heat. They do not willingly enter water, but when they are compelled to cross a river on a march, they bridge it with festoons of their own bodies.

A BIRD GHOST STORY.—The *Athenaeum*, noticing a book on birds, says:—"Birds have a great fear of death. A hen canary belonging to the author died while nesting, and was buried. The surviving mate was removed to another cage; the breeding cage itself was thoroughly purified, cleansed, and put aside till the following Spring. Never afterwards, however, could the bird be induced to get out. The little creature fought and struggled to get out, and, if obliged to remain, they huddled close together and moped, and were thoroughly unhappy, refusing to be comforted by any amount of sunshine or dainty food. The experiment was tried of introducing foreign birds, who were not even in the house when the canary died, nor could, by any possibility, have heard of her through other canaries. The result was the same, no bird would live in the cage. The cage was haunted, and the author was obliged to desist from all other attempts to coax or force a bird to stay in it."

PROMPT EDUCATION.—The following note from a Canadian correspondent brings an interesting bit of news, from its novelty. Perhaps some of our readers may have had some such experience before. If so, should be pleased to hear from them.

DANVILLE, CHESD., Oct. 17, 1874.
I have a pair of our common wood partridges, caught wild from the forest less than a month. They are so tame that they will eat from my hand and I never hear of such an instance before.
Yours truly, M. W. CLARK.

—The exhibition of useful and noxious insects in Paris, recently opened in the Tuilleries Gardens, was highly interesting and useful.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, I

Animals received at Central Park Menagerie for the week ending October 17th, 1874:
Two White Pelicans, *Pelecanus onocrotalus*. Hab. South Europe.
One Marabou Stork, *Leptoptilos crumeniferus*. Hab. West Africa.
Two Elands, *Ovis oryx*. Hab. South Africa.
One Horned Owl, *Bubo Virginianus*. Presented by Dr. E. Sterling of Cleveland.
One Wall-throated Sapsucker, *Cobus hypoleucus*. Presented by Mrs. W. A. CONKLIN.

Woodland, Lawn and Garden.

LILIUM LANCIIFOLIUM.

THERE is no handsomer pot plant introduced among your numerous varieties than the liliac liliac. They are beautiful for either the conservatory, parlor, or the sitting-room. We have grown these lilies for years, and never thought them difficult of culture. The want of success complained of by "A. M." of Minnesota, we cannot account for on any other ground than that he made his soil too rich and his pots too large.

Our own manner of planting this bulb has been as follows, and we have never failed of obtaining good, strong flowers: We provide for the Japan lilies pots certainly not less than fourteen inches in diameter; we plant three bulbs in each of these pots. Always if possible select the double-crowned bulbs, as they are the best for culture in pots—single eyes do not give you good satisfaction. You now want a good, fat lump of brown loam at the bottom of your pot; now you will very carefully prepare a compost for your bulbs, containing three parts of good peat soil, one part fresh loam; this with one part of old rotted pasture soil, and one part of coarse river sand is all you require. Mix these together, fill your pot to within four inches of the rim, place the bulbs at equal distance from each other, and do not fill up the pot to the top, leaving the crown of the bulb exposed. Your best time to plant will be from 10th November to 10th February. They should be protected and kept from cold. If you have not a greenhouse of your own some of your friends having one will let you use it. Let no water drop upon them. They can also be left in a light cellar where no frost can chill or blight them; let them have all the air they want. While in this state, as they are slowly forming rootlets, they require only a moderate supply of moisture. Let the soil in the pots be neither wet nor dry, but a medium between the two. As they begin to push the green shoots or young leaves they require more water. At this period these bulbs are sometimes troubled with an enemy called "green fly." Rout him out at once with the fumes of tobacco-smoke; he is no lover of tobacco, and will be sure "to get" as soon as you smoke him. OLLIPHANT QUILL.

THE SLEEP AND ODOR OF FLOWERS.—Sir John Lubbock, in speaking before the British Association concerning the fertilization of flowers by insects, said:—"Everybody, however, has observed that even in fine weather certain flowers close at particular hours. This habit of going to sleep is very curious. Why should flowers do so? In animals we can understand it; they are tired and require sleep to wake at seven and close soon after two, while the flowers do so and not others? Moreover, different flowers keep different hours. The daisy opens at sunrise and closes at sunset, whence its name daisy's eve. The dandelion (*Leontodon taraxacum*) opens at seven and closes at five. The *Arenaria rubra* is open from nine to three. The ear hawkweed (*Hieracium pilosella*) is said to wake at eight and go to sleep at two; the scarlet pimpernel (*Angelfish areolaris*) to wake at seven and close soon after two, while the *Trogon pratensis* opens at four in the morning and closes just before twelve, whence its English name 'John-go-to-bed-at-noon.' Farmer boys in some parts are said to regulate their dinner hour by it. Other flowers, on the contrary, open in the evening. Now it is obvious that flowers which are fertilized by night-flying insects would derive no advantage from being open by day; on the other hand, those which are fertilized by bees would gain nothing by being open at night—any, it would be a distinct disadvantage, because it would render them liable to be robbed of their honey and pollen by insects which are not capable of fertilizing them. He believed, then, that the closing of flowers had reference to the habits of insects. He observed also, in support of this, that wind-fertilized flowers never saw, that some of them were present in great numbers, and small emit their scent at particular hours. Thus the *Veris nativialis* and *Lycium respartina* smell in the evening, and the *Orchis bipinnata* is particularly sweet at night. He had been, he said, good humoredly accused of attacking the little busy bee, because he had attempted to show that it does not possess all the high qualities which have been popularly and politically ascribed to it; but if scientific observation has been made in the case of the bee, and the evidence which has been ascribed to bees, they have made known to us in the economy of the hive many various peculiarities which no poet had ever dreamt of, and having shown that bees and other insects have an importance as regards flowers which had been previously unsuspected. To these we owe the beauties of our garden, the sweetness of our fields. To them flowers owe their scent and color—nay, their very existence in some cases. Not only do they have their brilliant colors, the sweet scent and the honey of flowers being gradually developed by unconscious selection of insects, but the very arrangement of the colors, the circular bands and radiating lines, the form, size, and position of the petals, the arrangement of the stamens and pistil are all arranged with reference to the visits of insects, and in such a manner as to insure the grand object which under these circumstances is in view, in conclusion, he observed that while he had attempted to point out relations which exist between insects and some of our wild flowers, and the whole subject is one which will repay most careful attention, for, as Muller has very truly said, there is no single species the whole history of which is yet by any means thoroughly known to us."

TUBEROSE BULBS.—There are a few rules that the novice in these matters must bear in mind. Do not undertake to root the bulb with all the top on; do not cut it off too near the crown of the bulb. Either proves injurious. The first, because there is such a mass of green, succulent growth to wither up, and consequently to engender decay; and the latter because there will be great danger of destroying the germ in the centre. I have seen bulbs to all outward appearances sound and healthy, but when I examined this vital point, found it gone beyond recovery, and the bulb was necessarily worthless. My practice is to dig them up as soon as the first frost injures the leaves, cut them down to say three inches of the bulb, and then spread them thinly on a shutter, or what is better, a slatted frame, and place them in the sun or near fire heat, until every vestige of moisture has departed. It is really wonderful how much vitality there is in the leaves of this beautiful flower, for not unfrequently one has to wait for sev-

eral weeks before they are ready to store away. When once thoroughly dried, I simply place them in a box without any packing material whatever, and keep them in a warm and perfectly dry place. The cellar near a furnace will answer, provided there is no dampness in the air. It is a good plan to examine them carefully during the Winter to see if there is any moisture present, and if it is detected take them out at once, and again spread thinly over the top of a furnace or other surface, to remain until dry once more.

PRUNING AND TRAINING FRUIT TREES.—Our most successful pomologists agree that a standard tree in an orchard should have five or six feet of a clean, straight stem. Straightness can be perfectly obtained by keeping the young tree tied to a stake until it has acquired strength and firmness enough to support itself in a straight position. All shoots proceeding from the stem, below the first tier of branches forming the head, should be rubbed off with the hand while tender, as if allowed to grow they retard the development of the head and impair the form and habit of the tree. In forming the head of a young standard a vigorous upright root should be secured for a leader, and three or four others of the most vigorous for form branches or boughs. The right to the stem and the habit can be corrected by pinching off the ends of the branches, producing a more horizontal growth. At the present time, in the growing season, young trees will be pushing vigorously, and as a general thing will have made growth enough to enable the orchardist to perceive what form they are about to assume—whether the young branches are from the right place, and the right direction to reach the desired form. If they are not, they should be set right at once by rubbing off shoots that are not wanted, pinching the top off to retard such as are pushing too vigorously to the detriment of others. An equality of growth among the shoots intended for the main branches, or framework of the tree, should be maintained; and where a surplus of small branches in the interior are appearing, giving the tree a bushy or twiggy look, a sufficient number of them should be removed to allow the others to acquire a full and vigorous growth. The ordinary mode of proceeding is to allow the trees to grow as nature and circumstances may direct during the Summer, and in Winter or Spring correct by pruning, etc., any defects or deformities that may have arisen. This is not what we call good culture.—*New York Herald*.

RULES FOR CHOOSING POULTRY.—In the choice of poultry, the age of the bird is the chief point to be attended to. A young turkey has a smooth, black leg; in an old one the legs are rough and reddish. In domestic fowls, the combs and the legs are smooth when the bird is young; and rough when it is old. The bills and the feet of geese are yellow, and have few hairs upon them when the bird is young; but they are red if it be old. The feet of a goose are pliable when the bird is fresh killed; and dry and stiff when it has been some time killed. Geese are called green till they are two or three months old. Ducks should be chosen by the feet, which should be supple; and they should also have a plump and hard breast. The feet of a tame duck are yellowish—those of a wild one reddish. Pigeons should always be eaten while they are fresh; when they look flabby and discolored about the under part, they have been kept too long. The feet, like those of most other poultry, show the age of the bird; when the feet are yellow, when stiff, it is old. Tame pigeons are larger than wild pigeons. Partridges have yellow legs, and a dark colored bill when young. They are not in season till after the first of September.—*Knapack*.

THE EFFECT OF LIGHTNING ON TUBES.—The theory that the splitting of the trunk, and the lighting of the result of the sudden evaporation of the liquids contained within them has received much confirmation from experiments made by Osborn Reynolds, who succeeded in splitting small sticks of wood by passing the electric spark through them after they had been impregnated with water. He also burst small glass tubes, which were filled with water, although the same tubes, when empty, allowed the electric spark to jump through them without effect, destroying them. The most striking experiment made by him was upon a tube three eighths of an inch exterior and one eighth interior diameter, which could stand a pressure of at least 200 atmospheres to the square inch; this tube was fourteen inches long, and bent at a right angle. A very large electric flash being sent through the tube, it was split by the first discharge, and the pieces thrown to a distance of several feet. The inner diameter of the tube was, in fact, completely pulverized, as though it had been struck by a hammer. Reynolds estimates that the pressure must have been more than 1,000 atmospheres.

IS YOUR LAND POOR?—If so, it is because it lacks either phosphoric acid, potash, lime, or nitrogen, or perhaps all of these. The other six minerals supplied by plants as food are generally found in the soil in sufficient quantities to supply the plants, while the soil is generally lacking in those named above, and which are indispensable to their growth and vigor. And in proportion as you supply the deficient article to your poor land, so you add to the health and vigor of the plants, enabling them to draw a large proportion of their food from the air, and thereby increasing your crops nearly three to one.

A PINEY WOODS HOG.—Of all the woe-be-gone-looking animals, nothing, we think, can be compared to the hogs that are generally seen on the farms in Florida. They are neither alligator nor deer, but partake of the characteristics of both, with the snout of the former and the legs of the latter. Food is completely thrown away on these wretched beasts, and it requires years to bring fat enough on them to grease a gun barrel.—*Florida Agriculturist*.

A GENTLEMAN who lately visited Cape Breton, went to see a tree at Margaree which has obtained some notoriety on account of its great size, and is probably the largest moving specimen in the Province. In circumference, six feet from the ground, is twenty-four feet, four inches at a height of about twenty feet. It has three branches of six to nine feet circumference each. The branches overhang an area of about sixty feet diameter. This denizen is of the yellow birch species, and is situated in an alder swamp on the farm of Mr. Lauchlin McDonald.

FLORIDA LANDS.—Good land is selling for from one to five dollars per acre one mile back of Mandarin, Florida. This would be a good place for a hotel.

The Kennel.

DOG BREAKING.—No. 1.

ALL that is really necessary in the breaking of dogs is a thorough knowledge of what constitutes a first-class setter or pointer, and the manner in which they should work in the field, besides such a judgment of dogs as will enable the trainer to determine between the different dispositions and characters he has to deal with. Few can be handled precisely alike; some are timid and need encouragement, others are headstrong and want strictness and sometimes severity. An absolute command of temper should be observed by the instructor in his lessons to the beginner, that an unnecessary blow may not be given, for work done cheerfully and with a desire to serve and benefit the master, is a hundred fold better than service rendered by compulsion.

A puppy should never have but one teacher; no matter how close the methods of two trainers may be, he must learn *your role, your manner, your very look*; therefore, if you determine to break your dog, do it entirely yourself; do not stop half way and have it finished by another.

You may safely begin in-door or house-breaking your dog when he is six or seven months old, but often we find puppies so precocious that they may be readily taught at four; as with a liver and white puppy of the writer's, that retrieved in a business-like manner before he reached the age of five months, besides being perfect in charging by motion of the hand, and ready, had it not been for physical weakness, to be put into the field.

From the beginning attend to the feeding of your youngster yourself, and if possible, let all food be taken from your hands. This we advise that the puppy may the sooner look to you alone as his master, and attach himself to you solely; for we argue that a setter or pointer should by no means ever be loaned or hunted by others than his trainer, and advocate the breaking of all field dogs by the sportsman himself, if he has the patience and time to devote to it.

The check cord is a far greater assistant to the breaker than the whip, as the most unruly and headstrong dogs are sufficiently brought to submission by it, and at the same time it can be so applied as not to intimidate. We should bear in mind that a dog should not be corrected for disobedience, unless it is certain he knows his fault. Punishment is absolutely necessary at times, and that of the most severe description, with certain dispositions, but we must be first satisfied that the act for which correction is administered was committed with a full knowledge that it was wrong. Show us a cringing and supplicating dog on being called, and we will find his master with an ungovernable temper, unfit to train or manage a puppy. Such a dog has been unmercifully flogged, perhaps kicked, before he has been taught and made to understand his line of duty, and fearful of a repetition of the lash—for what he knows not—obeys the summons crouching and creeping. How we detest such an exhibition, pitying the servant and condemning the master!

A thoroughly broken dog should systematically range the field which he is hunting, and be staunch in his point when game is found, and back his companion, no matter how far distant he may be from him, as soon as his attention is called to the point; standing as it were by sight, charging at the report of the gun, or by verbal command, at all events not to break short and rush for the bird the moment it falls, but to retrieve only when so ordered.

We shall endeavor in a series of short articles to give the readers of the FOREST AND STREAM, who have never attempted the training of their own setters or pointers, simple plans of breaking which we have found successful.

CONDITION OF DOGS FOR THE SHOOTING SEASON.—It cannot be expected that hunting dogs of any description can be in condition to undergo the great labor called upon them to perform, when the shooting season first opens, without having gone through a systematic course of exercise that will harden them, or prepare them for the work. A dog that has had but little freedom for two or three months naturally becomes gross or soft, as it is called, and on being taken into the field may dash off in grand style, apparently as strong and vigorous as might be wished; but the first forenoon hunt soon tells on him, and by night he is completely fagged out. In the morning he is found with legs stiffened and sore, and although showing a desire to accompany you again, is often in no condition to be taken out. All setters and pointers for at least two weeks before the season opens should be allowed to run as much as possible, and if kept in cities where it is necessary to have them continually chained unless you are present, they must have at least two or three hours daily exercise in the fields or commons of the rural districts. They should be fed but once a day, and we recommend a regular hour in the evening as best, and the food ought to be of the most nourishing description. We have settled down finally, after trying everything else, to corn meal, finely ground, and scraps of meat thoroughly boiled together and properly seasoned, feeling satisfied we can give nothing more strengthening. The nearer the time approaches to the shooting season the oftener and more protracted the exercise should be, if possible, and you will find when you enter either the stubbles or the meadows, you will have dogs fit for work and plenty of it.

FOOT-SORENESS IN DOGS.—During the shooting season the feet of pointers and setters—especially pointers—often become sore and tender from continued ranging over short

cut stubbles and a stony country. To prevent this, and to remedy it, we would advise the sportsman to bathe the dog's feet twice a day for a few days before going into the field, with a solution of alum, say a piece the size of a walnut on a quart of common whiskey, adding to this an ounce of tannin. On returning from the day's work, if the dog appears at all lame, it will be best to examine his feet, and if they appear tender to the touch and do not contain a thorn, wash them thoroughly with the solution before he is put up for the night. It has the effect of greatly hardening the pads, when they have become soft from standing idle and want of exercise. We would also recommend a brisk rubbing of the limbs with plain whiskey after a hard day's hunt; such attention to your setter or pointer will add a great deal to his freshness in the morning.

DOGS AND PORPOISES.—Until reading the letters of your correspondents in the issue of 15th August, last, I always thought that of the few accomplishments dogs were not *au fait* at, fishing was one. Their communications, however, disabused my mind, and I find their evidence corroborated in a most strange and amusing manner in one of the Cape Coast daily newspapers for May. A gentleman, walking along the beach with a large Newfoundland dog, noticing a drove of porpoises pursuing a shoal of fish close in shore, encouraged his dog to venture out amongst the drove. The dog instantly started off, and (to use the words of the journal) "on reaching the porpoises he set up a terrible yelping, to the consternation of the sea-pigs, for dog-barking among the sea residents is an unusual thing. Carlo now plunged, first for one porpoise and then for another, and so excited the whole company that a grand charge was made, and Carlo was obliged to beat a retreat, which he did in great haste, followed by scores of the porpoises, barking, snorting, and tumbling about, evidently much delighted in putting the Newfoundland stranger to flight. The dog was chased close in shore, his pursuers only retiring after getting among the breakers. Upon an examination of Carlo after his novel venture, Mr. Carson (the owner) found that he had been severely lashed in the side, and had one ear partly bitten off. This, I believe, is the first instance on record of a dog going out to battle with the hosts of the sea."—*Land and Water.*

CURIOS ANECDOTE OF A DOG.—A recent number of *Le Petit Journal*, of Paris, is responsible for a dog story, the circumstances of which are somewhat as follows:—"Not long since a gentleman, while driving down the Avenue de Neuilly on a dark night, was suddenly stopped in his course by a man who asked him for the loan of one of his lights to search for some money which the latter had lost through a hole in his pocket, the amount being a considerable sum in gold. Instead, however, of complying with the man's request, the traveler called up a large Danish dog, and, after taking a coin which the man still had remaining in his pocket, and holding it to the dog's nose he told the animal to "go seek." The intelligent animal understood what was required, and immediately commenced his search for the missing coins, which he found, bringing them back one by one to his master, who handed them over to the rightful owner. He, of course, was in ecstasies, having just made a particular business by his employers with the money he had previously lost, and which he would probably never have got a sign of again had it not been for the extraordinary sagacity of the dog."

—The Montreal fox hounds have been lately having some good sport. On Saturday week they scored two kills in one day. The noble sport attracts plenty of voluntes, and many of the fair sex not only grace the field by their presence, but ride to the hunt on the boldest and most brilliant hunt is decidedly in the ascendant.—*Quebec Sportsman.*

The Horse and Course.

—On the fourth day of the Fall meeting of the American Jockey Club six races were closely contested. The first was a dash of a mile for all ages, with penalties and allowances; seven entered, viz., T. G. Moore's b. g. O'Neil, 3 years; Lawrence and G. Lorillard's b. c. Resolute, 4 years; John Coffee's br. f. Ida Wells, 3 years; John P. Chamberlin's b. c. Survivor, 4 years; P. Lorillard's b. c. Stanford, 4 years; Dugald S. Bannatyne's b. c. Audubon, 4 years; Hoaxer being second. The betting by the followers of the several stables was very exciting. James A. was the victor in 1:18½, Aristides being second, and Hyder Ali third.

The second event was a dash of a mile and a quarter for three-year-olds, with allowances and penalties. The entries were James Thompson's ch. f. Emma, Thomas G. Moore's b. g. O'Neil, John Coffee's b. f. Nettie Norton, and John P. Chamberlin's b. c. The Hoaxer. Won by Nettie Norton.

The third race was a dash of three quarters of a mile, for two-year-olds, which had eight entries; six started, viz., D. D. Withers' b. c. Athlete, Lawrence & Lorillard's br. f. Hyder Ali, H. P. McGrath's b. c. Aristides, Thomas Puryear's br. c. Leader, P. Lorillard's br. c. James A., and August Belmont's c. c. Babylon. Four out of the six starters were Leamington stables, and the betting by the followers of the several stables was very exciting. James A. was the victor in 1:18½, Aristides being second, and Hyder Ali third.

The fourth race was the most important of the day, being a mile and three quarters for all ages, three-year-olds to carry ninety pounds. For this there were seven entries, and five of them answered the judges' call, viz., M. A. Littell's b. c. Wildfire, W. W. Cottrell's br. h. Littleton, Lawrence & G. Lorillard's b. h. Shylcock, Thomas Puryear & Co.'s b. c. Grinstead, and P. Lorillard's b. c. Stanford. As Grinstead was the only three-year-old among the lot, he carried the light weight of ninety pounds, and the speed that he has lately shown tended to make him a great favorite. Grinstead led the field at the winning post in 3:10, Shylcock being second, Littleton third, Wildfire fourth, and Stanford fifth.

The fifth race was the Members' Cup, a piece of plate of the value of \$500, and \$250 in money, added to a sweepstakes of \$25 each, play or pay. Five were entered, but only three came to the post—L. A. Hitchcock's ch. c. Limestone, ridden by Mr. Clason; A. Belmont's g. h. Gray Planet, ridden by Mr. Purdy, and T. B. & W. R. Davis'

ch. h. Fadladden, with Mr. Glenson on his back. Limestone won in 2:03½ by a length, Fadladden second.

Concluding an excellent day's sport was a handicap steeple chase, which brought out four starters out of eight entries. These were A. H. Torrence's ch. g. Trouble, M. J. Tully's b. g. Vesuvius, M. A. Littell's gr. m. Mary Clark, and A. P. Green's b. m. Daylight. At the start Vesuvius took the lead, Daylight being second, Mary Clark third, and Trouble last. In these positions they remained until the first eight jumps. At the water jump in front of the grandstand Vesuvius was a length ahead of Daylight, and she six lengths ahead of Mary Clark, who was the same distance ahead of Trouble. The only change that occurred was at the hill, when Trouble took the third place from Mary Clark. The race at the finish was between Daylight, Trouble, and Mary Clark. Daylight was in the lead at the last hurdle, but fell and injured her jockey, giving Trouble the race, Mary Clark second, Vesuvius third.

—Last Saturday closed the Jerome Park Fall meeting, and the racing on that day was fully equal to the best of the previous days.

The first race of the day was a five handicap sweepstakes of \$30 each, one mile and five eighths, for which there were three starters, viz., Lawrence & G. Lorillard's b. h. Shylcock, five years; A. M. Burton's c. c. Jack Frost, four years, and John Coffee's b. f. Nettie Norton, three years. In the betting Shylcock was the favorite, and he won in 3:57.

The second event of the day was a dash of three quarters of a mile for two-year-old maidens, for which there were the following four starters, viz.: Wood Stringfield's br. c. Ravenna, P. Lorillard's ch. f. Springlet, D. D. Withers' imp. ch. c. Athlete, and J. W. Hunt Reynolds's ch. f. Aniella. Springlet was a heavy favorite, but the knowing ones this time came to grief, as the filly was somewhat fractious, and got a bad start. She showed a great turn of speed, however, and had she got away even with Aniella she could not have lost it. Aniella was the winner in 1:00.

The card furnished for the third event was a pur of \$500 for three-year-olds which have not won this year; there were four entries: F. G. Moore's b. g. O'Neil, D. Desmond's b. f. Mollie Darling, James Thompson's ch. f. Emma, and D. J. Bannatyne's ch. f. The Ghost. Emma won a well-contested race in 1:58½, distance 1½ miles.

The fourth event of the day was a handicap sweepstakes of \$30 each, one mile and an eighth, which brought out a field of seven starters, including J. W. Weldon's b. g. Kadil, five years; P. Lorillard's b. c. Stanford, four years; Lawrence & G. Lorillard's ch. c. Resolute, four years; John Coffee's br. c. B. F. Carver, four years, and b. f. Nettie Norton, three years; Thomas G. Moore's gr. h. London, five years, and D. D. Withers' b. c. Minstrel, four years. This was a good betting race, and notwithstanding that Kadil appeared for the first time in other colors than the favorite dark blue, he was the favorite, and well did he sustain his reputation, for he won in 2:04½, Resolute being second, London third and Carver fourth.

The fifth affair of the day was a dash of two miles and a half for all ages, three-year-olds to carry ninety pounds. This had the following three starters: J. W. Weldon's b. g. Kadil, four years; J. C. Whisper, four years; M. A. Littell's b. c. Wildfire, four years; and K. W. Sears' ch. c. Acrobat, three years. Of course Acrobat, with his light weight, was an immense favorite, and his running proved him to be the best colt on the turf, as he came in 4:34½, within half a second of the fastest time on record.

The meeting was brought to a close with a handicap hurdle race of a mile and three quarters over seven hurdles. There were five entries, and the following four came to the post: L. A. Hitchcock's ch. c. Limestone, A. H. Torrence's b. h. Moonstone, J. S. Cattanach's b. g. Impecunious, and Hugh Gaffney's b. g. Gaffney. The race was a remarkable one, as three of the four starters came to grief, ending in the serious injury of one of the jockeys. Limestone won. No time taken.

—The following are the winnings of the different stables that competed at the last meeting:

M. H. Sanford	\$3,040	T. B. & W. R. Davis	\$800
F. C. Sears	4,950	W. W. Cottrell	530
Governor Bowie	3,500	J. H. Weldon	500
John Hunter	3,550	W. H. Reynolds	500
P. Lorillard	3,000	James Thompson	500
Lawrence and G. Lorillard	2,000	A. Belmont	400
A. H. Torrence	2,000	L. A. Hitchcock	375
A. B. Lewis & Co.	2,000	M. C. McCormack	350
T. Puryear & Co.	1,450	W. H. Cottrell	300
A. H. Torrence	1,300	A. P. Green	300
J. W. Weldon	1,200	H. P. Barron	250
H. P. McGrath	900	R. W. Cameron	100
M. A. Littell	800	T. B. & W. R. Davis	100
J. W. Weldon	800	D. Desmond	100

—The Sea View Park Association, New Dorp, Staten Island, opened their half mile track on the 15th inst. The first trot, for a purse of \$500, brought out four competitors, but Belle of Richmond distanced all in the first heat in 2:44½.

The second trot, for a purse of \$600, for horses that never beat three minutes, brought seven to the stand, but the race fell to Waterston's "Boy," he winning all but the first heat. Best time, 2:36½.

—The extra day of the opening meeting at the Sea View Park Association, at New Dorp, Staten Island, last Saturday, was well attended, although the programme included only the unfinished race from Wednesday and the \$1,000 purse for the 2:30 class. In addition to these a scrub race was arranged, and sweepstakes of \$300, for which four heats were trotted, each being very closely contested by Sam and General Butler. The final heat in the unfinished race was won easily by Sweetmeat. For the \$1,000 purse M. A. Whitten was the favorite, and after coming a third in the first heat won the race in three straight heats.

—At Goshen Park, last Thursday, two trotting contests came off, the first being between horses that had never trotted better than 2:50, and the other by horses that had never beaten 2:28. There were five starters in the first, consisting of M. Roden's b. g. Rutledge, A. J. Feek's b. g. George F. Smith, J. H. Harbeck Jr.'s, br. g. Windemere, H. Casey's br. m. Agnes and Edwin Thorne's b. s. Will Out. Rutledge was the favorite, and won the race by winning the first, third and fourth heats in capital time for a green horse, this being his second appearance on any track. Best time, 2:33½.

The second trot had four starters, viz., Wm. H. Simmons' b. m. Bella, John S. Baker's b. g. Tom Keeler, Ben. Wilson's br. m. Carrie and H. Casey's blk. m. Lady Byron. Tom Keeler was the favorite before the start, but Bella

won the race in three straight heats, Tom Keeler second, Carrie third prize and Lady Byron fourth. Best time, 2:28.4.

—The closing day at Goshen Park was a delightful one, and the attendance was good. There were two races, the first being between horses that had never beaten 2:21. There were six starters in the first race and five in the second. The starters in the 3:35 trot were the ch. g. Bonner, b. m. Lady Annie, b. m. Lottie, blk. g. Black Crook, ch. g. Mountaineer and b. m. Lady Angie. Bonner was a great favorite over the field. He won the race very easily, taking the second, third and fourth heats. Best time, 2:32.4. The starters for the 2:21 trot were the gr. g. Hopeful, ch. g. Thomas L. Young, b. m. Huntress, b. g. Kansas Chief and gr. g. Tanner Boy. Hopeful was the favorite, taking the second, third and fourth heats, the last one being the fastest heat ever trotted on the Goshen Park track. Best time, 2:26.

—A "harness race," for a purse of \$1,000; \$700 to the first and \$300 to the second; mile heats, best three in five, came off at Deerfoot Park, Long Island, last Monday, between the trotter American Girl and the pacing gelding Copperbottom. In the contest the mare was the favorite before the start at 25 to 10, and after being beaten the first heat she was still the favorite at the same amount of odds. Copperbottom broke up in the second heat, and the mare beat him easily, and became a greater favorite than before, selling for 25 to 8. American Girl won the two subsequent heats quite easily, the pacer being evidently out of fix, as he seemed inclined to break when called on for speed.

—The match race for \$5,000 (mile heats, best three in five, in harness), between the stallions Jay Gould and Bashaw, Jr., took place at Baltimore on the 10th ult., over Bishop's Herring Run Course. The attendance of spectators was large, over 3,000 persons being present. At twenty minutes to four o'clock the horses were sent off to a good start, Jay Gould having the inside. Bashaw, Jr., broke down very soon after starting, and pulled up at the end of the heat, very lame, whereupon the judges allowed him to be withdrawn. The following is the time: Half mile, 1:15; mile, 2:40. The victor trotted a mile after this in 2:19, which is the best time ever made by a stallion.

—The races at Mutchmore Park, Canada, on the 16th, were largely attended. For the hurdle race, two miles and a half, the starters were Kelso, Helen Bennet, Jack on the Green, and Mitchell. The latter threw his rider, giving the lead to Kelso, who won the race. Jack on the Green coming in second, and Helen Bennet third. Time, 6:25. The second race was for the "Princess's Purse" of \$250; mile heats. Minnie won in two straight heats, Helen Bennet second, and Sarah G. third. Time—1:48.4, 1:49. The Moor threw his rider (Cooper), and it is feared he is fatally injured.

The match race between Beatrice and Clip, twice around the steeplechase course, was won easily by the former.

The meeting closed with a mile dash, which was won by Ottava Belle, Colonel B. finishing second, and Hailstone third.

—The fair at Raleigh, N. C., on the 16th inst., was a grand success, the visitors numbering at least 13,000. In the racing Billy Bowlegs won the first race in 1:52, beating Piney Woods. The hurdle race was won by Joe Davis in 1:55, defeating Jack Rouillac. The most exciting race of the day was between Mary Long, Notre Dame and Billy Bowlegs, mile heats, and was won by Mary Long in two straight heats. Time—1:52 and 1:51.4.

—In the races at New Haven, on the 15th inst., T. S. Foster's Harry Spanker won the 2:35 race in three straight heats, H. Gilbert's Harry Gilbert second, and P. B. Morton's Jimmy Morton third. Time—2:38.4, 2:37, 2:40.

The open to all special purse of \$2,000 was contested by American Girl and the pacer Copperbottom. The Girl won in three straight heats. Time—2:28.4, 2:37.4, 2:28.4.

—The October races at Beacon Park closed on the 16th. There was but one regular race on the card—that for a purse for \$600, for horses that had never beaten 2:20. Of seven entries, five started, and the race was won by Flora Belle in three straight heats. Best time, 2:29.

—The Carleton Park races, at Canada, promise to be very interesting, as steeple-chasing is one of the most prominent features.

—Neilson won the fifteen mile trot at Montreal, the other day, making the distance in 46:54.

Rational Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other outdoor Clubs need kindly send their contributions not later than Monday in each week.

—The Peninsular Cricket Club of Detroit lately defeated the St. Louis club at Chicago by a score of 147 to 94—85 and 59 to 53 and 36. On the part of St. Louis, double figures were scored by Dile, Muller and Sharp, and by Rosertwaite, Culvert, Irvine, Bamford and Armstrong, of Detroit. They then played against a combined eleven of St. Louis and Chicago, and in the deciding innings won by 92 to 39, Culvert's 26 being the best score, Edgar Bamford and Hirding also scoring double figures. White took the majority of wickets on the part of Chicago.

—The Bostons last week went to Baltimore and defeated the Baltimoreans of that city three successive games by the respective scores of 7 to 4, 14 to 7, and 15 to 2. The Baltimoreans distanced immediately afterwards, and the Bostons are much chagrined to find that none of their victories over the Baltimoreans has proved less than a costly one, as they have not played them since June 1, and it only needed a single game, and one with the Atlantics to have made the Baltimore record legal.

—The Baltimore club were disbanded Oct. 15, and their 47 games in the championship arena this season count for nothing, inasmuch as they had failed to play their quotas of five games with the Atlantics and Athletic clubs. They only had one each to play to complete their record, so that their games would count, and these were due them in Baltimore by the two clubs above named. By this disbandment the Bostons lose 9 won games, the Chicagos 9 and the Mutuals 8. The result will be to materially change the championship record, the Chicagos going from fourth to first position, while the Athletics are but four games behind the Mutuals for second place.

—The worst defeat sustained by the Mutual club since last July was that they received at the hands of the Atlantics at Brooklyn on Oct. 17th in their ninth game, a defeat which the Atlantics won by the totals of 9 to 3 of scored runs and 9 to 0 of earned runs, they getting 14 base hits to the Mutuals 5 only. Indeed, but for two passed balls by Fleet in the first innings and a bad miff by Sweeney in the fourth, the Mutuals would have been handsomely "Chicagoed."

—The transfer process of players from one club to another will commence in November next. Several of the club managers have wisely retained men whom they have found to serve them faithfully. In this respect the retention of the whole of the Boston nine speaks volumes in favor of their players. Of the original nine of 1871 six have been retained in the club team each season. The nine for 1873, re-engaged, will be White, Spalding, O'Rourke, Barnes, Shaffer, George Wright, Leonard, H. Wright, and McVey.

—The new professional of St. Louis will be very strong in the individual strength of its players, but the element of harmony has not been duly considered, judging from some of the selections made. Bradley and Miller, of the Eastons, have been secured as pitcher and catcher, and Pike as one of the out-fielders; Dehman is to be their first baseman, and Cuthbert their left-fielder. Messrs. Bishop and Fowle, it is said, are opposed to the clubs playing matches on Sunday. This speaks well for the character of the new organization.

—It is said that the Hartforders have arranged to have Cummings for their pitcher and Higham as catcher, with Carey at second base, Palmer short-stop, Remsen at center-field, and Burdock at third base. The latter is the man to Captain the nine if they fail to secure Ferguson.

—The many friends of the veteran Peter O'Brien will be relieved to learn that the sad occurrence of his death was the result of accident, and not suicide, as erroneously reported. Open-hearted, enthusiastic and upright, he was a model of integrity for every ball player to copy from.

—On October 7th, Pittsfield was the scene of an interesting contest between the College nines of Amherst and Williams, the result of which was a signal victory for the Amherst nine by 21 to 7 in a full game. Record led at the bat on the winning side and Ogden on the part of Williams. The second nine of both sides was very good, Storke's catching being noteworthy.

—In the game of base ball played at Prospect Park between the "Tribune" and "Wild Oats" nines, the former won by a score of 18 to 13. The "Wild Oats" nine challenge the "Tribune" nine to play another game, to be played by their (the Tribune's) own nine, the trophy to be a ball.

—The Hartforders will retain only Mills, Tippen and Brady of their nine of 1874.

—The Athletics retain Clapp, McBride—he could not play under any other colors—Anson and Sutton.

—The Chicagoers retain Malone, Zettlin, Glenn, Hines and Peters.

—The Mutuals retain Mathews and Start.

—A society formed this year for the purpose of increasing the interest in athletic sports at Harvard College, was formally organized last week. Contests have been decided upon which will occur on Jarvis Field at three o'clock Friday afternoon, Oct. 23. These contests will be as follows:—One hundred yards running race; high jump; one mile running race; running low jump; hurdle race of 120 yards over ten hurdles; throwing base ball; two miles running race; consolation race of one-half mile; three-legged race of three and three miles walking race. Gen. F. W. Lister has made an offer of two silver cups to be contested for in the spring races. One of the contests for the cups must be a high jump. The other is unrestricted.

—The Toronto foot races came off on last week on the grounds of the Toronto Cricket Club. In the 100 yard race, Burns was the successful competitor. In the 440 yards race the starters were reduced in the last heat to two, Lea and Jacobs, the former taking first prize. For the Challenge Cup, there were only three contestants, Tolman of the Shamrock Lacrosse Club, and two Indians. Quartz and Eastlake; this race was easily won by the latter. Fastest time, 5 min. 4 sec., made during the first heat.

—The foot ball match at Dartmouth College last Friday between the Seniors and Sophomores on one side, and the Juniors and Freshmen on the other, resulted in a victory for the Juniors and Freshmen, they beating five out of the six games. The contest was the most exciting that has happened for a long time.

—In the walk between Edward Mullen and Richard Wallace, at Yonkers, recently, Mullen won the first heat, Wallace the second and third, and Mullen the fourth and fifth. Twenty-nine circuits of the half mile a minute. Both men walked well. The best time was seven minutes, the longest time eight minutes and ten seconds.

—The foot ball match, Old Countrymen vs. Canadians, came off on last week on the grounds of the Toronto Lacrosse Club. After a close contest the game was decided in favor of the Old Country team, they making three touch-downs, neither side being able to obtain a goal.

—The Emperor William, we hear, has ordered in England ten million rounds of cartridges. This is doubtless owing to the well-founded rumor that Weston was going to Berlin to attempt a walk of 365,000 miles in 365 days.—*Danbury News.*

—A closely contested lacrosse match was played on the 14th ult. at Orillia, Canada, between the Collingwood and Orillia clubs, for the championship of the North and set of silk flags, resulting in a victory for the latter club.

—The championship lacrosse match on Thursday last, between the Shamrocks and Montreals, resulted in favor of the former club in three straight games.

—The Canadian Curling clubs are organizing for the Winter.

—Boston is organizing foot clubs.

—In the midst of a dense forest near Fort Madison, Ia., are a large number of apple trees, which recent developments have shown were planted between 1795 and 1798 by one of the young braves of the Black Hawk tribe.

Answers To Correspondents.

T. W. E., Woburn, Mass.—We know nothing of the party referred to.

G. E. C. Meirkirch.—Have not seen the paper you refer to, so cannot answer you.

F. B. H., Dover Station, Mich.—Your dog is good for nothing for sporting purposes, she being evidently a mongrel.

G. A. B., West Quincy.—Can you tell me of any one near Boston that I could get to train a young pointer pup? Also where, near Boston, can I get a few day's shooting? Ans. We can only refer you to our Boston agent, C. F. Penno, P. O. box 407.

S. D. S.—Please inform me whether it hurts a muzzle loader shot can to let it cool, and without cleaning after having shot it, say thirty or forty times, that is without a load in it? Ans. If not allowed to stand too long, No. Better, however, clean it as soon as possible after use.

F. S., Bella.—You state in this week's issue that Captain Bogardus uses five drachms powder and one and one-quarter oz. shot. I would like to know what shell he uses, as the ordinary one will not hold that charge? Ans. Will Captain Bogardus answer this?

J. H. P. D., Mystic River.—Would you please answer through your correspondent's column where I can get a good Newfoundland pup shot at 25 weeks—without the price of such a dog? Ans. We do not know; some of our numerous correspondents will undoubtedly give you the needed information.

A. B., Philadelphia.—Please inform me through the columns of your paper what will cure my dog of constipation, and you will relieve an anxious reader? Ans. Epsom salts or castor oil, or the following:—Barbadoes aloes, 10 to 15 grains; powdered jalap, 5 grains; ginger, 2 or 3 grains; soap, 10 grains; mix into one bolus for a large dog, or divide into two for small ones.

W. S. Y., Communipaw, N. J.—Will you please inform me which are the best sporting materials manufactured, such as powder, shot, cans, flasks, pomches, wads, etc., and if possible the best (and most reasonable) place I can procure them in the vicinity of New York? Ans. There are several standard brands, and each has its favorites. We cannot specify who sells them cheapest.

W. McN., City.—Where can I get the nearest trout fishing, also lake bass fishing, in this State from September 15 to March 15, under penalty of \$25. Most of the fresh water lakes, we believe, offer fair bass fishing. The Bronx is too much fished to afford much sport to the angler.

OTIS BROOK, New York.—Being out of work and without means to live in the city all winter, do you think it would be advisable to take a tramp into some part of the country where there is plenty of game, and camp out? If you do, what part of the country would be best? I know something of the Adirondacks, have done the Adirondacks and other places of note when in better circumstances? Ans. Go to Alaska, or join Weston on his tramps.

F. J. P., Palestine, Ill.—I notice in No. 8, Vol. 3, FOREST AND STREAM, under head of Answers to Correspondents, that you recommended for quail shooting 4 drachms of powder and 14 oz. shot; for ducks, 4 drachms powder and 14 oz. shot. Will you please state in your next number whether the powder named is by weight or by measure? Ans. By measure, as indicated on most powder dasks.

C. M. C., San Francisco, Cal.—What is the best thing to wear for marsh shooting? Our rubber stockings and waterproof boots are too heavy? Ans. If the water on the marshes is not more than three or four inches deep, Gault's meacans will suit; if the water is deeper, we know nothing better than Hodgson & Co.'s troutling pants or fishing stockings. The address is 102 Maiden Lane, N. Y.

J. S. R.—What is the most killing charge for a 12 bore Remington shot gun for medium sized birds? Ans. One and one-eighth oz. shot, three drachms powder. What quantity of powder and shot would be sufficient for one month's camping out in Northern Pennsylvania, for one person, using a double barrel Remington? That depends too much on the shooter's industry and marksmanship to be answered definitely. Always take enough.

W. H. S., Stafford Springs, Conn.—1. Is there any print in print that will tell me how to break a cocker spaniel? 2. How can I exterminate flies on my dog? Ans. 1. Get Stonehouse. 2. Mix soft soap with as much carbonate of soda as will make it into a thick paste, rub this well into the roots of the hair all over the animal's body, adding a little hot water, so as to saturate the skin. Let this ointment remain on for half an hour, then put the dog into a warm bath for ten minutes, letting him sneeze, occasionally dicking his head under. Wash the soap out and dry him before the fire. This remedy will prove thoroughly effective.

H. R. J., Philadelphia.—Will you please tell me in your Answers to Correspondents whether you can get me a copy of J. P. Girard's "Birds of Long Island," and what the price would be? I am a poultry dealer, and I am a general reader in general reader in their hands and as I am a dealer, would the one now advertised in your columns by Prof. Baird, Brewer & Bidgway be preferable to any other of earlier date? Ans. The price of Girard's book is \$2; we can send it. Prof. Baird's book is considered the latest and best authority.

J. E. H., Philadelphia.—Can you inform me in regard to the best time for duck shooting on the Carolina coast? Is the early November shooting the best and general season for the four or five months, peaking out at that season of the year? Do they shoot from points principally, or from sink-boats? Ans. Duck shooting is good through November and the entire Winter. Goose shooting depends entirely upon the state of the season north of the Carolinas, as the birds arrive in November and stay on the bays until very cold weather drives them South. Should you have the best. Snipe shooting is best after middle of the month, and in December. All methods are practiced in foot shooting there; shooting from points and sink-box hides; few from sink-boats, many paddle on them.

P. E. B., City.—Can you tell me how through your columns if you think it would pay me to go down to Shinnecock Bay for one day (Thanksgiving Day)? If it would pay me, what would it cost? Can you recommend to me a good house to stay at, at good grounds, and also a good bayman? If you can let me know in next week's number of your interesting paper you will confer a favor? That is deemed an excellent place for gunning, as the brants, black duck and broadbill are numerous there. We do not know what bayman to recommend. Cost of day's sport very trifling.

Munk Barent, City.—1. Is there a sportsman's club or public resort in the city where game, fish and fowl are served in their season? 2d. Where, in Westernmost country, can I get a fair day's shooting of quail or partridge? 3d. What is the best location around New York, say within fifty miles, in which to buy a farm with a view to good upland shooting, and also good fishing? Ans. 1. We know of none save the various restaurants. 2. Good shooting is to be had at good grounds, and also a good bayman? If you can let me know in next week's number of your interesting paper you will confer a favor? That is deemed an excellent place for gunning, as the brants, black duck and broadbill are numerous there. We do not know what bayman to recommend. Cost of day's sport very trifling.

VARIANTS INQUIRE.—Where can a good day's shooting be had within a few hours' ride of New York? There is good quail shooting at Lake-had (L. I. R. R.), about fifty miles from New York. Inquire for George Taylor. For duck shooting, try Fort Jefferson, L. I. (North Side, R. R.) about sixty miles. Cloud Creek will furnish shots. Good woodcock shooting on Thimble Island. Take New Haven Railroad to Stony Creek; boats plenty. There is good quail shooting near Babylon, on the South Side Railroad, L. I., and at Mattauck, on the Central L. I. Road. Good accommodations and all necessary assistants to be had. Shinnecock Bay is good shooting. The cost of a trip to any of these points will be only a few dollars. There are many other desirable localities, but these are such as have been favorably mentioned by our friends who have recently tried them.

A WEEKLY JOURNAL,

DEVOTED TO FISH AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company.

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
POST OFFICE BOX 3382,
125 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 22 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 22, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, October 23d—Trotting at Massillon, Ohio, Poughkeepsie, N. Y., Paterson, N. J., Danville, N. Y., Denver, Col., Allegheny Valley, W. Va., and Penn. Cumberland Fair.

SATURDAY, October 24th—Trotting at Denver, Colorado.

MONDAY, October 26th—Racing at Fleetwood Park and Paterson, New Jersey.

TUESDAY, October 27th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, and Prospect Park, N. Y.

WEDNESDAY, October 28th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, Prospect Park, N. Y.

THURSDAY, October 30th—Trotting at Fort Wayne, Ind., Wooster, Ohio, Rinebeck, N. Y., Great Falls, N. H., Toledo, Ohio, Prospect Park, N. Y.

HUNT OF THE IRISH TEAM.

The following special dispatch shows how and where the Irish riflemen have been enjoying themselves in the West. We are pleased to note that our distinguished visitors have been treated with the courtesy and hospitality so characteristic of our Western gentlemen:—

HANNIBAL, Mo., October 15th, 1874.

Irish riflemen returned last night from week's hunt in Kansas and Indian Territory, bringing deer antlers and other trophies. Party included Rigby, Milner, Johnson, Kelly, and Bagnall of the team, Chas. Hallock, editor FOREST AND STREAM, New York, G. W. Dorman, of this city, and E. W. Hope, of La Grange, with servant, and six setters and hounds. Express themselves much gratified with success, and surprised at richness and immensity of country. Some 300 chickens and quail were brought to bag, although long continued drouth made game comparatively scarce, and water for camp use difficult to find. At Schell City, however, and all along the line of Missouri, Kansas, and Texas Railway, chickens and quail were very abundant. Party drove about twenty miles into Indian Territory, where the Indians and half breeds treated them with courtesy, loaned dogs, &c.

Officers of Toledo, Wabash, and Western Railway, and of Missouri, Kansas, and Texas Railway, passed party free over their lines, and contributed in every possible way to pleasure and comfort.

Whole trip was carried out according to programme of Messrs. Hallock and Dorman, whose efforts were seconded everywhere by officials, landlords and private parties.

Party go to St. Louis to-night. II.

AN INTERESTING MISSION.

PROF. BAIRD, one of the most celebrated naturalists of the present age, and the United States Commissioner of Fisheries, will send one of his ablest assistants to the Pacific Coast next year to study the salmonidae of that region, with the primary view of classifying them specifically and noting the differences between them and their Eastern congeners. In no portion of the world are there so many varieties of this family as in Oregon and Washington Territory, but how far they differ from each other, and how much each variety is entitled to be elevated to the dignity of a species, is a matter yet undecided, as no special report has been made upon them since that of Suckley and Cooper was published in 1856-7. The belief among learned ichthyologists is that the classification made by these gentlemen is somewhat cumbersome, and that they have made a distinct species of what is really but a variety of the same species, the change in appearance being the effect of seasonal and sexual causes. If that is the case, the report of Prof. Baird will be looked for with much interest by naturalists, for they expect that he will treat his subject with the careful study and thorough analysis which are so essentially characteristic of him. The grounds for supposing that the number of distinct species in those waters has been made entirely too large is well founded, as it is deduced from experiment and observation. One instance of this is the change noted in the salmon (*S. quinnat*) placed in the ponds at Bucksport, Me. These had no means of becoming mingled with other varieties, yet some caught in the Fall differed materially in outline from those captured in the Spring; for, instead of the ordinary long and pointed head which they possessed in the latter period, they had the hook nose, which is the most marked peculiarity of the *Salmo souleii*, and even the flesh assumed a whitish hue. The inference to be drawn from this is, that the same species undergoes a decided metamorphosis in different seasons, that, therefore, such a change does not make a specific difference, and, as a sequence, that owing to want of careful study and observation, seasonal or sexual transformations have caused the same species to be classified into two distinct species, thus rendering our nomenclature cumbersome and our classification incorrect.

The rectification of this error is in itself quite important to science, but the mission will even have a higher result than this, as it will, undoubtedly, attempt to solve the cause for the destruction of so many millions of the salmon of that region during and after the spawning season, and the extent to which the fisheries can be utilized for commercial purposes.

Prof. Baird may even make a thorough examination of the entire ichthy fauna of the Pacific Coast, and, if so, he will, we doubt not, add some most interesting information to our present knowledge of the fish of that region. No thorough examination has been made of the fishes of the Pacific Ocean, for, although Richardson made an excellent collection, yet he did not by any means secure all indigenous to its waters. It is almost incumbent upon our Government to complete the work it commenced several years ago, in order that the treasures of the Pacific waters may be made known, so that they may be worked into commercial products, and our country thereby enriched.

AMERICA vs. EUROPE.

ONE of our English exchanges suggests that the annual winners of the Elcho Shield, the great honor badge of Wimbledon, meet our American riflemen in order to test the marksmanship of both teams, and the accuracy of the rifles used. It does not specify that if our men should win they would be entitled to the shield, nor refer to the conditions of the match, so we cannot consider that proposition until these matters are defined. It believes that some Americans are equal to the best English "cracks" at long range shooting. This is a sage conclusion to arrive at after the last match, when the Americans and their competitors made the highest score ever known in rifle contests. The fact of their being equal to any riflemen in the world is self-evident; so that matter being decided, renders all further reference to it unnecessary. We should like to see an international contest on a large scale, and would desire nothing better than to behold all the best riflemen in Europe, whether from the rocky Tyrols, the heathlands of Scotland, the sunny vales of France, the green fields of Ireland, or the "tight little island" itself, meet our riflemen in friendly competition at any central locality, and there test their nerve and skill. If such a match were undertaken, it would set at rest all mental reserves as to which men and rifles are the best, and, with all due allowance for the skill of the others, we would have little fear of our riflemen coming out second.

A series of international matches between picked teams from any of the European nations and our own men would undoubtedly receive warm support from the public, as they would foster a most useful and important modern accomplishment, and arouse an emulation for supremacy between the different nations that would be enthusiastic in the highest degree.

If these matches were inaugurated, a challenge cup or shield, with appropriate devices, and of sufficient value to render it an object worth competing for, could be bought, each "team" or nation contributing a certain amount towards its purchase, and by this means making it a perpetual challenge badge.

If this subject were once broached by those who have

the power to organize such matters, the probability is that it would be warmly received in the United Kingdom at least, as that undoubtedly boasts of the most skillful marksmen in Europe. If a team of the best shots in Europe were organized for competition with an "All America," we would not fear the result, so those who so niggardly admit the success of our riflemen, if they have any interest in the matter, can now set this suggestion rolling, and if they can manage to infuse courage enough into their riflemen to act upon it, the Americans will, we think, not hesitate to go more than half way to meet them. Let the next contest be between an "All Europe" and an "All America," or between the best picked team in the United Kingdom and our men, and we can then decide which nation can claim superiority as riflemen and as manufacturers of accurate weapons.

THREE BARRELED SHOT GUN.

THE three barreled shot gun, mentioned in a late issue of the FOREST AND STREAM as being invented recently, is, it seems, after all, a rather ancient affair, it having been used in this city over forty years ago, having been introduced by an enterprising firm in Alsace. The first one in this city was used by Mr. Michael Schreyer, a native of Alsace, who had become acquainted with the weapon in his own country. He found it sadly deficient in all the elements of a good fire arm, so discarded it promptly for one more effective. This old gentleman still resides in this city, and takes much interest in all matters appertaining to *fusils de chasse*.

We have before us a patent or circular issued by the Brion Brothers, of Wissemburg, in 1834, in which they describe their celebrated new invention with all the pompous detail of the olden times. A cut of the gun decorates the circular, and this shows the old weapon to have been supplied with a small bayonet, cleaning apparatus, and other paraphernalia supposed to be necessary in the chase or in keeping the weapon clean. The third barrel occupies the upper surface of the other two; and from the way it sets one would suppose that accuracy would be the exception and not the rule with it. Modern improvements, however, may remedy this defect, so three barreled shot guns may become as common as our ordinary two barreled guns.

LONG RANGE SHOOTING.

THE month of September was a busy one among the volunteers and rifle clubs of England, Ireland, and Scotland, and, judging from their scores, we should say that our American riflemen are by far the best shots. The best long range shooting ever noted was done by Dr. Barnett, of the Ulster (Ireland) club, who made eight bullets out of ten shots, at a distance of 1,100 yards. This is most remarkable work, and if it is not an exceptional case, the doctor must be entitled to premier championship at that distance. The following scores were made by the two clubs competing for the Irish Challenge Shield:—

Dublin Shooting Club Team—1,000 yards, Twenty Shots.

	Points
J. K. Milner.....	72
Edward Johnson.....	67
W. Rigby.....	63
W. Waterhouse.....	59
	—261

	1,100 Yards.
J. K. Milner.....	65
Edward Johnson.....	64
W. Rigby.....	59
W. Waterhouse.....	59
	—249

Grand total.....512

Ulster Rifle Association Team—1,000 Yards.

	Points
J. McKenna.....	67
Dr. Barnett.....	64
H. Fulton.....	60
William Steele.....	54
	—245

	1,100 Yards.
J. McKenna.....	67
Dr. Barnett.....	62
H. Fulton.....	63
William Steele.....	49
	—230

Grand total.....485

The Edinburgh Long Range Rifle Club, which contains the best shots in Scotland, and notably one of the winners of the Wimbledon badges, held their match recently, and their best men made the following score:—

	800 Yds.	900 Yds.	1,000 Yds.	Total.
A. Menzies.....	24	31	32	87
A. Logan.....	30	33	19	82
E. Millidge.....	27	33	21	81

We have introduced these scores to show what the European riflemen can do, and to prove therefrom that none of their clubs have made as good shooting as our Amateur Club, and that those who so ably sustained the reputation of our riflemen lately need fear to meet no body of men.

A HEGIRA OF GAME.—Our advices from Michigan specify that bears and squirrels were never before known to be so plentiful as they are at the present time. The former are even visiting the towns on a tour of inspection, and three of them were killed in one town last week. A Grand Rapids correspondent states that swarms of squirrels passed through that way last week, and that they are now followed by the *urus* family, the dam and cubs generally keeping together. The "oldest inhabitant" cannot account for this hegin; so many sage heads are predicting certain calamities in store for that region. We should be pleased if some of our correspondents would note the movements of the animals, their course and mode of procedure, as such matters will be interesting to our readers, and we may be able to deduce therefrom some facts in natural history.

A VALUABLE JOURNAL.—The FOREST AND STREAM has been the recipient of several compliments from exchanges throughout the country for the thoroughness of its Creedmoor reports, and the energy displayed in securing plates showing the shooting of both teams in the international rifle match. It is pleasant to receive these tributes, and to be reminded so pleasantly, and in such varied forms, of the good work of this journal in elevating the noble pursuit of the chase and the pleasures of angling to the high standard which they should occupy, and proving that elegant pastimes are always the accompaniments of refined and cultivated tastes. As it is the aim of the FOREST AND STREAM to extract the higher pastimes from any association with the low and coarse, with which they are often identified, we feel pleased to learn that its work has been recognized, and that it fills a journalistic niche to which our most cultivated ladies and gentlemen can go for exhilarating mental food. It shall ever be the aim of this journal to cater only to the pure in sentiment, for to such do we look for support and encouragement. We shall try to keep the lead in all topics appertaining to our sphere; and to do this is easy to us, as we have as contributors the leading naturalists of this country, and several eminent men in Europe.

As a work of reference on all current events in field literature, rifle practice, and kindred subjects, the FOREST AND STREAM will be found invaluable, as all such matters are treated of in a concise yet comprehensive manner. That this characteristic is appreciated is evident from the large number of orders sent us for the issue containing the Creedmoor matches. This interest in the welfare of the rifle, by the public, we shall try to reciprocate by making it worthy of them and its own mission.

PERSONAL.—We received a visit this week from Messrs. Dougal and Gillmore, two gentlemen well known in the sporting world of England and America. The former is a member of one of the most celebrated gun manufacturing establishments in England, and his companion is the author of several highly interesting works on field sports in the United States and Europe. Mr. Dougal returns to London on the next steamer, and Captain Gillmore goes to Dakota for a hunt.

Sporting News from Abroad.

THE AUTUMN FIELD TRIALS.

[FROM OUR SPECIAL ENGLISH CORRESPONDENT.]

WE have only had one trial in the field for pointers, setters and retrievers ("this Fall," and the one in point took place in Lincolnshire on the estate of the Marquis of Bristol. The rules used were a new code furnished by the Kennel Club, and announce a new era in the sport. For the information and criticism of American sportsmen I give them at length, and I will proceed to show how they were applied last week:—

SCALE OF POINTS.

1. The number of points to decide a trial shall not be less than twenty-five; it may, however, be more than this number, but in this case the number must be specified in the conditions of the stake. As soon as the twenty-five (or more) points have been made, including the good and bad points made by both dogs, the dogs shall be taken up, and the dog which has the most good points, or the fewest bad ones, after deducting his bad or good points, as the case may be, wins.

2. Every point at game to count four, a natural back two, and if drawn to the other dog or dropped, one only.

3. If a dog rushes right in to his game, he loses four; but if he finds it first, points, and then rushes in, he gains nothing by the two, and loses two for the flush.

4. A dog seeing the point and refusing to back, loses (two), and if he rushes into his opponent's point he loses four if he points and the birds do not rise, and six if he flushes them.

5. A dog not dropping the game loses one, but it does not otherwise detract from the merit of a find, and in the same way he can lose one for not dropping to shot, but he does not lose one for each fault, providing it is not dropping to wing or shot. If, however, he runs in the moment the birds are on the wing or the gun is fired, he loses all the merits of the find, one for not dropping, four for rushing in, and is out of the field. He is then to be chased for the next find. Hares or rabbits to count the same as feather, both as regards merits and faults, except in cases of flushing, which are not counted.

6. Every false point which the dog does not discover to be false, and move on without direction from his master, shall count two demerits.

7. Except in the case of pointing and running up birds, every number allotted as penalty shall be doubled on repetition of the fault, and the last number given for that fault, shall, on every repetition of it, be still further doubled.

8. Whenever the dogs may do after the settled number of points are obtained shall not count.

9. In case both dogs are found equal, the judges shall (unless the owners come to some agreement to draw one of the dogs) select a further number of points to be obtained by the two; the number selected to be not more than ten.

10. The result of the points only to affect each separate brace; and when the stake has been gone through, the respective winners to run off the ties according to their order on the card, and the winners of these ties to be tried on until two winners only remain in, when they must be tried, to decide the actual stake, the beaten dog in the final to be considered second. Or, owners may have the option of dividing prior to a final, when the first and second money must be added together and equally divided.

The idea was—(the reader will readily grasp)—to reduce the whole system of judging pointers and setters in the field to a sure and certain method of proving the best dog, as scoring the points made in a game of billiards, and to make the whole thing more like a coursing meeting. Under the new regulations a judge was scarcely wanted at all, except in cases of doubt, when he became a sort of arbitrator, and throughout the meeting a piece of chalk and a board would also, almost, have done all the judging. Presumably, this new arrangement was merely on trial, and whether successful or not, the Kennel Club deserve the thanks of the public for their originality and their obvious efforts to benefit "the course"—the only drawback being, that the designer was the only one of the competitors who had been able to try the rules as applied to his kennel; but this is irrespective of their merits or demerits.

This mechanical method appeared to me when I first heard the scheme, and the *Field* reporter bears me out in my opinion, much in favor of a slow dog, who, cautious and afraid of making mistakes, would be infinitely less liable to incur "points to the bad," and though really far inferior to his rash but faster rival, beat him out of time on the "Fables Cunctator" principle. Slow dogs have only to wait their time, avoid putting up game and win, and a clever breaker having them under his control can assist them very much by preventing their ranging wide in doubtful cover and running risks. Again, there is no reward for style, in my opinion one of the most essential qualifications of a pointer or setter. To see a dog range freely and merrily, with his head well up, lashing his stern, championing the scent, going for the wind, working in parallels independent of his companion, and drawing up to his game grand and picturesque, is to me more than half the pleasure of sport. And I must have pace also, and this is not allowed for. I want my dog fast as the wind, with a gallop like a thoroughbred, and "stamina" that can keep him going all day long. Another hole I can pick in the new code, is the absence of penalties for disobedience of the breaker's orders. A dog may disregard hand, voice and whistle with reckless impunity. A great deal of luck is admitted, too, that any one can readily see, and though it is a step in the right direction, yet, I prophesy that without a thorough revision, the new "articles of war" must inevitably "go to the dogs."

On the first day of the trials the meet was at Boughton, near Sleaford, and at 11 o'clock the first brace of setters were put down on a rough piece of fallow for the Lincolnshire stakes. They belonged to Mr. Purcell Llewellyn, and consisted of two red Irish dogs, Kite and Samson. Working tolerably independently and well, they began by a false point, which Kite backed; for this they deserved penalties, but the judges did not like to begin too severely, and allowed them to go scot free. In a stubble field Samson followed a hare until stopped by hand, and Kite appeared to be the best worker. They did not, however, turn out anything very wonderful, and after making three false points in some "roots," one of which led the guns and judges a field's length for nothing, they were taken up with a total of sixteen good marks and nine bad ones; or in other words, a score of seven. Mr. Llewellyn's Laura and Druid were the next on the card; the former being a lemon and white bitch, and the latter a handsome black and white dog of the Laverack strain. Druid had previously taken second prize at the Shrewsbury Spring Trials, but here he seems to have run up birds, and though fast and stylish, was guilty of a decided "blink," retiring with his kennel companion with the curious score of three points to the bad. At 1:40 Mr. Lloyd Price's celebrated pointer Drake, purchased but lately of Mr. Garth, the eminent Queen's Counsel, and Carch, started in a stubble field. They ranged grandly and well, the old dog showing a good deal of his wonderful turn of speed, which had served him so well before. The new code of rules left such a quality unrewarded, and Carch behaving in like manner, excellently. Later on they came rather to grief, Drake refusing to back, and Carch putting up his game, but they left off, having scored fifteen points to the good and ten to the bad, or a total of five. Beau and Mallard, some more of Mr. Price's dogs, did well amongst the hares, which were very numerous and behaved steadily, but at the last point, which was held by Beau, Mallard flushed the birds and spoilt an otherwise good performance. They left off with eleven to the good.

The so justly notorious Ranger, belonging to the Rev. J. Cumming Macdonald, and a bitch named Lucy, were then thrown off, and the dog soon made what the *Field* reporter styles the longest and best point of the day, going with his old dash and vigor, but being hampered by his companion, (who, it seems, was only half broken and chased and flushed fur and feather,) he could not win the stakes and the brace was soon drawn, giving place to Mr. Whitehouse's beautiful lemon and white. Beau, a great winner of cups and prizes at dogshows, and Doncaster, a puppy of some eighteen months old. Had it not been for the unsteady behavior of the latter they would probably have won. As it was, Mr. Lloyd Price's Beau and Mallard took the cup for the best brace, and £11, and Mr. Purcell Llewellyn's Kite and Samson won the first prize money for the best brace of setters.

In the Sleaford puppy stakes there were only two competitors, and Mr. Price's Queenie, a neat little bitch, beat Mr. Llewellyn's Sam, and won. There was then a total stake of little entries, and after that the Kennel Club Cup was contested for by several well known dogs. There were several "heats," but I will only give the concluding one, which is a fair sample of the way the new code worked, and how it proved the ruin of one of the best dogs ever seen in the field. Mr. Macdonald's Ranger had made a "dreadful example" of Druid, who had been considered about the best setter in Mr. Llewellyn's kennel, and, according to the rules, he had to fight it out with Mr. Llewellyn's Laura for the Cup.

I take the words of the *Field*, as it may be said to be prejudiced in favor of Ranger:—"In a piece of seeds Ranger made a false point, but a hare having been seen to go away by the keeper, no penalty was awarded. Soon afterwards, however, he incurred one for the same fault, and the bitch stopping to hand and voice, (though not backing,) got one to the good. A false point similar to Ranger's first was made by the bitch and also treated in the same way. The score now stood—Laura, five good; Ranger, four good, two bad. Moving to some turnips Laura was

kept very close in hand, but fortunately dropping on some birds, got a four. During this performance Ranger made a distant point, which turned out to be a Guinea fowl, and for this not being game, he was allowed nothing, though we all know that the scent is exactly like that of the pheasant. At the end of this field Laura made an unmistakable false point, and the score was then added up as follows, viz:—Laura, thirteen good, five bad; Ranger, four good, four bad. Laura thus got the cup, though it is absurd to suppose that anything more than luck gave it her." More of this anon. ISTONE, JR.

[From Our Special Correspondent.]

TENNESSE SPORTSMEN'S ASSOCIATION.

MEMPHIS, TENN., October 10, 1874.

EDITOR FOREST AND STREAM:

ON Thursday the grand field trial for the best setter or pointer came off, the prize being an elegant silver service, and was won by H. C. Pritchett's setter, Knight, over nine competitors, the dogs being hunted in pairs and awarded points as to their respective qualities in nose, pace and style; breaking, pointing, style and staunchness; backing, roading—100 being the total standard. Messrs. J. W. Burton and J. H. Acken were the judges, and furnish the following score:—H. C. Pritchett's setter dog, Knight, 88; Horsefall's Romp, 86; Wheatley's Guide, 80; Dew's Mack, 78; Wheatley's Addie, 72; Merriman's Rex, 67; Carroll's Bang, 64; Stevens' Frank, 63; Frances' Dixie, 57, and his other entry, 46. The dogs were matched by lot and one brace hunted at a time by experienced gunners, the trial lasting from morning until night, and more interest was manifested in this trial than was expected, as each of the owners were confident of adorning their table, after the awards were made, with the very elegant silver service; consequently only nine of them were disappointed.

Several sweepstakes were shot during the day at the grounds of the Association. In the first, a match at 21, 26 and 31 yards rise, South and Pearson tied, killing ten straight birds each, leading Messrs. Watkins, Jones, Johnson, Green and Leland. In a match at three double birds Mr. Sherman, of Wisconsin, carried off the pool, scoring six and beating Messrs. Watkins, Johnson, Jones, South, Green, Pearson, and Leland. In the third Mr. Harvey McNeely, of Memphis, Tenn., who had not previously shot over a trap vanquished at single birds Messrs. Leland, Watkins, Jones, Johnson, Green, Bray, Allen, and Boyd; and in the next Mr. South was the victor in a field of eight at single birds, the contestants "barring" Mr. Sherman.

On Thursday night the State Association met at the parlors of the Peabody Hotel, where, after some preliminary business had been gone through with, an election was gone into for officers for the ensuing year with the following result:—

President, P. H. Bryson; 1st Vice-President, H. C. Pritchett; 2d Vice-President, T. F. Perkins; Secretary and Treasurer, W. A. Wheatley; and the Ex-Com. composed of J. K. Hughes, J. W. Alley, J. H. Dew, W. E. Watkins, and J. H. Acken; and as honorary members, Hon. George W. Polk, of Columbia, Tenn.; Jas. Gordon, Pontotoc, Miss.; Colonel F. G. Skinner, of New York City; Luther E. Shinn, of Chicago; Charles Hallock, of New York City; Wilbur F. Parker, West Meriden, Conn.; H. L. Smith, Memphis; Wilbur F. Johnson, Atlanta, Ga.; and Gen. W. H. Jackson, Franklin, Tenn. Subsequently the thanks of the Convention were tendered the various sporting papers for the interest shown, and Nashville was selected as the point at which the next annual tournament would be held, after which, and a vote of thanks to the retiring officers, the Convention adjourned *sine die*.

On Friday the attendance at the tournament exceeded that of any other day, there being present fully 500 spectators, enough to fill every inch of available space outside the railing, as well as the elevated seats behind. The first order of business was the contest for the Gold Badge, worth, perhaps, \$200, and open to all members of the State Association. For this there were nineteen entries, the following being the score:—

Prize—Gold Medal. Match, five double birds, 18 yards rise.

Name.	Score.	Total Name.	Score.	Total
P. Bryson.....	11 10 11 01	8 Bowles.....	11 11 11 11	10
Nicholson.....	01 11 11 10	7 Watkins.....	10 10 11 11	8
Acklen.....	11 10 11 11	8 Ligon.....	10 11 00 10	5
Hughes.....	11 11 11 11	9 Wheatley.....	0 11 01 11	7
Davis.....	11 11 01 10	8 McNeely.....	11 10 10 04	6
Dew.....	11 11 11 11	9 Leland.....	11 11 00 11	6
Douglas.....	00 11 00	2 Walker.....	10 11 10 01	6
Cockrell.....	11 11 11 10	9 Merriman.....	11 11 11 11	9
Perkins.....	11 11 10 10	8 Mitchell.....	11 11 10 01	8
Hayes.....	11 11 10 11	8		

In this nearly all of the best of our local gun talent participated, and, as will be seen, some very good pigeon popping was done. Mr. Wm. Bowles, Jr., the victor, is a young cotton buyer of this city, and he did some tall shooting to "got away" with many of those "older heads."

After the conclusion of the badge match, Wednesday's ties in seven were called to the score, with the following results:

Ties on seven, three single birds, 26 and 31 yards.

Hughes.....	1 1 3	0 10—3	Green.....	1 1 3	1 0 1 2
McNeely.....	1 1 3	0 10—3	Walker.....	0	
Davis.....	1 0		Leland.....	0	
Pearson.....	1 0		Hayes.....	1 1 0 2	

McNeely and Green dividing the prize—\$25.

Wednesdays ties in six, three single birds, 25 yards rise.

Terry.....	0	0	Bowles.....	1 1 1	8
Merriman.....	1 0	1			

Next in order came the class match for \$175—\$100 to first, \$50 to second, and \$25 to third—entrance \$10, open

Boston.

SPORTING BOOKS.

I. JERAM WOODRUFF'S—THE TROTTER HORSE
OF AMERICA. New edition (the 18th), with nearly
100 pages of entirely new matter by CHAS. J. Foster,
bringing the work down to May, 1874;
with a new record of performances, giving the best
times made in the last fifty years, and with seven
new full-page engravings of celebrated horses,
Cloth, black and gold, \$2.50. This is the standard
book on the subject, and the additions just made
add greatly to its value and interest. Every horse
lover should own a copy.

II. STONEHENGE'S—THE HORSE IN THE STABLE
AND THE FIELD. His management in health
and disease. By J. H. Walsh, F. R. S. U. ("Stone-
henge"). Thoroughly revised and Americanized by
Robert McClellan, M. D., V. S., with an essay
on the Trotting Horse, his breeding and training,
and with full tables of pedigrees. Illustrated with
nearly 100 engravings. \$2.50. This is universally
admitted to be the best horse book ever published.

III. DR. McCLELLAN'S—THE AMERICAN GENTLE-
MAN'S STABLE GUIDE. Giving full directions
for the management and care of stables, horses, and
carriages and harness. By ROBT. McCLELLAN, M. D.,
V. S. A practical manual for every stable owner.

IV. THADDEUS NORRIS'S—THE AMERICAN AN-
GLER'S BOOK. The Natural History of sporting
life, and the art of taking, with its traditions in fly
fishing. My making, and Rod making, &c. &c.
With 30 engravings. 8vo, cloth, gilt, \$5.50.
This classic is being by the best fisherman in Am-
erica. Should be in the hands of every sportsman.

V. THADDEUS NORRIS'S AMERICAN FISH CUL-
TURE. Embracing all the details of Pisciculture.
12mo. Cloth. Illustrated. \$1.75

VI. STONEHENGE'S ENCYCLOPEDIA OF RURAL
SPORTS. Comprising Shooting, Hunting, Cours-
ing, Fishing, Hawking, Athletics, Yachting, Boat-
ing, Racing, Pedestrianism, and the various rural
games and amusements. By J. H. WALSH, F. R. S. U.
C. S. ("Stonehenge"). Illustrated by 280 engrav-
ings. Revised and Americanized. A sine qua non
to sportsmen. Crown 8vo. Cloth, black and gold,
\$5.

Field, Cover, and Trap Shooting.

By Captain A. H. BORDERS.

CHAMPION WING SHOT OF AMERICA.

This book contains in sixteen chapters, and about
400 pages, a full and instructive account of the expe-
rience acquired by Captain BORDERS in twenty
years with the gun in all seasons; the best method
of finding and killing with dog and gun Pinnated
Grouse, Quail, Ruffed Grouse, Woodcock, Plover,
Snipe, &c.

Also the most successful methods of shooting Wild
Ducks, Geese, and Cranes. And the best ways
of hunting Deer and shooting Wild Turkeys.

Sporting Dogs, their breeding, and how to break
them.

THE COMPLETE ART OF SHOOTING ON THE
WING, with full and clear instructions for young
sportsmen, by means of which they may become
crack shots.

The habits, haunts, and varied flight of birds in
their seasons.

Pigeon Shooting as an art, with the rules of the two
Championship Badges and report of championship
matches.

EDITED BY CHAS. J. FOSTER.

Published by J. B. FORD & CO., 27 Park Place,
New York. For sale at all bookkeepers and the lead-
ing quailers. Price, 25 cents. Sent by mail by the pub-
lishers and by Captain BORDERS, Elkhardt, Logan
county, Illinois. Also for sale at office of Forest and
Stream, 12 Chatham street, N. Y.

AMERICAN WILD FOWL SHOOTING.—BY J.
W. LONG. A practical treatise on the habits, hab-
its and methods of shooting, also specific explana-
tions for "shooting" birds, snipe and doves, the
training of water retrievers, and other valuable mi-
cellaneous information, by a professional duck shoot-
er. 12mo. 250 pages. Illustrated. \$2.00.

Also at all bookkeepers and the leading gun stores, or
will be mailed to any address, post paid, on receipt of
the price. J. B. FORD & CO., 27 Park Place, N. Y.

BREECH-LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our
large assortment of

Breech-Loading Shot Guns,
Manufactured by the following celebrated makers:
Messrs. W. & C. SCOTT & SONS (winners at the Inter-
national Gun Trial of 1873); P. WEBLEY & SON,
W. W. GREENE, WESTLEY RICHARDS, J. HOLL,
LIS & SONS, and other makers.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
DIXON & HAWKLEY'S SHOOTING TACKLE.
To insure good shooting from Breech-loading Guns,
we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co.,
Bridgeport, Conn. These shells are the cheapest and
best in the market, can be easily re-capped with ordi-
nary caps, without the use of the implements neces-
sary in priming all other styles of shells.
BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE, AND 100 BIRDS.

Black's Patent Cartridge Vest.

This Vest affords the best ar-
rangement yet in
carrying cartridges,
so evenly distrib-
uted, that they
can be carried with
the vest, which in-
creases when brass
shells are used
as when carrying
lead up the weight
on the vest is
bad shooting is the
result. When
ordering send
measurement around the chest.
Price \$7.50.

Remington's Long Range, Breech Loading Target Rifle.

No. 2. Diagram of Second target made by Henry Fulton, Civil Engineer, Lieut. 12th Regt. N. G. S. N. Y., of Brook-
lyn, at Montreal, Can., Aug. 14th, 1874, with a "Remington Breech Loading, Long Range, Challenge Rifle," 24
inch barrel, 44-100 calibre, wt. 10 lbs., cartridge containing 90 grains powder, 350 grains bullet. Price of rifle,
\$100, including pistol grip stock, vernier gauge orthopedic, and wind gauge fore sights; extra for spirit level, \$5;
extra for disks for fore sight, \$2.50 each; cartridges, \$4.50 per 100.

Special Telegram to "Commercial Traveler,"
"Remington aimed at long range. I have hit, 250 yds. in one match I made a clean string of seven bulls' heads, and am allowed for the aggregate. Can't do second, and do the first four prices taken by Remington rifle."—H. FULTON.

Extract from the "Army and Navy Journal," 12, Report, dated Oct. 3, 1874.
"The match decides several disputed points, as near as can be decided; first, that there is no perceptible difference in accuracy between breech-loading and muzzle-loaders, and that if anything the former are the best, as they are certainly the quickest; second, that in our clear climate we may look for even better shooting in the future; third, that the Remington rifle stands at the head of all others for accuracy, as it does in simplicity of mechanism. The Remington rifles in the match scored thirteen points ahead of the same number of muzzle-loaders, and twenty-two points ahead of the Sharp's breech loaders in the same time."

In the International match, six muzzle loaders, three Remington, and three other breech loaders were used. Lieut. Fulton, Col. Bodine, and L. H. Leburn used the three Remingtons.
For full official report, see Army and Navy Journal, Oct. 3d, 1874.

FIFTY
CENTS

Miscellaneous.

This arm was submitted in competition with over
one hundred different systems, American and Euro-
pean, to the Board of United States Officers, appointed
by Act of Congress, March 3d, 1873, for the pur-
pose of selecting the best arm for the service, and of
which Brig. Gen. A. H. Terry was President. It suc-
cessfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for
the military service by all nations is only a question
of time; that whenever an arm shall be devised which
shall be as effective as a single breech-loader, as the
best of the existing breech-loading arms, and shall at
the same time possess a safe and easily manipulated
action, every consideration of public policy will re-
quire its adoption."

Resolved, further, That the experiments before the
Board with the Ward-Burton Magazine System have
so impressed the Board with the merits of this gun,
that they consider it to be more nearly fulfilling the
conditions above specified than any other tried by them
or which they have any knowledge, and it does
recommend that a number of magazine muskets be
made on the plan for further trial in the field." (See
Ordinance Report.)

We are now receiving orders for these guns, and due
notice will be given in this paper when they are ready
for delivery.

The following is our scale of prices: Special Magazine
for large game, carrying from 3 to 8 cartridges,
70 to 85 grs. of powder, 350 to 400 grs. of lead, 8 to 10
lb. weight, from \$80 and upward, according to trial.
Special Long-range Magazine Rifle for Creedmoor
shooting, 50 grs. of powder, 450 grs. of lead, carrying
to 8 cartridges, weighing 10 lb., from \$100 and up-
ward. Magazine guns for general use, carrying 3 to
4 cartridges, 60 grs. powder, 350 grs. lead, from \$40
and upward. Breech-Loader, Creedmoor
shooting, for long range, 50 grs. powder, 450 grs. lead,
from \$60 and upward. Single Breech-Loader for
general use, 60 grs. powder, 350 grs. lead, from
\$30 and upward. The calibre of all our rifles,
unless otherwise ordered, will be 45-100. In
all communications should be addressed to

THE CHURCH SPIDER.

TWO spiders, so the story goes,
Upon a living bent,
Entered the meeting-house one day,
And hopefully were heard to say—
"Here we will have at least, fair play,
With nothing to prevent."

Each chose his place and went to work—
The light webs grew apace;
One on the altar span his thread,
But shortly came the sexton dread,
And swept him off, and so half dead,
He sought another place.

"I'll try the pulpit next," said he,
"There, surely, is a prize;
The desk appears so neat and clean,
I'm sure no spider there has been—
Besides, how often have I seen
The pastor brushing dice."

He tried the pulpit, but alas!
His hopes proved visionary:
With dusting brush the sexton came,
And spoiled his geometric game,
Nor gave him time or space to claim
The right of sanctuary.

At length, half starved and weak and lean,
He sought his former neighbor,
Who now had grown so sleek and round,
He weighed a fraction of a pound.
And looked as if the art he'd found
Of living without labor.

"How is it, friend," he asked, "that I
Endure such thumps and knocks,
While you have grown so very gross?"
" 'Tis plain," he answered—"not a loss
I've met, since first I spun across
The contribution box."

Sched.

were topping the breakers' crests in search of food, and, as Nita had prophesied, numbers of curlew whistled over our heads, and little flocks of sand snipe, or *amigdos* (little friends), were now showing brown, and now flashing white, as they wheeled and turned in the sun.

"Don Guillermo"—the little witch had discovered my baptismal name, and addressed me accordingly—"do you see that great mound some distance down the beach?"

"Yes, senorita linda, I do see the mound, and to me it resembles nothing more than a giant's grave without the tombstone."

"Well, then, illustrissime senor yankee, your guess is quite correct; it is a grave, and of a giant. Under that heap of sand lie the remains of an immense whale, which was thrown up there during a storm two or three years ago. Gradually the surf lifted him higher and higher, and other gales blowed the sand around him until he was entirely covered, as you see him now."

The Colonel afterwards told me that this monster, which was nearly one hundred feet in length, actually remained there until the sand had covered him without emitting any offensive effluvia. Such is the dryness and purity of the atmosphere that the natives cure their meat by cutting it in strips and hanging it in the sun to dry.

"Miss Anita, you are telling me a fish story, but I believe you. In fact, I believe everything I'm told. I came a skeptic, and returned convinced. I can swallow anything now, from a thousand pound beet to a six inch strawberry, or even a whale. It is not exactly *veni, vedi, vici*, for I came, saw, and *was* conquered, Miss Nita, apropos of the wonders of this country, I want to ask you a question."

"Well, sir, proceed; I am all attention."

"Do you permit compliments?"

"Only in Spanish, sir; they are quite harmless in that language, but they might frighten me in English. So if you are preparing any pretty speeches, just remember my injunction."

"And have you laugh at me for my pains. No, Miss Nita, your 'trap to catch a snemban' won't work, and if I must not say in English, the compliment is lost forever."

Over my head the flies were dancing collisions among the branches of the tree. A little ground squirrel had come out of his hole near by me, and was apparently cogitating whether it would be safe for him to make a visit to his neighbor over the way. After a long silence, "Miss Nita," said I, "won't you close that incongruity in the shape of a parasol, which you hold in your hand, and risk your complexion for a little while. I cannot get even a glimpse of your face."

Nita changed her position so as to face me, and threw the obnoxious parasol over her shoulder.

"There, sir, does that suit your lordship any better? But mind, you are not to stare at me in that manner, or I shall put the parasol between us again."

"Pardon me, please, Miss Nita, but you see you are such a different type of young lady to that I have been accustomed, that I cannot help looking at you in wonder and amazement."

"Am I to take that as a compliment, senor, or the reverse?"

"Can you doubt which? Of all the lovely productions of this remarkable country you are the loveliest I have yet seen."

Down came the parasol like a flash, and all I could see of my fair companion was the lower part of her brown dress. The startled flies broke up their coition, and escorted their partners back to seats on the boughs. The little squirrel was frightened, and whisking his tail tumbled back in his hole, and a woodpecker, who had been tapping assiduously for half an hour, stopped to listen.

"Miss Nita," no answer. "Miss Forester, are you angry with me?" Still no reply. "I am really sorry, Miss Nita; please forgive me."

This time the parasol was moved a little one side, and I

could see my companion's great brown eyes looking very solemnly at me.

"I am not angry, Mr. Irving, but it is very wicked and unkind in you to make fun of me. I am not quite so foolish as you imagine. But come, Mr. Laziness, we must go home now; you can finish your siesta after dinner. If the weather continues warm while you are here, we will all come down some day and have a glorious bath in the surf. Later in the Summer numbers of families come from far inland, and, camping under the trees, spend weeks in bathing and fishing."

We sauntered back to the house, and I was duly introduced to Miss Inez' lover. Senor Don Pablo de la Cruz was a splendid specimen of a race which, alas! is fast degenerating under the influence of the "Argonauts" into the typical gambling and cock-fighting Mexican. Fortunately, in this immediate neighborhood, there being little to attract the cupidity of the minor or money lender, a few of the old families still remained uncontaminated. Before the discovery of gold they lived in Arcadian simplicity, surrounded by their flocks and herds. Nature supplied nearly all their necessities, and the proceeds of the hides and tallow, sold at the ports of Santa Barbara, San Pedro, and San Diego, procured them luxuries in abundance. With vines growing almost without labor, the padres at the different missions taught them how to turn their grapes, though by the most primitive process, into wine, and from the same source they learned the cultivation of many fruits and cereals, which added to their wealth and comfort.

Thirty years ago the traveler could go from one end of the State to the other, finding a welcome at every rancho, and a fresh horse or money, if he required either, to hold him on his journey. But now, fiery whiskey and *aguardiente* have taken the place of wine, and their lands have been torn from them by unprincipled usurers, who, by fostering and encouraging the gambling instinct inherent in the race, have enriched themselves at their victims' expense. Even Nature, once so prodigal, seemed to have turned against them, for in 1862-3 two successive years of severe drought carried off almost the last remnant of their once immense herds of cattle. No wonder that they hate the "Gringos," or yankees, and curse the bitter day which brought the gold-seeking hordes to rob them of their inheritance. The old grace and courtesy of manner, the same fondness for amusement and love of dress, still remained, and the slightest pretence was seized upon as an occasion for a *baile*, or fandango. Don Pablo informed us that on the following day there was to be a *rodero* at his father's rancho, to be followed by a *baile* in the evening, and gave us all a cordial invitation to attend.

A *rodero*, explained Col. Porrester to me at dinner, is a general meeting of rancheros, held once a year, for the purpose of recovering and restoring lost stock. Notice is sent weeks before, giving the time and place of meeting. All owners of horses and cattle frequently find among their *ganadas* (bands of cattle), *manadas* (bands of mares), and *cavadas* (bands of horses), animals belonging to other rancheros, or distant proprietors, whose brands, perhaps, are unknown. On the appointed day, all who have received notice assemble with their *vaqueros* and select the animals which have their private mark branded on the hindquarter. This *fiervo* is the only proof of ownership required, and when a horse or cow is sold, the original owner brands him again on the forehead, which constitutes the *venta*, or bill of sale. The purchaser then alikes his brand on the hindquarter, and an animal which has frequently changed owners becomes so scarred with numerous hieroglyphics that it requires a person well versed in this species heraldry to tell who the present owner is. All animals unclaimed at the end of the day are delivered to a pound keeper, or judge of the plains, as he is termed, who posts a description of them on the court house door of the county town. Many mares will have foals running by their sides, or cows will be followed by their calves, and the wee things are branded on the spot for future recogni-

Santa Monica.

For Forest and Stream.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILSTON.

The Colonel went off to his sheep, and I was left with the young ladies to make our plans for the day, or, rather, with Miss Nita, for on her the charge of the guest seemed to devolve. Inez went to the gates and gazed off on the plain in search of the expected Pablo.

"What shall we do," said Nita, "would you like to ride?"

"Thank you; yesterday's experience was quite sufficient for the present. If agreeable to you I would rather remain quiet, or take a walk down the canon and look at the surf."

Miss Anita assented to this proposition, and offered me a gun, saying that there were numbers of curlew and snipe on the beach; but being too indolent to carry the weight I declined. So we strolled out of the house and through the canon. The stream still rushed wildly over the huge boulders as we wandered along its bank and under the giant sycamores, and clearing the shadow of the glen reached the soft sandy shore of the ocean. Not the turbulent old monster of the previous day, but still with its great respirations rolling in and tumbling in foaming and sparkling masses on the beach. There is something in the climate of southern California which, while bracing and invigorating, is still strongly suggestive of the *dolce far niente* to which the dry and pure air and the bright Italian sky largely contribute. In the full enjoyment of the laziness born of the warm sun and the poetical surroundings of the place, I threw myself at full length on a little strip of turf under a tree, while my companion contented herself with a seat on a rock near by. The tide was at the full flood, and the little foam-edged waves rushed gaily up to the line of sea weed and other debris which marked the highest water line. Dozens of sea birds

tion. Sometimes a horse will be recovered after being lost for years, his whereabouts a mystery, but the saddle marks will show that he has been in use, and has probably taken advantage of the first moment of liberty to return to the rancho where he was foaled.

We had scarcely finished dinner when the clatter of spurs and saddle accoutrements outside announced the arrival of a new comer, and a few moments afterward he entered the room.

"Ah, Bill," said the Colonel, "you're just the man I wanted."

"Well, here I am Colonel," responded the individual so addressed.

"Scnoritas, *a su servicio*; Don Pablo, *como te va*; stranger, I'm glad to know you," and about six feet six inches of attenuated humanity crossed the room, and a hand of rough parchment grasped my poor fingers like a vice.

"Well, Bill," continued the Colonel, "what's the news from the mountains; how are the bees and the honey?"

"All serene up yonder," said Bill, jerking his finger over his shoulder in the direction indicated. "The bees are as lively as crickets, and makin' lots of honey; I've brought down a pair full for the senora. But the wild cats are gettin' awful troublesome—two or three chickens carried off every night, and in the last night a hen going to bring a bar down the gulch some of them night and the varmint will do a sight of damage among the hives."

"Been along the foot hills lately?" said the Colonel.

"Are there many deer there now?"

"I haven't killed a venison in a week," replied Bill, "but there's a smart sprinklin' of deer. I saw a buck and two does this morning as I came through the chaparral."

"Well, I want you to take Mr. Irving for a hunt, and perhaps we may all go up and camp for a night or two at your place. I should like to catch a few trout myself. Do you think you could show our guest a grizzly?"

"No grizzly in mine, thank you, Colonel. I haven't lost any of them bars lately, and don't go huntin' them. Now a black bar, or a cinnamon, I don't mind takin', but I've had my allowance of grizzlies. The stream is alive with trout, I caught forty or fifty in an hour the other day, with nothing but a little red rabbit skin for bait."

"Bill, or Grizzly, as he was commonly called, was not a handsome man to look at, and might have carried the knife for a life time against all comers; but his bronzed skin, his huge joints, and great muscular development, indicated wonderful strength and endurance. The lower part of his face, which was surmounted by a crop of thick grizzly hair, was one huge ear, and looked as though some violent blow had dislocated his mouth and jaw, and everything about his jaws. It was, indeed, the result of an encounter with the beast from whom he derived his sobriquet. His deeply sunken blue eye was soft and pleasant, and its expression indicated a warm heart and the greatest simplicity of character. Bill was a fair specimen of a type of men only to be met with in California and the border States.

Wanderers from youth, with apparently no home ties, or even a name, beyond the nickname bestowed by their companions. Hardened by contact with the rougher side of the world, but with an under current of warm humanity hidden by a rough exterior. Living independent lives, happy in having more than sufficient for their wants, and fearing neither dun or creditor.

It was finally arranged that on the day succeeding the *rodero*, we were all to go to Bill's rancho and remain there for a day or two hunting and fishing. Don Pablo consented to be of the party, and the Colonel, in view of the prospect of a chance, and even the stately senora declined to unbind a little and express approval of the arrangements.

The next day was cloudless and bright, as twenty-nine out of every thirty days are in this climate, and after an early breakfast the Colonel, Don Pablo and myself started for the scene of action. Pablo in his picturesque riding costume of *chaqueta*, or jacket of velvet profusely ornamented with silver buttons; *calzoneras*, or pantaloons of the same material, held in place by a rich scarlet sash, and broad brimmed hat, and myself in my light-colored suit, a perfect specimen of the Mexican *Caballero*. His saddle trappings and bridle were so covered with silver as almost to conceal the leather. His prancing and perfectly trained mustang, showed strong marks of his *barb*, or Moorish origin, and was probably a lineal descendant of one of the horses ridden by some of Hernando Cortez's fiery followers.

Poor old Pablo remained in pasture enjoying his well-earned rest, but the Colonel had mounted me splendidly from his own stable. All horses brought from the Eastern States, or bred from such, are called American horses, to distinguish them from the native animals, and for draught purposes, owing to their greater weight, they are far superior; but for riding, or for long journeys, give me the very little mustang. No road is too long for him, and having never been punished, he is by no means particular as to his diet. Our route, running parallel with the mountains, carried us over twelve or fifteen miles of plain and undulating country; across an occasional *arroyo*, or water course, cut by the mountain streams. The ranch, when reached, was found to possess a *casa*, or house like Colonel Forrester's in size and shape, but entirely without the adornments, both interior and exterior, which were the result of his more advanced ideas of comfort, as well as the fruits of his greater industry and perseverance. There was a vineyard, a peach orchard, and numbers of old olive trees shading the house, and from the courtyard rose a magnificent palm, topped the roof and serving as a landmark for miles; but large flakes of plaster had peeled from the walls without being renewed; the barred windows reminded one of a prison, and the floors, instead of being polished and shining, were of the native mud pounded dry and scraped smooth. A few game cocks were tied by the leg to the pillars of the veranda, and without, a string of horses tethered by their lariats, indicated that the company were almost assembled.

Entering the house we found fifteen or twenty persons who, from their all talking and gesticulating at once, a stranger would have supposed were engaged in a violent altercation. No smoking there, they in smoke from the cigarette which each one was smoking that was not a sign to distinguish faces. Remarkably handsome were some of the men, particularly the older ones, who, with white whiskers and moustaches, and air of great dignity, were unusually distingue looking. All were in riding costume, and some wore *chaquetas* of the skin of the wild cat or leopard. One old *viejo* had a silver hilted sword across the pommel of his saddle of many years past when it was the custom to go so armed, more an indication of rank than through any necessity for protection. There was a

constant clicking, as little glasses of *aguardiente*, or native wine, were quaffed to each other's health. The arrival of our party was the signal of adjournment, and mounting their horses the whole party cantered off to where two large corrales, guarded by a number of *vagueros*, contained the horses and cattle. A fire was burning near, in which the branding irons were being heated for the benefit of the poor little colts and calves. And now the scene became intensely interesting and exciting. A *ranchero* discovering in the crowded corral an animal marked with his brand would direct his *vaguero* to bring him out. Nothing bold, the *vaguero*, taking his *lazo*, or lariat, in his hand, would enter the gates and drive the affrighted crowd before him around the corral, until he had succeeded in separating the particular animal and a little from his fellows, when, swinging the lariat two or three times around his head to give it an impetus, it leaves his hand, and with unerring precision the noose falls over the animal's head, and he is led away a captive. Sometimes an old mare, who had been caught too often, would be up to a very bright trick. At the moment the *lazo* was thrown she would duck her head to her knees and allow the noose to pass over her amid shouts of "*buena quita*" from the crowd. The knowing mare would then be separated from the bunch and driven out on the corral, where, being chased at speed on the open plain she was unable to dodge.

But it was at the corral containing the cattle that the fun was growing fast and furious. Such feats of horsemanship, and such narrow escapes, I am sure were never witnessed before. In a little while the cows, calves and steers in the corral became perfectly wild with fear and excitement, and it was anything but a joke to enter this den of wild beasts. A man on foot would have been instantly pored, and none would have dared to approach a Mexican cow with a young calf. Some worse than a dozen bulls. Yet the *vagueros* rode among them with perfect fearlessness, now dodging a horn on one side, and now one on the other. And the training of the horses was marvelous; turning to the right or to the left at the slightest pressure of the rein upon the neck, or sometimes, when both the rider's hands were engaged, with the lariat, guided by the knee, and even stopping suddenly when at full speed, the rider remaining perfectly motionless as though glued there. One poor fellow had his arm broken by being jammed against the fence as the crowd of angry beasts rushed at him and fairly took his horse off his feet. He managed to regain his seat and escape from the corral, but was *hacia el combat* for the day. Not unfrequently men are killed by these *vagueros*, particularly after imbibing sufficient quantities of *aguardiente* and *panicoles*. Occasionally a particularly vicious cow or steer would be turned out on the plain and several *vagueros* started after her. It was almost equal to a bull fight. One *hombre* would throw his lariat dexterously over her horns, when she would charge him furiously. Meanwhile, while he was dodging her, another would throw a noose on top of the first one, so that she charged until the other would jerk her in a contrary direction, until her strength being exhausted she would submit to be led away.

The last claimant for horse or cow had appeared, and those remaining had been handed over to the *maestro de los llaños* for future recognition, or, after a specified time, to be sold to pay the expense of keeping them; but the sports of the day were by no means at an end. One *ranchero* bantering another regarding the speed of their respective horses, a race between them would be immediately arranged. The judges, or *jurados*, having been appointed and the distance marked off, the horses were started at a gallop. The riders, who have handkerchiefs tied tightly around their heads, disengage with saddles and are fastened to the horse by a cinch, or girth, passing over their thighs and buckled under the horse's belly. After considerable jockeying for the lead the word is at length given. In a minute the decision is announced, the loser hands up his *pesos*, *more vino* (a cornucopia), and sends many a sighs to his cigarette. Now the *vagueros* exhibit more of their fresh courage, and, picking a dollar from the ground while at full gallop, and rolling and lighting a cigarette while at the same rapid speed. Even some of the *Padrones* did not decline to take part in the fun, although they preferred to show off the high stepping paces of their horses by making them prance and curvet in front of the house where the ladies were gathered, and even jumping been appointed and the distance marked off, the horses were started at a gallop. The riders, who have handkerchiefs tied tightly around their heads, disengage with saddles and are fastened to the horse by a cinch, or girth, passing over their thighs and buckled under the horse's belly. After considerable jockeying for the lead the word is at length given. In a minute the decision is announced, the loser hands up his *pesos*, *more vino* (a cornucopia), and sends many a sighs to his cigarette. turns, and as for the rest of the covey, the sportsman is scarcely in a mood to follow them into the open stubble field, where they have too good an opportunity to see him, and too obvious an intention to avoid him. It suits better the whim of the moment to cross the road into the neighboring plantation. The trees—chiefly Scotch firs and spruces—stand in groups, and their leafy boughs upon the glades throw a shadow of dark shadow, like a contrast. The undulating character of the ground, too, emphasises the light and shade, and more beautifully impresses the general effect. How calm, how beautifully, how soul-subtling is Nature in such a place—the stillness all undisturbed by any sound save the very musical chirping of some homely birds. A slender little creature, brown on the back and quite beneath, runs nimbly over some dry and withered leaves, and then, as if it had been blown by the wind, but not a breath is stirring, and the sportsman very well knows that this small creature is a weasel, which has doubtless harried many a nest, and destroyed many an unfledged bird on the adjacent moor. The weasel is there for one unhesitatingly shot at the moment when it comes into a distinct relief on the light grey surface of a sunken granite rock, and the sportsman is not a little startled, and sometimes pressed into the sportsman's service, as he may take occasion to show the readers of *FOREST AND STREAM* at some future time. The larches make a favorite shelter for that shy bird, the woodcock, and, indeed, one's dog is almost certain to put up an awkward fellow, that will dart for a moment across the pale emerald of the fasselled foliage, or into the sunlight in the open, there to be precipitated, and then, as if it had been blown by the wind, it finds the grouse in large flocks, few and far between, and somewhat wild—though that is not to be wondered at. Two brace are almost as hard to get in October as two dozen in August, but by dint of walking, and with the help of a good steady dog, one can get, them in an hour's time, and possibly a snipe, also, as a diversion. The sportsman does not care to confine his peregrinations to the hill and moor, and he will sometimes take a little excursion into the woods, and he will find the mood he wears down towards the woodland, bagging on the way another hare, and ignoring a multitude of those vermin, the rabbits, that honeycomb the soil with their excavations, and break the hearts of the farmers. Before eleven o'clock the dew has disappeared in vapor, and the air becomes warm, and it is clear that there seems no limit to the vision, save the limit imposed by the earth's depression towards the horizon. For some time in a few short weeks gloomy Winter will be passing all its time in the air, and to look upon, the sportsman yields to his inclination, and, gladly relieving himself of the weight of his game bag, sits down to enjoy awhile the scene that slopes away from the acclivity which he has chosen as his coign of vantage. I do not suppose there ever was a sportsman who could not, in the intervals of his recreation, spare time to muse upon the beauties of Nature, and who would not become a habit with every intelligent man who is wont to take himself frequently to Nature's solitudes. The emotions of such an habitual admirer of Nature are not so demonstrative as those of the occasional incuriosum from civility, who has exclamations of wonder, superlatives of delight, and a vocabulary of compliments to utter obstructively concerning every mountain, stream, or tree that his eyes fall upon. The sportsman, on the other hand, has expressions of quasi-admiration too often seen, and too often the mouth somehow for the sake of effect, and seldom have the ring of true metal; but, indeed, the effect which a page of Nature has on any man's mind is perhaps to be judged of better by his silence than by his articulate speech, by monosyllables rather than by eloquent phrases.

To descend a hill after half an hour's musing on the landscape, and to find oneself, on coming down, in a dreariland; and at such a moment, even to find one's dog help to recall a man to the business before him. Coming suddenly to the edge of a small pond in the hollow, a mallard leaves the rushes with a mighty splashing, which somewhat shakes the nerves of the sportsman, not yet awake from his dreaming. As a consequence, it takes a second barrel to make sure of the bird, but the occasion is not without its interest, and the sportsman, and the pleasure that comes with it, change immediately to a warm glow, without extra charge of gunpowder. At this season it is not unusual to come upon the grouse in pairs, but the sportsman, as a rule, leaves such amatory couples alone. On some shootings, however, he may fall in with the lurly blackcock, which makes a very fine addition to the bag, and whose flesh, of a wild, gamey flavor, is regarded by some as a delicacy, and is said to be an Apicins.

Outside of legitimate game, there are other birds which sportsmen seldom care to pass by. The kestrel he sacrifices without compunction, as that bird is a prowler that preys not only in the banyard, but also in the game preserves, among the young grouse and partridge broods. The heron, a bird most difficult to stalk, sometimes sails within range, and as he has some feathers in his wings which are of great value, and as he is so often killed by a human biped, to the possession of an feathered tribe. But though random shooting among the feathered tribe is discouraged, and properly so, in the British Isles, nevertheless several species of birds, which it seems unreasonable and inhumane to exterminate, are likely ere long to become altogether extinct. When the sportsman leaves the heath and the gorse, and emerges from the woodland, and the sportsman, as a rule, leaves such amatory couples alone. On some shootings, however, he may fall in with the lurly blackcock, which makes a very fine addition to the bag, and whose flesh, of a wild, gamey flavor, is regarded by some as a delicacy, and is said to be an Apicins.

EVERY one of your readers in this vicinity, I am sure, acquainted with the locality known by the above title. The paradise of snipe-shooters, it is the spot to which all sportsmen wend their way to worship at the shrines of the migrating *scotoper* *Willornis*. For six weeks in the Spring, and for the same time in the Fall, the meadows are covered with shoals and attentives hunter to a bird. In the Fall flight it frequently happens that large numbers stop to feed on the soft and muddy flats and remain a day or two. Abundance of food soon renders them fat and luscious, and although the birds first stop only to rest, they find so good cover and so fine feed, they hesitate about continuing their flight north for weeks. The meadows are covered with water, the shore is as low now as it was forty years ago, and the fortunate hunter who happens to reach the meadows while the flight is at its height, finds most famous sport. It is no uncommon thing to secure a bag of from thirty to fifty birds. Lying midway between Paterson and Newark is a still secluded ground, for both the Big and Little pieces are dozen miles from the depressed city. A single horse and driver, or a car can command a horse and wagon or excellent pedestrian accommodation, ever reach these meadows. This season the remarkably heavy rains flooded both Pieces, and the waters have not yet entirely ran off. This has not made much difference to sportsmen, from the fact that the Fall having been an exceedingly mild one, the birds had not yet begun to migrate. A large number of the birds are in the guard of the "grand army," are the only birds to be found as yet.

Last Thursday, Fred Underhill and myself, with Nel Ferris, a veteran sport, and an excellent shot, started for Pine Brook. The heavy frost and freezing cold of the night before, together with the young moon, were all hopes would bring the birds along, and we anticipated glorious sport. We reached Steve Coulter's, the good-natured and obliging landlord of the Pine Brook Hotel, in time for a late supper. We found there the veteran sport, Scott Rodman. The lands were still wet, but the water had run off greatly, leaving the ground soft and in exceedingly good condition for the boring of the long bills. "Early to bed and early to rise" is a good maxim, and one which we always try to follow. We had everything arranged splendidly for the morning and retired to our rooms. Since we wanted sleep we needed, but sleep we did not get. A jovial party of sports tenanted the lounging room of the hotel, and the chink of dominoes mingling with the chink of something else, kept us awake until long after midnight.

Darby took us all astray, and Coulter had a hot and excellent breakfast ready for us at sharp six. That finished, we got in the waiting wagon and started for the Little Piece. Stopping in front of Arnold's and hitching one horse, we stepped over the fence and struck the snipe ground. Rodman had Mr. Pentz's Belle and his two young pups. Nel Ferris had a grand-daughter of Old Dan named Lize, and Steve Scotty, a son of Steve Scotty, an even younger pup. We found the ground very dry and covered with about four inches of water on the level, with a slank hole here and there with at least two feet in it. However, we had come for snipe, and a little water—something, I acknowledge, we were all afraid of—was not to stop us on this occasion. Rodman turned off to the right, and with Underhill and Nel hunted along and parallel to the road. Steve Coulter and myself struck blood foot for the first time in the morning. The water was so shallow and well, considering they hardly knew what a snipe was, but Scotty was a sniper. Blood will tell, whether in horse or dog. To see him ranging over these meadows at race-horse speed, splashing along through water knee deep and throwing up a shower of splashing drops as he fairly churned his way through the flood, he left a trail behind him, like a yacht breasting a heavy sea, with a ten knot breeze behind him. He seemed to wave of hand, and as close as a kitten he ranged over acres of ground in a trice and found nothing until we struck the second slank. Here he struck the scent, when at least a hundred yards from the bird, and crawled slowly up until he suddenly stopped with a jerk. There he stood a picture for a camera. Coulter waded through while I stood debating on the near side of the slank. Getting to within a few feet of the dog, the splashing Coulter came to a halt, long as I could see. Steve, who was back-a-kick-a-kick like a bass in a trombone, the wet up wild and broke for safer quarters. Although not in fair shooting distance, Steve pulled his gun up and pressed first one trigger then the other. Naught was the response, save the bursting of a couple of caps, and faster and faster went Wilsonii. From the speed at which he started I think he must be going yet. With a savage imprecation on all muzzle loaded dogs he pressed no further. I saw him strike the water half covering him. I felt sorry for the dog, but still more so, when but a few moments after, in picking my way more gingerly through and across a slank, I made a misstep and went down with a gasp half way up to my thighs. The water was ice-cold, and as it poured into my boots it sent chill after chill up and along my spine. I felt, then, as if I were in a lightning rod, with the scorching sudorific current fluid coursing up and down, taking me apart drop after drop flowed in till it poured out again over the rubber tops. Here was a mess; only the commencement of the day, and wet through. No use crying over spilled milk, so walking to a two foot high stump, I seated myself thereon and taking off those water jugs of feet coverings, emptied them out, squeezed out my socks and then ploughed my feet back again under the wet boots. My hands were raw and numb, and my feet feeling like lumps of brown sugar and nurtured, none to whom a wet foot was as disagreeable as to a cat, and then to have it for a whole day; nice, wasn't it?

"Well you could be a snipper; how do you like it as far as we've got?" sang out Derhull.

That added fuel to the fire. As Conlter talked with him, so did I to myself, only more so. Not another bird did we find on the Little Piece, and after hunting it thoroughly we started for the Big. A mile's ride brought us to the Sand Patch road, and riding for a few moments longer brought us on the Big Piece. Driving well out on the meadow, we saw the one tree the low-lying limb of a two-foot four inch trunk, black oak, and adjusting cards started to hunt the ground. The Big Piece derives especial mention. Running Northeast and Southwest it stretches out a broad level patch of meadow land for miles

and miles. Thousands of acres in extent, nothing relieves its vast expansive flatness save here and there a gigantic moss-covered black oak. On its edges a few scattered bunches of short silver-leaved willows relieve somewhat the flat monotony of the view. The oaks are covered with moss, although their massive trunks to about three feet above the ground are bare and highly polished by the water. The water, with blackened line for the mark of the frequent floods. Standing on the neighboring hills and looking over this meadow where it is water-covered, it resembles an inland sea. As far as the eye can reach nothing can be seen but water. To add to the strangeness of the scene, the flood-girdled trees stand out in bold relief, as light-houses on a dark ground. The water, which carries the Big Horn, is a lake for weeks on a stretch. Strange, the malaria fevers appear to be unknown. The smell of the damp soil, when the floods have abated and the ground once more appears, is anything but pleasant to the unaccustomed nose.

This day, however, we found the ground in superb order. We enough to give easy boring to the migrating birds, it was yet dry enough to furnish them with good cover. Rodman turned to the right with Belle and the pups; myself, name next, then Nel with Lize, then Coulter with Scotty, and finally, the two boys, the two girls, and Luderhill. We hoped by moving in line to keep the birds from getting between us and making for the lower end of the Big Piece, miles away, when we would have lost them indeed. Stepping one ahead of the other, *en echelon* in fact, we swept up the meadow. We were first on the ground and the dogs were working beautifully. Suddenly Scotty caught the smell of the faint footsteps and drew up quickly, sharply followed by Lize. They had scarce struck a steady point, when s-k-a-a-n repeated strongly struck upon our ears and the birds were in the air, high, high, high, in the air. No zigzagging flight for these fellows. Five to the left in a second, and not one moving to the right or the left. Screaming saucily in their flight, like high-dry pigeons, they soared aloft like so many rockets.

Mark! Mark! we all shouted in chorus, for not a gun was fired, and there we all stood, with mouths agape, watching the swift flight of these wary beggars. While we were yet star or snipe-gazing, up from under our very noses got a couple. If they had only kept their mouths shut, not one of us would have noticed them, so intent were we on the first lot, but that resonant bill presentation was too much for us. On a beneficent night, started us all, and brought us suddenly from the skies to earth. Up went Nel's gun, and, with the report down, dropped the bird he had covered. The other dodging along struck Underhill, who, cool as a "cucumber on ice," raised his muzzle loader and instead of a savage report, we heard, as with Coulter on the Little Piece, the snap, snap of two bursting caps. Underhill's face was a study. Talk about sudden conversions. Not a Methodist camp meeting ever gained a convert so fast. The birds were right in front of our eyes, and regarding murder *trains* breach loader. More priming *a la* Coulter was done, and once again we measure the Big Piece. We found birds in plenty, but all wild as hawks and but one lying to the dogs, and he laid like a stone, and paid with his life for his temerity. At the report of Coulter's gun up rose from one of the many ditches that mark the Big Piece, a flock of black ducks. Just out of gun shot, it was calling in the extreme to see them get up and away. They were not far off, and they were not far off. Twenty-five we counted, and they loomed up against the light blue of the sky, as a flock of dark-winged yachts skimming the lower blue.

Once more we move along. We found the water pond three to four inches deep everywhere. The tufts of course meadow grass growing in bunches, showed just above the water, and here on these miniature hummocks sat the snipe warning themselves in the same bill and wary, the birds were so few and so little that for large game the birds were up they were off indeed, and seemed to be flying for the South without a thought of stopping till they got there. This sort of shooting soon becomes monotonous, decidedly so. Some twenty or thirty birds got up, and we had but a half dozen poor shots in all. Some of these did not, like the first ones, come out and show for a good day's sport. Hearing the report of guns away to the Southwest, far down on the Big Piece, we turned and retraced our steps, spreading out as before. Scarce turned when a bird got up in front of Nelse and was missed clean. Marking him down to a notch, we moved toward his hiding place. Only a few birds came out, and we were not long in our rush, stopped short enough to twist his head off, so quick was his speed and so sudden his stop. He stood like one of the marking stakes on the meadow, and fully as stiff as any of them! Nel being the nearest, walked in, put up the bird, and although a good long shot, cut him down dead. Only a few birds came out, and we were not long in our rush, stopped short enough to twist his head off, so quick was his speed and so sudden his stop. He stood like one of the marking stakes on the meadow, and fully as stiff as any of them! Nel being the nearest, walked in, put up the bird, and although a good long shot, cut him down dead. Only a few birds came out, and we were not long in our rush, stopped short enough to twist his head off, so quick was his speed and so sudden his stop. He stood like one of the marking stakes on the meadow, and fully as stiff as any of them! Nel being the nearest, walked in, put up the bird, and although a good long shot, cut him down dead.

Mark! Mark!

Three birds going like a whirlwind, soared aloft and winged their flight adown the piece. A puff of smoke is seen and a slight report is borne down to us, but is hardly heard ere we see two birds come swiftly toward us and pitch with a jerk, or rather at the foot of our stand, and the third, like a bullet, strikes the other's downy flank, and these and was backed nicely by Lize. Underhill, Coulter and myself walked rapidly in and up got the birds with a s-k-a-a-u-u-ik like a wild duck. Coulter dropped his bird, killed clean. I missed the second bird just as nicely. Underhill, away to the left, missed with the first barrel as the bird came toward him, but as Mr. Snipe turned at the report, and threw up his wings as he changed his flight, caught him with the second barrel and was successful. We then hunted for an hour more and found one bird and which, which went to bag. This was anything but good work, so we gave up snipe shooting for the day and broke for the wagon tired and wet. Evidently the Fall flight has not yet come on, or it has come and gone. I am inclined to think that a sharp rain, followed by a stiff, cold Northwest, will bring them on in a heap. The snow will be soon at the foot of the fancy woodcock, as well as snipe will come with this moon, if at all. If they do you may soon hear again from

Gopher.

—A New York man who was demonstrating to a crowd that there was no such thing as hydrophobia, was the first to climb up a barber's pole when a small yellow dog came rushing down the street.

—The news from the Arctic whaling fleet is not encouraging this season. The weather had been mild. Up to August 10 only five whales had been seen by the entire fleet.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

INDIANA FISH COMMISSION.—We learn that the State of Indiana is soon to establish a State Fishery Commission, for the protection and improvement of the lakes and rivers of that State, and that our correspondent, W. H. Holabird, of Valparaiso, has been designated as one of the commissioners. Efforts will at once be made to restock the principal waters with improved varieties of fish.

PROPAGATION IN CONNECTICUT.—Black bass weighing four pounds have been taken in considerable numbers throughout the present season from a small lake near Granby, Connecticut. They are the progeny of some 250 stock fish planted there six years ago. There is no doubt but that from insignificant beginnings any suitable water will give the most satisfactory returns within a very few years thereafter. There are few fish more prolific than black bass, which, being palatable flesh, a most excellent game fish, and well able to protect their progeny, are certainly to be preferred for restocking such depleted waters as are not suitable for speckled trout or other fish of more aristocratic strains.

HATCHING FISH IN TRANSIT.—Fred Mather, of the U. S. Fish Commission, has invented a can in which to hatch shad eggs while travelling. It consists of one small can inside a large one. The small one has eight arms terminating in rubber balls, which press against the outer can and allow it to slide up and down as required to get any depth of immersion, and yet will hold it in any desired position. The bottom of the interior can is of wire cloth, and there are places for one or more trays of the same material above it. There is a four-inch space between the cans, and the motion of the surface water while the cans are running is expected to agitate the water below the wire sufficiently to cause a proper amount of circulation, and to agitate the eggs. When there is but little motion the interior can is raised, to bring the eggs up near the surface where the greatest agitation is found, and when the train is at a higher rate of speed it is lowered. Mr. Mather has a well-known aversion to patenting what he calls "trifles," and has given this to the U. S. Commission, who have had one made.

PROPOSED FISH FARM.

LEESBURG, Va., October 23d, 1874.

EDWIN FOREST AND STREAM.—

The plover fever has died away, and our sportsmen are beginning to try the Bob Whites. Very few birds have been killed as yet by even the best shots. There is some probability of a fish farm being established near our little town. Maj. Ferguson, who is an accomplished angler and an energetic officer, is trying to come to terms for the use of the Big Spring tract between Leesburg and the Point of Rocks for the purposes of fish culture. This spring is near the residence of the Hon. Thomas Swan, and is therefore convenient to the Major, Mr. Swan's son-in-law. The Major has been liberal in his efforts, and all sportsmen wish him success. He at first offered to put in the capital necessary to make a first-class fish farm, and allow them to hatch some salmon for Maryland. This was not agreed to. Now he wants to lease the land for ten years. They have not yet come to terms. It will stimulate the culture of fish here in London, and we hope the Maryland commissioner will gain his point.

T. W.

—Mr. C. G. Atkins, of Bucksport, employed by the United States and Maine, Massachusetts, Vermont, Rhode Island and Connecticut, to collect the eggs of fish, has at present in his building erected for the purpose 28374 feet in size, about 2,500,000 eggs, obtained from 500 salmon. The estimated number of eggs obtained from each female fish is about 9,000, of which about 8,000 mature under favorable circumstances.

STOCKING OUR LAKES AND STREAMS.—We find in the *Rochester Union and Advertiser* the report of an interview with the noted Seth Green on the subject of stocking our lakes and streams with fish. He stated that on inspecting recently some of the streams which had been stocked with young shad and salmon, he found those of two years' growth fine and healthy, but complained bitterly of the contrivances used for catching fish at wholesale, big and little, of course, destroying those not large enough to serve their cupidity. The "eel weir" was especially destructive, and the most wicked of all the traps employed. In Oswego River as many as one hundred young shad have been caught in one of these weirs in a single night. He said it was preposterous to suppose that as long as these practices are allowed to prevail. Of the three hundred thousand and fish of all kinds put into this river, it was impossible to say how many were left. One thing was to be borne in mind, that either all unlawful modes of taking fish must be suppressed, or fish-stocking of the streams must cease. Mr. Green said, however, that he believed laws would ere long be provided and officers appointed to execute them, and that they would be strictly enforced in cases as strictly as they were in crimes of burglary and horse-stealing.

In reference to the practical benefit of the State Fish Commission, Mr. Green said it was rather early to expect any enlarged benefits. The Commission was not established until 1869, and two or three years were then spent in looking over the ground and laying out plans. "In no case where small fish were deposited in large numbers have they remained long enough yet to attain full size. In many waters, however, good-sized fish of artificial hatching and planting have become very abundant, and soon will become so plenty as to attract much attention. The Commission have had much to contend against in the greed of the net and trap fishers. Shad were put in the Hudson as early as 1807, and have been continually added to, at the proper season, since that time. Their abundance at present is a matter of frequent comment. Many will remember that

shad weighing four pounds each were sold here last season at fifty cents a pair. As a result of a stocking of the Hudson and other streams the price of this fish has been reduced fully three-quarters."

The commissioners expect to distribute to all applying parties in the State during the coming three winter months, three millions of fish, and in four years expect to supply every lake and stream in the State. The result of all this will be that fish, an article of food will become so abundant and cheap as to reduce all other necessities of life proportionately; and will afford a permanent supply if the protective laws are enforced.

BROOK TROUT.—A. Palmer, Boscobel, Wis., says:—

"While this is not the fish for the million, as the amount which can be raised is limited, yet it is a great favorite with the angler and epicure, and is better adapted to cultivation in private ponds than any other fish yet experimented with. Although naturally very wild, it is easily domesticated, and with a little petting becomes as tame as a kitten."

"They are easily bred, and grow rapidly, although they don't produce as much spawn as some fish, yet a sufficient amount to trouble the breeder to find water to raise the fish in, each female producing from five to eight hundred spawn at two years old, and about double that amount at three years old; but they cannot be raised to advantage in any other than spring or brook water. This may be either hard or soft, but not largely impregnated with minerals."

"Trout, in their natural state, prefer active water, and even temperature, but still they do well in pond water if there is a continual supply of fresh water running into them, and will stand a temperature of sixty-five or seventy degrees; but water which runs up to a high temperature will not raise as many trout as that of more even temperature. The same applies to still water. They are great consumers of oxygen, and cold water contains more than warm water, and running water more than pond water. In building ponds we try to have a fall from one pond to another to carry this property into the water. We find in transporting trout that as long as the cars are moving they need but little attention, but if they stop for a short time the water must be agitated."

"They are cheaply raised. Being cold blooded, they waste no food in keeping up the heat of the body, and ponds which have been fed with a few brook trout will produce a large amount of insects and crustacean, and nearly enough to feed what trout the water will bear."

"I am feeding about fifty thousand, ranging from two to eighteen inches in length, the larger portion small, and they will not eat a beef liver a day. Milk curds, any lean meat that is fresh, or other kinds of fish, make good food for them."

"In connection with other farming, a small spring that is perpetual will pay to improve, while many farms in the State contain water enough to raise more pounds of meat than all the arable land would, if cultivated, and the products of it fed to cattle and hogs, and the building of the ponds would not cost as much as the necessary buildings to make the stock comfortable. The stock to start with would cost less; the necessary feed for the farm would more than feed the trout; the labor of feeding and caring for the cattle and hogs would be much greater than that of the trout; then if I am right, and I think I have been liberal, the trout will pay the best by the difference of fencing, ploughing, seeding, harvesting, and threshing, and will come into market in less time than the cattle, and pretty near as soon as the hogs."

"While the fish is such for the new beginner to learn, I think he can get a knowledge of it as easily as he could of other fish and habits. And while in one case he would apply to the cattle breeders for information, in the other he would go to some well informed fish breeder."

ACCLIMATIZATION OF TROUT IN OTAGO, NEW ZEALAND.

About seven years ago Mr. G. P. Clifford, the manager of the Acclimatization Society of Otago, undertook the conveyance of a lot of trout ova from Tasmania to Otago, which he safely landed and hatched out at the society's grounds in Dunedin. When the young were ready for transport, they were distributed in several of the likeliest streams in the province. In one of those, the Slag River, at Palmerston, he put, if I recollect right, 100 fry. These were looked after, and I may say, nursed by Mr. W. A. Young, an energetic and enthusiastic gentleman, through whose property the river runs. Mr. Young, taking a lively interest in the stocking of the river, determined to increase the quantity of trout by artificial breeding. Not content with he anxious to increase the fish in his river, but wished to get all the rivers in the province also stocked, and therefore he has watched their growth from their infancy, and prepared places for breeding purposes. At his own expense he excavated a pond on his property, the water to supply which is taken from his mill-lade. At the head of the pond there is a small lade about thirty feet long by three feet high, and one deep, a sluice at the head, and regulating a continuous stream of water which passes into the pond. On the property there is also a fine spring, having a temperature of forty-eight degrees Summer and Winter; it is at this spring his breeding boxes are placed. Last year was the first in which he began operations. Having procured nets, so as to be ready on the approach of Winter, he waited, until July, when a large trout, running up the stream, which he thought was a sluice at the head, and then sent for Mr. Deans, the present manager of the Acclimatization Society, to help him. I also was present on the occasion, and with the nets, twelve fish were captured, the largest weighing twelve pounds, the rest being nine pounds, eight pounds, and down to three pounds. These were placed in the small lade above referred to, and kept until July, when they were graded at top and bottom. From these fish he got 30,000 ova, which were treated by the American dry process. They hatched out over ninety per cent. The same fish were stripped three times at different dates, which was found to be the best way, as only the ova which came away readily was taken. The young fish were distributed in nearly every river in the province successfully. This week I have had a letter from Mr. Deans, who writes, "I have had caught eighteen fish this year, one of which was of the extraordinary weight of sixteen and a half pounds. This fish he intended killing and sending to the museum in Dunedin, which already contains specimens of trout and other fish. From his trout this year he has obtained a large supply of ova, which by this time will be hatched out. The Slag River is small, but has fine deep pools and gravelly streams, and has good shelter for the trout. It

also teems with food, which may account for their rapid growth. In other streams trout have been seen of a large size; but there are very few persons who take such a lively interest in them as Mr. Young.—*Land and Water.*

THE BLACK BASS.—We doubt if as gamy a fish swims as the black bass. Hooking him is the least of catching him, and no bungler can land a three pounder. When hooked he dives for the bottom, and turns and rudds like an arrow to the top, sometimes leaping three or four feet in the air, then down he goes again like a bullet, turning, shaking, and twisting, bending or breaking a stout pole like a reed, snapping a silk line like a thread, and jerking the strongest hooks from his tough gills. If you are expert and wary enough to prevent this, after three or four plunges he becomes exhausted, and you may haul him in. The manner of fishing black bass is generally by trolling with a long line, though sinking in ten or fifteen feet of water with worms or minnow for bait is a favorite method with some, especially in the Fall.

The bass pair and spawn in May, and are said to make their beds very much like the roach, only in deeper water and on a much more extensive scale. They select a bed of coarse gravel, and after scouring the pebbles smooth and bright with their fins and tails, deposit their eggs. It is supposed that two or three weeks elapse before the eggs hatch. The hatching is almost instantaneous, the young bursting the egg and coming out a perfect fish about three eighths of an inch in length. After hatching, the young remain several days hovering over the spawning beds, the old ones keeping close by to protect them.

In about a week the young scatter into deep water, and are not seen again until September, when they come in shore, having grown to about two inches in length. When they are well supplied with food, they grow about four inches the first season. At two years old they reach a pound in weight, and after that will grow about a pound each year until they weigh six or seven pounds, though few are caught weighing over four pounds. They are enormously prolific, a fish yielding nearly a third of her entire weight in spawn.

Natural History.

A HORNED TOAD.—Through the kindness of Mr. Wm. M. Tlleston, one of our most valued correspondents, and the author of several breezy sketches of adventures in the Orient and California, we have been enabled to glance at the horned toad (*Tapaya Douglasii*), a species of the Saurian family quite abundant in the Pacific States and Territories. This is most common on the dry and elevated plateaus, and like its congeners is an excellent adept at catching flies. Its most marked peculiarity is the two small and hard excrecences which put out from the head above the eyes and give it its cognomen. This creature has a temper not the sweetest, for in its natural state it is quite pugnacious, and will promptly oppose any enemy, yet it is perfectly harmless. The specimen shown to us came through the mails from San Diego, California, so that it is now quite an experienced traveler. It is quite a curiosity to those who have never seen the species.

A WANDERER.

CATSKILL, N. Y., October 23d, 1874.

EDITOR FOREST AND STREAM.—

A bird which tallies precisely with Leach's Petrel—*genus Gynchochroa*—(Cones was shot one day last week, in about the same bay along the west coast of New London, in the old junction thereof of the Catskill River. The dimensions, as measured by J. Robert Greene, Esq., of this village, are as follows: Length, 8 inches; wings, 4½ inches; tail, forked, 3½ inches, white upper tail coverts, &c. Very respectfully,

GEO. B. DAY.

P. S.—I have often seen the stormy Petrel, but never observed one closer. This specimen of the Petrel family is, I should judge, not quite as large as the common species. We are 120 miles or more from the ocean.

G. B. D.

THE ORIGINAL CAUSE OR CAUSES OF THE MIGRATION OF BIRDS.—In some cases scarcity of food would seem to be a sufficient cause, and it is undoubtedly the most obvious one that presents itself to our minds. As far as food goes, it is not towards the south, but towards the north, that the most northern limits of the range of a species, the individuals affected thereby seek it in other countries. Thus doing, they press upon the haunt of other individuals; these in like manner upon that of yet others, and so on, until the movement which began in the far north is communicated to the individuals occupying the extreme southern range of the species at that season; though, in the winter, no bird leaves its home to come to the south, and some time longer in the enjoyment of their existing quarters. When we consider, however, the return movement, at the end of Winter, it is doubtful, I think, whether scarcity of food can be assigned as its sole or sufficient cause. But here we feel the want of knowledge. At present we are too little acquainted with the physical peculiarities of those more equatorial regions, which, in Winter, are crowded with emigrants from the north, to come to any final decision. It seems not too violent an assumption to suppose that though such regions are well fitted for the Winter resort of the bird population of the north, they may be deficient in certain necessities for the nursery; and it seems still less of an assumption to suppose that even if such necessities are not wanting, yet that the regions in question would not supply them in sufficient quantities for the different seasons, being, at the lowest computation, twice as numerous as the former—unless the numbers of both were diminished by the casualties of travel. But another point must not be overlooked. The most sedentary of birds year after year occupy the same quarters in the breeding season. In some instances this may be ascribed, it is true, to the old haunt affording the sole or the most convenient site for the nest in the neighborhood, but in many cases such is not the case, that we are led to believe in the existence of a real partiality, while there are quite enough exceptions to show that a choice is exercised. The same may equally be said of the most migrant of birds, and perhaps the strongest instance that has ever come to my knowledge refers to one of the latter. A pair of stone curlews (*Gallinago capensis*)—a very migratory species, affecting almost exclusively the most open country—were in the habit of resort-

ing for many years to the same spot, though its character was entirely changed. It had been part of an extensive rabbit warren, and was become the centre of a large and flourishing plantation. It seems to me, therefore, that among the causes of migration the desire of returning to old haunts must be included.

That all birds do not migrate in the same manner is pretty plain. Some, as the swallows, come and go conscientiously, and in vast flocks, and so leave our shores in a large company, while the majority of our summer visitors slip away almost unobserved, each apparently without concert with others.

It is also pretty nearly certain that the same species of bird does not migrate in the same manner at all times. Mr. St. John tells us of the arrival of skylarks on the coast of Norway—"They come in flocks, and in a constant straggling stream, not in compact flocks." Yet it is notorious that a little later these same birds collect in enormous flocks, which prosecute their voyage in company. As tending to the same conclusion, I need hardly do more than refer to the excellent observations of Mr. Knox on the movements of the great wagtail ("Ornithological Rambles," third edition, pp. 81-86), and, indeed, to the whole of his remarks on migration, because they must or ought to be known to every one who takes an interest in the subject. But more than this, it is pretty nearly certain that of the majority of northward migrants in Spring the males take the lead, and anticipate the advent of their mates by some days, not to say weeks—a fact which may possibly indicate the existence of another cause of migration to which I have not before alluded—while this peculiarity has never been observed in the autumnal movement.—*Nature.*

BIRDS.—The *Daily Telegraph* notes that "of late a singularly beautiful theory of the migration of birds has been suggested by the aged poet Runeberg, who, lying on his sick bed at Helsingfors, in Finland, has watched day after day through the open window the habits of the feathered visitors. He believes that what draws birds southward is the longing after light. Beautiful as the fancy is, it is yet North then they make their passage to the South; but as soon as the Northern nights set in, with all their luminous and long-drawn hours, the wanderers return to their old haunts. 'The same instinct,' etc., he asks us to believe, 'that works in plants—which, although firmly rooted in ground, yet strain towards the light, spreading upwards in quest of it—works also in birds, who, on their free wings, fly after and follow it.' Beautiful as the fancy is, it is yet unfortunately must be rejected by those who follow the terrible logic of facts. The coming and going of birds is in no way coincident with the shortening of the days, but is later in some years and earlier in others, from causes at which from the present we can only guess. 'That want of food has in some cases a great deal to do with it can hardly be questioned. The sea-birds, for example, winter on our coasts follow the southward passage of the herring and pilchard, upon which they feed; and when the ground within the Arctic circle is iron bound with the bitter frost, the snipe and the snow bunting pass down towards the South. But, on the other hand, it is impossible to explain the Spring passage of the swallow from Africa to Southern Europe by any want of food, or to say why so many of the warbler tribe should leave us long before the insects on which they feed have disappeared.'"

TRAINED BIRDS.—The *Baltimore American* gives the following account of a troupe of trained Java sparrows and parakeets now exhibiting in the streets of that city:—"When a suitable place is found, a circular table is opened, and the birds are all turned loose upon it; they manifest no fear at the crowd, and do not offer to molest. The performance consists of singing bells, trundling small wheelbarrows, slack wire walking, firing off pistols, dancing, swinging each other in small swings, an excellent imitation of a trapeze performance, and a number of other equally interesting tricks. The most wonderful part of the performance, however, is done by a parakeet. The bird walks to the centre of the table, and, after bowing to the crowd, seats himself in a chair, and rings a bell. The top of the paper of the bell is attached a small cord, and any one in the crowd is allowed to ask the bird to strike any number of times upon the bell. If asked to strike ten times, he leaves the chair, seizes the bell rope, and pulls it ten times, after which he bows and returns to his seat. This was repeated a great many times, and with one exception, the bird made no mistake. The bird in a few twenty-seven times, but he is unable to count further. A collection is of course taken up after each exhibition."

—The expedition sent out under the auspices of the Treasury Department for the investigation of the fur-seal rookeries of the North Pacific, and especially on the Pribilof Islands, consisting of Mr. Henry W. Elliott and Lieutenant Maynard, of the navy, has been heard from to the date of the 5th of July. The party was then at the island of St. George, which they had reached from Alaska. During the year which had elapsed since Mr. Elliott's last visit he was satisfied that there had been no material diminution or alteration otherwise of the numbers of the fur seals. He and his companion expected to leave St. George in a few days, and proceed to the islands of St. Michael, St. Matthew, St. Lawrence, the Diomedes, St. Michael, and to Nunivak, after which they would return to San Francisco.

—A pet fox in Leavenworth, Kansas, though pretending to be utterly regenerated, still retained his penchant for chicken meat. A pet wolf in the same neighborhood had the same taste. One night it happened to both to feel hungry simultaneously, and they met in a hen-house, each upon homicidal thoughts intent. "The wolf," says Mr. Webster in his *Great Unsettled*, "is cruel, greedy, and ravenous." "The fox," says the same indisputable authority, "is remarkable for his cunning and preys on hens." Similarity of tastes in this case led to single combat. The poor fox showed fight to the last, but the wolf was too good for him, and not only killed but afterward ate him, all but his tail, after the manner of South Sea warriors.

—A paper was read by Professor Panzeri before the Egyptian Institute of Cairo, relating to his experiments on the action of the poison of Egyptian serpents, in which he presented the conclusion that two animals only, the ichneumon and *Mephitis mephitis*, are able to resist large doses of the poison of the neja and the cerastes, so that in ordinary cases they may be considered as invulnerable to these serpents. These results are thought possibly to account for the veneration in which the ichneumon is held by the ancient Egyptians.

—The Zoological Garden, of Cincinnati, was recently the recipient of a package weighing 650 pounds, containing live specimens of all but three kinds of native American snakes.

—A horse raised in the town of Concord, Me., but sold to a person living fifty miles distant, recently got loose and brought up in his old quarters, though he had not been there for ten years.

—The Alaska fur trade is not a bad thing for the United States Treasury. The Government receives \$262,000 direct. The skins of the seals are taken to London, cured, and brought to the United States, and the duties paid amount to \$200,000 more.

THE ENGLISH AND MICHIGAN GRAYLING.

EDITOR FOREST AND STREAM:—

Sir Humphrey Davis considers the grayling of Northern Europe a different species from ours, for many reasons, which I condense for your information. In England they have been taken eight to nine pounds in weight. In the Baltic Sea two or three pounds weight and eighteen inches length is the common size, being about the proportions of a large English fish. It is noteworthy that our English fish cannot stand the slightest taste of even brackish water. A fish above two pounds is a very large specimen; far more are taken below ten ounces than above it. In looking at the lithograph of your Michigan grayling I do not observe the peculiarity of the pupil which distinguishes ours, which is, that the pupil of our fish, instead of being circular, is slanted like a pear, with the small end, or shank, pointed towards the snout.

The northern grayling found by Back and Captain Franklin's companions has much larger dorsal fins than our English fish. This seems to apply to your lithograph, and I am now inclined to think that your Michigan fish is not identical with our grayling, but very likely the same as Back's. Our best authorities seem to agree that our fish is not indigenous, but imported by the old monks, so that these old gazelles might have an excellent substitute for trout and salmon in the Autumnal and Winter months, when it is in best season.

The question may be asked "Why is it not found in all fine streams near old abbeys and monastic institutions?" My answer is that doubtless they were not there, but water not suiting their nature and habits, they dropped down stream and disappeared, as they have done in many cases in my time. The brilliancy of color of the grayling seems to vary much, as with our common trout. Sir Humphrey writes that he caught some on the Continent with the back as high as colored as a "damask rose or an anemone." A gentleman in Worcestershire, in the west of England describes a grayling he took in the Tems, which, in the height of condition, which is in October or November, had upon the head and looked at horizontally, presents the most beautiful purple and violet he saw from snout to tail; snout, sharp; eyes, lozenge shaped; hog-backed; under part of lower jaw and belly touch the ground together; latter brilliant white with narrow lacing of gold; dorsal fin very large, covered with scarlet waves, and spots intermingled with purple. Adipose fin also dark purple, and the fish smells like a cucumber."—JACKSON GILLBEANS.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
New York, N. Y., Oct. 25, 1874.

Animals received at Central Park Menagerie for the week ending October 24th, 1874:

Four Black Snakes, *Bascanion constrictor*. Presented by Mr. H. N. Strong.

Two Gray Foxes, *Vulpes Virginianus*. Presented by Mr. Lyman Fisk.

One Badger, *Taxidea Americana*. Presented by Mr. F. G. Skinner, editor *Trifid* and *Forest and Stream*.

One Civet Cat, *Protera Arctica*. Presented by Mr. John Thies.

Two Horned Toads. Presented by Mr. D. A. Freer.

W. A. CONKLIN.

Woodland, Lawn and Garden.

ANSWERS TO CORRESPONDENTS.

ELLEN MAY, Gloucester, Mass.—Your note received. The specimen branch you send is the tamarix, and is quite a hardy shrub, not so much in cultivation as it should be.

There is a legend connected with this unpretending little shrub, which gives it its name. In ancient times there were a race of men called the Tamariscis, who dwelt upon the side of the Pyrenees, that bordered upon the Spanish territory. They gave much time to the culture of this plant, and developed its beauty to its fullest extent.

When once seen, it will ever be remembered for the peculiarity of its foliage, which consists of a series of thread-like leaves, very slender and of a feathery appearance. The pink blossoms of the tamarix make their appearance early in the Spring before the foliage appears, and give to the plant a curious as well as uncommon appearance. This plant delights in a deep, sandy soil, and when not placed in too rich a place will flower twice in the season—early in Spring and late in Autumn.

Having once well planted your tamarix, you have it for all time, if you take good care of it. To have a good appearance, this plant should be set upon a lawn, as it requires space to develop itself. It will thrive well in this country yet. There are not found in America such superb specimens as may be found in England. In some parts of England trees may be seen from twenty to thirty feet in height, and measuring at the ground twelve inches in diameter. Imagine the rare beauty of such a tree when in full bloom. Some fine specimens may be seen in France; and it only needs special cultivation to give grand effect. This plant may be cultivated from cuttings, or bits of the roots.

OLIVIER QUILL.

VAN ANDERSON, Milo, Me.—Your preparations for the future orchard may be stated as follows, viz.: Plow deeply your ground, and subsoil same. Turn under a large quantity of good manure. Mellow your ground completely three feet deep. The trees can be planted without any more manure. Make the holes for the same large, and use finely pulverized manure, carefully sifted, about the roots. If you have on hand, and wish to use in the hole beneath the tree old well-rotted manure with it, it will do no harm. Place the trees as deep as they stood in the nursery row, stake them firmly, and patiently await for them to grow.

OLIVIER QUILL.

ORCHARD MANAGEMENT.—A successful Michigan orchardist gives his method of cultivation, in a communication to the Pomological Society, as follows:

I manage the field as though there were no trees—plowing, cropping, seeding to grass, mowing, pasturing, &c.;

but I do not forget my trees nor allow them to take care of themselves. I do not allow a living thing to grow under them—grass, weeds, or grain.

When the field is plowed, the plow is allowed to skim lightly over the roots, with care not to cut many if any of them. I am also particular to keep the trees well mulched with straw litter, either from the barnyard or from straw; the latter is preferable, as it is not apt to be mixed with weed seeds, and not so rich as the former. Too much manure can be applied to fruit trees for their good; but straw, entirely clean and unbroken, is a capital application—if a little fine and slightly mixed with the droppings of stock as they feed on it, all the better. Beneath each tree, and as wide as the branches spread above (wider if the trees are young) apply the clean straw eight to twelve inches deep, one half or two thirds the depth of the mulching is finer or richer, as from straw-stack feeding.

In this practice, here is my theory for success in raising fruit: Plentiful mulching serves the tree in many ways. First, it is a fertilizer; second, it always keeps the root-bed soil mellow and moist; third, it operates as a sponge, by catching and retaining the water which falls off times in Summer in heavy, dashing showers, until it gradually sinks away beneath the tree root-bed, where it is always much needed in the hot and thirsty season, but where it seldom gets where the turf is allowed to form—often and nearly always running off, and not wetting half an inch deep during a good average shower the little knoll on which an apple tree is too apt to stand, so the roots do not get a taste of that for which they are the most thirsting, and must have, to do well.

Lastly, I think in some way it favors the destruction of the apple worm, which thrives by thousands and millions in some orchards. I have not seen a single mature worm in my orchard this season, nor do I remember of seeing any last year, though I have had a few years ago, but never many. I have seen this year in a neighboring orchard ten to thirty nests to a tree throughout the orchard, and it looked nearly ruined. This orchard is often cropped, but never mulched.

I have yearly uniformity in bearing, and enough in abundance to occasionally break the branches.

CULTURE OF THE CACTUS.—This genus of plants is divided into cacti, cactus, epiphyllum, pyramidalis, and some of which are remarkable for their showy flowers, while others, such as melo-cactus or Turk's-cap-cactus are cultivated more for their peculiar shape than for their flowers. To see a collection of cactuses, consisting of a large number of different genera, gives one some idea of the many ways nature exhibits herself; they convey a repulsive feeling, and also an attractive one at the same time. The idea of having to travel through different shapes, and to admire the gorgeous flowers of some of them, make them a very attractive part of the vegetable creation.

They are mostly of easy cultivation—more especially those in general cultivation—some of them being also well adapted for house culture, especially some species of the genera cereus and epiphyllum; they require for soil a good turfy loam and a little well-rotted cow manure, giving plenty of drainage to the pots, with either pieces of broken pots or charcoal. During their growing season, give them plenty of water and a high temperature, but when at rest keep them dry, and most of them will endure very low temperature. If these points are attended to, no fear but success will follow. I have never seen or had any difficulty with them when treated so. The greatest cause of failure of growing cactus which I have met with has been keeping it too wet, and too shady when ripening their wood and at rest. No class of plants I know of better endures extreme temperatures, if given at the proper time and properly attended with water. I have seen some folk keep plants of *Epiphyllum truncatum* year after year without their showing any flower buds, while others with the same conveniences have them flower regularly, the trouble always being in keeping too wet, and not enough of sun to ripen the wood.

GRAFTING FROM BEARING TREES.—Nurserymen have made many discoveries of late years, as to the tendency of plants to "sport." They will take one branch of a tree or shrub, well variegated with foliage, or some other peculiarity, propagate this by cuttings till they have secured a new stock, and then send it out as a distinct variety; and such a process. These peculiarities of branch or leaf, seem almost as permanent as those of new varieties originated from the seed.

We must acknowledge that all experience of this sort is delicate, or we must admit that a great and almost universal mistake is made in grafting nursery stock with scions cut from young, non-bearing trees in the nursery rows. This is continued year after year, scions always cut from young, rapidly growing stock, possibly a den or more removed from a bearing tree. Is not this one reason why young orchards are so long coming into bearing; especially of new varieties, where the supply of scions is small, compared with the demand? In the olden time, farmers who took grafts from the bearing trees in their orchards, found no difficulty in changing the wilding to a productive tree of good fruit, often gathering some specimens the second season after the graft was set. And if it is not so easy to cut from a bearing tree, grafts from bearing trees as from nursery stock, but if the former make more productive heads, they should be generally preferred.

I understand very well that grafts are not selected with blossom buds, but if a tendency or "sport" in a single branch can be perpetuated into a distinct variety, is it not best to cut grafts from trees and branches having some tendency to fruitfulness?

—The bottom fell out of the Conshocken reservoir, in Pennsylvania, the other day, and one million gallons of water wholly disappeared. A hole twenty-five feet deep and thirty feet in diameter was left. As the region is of limestone formation, it is conjectured that the country is underlaid with great caves, into one of which the water of the reservoir has disappeared. Evidence of the existence of such caves has been observed at different times in the Past.

—The last number of the *Gardener's Chronicle* gives a drawing of four lopped elms growing near Bachel, the tops of which have naturally grown with the outline of a horse.

The Kennel.

DOG BREAKING.—No. 2.

FROM the moment you come into possession of your puppy—we will say at three or four months old—lessons of obedience can be given at feeding time, before you begin the more difficult part of yard or indoor breaking; in fact, whenever you may choose to offer him food, by placing it before him and not allowing him to touch it until ordered, slightly tapping him when greediness or a non-regard of your command is observed, persisting in it until you feel he knows he can gain nothing by disobedience.

We have said that it is desirable that the trainer should take the entire charge of the youngster himself. This is important if we wish a more easy task, for we certainly gain complete affection more readily thereby, and create in the dog a greater desire to please his master.

The first important lesson we give the puppy is that of charging or dropping to the ground at command, and remaining so until permitted to rise by the order "hold up." Very few dogs in this country are trained absolutely to go down at the report of the gun, or as it is called, dropping to shot, the sportsman feeling satisfied if his setter or pointer does not break shot and rush for the bird the moment it is killed, but charges at the word, and remains so until commanded to fetch, if a retriever, or to keep the position upright until the gun is reloaded, and he is ordered to move on again.

Notwithstanding so few dogs are broken to drop to shot with us, we think it should be done, as undoubtedly it tends to giving steadiness in every active point, and acts as a check on any desire the animal may have to break in and mouth game when it falls, for, in the excitement of the moment, the sportsman may neglect to give the order to drop or charge when he has brought down a bird, and the dog being left to act as he chooses, naturally moves toward it also, which, if too often repeated, will certainly unsteady him. Therefore, we advise the teaching of dropping to shot, and, with very little trouble it can be readily accomplished by the following method.

Fasten to your dog's collar a strong cord thirty or forty feet long, and take him into a yard or lot where no one will be present, and secure one end of the cord to a short stake firmly driven into the ground. Place him in a crouching position in front of you and keep him there, pressing on him and saying down, drop, or charge, as you see fit. The moment you take your hand from him he will, of course, attempt to get up, which you must meet with a sharp jerk of the cord and a determined "charge." Until he obeys, after which encourage and caress him and allow him to rise, using the words "hold up." You can now make use of the cord in a more forcible manner, as a reminder that your command must be obeyed. Take the dog to the stake and make him charge there, and not allow him to move while you walk from him. Go a few steps beyond the distance the rope will allow him to come, and tell him to hold up. He will naturally run toward you, and just as he reaches the end of his tether and receives the jerk, cry charge. This, we find, teaches quick and prompt obedience to the order.

It is time now, supposing that you have thoroughly taught this lesson, to have the dog learn that the holding of the hand aloft is equivalent to the verbal order to drop, and from the start it might be better to always uplift the hand when the command is given, practising him until the signal only is required to cause him to go down promptly.

In the same manner can dropping to shot be taught by firing off a pistol and instantly jerking the cord and saying charge; but we advise commencing with a cap only, then very small loads, and gradually increasing to full charges.

The dog must fully understand to be entirely broken in this particular, that the uplifted hand means he should drop, no matter how far he may be from you in the field, and that the report of the gun is likewise the same command.

In these lessons patience must be studied, and the dog forcibly impressed with the necessity of obedience without being cruelly treated. On the contrary, praise and caress him when he does well, but then only.

THE BENCH SHOW AT MINEOLA.

THE first regular bench show of dogs we have ever had in this country in connection with agricultural fairs took place at Mineola, Long Island, on the 7th of October, and proved a success beyond the most sanguine expectations. In fact, the interesting feature of the Queens County Agricultural Exhibition was the department for setters and pointers, and attracted many that would not otherwise have attended.

The entries were more numerous than it was supposed they would be, and comprised the red Irish setters, the black and tan Gordon, and others which came under the class of setters, of any breed. We noticed that few pointers were shown, and although greatly outnumbered by the setters, they were remarkably fine specimens of the breed, the pair from the kennels of the Duke of Beaufort especially so.

Of dogs of other breed than setter and pointer, we were particularly attracted by Mr. Raab's Dachshund, or German beagle, and Mr. S. M. Barlow's Scottish stag hounds.

The spaniel class was thinly represented, while not a few well-bred terriers, both black and tan, and skye, were exhibited.

The rules of the Kennel Club of London, as regards points in judging, were taken, and the premiums awarded to pointers and setters were as follows, Messrs. E. S. Carman, A. Gubner and Charles H. Raymond acting as judges:

Red Irish Setters—Dogs: Duke, exhibited by Mr. Hamilton Thompson, of Jersey City, a special premium cup valued at \$20; second best dog, Pilot, exhibited by R. L. Lawrence, Esq., diploma.

Red Irish Setters—Bitches: Lady, exhibited by Mr. H. S. Parke, a special premium cup valued at \$20; second best bitch, Fannie, exhibited by R. W. Reid, Esq., diploma.

Gordon Setter—Dogs: Shot, exhibited by Thomas A. Jerome, a special premium cup valued at \$20; second best Gordon setter, Ponto, exhibited by C. O. Doherty, diploma.

Gordon Setter—Bitches: Di, exhibited by James R. Filley, a special premium cup valued at \$20; second best Gordon, Kate, exhibited by A. C. Waddell, diploma.

Setters of any Breed—Dogs: Dash, exhibited by A. C. Waddell, a special premium cup valued at \$20; second best, Count, exhibited by M. Leavitt, diploma.

Setters of any Breed—Bitches: Maggie, exhibited by Mr. Nelson, a special premium cup valued at \$20; second best, Nelly, exhibited by E. Orgill, Esq., diploma.

Best Pointer—Dogs: Phil, exhibited by A. C. Waddell, a special premium cup valued at \$20; second best pointer, Bang, exhibited by J. Smith, diploma.

Best Pointer—Bitches: Fannie, exhibited by Mr. C. Porter, a special premium cup valued at \$20; second best, Belle, exhibited by A. C. Waddell, diploma.

We trust that our sportsmen interested in the improvement of American field dogs will continue in the good work they have inaugurated, and that in every prominent agricultural exhibition a space may be set apart for the display of well-bred dogs, as it is in Great Britain.

PORTABLE REMEDY FOR RAPID DOG BITES.—Amongst the new inventions submitted for inspection, says the *Lancet*, "is a remedy against the bite of rabid animals." It consists of a few small glass tubes and a blunt probe in a case. Some of the tubes are charged with nitric acid, and the others with subcarbonate of potash. The object of the caustic is to give an immediate and thorough cauterization to the wound before any of the poison can circulate through the blood. The application of the subcarbonate of potash immediately afterwards is to destroy the further action of the caustic, and the probe is used to spread and touch every part of the wound with the liquids. After these operations have been performed, a bread and water poultice should be applied, and then the wound should be treated in the ordinary way.

A CHILD ATTACKED BY BLOODHOUNDS.—A little girl named Wilkin, in the service of a gentleman residing at Hillington, near Uxbridge, was fearfully worried by four bloodhounds on Saturday afternoon. It appears that she had been left alone in the house with the animals, and while she was in the act of attending to some food which she was cooking for them, they suddenly turned upon her. Her cries attracted the attention of the passers-by, and on some neighbors entering the house they found the dogs literally tearing her to pieces. After a good deal of trouble they succeeded in beating the animals off; but the girl had by this time become so frightfully mangled, especially about the face, that it was thought she would not recover. —*Pancier's Gazette*.

Dachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

PORT FLORIDA.—Sportsmen intending to visit Florida, and who are anxious to practice economy, will be pleased to learn that schooners are now running weekly from New York and Boston to New Smyrna, Florida. Captains of vessels about to sail for Florida will do well to notify us in season, as it will be greatly to their interest.

—Last Friday afternoon a large number of the members of the Manhattan Yacht Club and their friends assembled at their club house, at the foot of Eighty-ninth street, East River, to witness a scrub race and enjoy a clam bake and chowder. The course selected for the race was from a stake-boat off the club house to and around a stake-boat anchored one mile up the Harlem River, five times over the course, which made the distance to be run ten miles. Two pieces of plate were offered, one for first-class boats over twenty feet in length, to be captured, it being planned, the other for second-class boats, to be catrigged. Owing to the late hour at which the start was effected and the lack of wind, the distance was changed from ten miles to six. There were no time allowances given. The entries were as follows:—

First-class boats, Oriole, Captain Jacob Varian; Carrie, Captain J. D. Brassington. Second-class boats, Skipjack, Captain J. D. Brassington; Zephyr, Captain Hyslop. The judges awarded the race to the Oriole, she having beat the Carrie 35m. and 40s. Times of race, 5h. 03m. 30s.

In the second race the Skipjack and Zephyr were the competitors. The former made the distance in 5h. 33m. 10s. Time of the latter not taken, as it was after dark when she came to the stake-boat. Commodore Jacob Cooper presented the prizes, after which the yachtmen and their friends feasted on chowder and roast clams and yachting. The race winds up the sport for the season with the Manhattan Club as an organization.

—The annual yacht race of the Hamilton (Canada.) Yacht Club took place on the 21st. The entries were:—The Brunette, Cuthbert, and Lady Stanley, in the first-class, and the Jacqueline, Saunterer, and Water Lily in the second. A fine start was made at 10:07 A. M., and after an exciting contest, lasting nearly four hours, the Cuthbert came in first, at 1:44 P. M., followed by the Brunette at 1:58, and the Stanley at 3:03. Making tonnage allowance, the Brunette won by seven minutes. In the second-class race, the Jacqueline came in at 1:50, and the Saunterer at 1:52. The wind blew half a gale from the Southwest part of the time.

—At a meeting of the Halifax Rowing Club, held at the Pictou House last week, the financial matters connected with the late Brown-Morris race were wound up. A small assessment on the members to square some minor accounts was agreed to. A purse of \$30 was made up for Mr. Daniel Kennedy, Brown's trainer, and a committee was appointed to solicit further subscriptions from members for Mr. Kennedy. The following challenge from Vallejo, California, was read:—

"You cannot beat Long Steve in single sculls for \$5,000 a side, in San Francisco, California, within six months. Yours, ALBERT BOAT CLUB, Vallejo, Cal."

The Secretary of the Club replied per postal card to-day: "We won't, you bet." He also sent a letter informing them of the receipt of the challenge, and of the readiness of Brown's backers to match him against "Long Steve," or "any other man."

—Congressman Kellogg relates the following incident of his college days, brought to his mind by some casual reference to college boating. He was a member of '46 at Yale, and in those days boat races were few and far between. The classes of '46 and '45 decided to pull one, however, and the race occurred in the harbor. He was a member of the '46 crew, and his friend, A. P. Hyde, the well known Hartford sculler, set in the '45 to give astonishment and chagrin of the crew of '46 they were badly beaten. At the conclusion of the race, they took their boat ashore and examined it. On the bottom, not far from the stern, had been securely fastened a stone, weighing four or five pounds. Their curiosity was satisfied.

—The Harvard scratch races Saturday were quite interesting. The six oared race, a half mile and return, drew four contestants—the Wetmore, Bacon, Otis, and Appleton crews. The Wetmores were awarded the prize, though the Appletons were an eighth length in advance, a foul having been proved. The four oared race was won by the Freshmen over Holworthy, Matthews, Weld, and Holyoke. The double scull race resulted in favor of James, of the Scientific School, and Wiley, of '77. These two gentlemen subsequently contested in single scull wherries, James being the winner.

—A whaler race took place last week between four students of Belle Air College, of Nova Scotia, in the "Blue Nose," and a crew from the North end. The college crew took the lead from the start, and came in a length ahead of their opponents.

A boat race between the Sophomores and Seniors, for colors, took place last Saturday afternoon at Hanover, N. H., and was won by the former. Time—15:23, 16:10.

The Winnisimett Boat Club of Boston want the Harbor Commissioners to protect them in the right of reaching Revere Beach by water.

LOSS OF A FAMOUS CLIPPER.

NEW YORK, October, 1874.

BOSTON FOREST AND STREAM.—The *Shipping News* recently announced the loss of the ship Flying Cloud, at St. Johns, N. B., with her cargo of lumber. This vessel was the once celebrated clipper Flying Cloud, built by Donald McKay, at Boston, and which for many years during the clipper *furor* flew the champion pennant for the fastest passage on record to San Francisco.

Many of our readers will recollect the excitement and interest felt in this city in the great races between the rival clippers of New York and Boston some years ago. When the Flying Cloud was launched, she was hailed as the champion pennant for the fastest passage on record to San Francisco. At last McKay sent forth the Flying Cloud, the most beautiful vessel ever floated. So exquisite were her lines, that although a ship of great tonnage—1700 tons—she looked, when under way, hardly larger than the dainty yachts which cruise around the harbor. The Flying Cloud ran to France in eighty-nine days and a few hours. This passage has never been excelled. It is a question whether it has been equaled, although Mallory's wonderful clipper, the Andrew Jackson, claims to have beaten the Cloud a few hours. Webb's creek ship, the Challenge and Young America, never came within two weeks of the Cloud's time, and cost their New York backers lots of money by their failure.

The Flying Cloud was sold a number of years ago to a party in England, where she went into the Australian and China trade. There she always distinguished herself for rapid passages, till at last grown old they changed her rig into a bark, and put her into that last refuge for worn-out ships—the St. John's timber trade. Now, from the scenes of her triumphs, her poor old bones repose in the Canadian harbor.

NEW YORK.

EVERLASTING FLOWERS.—Very many amateur culturists have devoted considerable time and money to obtain a fine collection of everlasting flowers; but in arranging them in suitable bouquets for parlor ornamentation is where many fail to produce results that are even satisfactory to themselves. The plan I have adopted for making a very symmetrical and pleasing, yet cheap, light and airy bouquet of everlasting flowers, is to gather late in August, or early in September, a sufficient quantity of expanded, bushy bunches from the ornamental and common fringed smoke tree, suspended by their stems in a dark room until thoroughly dry. Then I tie the five or more bunches firmly together at their stems, and with shears trim them in the form of a balloon; when this is quite smoothly done, cover the entire surface with the dried flowers, placing the stems in the spongy mass. The following named varieties I have found as being most desirable:—The most striking effect is produced with flowers of brightest hue: *Gomphrena*, *Heliotropium*, *Acerolium*, *Xeranthemum* and *Polygama*. If possible, when gathering, leave the stem two inches in length for better adjustment. When the fringe is trimmed in the form of a cone, half sphere, or any of one of the many symmetrical forms, and covered with a miscellaneous, but nearly uniform-sized collection of bright everlasting flowers, the effect will be most pleasing. A bouquet of this sort is a beautiful parlor ornament at little expense will please try this plan.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor clubs will kindly mail their contributions not later than Monday in each week.

—The Metropolitan cricket clubs have done nothing of note during the fine weather of September and October. In fact there appears to have been no life in them during the latter part of the season. The Prospect Park club will play a match against themselves at the Park on election day, and the cricketers will also gather in force on that day at the St. George grounds, if the weather be fine.

—The Knickerbocker club have not yet played their annual game of cricket with the Manhattan. They ought to finish up with a one-innings game of cricket in the morning and a game of base ball in the afternoon, and Tuesday—election day—would be a grand day for the sport.

—The following is the list of championship games played since the 13th instant, up to which our last record was dated:—

October 13—Mutual vs. Hartford, at Brooklyn.....	19 to 4
October 13—Athletic vs. Atlantic at Philadelphia.....	8 to 1
October 13—Boston vs. Baltimore, at Baltimore.....	15 to 7
October 14—Athletic vs. Mutual, at Philadelphia.....	12 to 11
October 14—Atlantic vs. Hartford, at Brooklyn.....	10 to 6
October 14—Boston vs. Baltimore, at Baltimore.....	15 to 2
October 15—Mutual vs. Hartford at Brooklyn.....	4 to 3
October 15—Boston vs. Philadelphia at Philadelphia.....	10 to 7
October 15—Boston vs. Baltimore, at Baltimore.....	9 to 2
October 16—Atlantic vs. Hartford, at Brooklyn.....	8 to 2
October 17—Atlantic vs. Mutual, at Brooklyn.....	10 to 2
October 17—Boston vs. Philadelphia, at Philadelphia.....	5 to 2
October 19—Philadelphia vs. Boston, at Philadelphia.....	5 to 2
October 20—Boston vs. Athletic, at Philadelphia.....	14 to 0
October 20—Atlantic vs. Mutual, at Brooklyn.....	5 to 0
October 21—Atlantic vs. Boston, at Brooklyn.....	8 to 6
October 21—Philadelphia vs. Athletic, at Philadelphia.....	10 to 7
October 22—Atlantic vs. Hartford, at Brooklyn.....	11 to 9
October 23—Boston vs. Hartford, at Hartford.....	13 to 1
October 14—Boston vs. Hartford, at Boston.....	11 to 1
October 24—Athletic vs. Philadelphia, at Philadelphia.....	7 to 3
October 28—Boston vs. Philadelphia, at Boston.....	15 to 3
October 28—Athletic vs. Hartford, at Hartford.....	5 to 2

—The professional championship season closes on Oct. 31st, after which date exhibiting games, under the ten men and ten innings rule, will be in order. From the appended record of games won and lost up to October 26th, inclusive, it will be seen that the Boston stand first—winning the pennant—the Mutuals second and the Athletics third. The table is as follows:—

Club.	Games won.	Games lost.
Boston.....	41	16
Mutuals.....	31	24
Athletic.....	31	19
Philadelphia.....	26	34
Chicago.....	12	30
Atlantic.....	18	32
Hartford.....	11	35

—An exhibition match, under the ten men and ten innings rule was played on the Union Grounds, Brooklyn, October 24th, between the Mutuals and Athletics, which resulted in the victory of the Mutuals in a ten innings game, played in an hour and three-quarters, with a score of 7 to 1. West, of the Chelseas, played right short for the Athletics and made a splendid double play, Geer, of the Fly Aways, assisting the Mutuals. The Athletics earned the only run earned in the game.

—On October 31st a match is to be played in Philadelphia, New York vs. Philadelphia, in which Hicks, Cummings, Murman, Craver, Sutton, Haldsworth, Fly, Egger and Godey, will play for New York, and McGarry, McBride, Mack, Fisher, Asen, Palmer, Batue, McMillen and Schuchel, will represent Philadelphia. Egger and Hall will be two of the Athletics' out-fielders in 1875, so the Athletic will not be all Philadelphians, as it ought to be.

—The Athletics closed play with the Philadelphians in the championship arena on October 24th, when they defeated them by a score of 7 to 3. Last season the Philadelphia nine won the first seven games of the series of nine, lost the eighth and won the ninth, thereby winning eight out of nine. This year the Athletics reversed this order by winning the first eight games, closing the ninth and winning the tenth.

—The Boston game the Philadelphians a very bad whipping at Boston, on Oct. 19, by a score of 15 to 3. They played again Tuesday, and on Wednesday, went to Hartford. On Thursday and Friday they played their last games with the Athletics and Mutuals in Brooklyn.

—The Staten Island club play the Eastons at Easton, October 31st, the Bridgeport club at Bridgeport, November 3d, the Reliance at Brooklyn, November 7th, and the Confidence at New Rochelle, November 10th.

—The last championship match of the Philadelphia club this season will be their game with the Athletics, October 29th, in Brooklyn. The same night the Athletics go West to play in Chicago and St. Louis.

—The Chicago team for 1875 is announced to be Snyder, Zettler, Glenn, Peters, Burdack, Captain, Force, York, Hastings, Stearns, Hines and Deacon. Strong except in pitching and catching.

—The Troy and Resolute clubs of Fall river had a close game together Oct. 17, the score being 7 to 6, a decision of the umpires preventing the full game being played, and so neither side won.

—The Boston club is the only one on the professional arena this season which has not lost games with every other club, the Hartford not having won a game from the Reds.

—On Oct. 26, the Staten Island nine defeated the New York Fly Aways at Easton grounds, by a score of 13 to 7, thereby winning the series of best two out of three.

—The Fly Aways of New York visited Princeton Oct. 22, and they came home minus the ball they went to get, the Princeton defeating them by 10 to 3.

—On Oct. 21, Meadville, Pa. was the scene of a finely contested game between the Mutual and Oil City clubs, the former winning by 5 to 4 only.

—A pretty game was played at Prospect Park, October 20th, between the Mystic and Frontier clubs, the former winning by 7 to 6 only.

—The Reliance club, of Brooklyn, whipped the Staten Islanders, October 23d, by 10 to 5, at the Capitoline Grounds.

—The Nassaus and Staten Island clubs had a close contest October 24th, at the Island, the score being 7 to 7, the game.

—The Athletics and Hartford had a close game together on Oct. 26, at Hartford, the former winning by 5 to 2 only.

—On October 24th the Chelseas won their second victory over the Concord, at the Capitoline Grounds, by 9 to 5.

—The Waverly club defeated a strong field nine at Hoboken, October 23d, by the small score of 7 to 0.

—The Athletics play the Boston in Boston October 28, and the two clubs play in Worcester on the 29th.

—On October 19th the Fly Aways defeated the Olympics of Manhattanville, at Melrose, by 9 to 7.

—The last foot ball match at Dartmouth College, between the Seniors and Sophomores on one side and the Juniors and Freshmen on the other, resulted in a victory for the Juniors and Freshmen, they beating five out of the six games. The contest was the most exciting that has happened for a long time.

—In a division foot ball trial last Tuesday at Hanover, W. H., the Seniors and Sophomores were victorious in four out of five games played. The score, including the result of Friday's game, stands seven to five in favor of the Juniors and Freshmen. Freshman Darling had a rib broken in the rush.

—The foot ball match between the officers of the Halifax garrison and H. M. S. "Bellerophon," was played last week on the Common, and ended in a victory for the garrison by a goal and one touchdown, to nothing. Collaring was indulged in a little too much.

—The Rutgers College foot ball club defeated the Columbia College team, of New York, last Saturday, by a total of 6 games to 1. The contests came off at New Brunswick, N. J.

—The Harvard College Foot Ball eleven, after a close contest with the McGill College, eleven at Montreal, Oct. 23, defeated the Canadians and bore off the international honors.

—The lacrosse match, at London, Canada, on the 31st ult., for the championship of the city and the Walker challenge cup, was very strongly contested by the London and Victoria clubs. There was a large attendance of spectators, and an unusual interest was manifested in the result. The Victorias won the first game in less than ten minutes. London took the following in 5, 35 and 40 minutes, respectively, thereby winning the cup.

—A wrestling match will take place in Sacramento, California, November 1st, between Thomas Harris and Michael Whalen (alias Corduroy), for \$1,000. Four hundred dollars is already up, another deposit will be made on the 17th, and the balance on the 24th inst.

—The annual athletic games of the University College, of Toronto, Canada, were held on the 20th. The exercises embraced running, walking, jumping, kicking foot ball, rowing, hammer and so. The prizes competed for were both handsome and valuable.

—One hundred miles walking match for the championship of America will commence in Bangor, Maine, next Friday evening between Charles S. Cushing, a Massachusetts pedestrian, and Avery of Bangor.

—Mr. George F. Avery, the pedestrian, walked fifty miles in nine hours and sixteen minutes, at Bangor, Me., recently.

—The amateur billiard tournament at the three ball French game was commenced at Samuels' Billiard House, Brooklyn, on Oct. 28, on which occasion the tourney was opened by Messrs. Vanderwerken and Griffiths, who with Messrs. Clark, Dorlon, Ferris, Buckhart, Reiss, Kavanagh, Knight, Piket, Latorre and Panukuchen will compose the contestants. The games will be 200 points up. The prizes consist, first, an elegant gold mounted cane and \$50 cash; second, \$50, cash; third, \$25 cash. The tourney will commence at 9 P. M., on Monday, Oct. 26.

—Mr. Griffiths defeated Mr. Vanderwerken by 200 to 176, and Mr. Kavanagh defeated Mr. Reiss by 200 to 182. The tourney games will be played at Samuels' Billiard House every afternoon at 2 o'clock, and evening at 7, for the next three weeks.

PRINCETON, October 23rd, 1874.

EDITOR OF FOREST AND STREAM.—Base ball, of late, has received more attention from the college generally, than any other outdoor sport. The class nine of '77 has paid a visit to New Brunswick and Easton, respectively, and met with success at both places. At N. B. they achieved a victory over the Rutgers college nine by the score of 17 to 10. The next game was played here between the Rutgers and Lafayette college and the same class nine of this institution. Again, the Sophs were victorious by the score of 9 to 8, the luer caught by the Lafayette short stop, Adamson, with his left hand, being the most brilliant play of the game. The next game was played at Easton, between the same nine, and resulted as before, in favor of Princeton, by the score of 11 to 10.

Since their defeat at the hands of the Sophs, the University nine have endeavored to redeem themselves, and, in a great measure, have been successful. The second game of the season was played here on Saturday, the 17th inst., with the Trenton nine. Though laboring under a great disadvantage, there being four substitutes on the nine, the University gained an easy victory, the score being 12 to 5 in their favor.

One of the best games ever played here took place on Thursday, the 22nd inst., between the Fly Aways of New York and the University nine. During the first half of the fifth inning, Princeton made two runs, which were the first made up to this period in the game. At the close of the 8th inning, the score was 10 to 6, in favor of Princeton; and, if it had not been for a bad throw on the part of Loughlin, our short stop, this would probably have been the score of the entire game. As it was, however, the Fly Aways managed to secure three runs during the last inning, thus saving themselves from a Chicago. The game, altogether, was truly a magnificent one, and the best one witnessed here for some time. The Fly Aways are to be commended for possessing so fine a catcher, as well as such excellent first and second base-men. Jacober and Woode on the Princeton nine, acquitted themselves in

quite a distinguished manner, as usual; the hot liner caught by the former being especially praiseworthy.

The Philadelphia nine, with a visit this Friday afternoon. The Philadelphia nine won the game by the score of 12 to 2. One of the most remarkable features of the game was exhibited by Ma-n, pitcher of the University nine. He succeeded in batting Cummings easily, making two second base and two first base hits in four successive innings. The only earned run in the game was secured by the Princeton nine. The great number of errors which occurred in the first part of the game, and, in fact, throughout the whole nine innings, on the Princeton side, were due to the absence of our valuable short stop, Loughlin, which caused a disastrous change among the players.

The Fly Aways have agreed to return here next week, and it is thought that our old opponents, the Chelseas, whom we have beaten twice, will also favor us with their presence within a few days. QUIDVIS.

Answers To Correspondents.

ANAS.—Good duck shooting can be enjoyed at Amityville, Oyster Bay, or Shinnecock Bay.

LEM.—You can find an abundance of black and grey squirrels now in the vicinity of Lovellon, Pa.

LEPCS.—Good rabbit shooting can be found in Monmouth county, New Jersey. Take the boat to Keyport, thence go to Matawan by wagon.

H. Montreal.—Is it true that the rattlesnake or moccasin cannot strike above the knee? Please answer to initials through correspondent's column. Ans. No.

H. G. Third Avenue.—Please inform me through this week's issue if it is allowed to shoot quail in Kings, Queens and Suffolk counties, N. Y.? Ans. Yes.

O. F. S., Chicago.—What is good for sprains or inflammation? Ans. Spirits of turpentine, 1 oz.; liquor of ammonia, 1 oz.; mustard, 3 oz.; mix well and rub in hard.

M. T. T., City.—You gave a recipe recently for extirpating vermin from dogs. Is there any other recipe more simple, but equally effective? Ans. Carbolic soap is said to be very effective. Make into a suds and use freely.

P. P. S.—Do you think it would pay to introduce the Remington and Sharp rifles into the Dominion? They do not seem to be known much here only by a few marksmen. I ask this question confidentially? Ans. We believe so.

J. B. C., Hartford.—Can you inform a subscriber where he can purchase a deer head with antlers, all complete, ready to hang up, or even not prepared? Ans. At the office of J. Wallace, 19 North William street, New York, or at most any taxidermist.

L. L. A., Mansfield, Pa.—Will you, or some correspondent, tell me through your journal the best breed of dog for hunting partridge or pheasant: one that will tree them and bark at the tree? Ans. The best dog we ever had for that purpose was a small wiry terrier, trained for that purpose.

E. J., Omaha.—Have you an imported breech loader you could recommend? Ans. Yes. We have a breech loader, 10 bore, 32 inch barrels, central fire, self and equalized action, bar locks; has been but little used, of the finest workmanship, made by William Powell of Liverpool, price \$200; would cost to import \$400.

A. P. & Co.—A friend of mine and myself have been in the habit of spending election day in fishing at the Central R. R. Co's "Long Bridge," Newark Bay. I was informed the other day by one who pretended to know, that we would not be allowed to fish there this year on account of the stocking of the river with salmon. Is this true? Ans. Fishes, black bass and salmon trout is prohibited in Hackensack River, but there is no law to prevent your catching striped bass or estuary fish.

C. E. C., Murfrik Furnace, Md.—Please say what would be considered good penetration at forty yards (measured) with No. 7 shot, using the paper enclosed for a 10 bore gun? Ans. To answer this properly is somewhat difficult, as we have no precedence for a guide. The manufacturers use this soft and equalized paper, and from forty to sixty fathoms is considered good penetration at thirty yards. The penetration also varies much with the quantity of powder and shot used; so we would state that with the usual charge penetrating twenty-five fathoms of the paper sent at forty yards would be good work.

J. S. R., Philadelphia.—In a recent issue, in an article headed "Brass and Paper Shells," in which Joseph T. A. asks for information in regard to the kind of brass shell in reply to him you say: "We have sent our correspondent samples of the brass shell" (i. e. the safety). Now this may be very well for J. T. A., but I am sure that many others beside myself are much interested in this question, and you would confer a favor by giving us the benefit of your opinion on this subject. I know the principles of the editor of the FOREST AND STREAM too well to think that he would lose in the way of advertising, &c., would deter him from giving his true opinions in regard to so important a question, where a mistake might occasion loss of limb or life. I carry my shells (which I use in a 12 bore, double barrel Remington) heads down, in a belt, and have never had an accident having with them, but still, I want to use the best and safest? Ans. The shell referred to can be obtained of Fowler & Co., 300 Broadway. It is considered safest because it is not burrished.

RIEFMAN, City.—Considering your paper the best authority on rifle topics, I would ask you to publish what the other papers have omitted in the report of the recent International rifle match, viz: the quantity of powder used, the name of the manufacturer, the number or size of grain, weight of rifle, calibre of rifle, &c. This will be very interesting to your readers. Ans. In the International match, the rifles used weighed about 10 lbs. each, and were of 41 calibre. The Rigby rifles are 33 inches long, the Metfords, 33, the Sharps, 32 or 31, the Remingtons, 31. The Rigbys and Metfords are muzzle loaders, and 90 grains of Curtis & Harvey's No. 6 powder is the usual charge. The Sharps use from 90 to 95 grains of the American Powder Company's powder, and the Remingtons use about 90 to 95 grains of Hazard's F. G. The bullets of the latter are hardened, and weigh from 48 to 55 grains.

J. M. T., City.—In croquet, if three balls are in a line with each other and with a playing ball, and the playing ball wishes to roquet the middle ball, can the obstructing ball be removed by the hand till the stroke is made, or if immediately replaced? 2d. Is there such a thing as a "froze" ball, or if a ball hits another ball and "freezes" it, i. e. does not separate from it) can a private or referee remove the ball and separate him from giving his true opinions in regard to so important a question, where a mistake might occasion loss of limb or life. I carry my shells (which I use in a 12 bore, double barrel Remington) heads down, in a belt, and have never had an accident having with them, but still, I want to use the best and safest? Ans. The shell referred to can be obtained of Fowler & Co., 300 Broadway. It is considered safest because it is not burrished.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT LIFE OF MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
(Post Office Box 2321)
135 SOUTH THIRD STREET, PHILADELPHIA,
CUBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallow's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, OCTOBER 29, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will tender to no depraved tastes, nor revert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, October 30th.—Trotting at Prospect Park, N. Y.
SATURDAY, October 31st.—Trotting at Lexington, Ky.—Racing at Jerome Park, N. Y.—Receipts at Harvard University—Competition at Creedmoor for the Turf, Field and Farm badge.
MONDAY, November 2d.—Wrestling for the championship of California at Sacramento—Trotting at Lexington, Ky.—Fair at Los Angeles, Cal.
TUESDAY, November 3d.—Trotting at Deerfoot Park, L. I.
THURSDAY, November 5th.—Trotting at White Plains, N. Y.

THE FUTURE HUNTING FIELD.

THE disease among the grouse in the United Kingdom has caused a perfect panic among the lovers of the dog and gun, and the moaning for departed pleasure is, as a consequence, long and loud, for they have now to rely upon the red-legged French partridges, or the almost domesticated pheasant, for their fowling. The slaying of the former among the turnips is very easy work, but the bagging of the pheasant requires no skill whatsoever, for with the modern style of battues, so common in England, one might as well try his gun on the chickens and hens of the barnyard as on the pheasant. If the disease among the grouse continues for any length of time, that proud and sturdy bird will be among the species of the past in Scotland, and that being the case, the sportsmen of Great Britain must hie away to Lapland, Norway, Sweden, Albania, or Corfu to get anything like good shooting, and even these regions are comparatively barren in the best species of game birds, so that large bags must be the exception and not the rule. European sportsmen who would, then, enjoy the pleasures to be gained with the gun and dog, must seek the shores of the United States, for in this broad country they have a wide range of birds to select from, besides the large numbers of game quadrupeds.

It would, apparently, be much cheaper for those gentlemen who have to rent shooting moors at prices ranging from five hundred to two thousand pounds sterling per annum, to come to this country for a hunting tour, for, besides the saving in expense, which ought to be some consideration, they will behold grandeur of scenery unapproachable in Europe, and partake of such shooting as no other country on earth can offer. It is not necessary to enumerate the various species which offer them pleasure to prove this latter assertion. They can also enjoy a style of sport which they can never behold at home, one which combines both ease and pleasure, that is, if they prefer

large bags and the epicurean ease of a carriage to long tramps and severe fatigue. On the prairies of the West one can ride over the shooting ground in his dog cart or pony phaeton, and shoot his coveys as they rise before his dogs, or, if he prefers exercise, he has the option of rambling over meadows which in luxuriance of grass and picturesqueness of scenery equal the best English park, while they excel the best moors in the abundance of game. For these reasons America will, ere long, become the Mecca of all the leading European sportsmen.

NATURAL HISTORY COLLECTIONS.

Few studies are more interesting than that of natural history when once its attractiveness is made known, for we are led by it to an analysis of the great varieties of life, and are made cognizant of the bounteous resources of Nature in fitting each animal for its special sphere, and importing to it such hues as most become it, so that every step in this study reveals to us new and varied beauties, and teaches us most important lessons in the economy of creation. The more attention we pay to this subject the more do we appreciate the great work of Nature, admire her versatility and power, and enjoy this planet of ours, which is generally accredited with being only a region on which we are placed to suffer hardships, pains, and sorrows.

If the highest purpose of life is to know the arcana of Nature, then those who devote their leisure time to the study of the natural sciences reach the most exalted position, as Nature is to them an open book, from which they can extract lessons of knowledge, that charm while they instruct. The lovers of these studies find beauties where others see naught but a dreary blank, for every shrub and tree, hill and vale, copse and plain, reveals to them phases of creation which are concealed to others, because they do not bring to their aid that key of knowledge which unlocks the portals that conceal the treasures which Nature contains. The more we know this world the greater our appreciation of its mechanism and variety of life and color, and, therefore, the more happily do we pass through it, as we receive delightful pleasures from sources which to others yield nothing higher than arousing a dull curiosity. Such being the case, those who would enjoy the varied beauties and pleasures of life should pay some attention to natural history, as it repays in manifold forms all the time devoted to its study. Let the student in this school of knowledge enter the fields, and he will find objects of interest everywhere, so that a walk for health or recreation will prove doubly useful to him.

Few persons have a finer appreciation of the beauties of bird or beast, flower or landscape, than the intelligent, cultivated sportsman; hence, we should suppose that our sporting clubs would devote more attention than they do to making collections of the animals indigenous to the region in which they are shot, and by this means rendering their own halls or rooms more attractive, besides making themselves thoroughly acquainted with the natural history of their section of the country.

The time and expense required to prepare the specimens in a proper manner are trifling, compared with the pleasure they afterward impart, for few objects give so cultured and animated an expression to a room as a good case of birds, or a few wild quadrupeds postured in the most natural manner. Being especially adapted to the rooms of our sportsmen, we can scarcely give these places an air of reality without supposing them to contain such a collection, something to show that the animals have an abstract interest beside their edible qualities. A few of the best clubs in this State have made some fine collections, and as the members shot the animals they are attractive in more ways than one.

If all the clubs throughout the country would follow this example, they would afford themselves a new pleasure, and increase their knowledge of natural history; and this is a species of knowledge that every one pretending a love for the chase should possess, if he would hunt with discrimination; for no person can be a good sportsman unless he knows the habits of animals and the peculiarities which characterize each species. We should be pleased to hear of the clubs that have made such collections, and the animals represented therein.

SCARCITY OF THE WOODCOCK.

OUR reports from nearly all portions of the country specify that the woodcock is exceedingly scarce, and that places where it was very abundant a few years ago know it no more. Many reasons are advanced for this decrease, such as the severity of frosts and snows, the bad effects of a rainy Spring, and the barrenness of the eggs owing to atmospheric causes; but to neither of these, nor to all of them, should we attribute the unusual scarcity, though they may have exercised a secondary influence. The primary reason is the want of protection afforded the bird, and the hungry, savage greediness of a certain class of pseudo sportsmen, who destroy it in every way possible, and in nearly all seasons. These pot hunters commence the work of destruction the very moment the protecting statutes expire, and continue it until they have killed all the birds in their vicinity, or driven them to seek protection in isolated and distant localities. By this dastardly species of hunting, the greedy savages have punished themselves; but we should not care how much punishment were meted out to them if the innocent did not suffer equally with the guilty. To the true sportsman, game is only a means of alluring him to seek health and recrea-

tion, and for this reason he only destroys a limited quantity, enough to give zest to his walking exercise; but the pot hunter looks upon it only as a providential means of furnishing him a feast, or increasing his coffers by its sale. The only way to check the total destruction of the woodcock is to extend the statute for its protection, so that it may have an equal chance of life with other species of game. The present law, which allows Summer shooting, is radically at fault, as it permits the foes of this bird to kill the chickens ere they have attained strength enough to fly with such rapidity as to give them any chance of escaping with their life. The only remedy that presents itself to us at present, is to have the sporting clubs in each State petition the legislatures to change the game laws, so that woodcock cannot be killed before the 1st of September at least. It would be still better if they could be so amended as to impose a severe penalty upon all who kill any woodcock for the next two years. This would give the birds an opportunity of increasing numerically, and would give us an opportunity of again enjoying this interesting species of fowling. Something must be done, and that quickly, or we shall soon know this bird only as an extinct species.

For the purpose of testing to what extent woodcock has decreased, we should be pleased to receive reports from our correspondents throughout the country, and we would especially ask of them to be specific in contrasting the present abundance with that of former times, and the ratio of young birds in the total number killed. Any information as to the localities in which the chickens were found would also prove interesting, as our idea is that they were found near springs, in the earlier portion of the season.

By securing this information, we may be enabled to prove that prompt action is required to preserve the bird, and thereby enlist the co-operation of the sporting clubs in the crusade against the pot hunters and others who are so actively engaged in this work of destruction.

REVIVAL OF AN ANCIENT SPORT.

THE revival of falconry in Ireland would seem to prove that sports move in circles like other matters peculiar to this planet. This pastime, which formed one of the most engrossing sports in the catalogue of our ancestors, has been discarded in Europe for many years; in fact, we do not know of any country, except Persia, where it still attracts the attention it merits. We have read somewhere that the Shah has the only large cage of hunting hawks in the world, and that these birds are models of docility and training. His Oriental majesty, it seems, has a sharp rival now in the person of the Hon. G. Lascelles, of Wexford, Ireland, who is said to possess falcons that approach in thoroughness of education those which existed when the royal sport was patronized by the crowned heads of Europe, and "hood and tinkling bells" were the principal themes in the sporting conversation of mighty Nimrods, and even offeminate courtiers. The care of Mr. Lascelles is flown principally at magpies, those being the only large birds frequenting the interior of the country that are not protected by game laws.

If falconry can be made interesting in the Green Isle, where game birds are comparatively scarce, it ought to be made both interesting and profitable in this country, where we have so many birds at which the hawks can be flown. It is well adapted to those whose frames will not permit them to engage in the sturdier sports of the field, and on this account it should prove attractive to ladies, who could then ride to a meet in their carriages, or if desirous of more vigorous exercise, take a gallop on horseback after the quarry.

It would be difficult to originate any field sport more interesting to the softer sex than this, as it affords them recreation in such modes as best suit the temper of their mind and the vigor of their frame. It may, on this account, be revived in this country by those who have the means and leisure to inaugurate it. The expense of a cage is comparatively trivial, when contrasted with other pleasures, and it certainly yields a most piquant pleasure, so that it fulfills duties now occupied by older and more expensive forms of the Muses. We have in this country hawks well adapted for the purpose of falconry, and many species of birds at which they can be flown, so that if the sport were introduced here it would never lag from want of material or even enthusiasm.

—In the Far West it is intimated that the grasshopper pest is a retributive visitation for the reckless slaughter of the buffalo, which in their constant migrations across the plains, kept the country thoroughly scourged by trampling out the eggs and incipient young, consuming the grass, &c. It is more probable, however, that the reclamation and cultivation of the waste prairie, has fostered the grasshoppers, providing them with food and cover; whereas in former years the practice of annual burning over vast tracts must have been direct and efficacious in destroying them.

MUSCULAR CHRISTIANS.—REV. E. C. Gordon, in an essay read before the Savannah, Ga., Christian Association, said:—"Christianity applauds all that is genuine on the playground, in the gymnasium, the boat race, and the hunting apple. It believes in bright eyes and a merry laugh. It approves of the arms that can strike straight out from the shoulder; of legs that can do their twenty miles a day without fatigue, as well as of hearts that know no fear, and lips that speak no guile. Muscular christianity repudiates as a travesty on nature, and an insult to nature's God, those miserable weaklings of our drawing rooms, born of a system that puts at defiance every law of health, and disregards every principle of beauty."

Christmas parties with amusement, and of course it can

not easily be enjoyed till the leaf is fairly off the trees. The battue is as much like an honest day's sport over dogs and after wild birds as prodding porkers in a farmyard resembles the pig sticking of the Indian jungle; but, though everyone abuses it, instead of its dying out, there is at this present moment an immense amount of rivalry amongst sportsmen as to who shall provide the largest massacre for the knights of kid gloves and breech loaders. The luxuries of the lunch, the dignity of the keepers, "who only take paper," or nothing less than a twenty-five dollar bill as a fee, the neglect of the cripples, and the absence of anything approaching to sport, have all been dealt with by me and condemned, and I need say no more when I have said that the last happy thought is a portable camp-stool, with one leg, which is strapped on to a suitable part of the body, and quite dispenses with the fatigue of standing up to shoot. This sybaritic invention is advertised in all the sporting papers, and merely requires a gun rest and feeding machine to make it perfect. True it is, that October is just the very best month for shooting in the open if the partridges were not too wild. With plenty of birds strong on the wing, I desire no better sport than a rough day and promiscuous sport with the wily pheasant, and I should be far better pleased than if I had shot myself into notoriety at a duval battue, and paid the head keeper for a good place at the "hot corner" as the opera would have provided me with a box at the opera.

The Empress of Austria has been staying lately incognito in the Isle of Wight. She has quite taken the shine out of our English horsewomen by her plucky method of taking her fences, and as she is mounted on the best hunters that money can buy it requires a good man and horse to accompany her. She was gracious enough to give a handsome cup the other day for a steeple chase, and I need not say that there were plenty of candidates, and the contest over "five miles of fair hunting country," as the conditions stated, proved that there was a man willing to risk his neck for such a trophy. LSTONKE, JR.

THE IRISH TEAM AT A PIGEON SHOOT.—Last week, at Chicago, several members of the Irish Rifle Team, who had just returned from their hunting tour in Kansas and the Indian Territory, participated in a little pigeon shoot gotten up by the Chicago Gun Club, which took place at Tom Stagg's. They were under the immediate escort of Ed. Thomas, Esq., who provided carriages, drove them to the grounds, and rendered them other attentions. Alderman Tully accompanied the guests and contributed to their enjoyment in a substantial way. At the rendezvous, the members of the Gun Club provided refreshments and hobnobbed in the most genial fashion. The first match was between the Gun Club members for three money prizes, provided by a general pool. There were twelve entries. The following are

Name	Score	Total
Almy	1 1 0 1 1 0 0 1 7	7
Smith	1 0 0 0 1 1 1 1 6	6
Kenny	0 1 1 0 1 1 1 1 6	6
Welch	1 1 1 1 0 0 1 1 8	8
Bellows	1 1 1 1 0 1 0 0 6	6
Ennis	1 1 1 1 0 1 0 1 7	7
Edwards	1 1 1 1 1 1 1 1 9	9
Norris	0 1 1 1 1 1 1 1 7	7
Brice	1 1 1 1 1 0 1 1 7	7
Phillips	1 1 1 1 1 1 1 1 9	9
Stagg	1 1 1 1 1 0 1 1 7	7
Martin	1 1 0 1 1 0 1 1 7	7

In shooting off the ties of nine, Edwards took first prize; Welch took second money in ties of eight; Stagg third money in ties of seven; and Greene Smith the leather medal.

Messrs. Millner and Rigby, of the Irish Team, and Mr. Ed. Thomas, shot a match of ten singles, at twenty six yards rise, with the following result:—

Miller	2 1 0 0 1 1 0 1 1 6
Rigby	0 1 1 1 1 0 1 0 1 6
Thomas	1 1 0 1 1 0 0 1 0 5

Considering that the Irishmen were novices at the sport, they did fairly. Messrs. Bagnall and Johnson, of the Team, were present, but did not participate.

The Irish Rifleman have been challenged by some of their countrymen in Chicago, but the offer was declined owing to want of time. The Irish Americans are said to be excellent shots, but we fear their effort at competition with the more distinguished gentlemen would be futile in results to them.

CREEDMOOR.—The experts of the Amateur Rifle Club indulged in a little family match last Saturday, at Creedmoor. In the absence of any new badge or fresh prizes it was resolved to introduce the novelty of shooting by sides, Amateur Club vs. Amateur Club. Colonel Gildersleeve and Lieutenant Fulton acted as captains, and chose alternately man for man from the club, until two teams very nearly equally matched had been chosen. The original plan was to have the stakes supper, to be provided for the club by the losing team, but this idea was abandoned, and in its place a general club dinner will be held shortly, at which all the members and some invited guests will sit down. Owing to the absence of several of the best shots, the match opened with but six in each side. The conditions called for ten shots from each man at 200, 500, 800, 900, and 1,000 yards, respectively, in any position, the latter item being taken advantage of by some to lie down at the 200-yard point. The shooting, as a whole, showed good marksmanship, Yale and Fulton each scoring 39 in a possible 40 at 500 yards, and coming out at the end in a tie, each having 178 out of 200 points. Fulton abandoned his practice of using his weapon as a muzzle-loader, and used the cartridges in the ordinary manner. His success is looked upon as a proof that equally good work could be

done with a breech loader, normally used, as by any extra devices for insuring accuracy. The annexed scores in detail show that the squad chosen by Lieutenant Fulton was victorious by odds of 125 points. The match lasted from 10 A. M. to about 4:30 P. M., including the lunch recess. The weather was delightful, though the changes of light and shade, of wind and loud, tried the skill of those engaged. The following is the score:

—The Executive Committee of the National Rifle Association held an adjourned meeting at First Division Headquarters, No. 7 West Thirtieth street, last week, for the purpose of taking into consideration the protests in the Gallatin match recently contested at Creedmoor, at the Fall meeting. The protest entered by Capt. Douglas, of the Eighty-fourth Regiment, against the score made by Drum Major Strube, of the Twenty-second Regiment "team," was admitted, and the score disallowed on the ground that he had used other ammunition than that furnished by the State. He was also censured for discredit conduct. The score of Private Keeler, of the Seventy-ninth Regiment, was also disallowed.

—The competition for the Turf, Field and Farm badge takes place next Saturday.

EDITOR FOREST AND STREAM.—
The New York Herald of Oct. 24 made certain erroneous statements, some of them concerning Canadian competitors in the recent matches at Creedmoor. I have endeavored to make that paper make the proper corrections without success, and therefore beg through your paper, to place our Canadian friends correctly on record before the public.

The first error in question was in the statement that several of the Canadians had entered and shot in the "Press Match," who were not eligible to shoot in it. Two Canadians only shot in the "Press Match," viz: Captain J. J. Mason and Ensign James Adams. It is well known that Captain Mason is editor and publisher of the *Craftman* newspaper, and therefore eligible. While the Executive Committee were entirely satisfied that Ensign Adams was eligible, so no ruled, that gentleman has, since his return home, furnished our committee with the written evidence of his employment on the Hamilton Times.

Again, Capt. Mason did not shoot in the "Consolation Match," as stated in the *Herald*.

The publication of the foregoing will do justice to two excellent marksmen and most amiable gentlemen. Yours, very respectfully,
H. A. GILDERSLEEVE, Secretary N. R. A.

—Within the past month we have given Holabird's shooting suit a most crucial test through all weathers and in various kinds of cover, and take more than usual satisfaction in volunteering our heartiest approval of it. It seems not only to be water-proof, but it is invulnerable to burrs, darning needles, wood lice, and all those barbed and pestiferous seed pods that attach themselves to the clothing and vex the sportsman's epidermis. It is very convenient as to pouches and pockets, light and comfortable to wear, and paradoxically cool in warm weather and warm in cool weather. No sportsman should be without one.

—A drunken fellow who had slept in the horse pound at camp, waked up one morning to find himself haltered and the proprietor demanding pay for his oats. The fellow protested, saying he was not a horse. "No difference," was the reply, "we charge as much for an ass as for a horse."

—"Boy, is that a licensed dog?" asked a Detroit policeman. "No," said the youngster; "he's a rat terrier dog, and I'm taking him down to have his teeth filed."

—Mr. Nickle died in Missouri last week. He retained his five senses to the last.

Shot Gun and Rifle.

GAME IN SEASON FOR OCTOBER.

Moose, *Alces Marcius*.
Elk or Wapiti, *Cervus Canadensis*.
Hares, brown and gray.
Wild Turkey, *Meleagris gallopavo*.
Woodcock, *Scolopax rusticicola*.
Ruffed Grouse, *Tetrao umbellus*.
Esquimaux Curlew, *Numenius borealis*.
Plover, *Charadrius*.
Gull, *Larus*.
Redpoll, *Ammodramus*.
Rice Bird, *Dolichonyx oryzivorus*.
Wild Pigeons.
Snipe and Bay Birds, *Villets*.
Curlew, *Turdus migratoria*.
Red Deer, *Cervus virginianus*.
Buffalo.
Squirrels, red black and gray.
Cat, *Felis catus*.
Pinnated Grouse, *Tetrao canadensis*.
Canada Goose, *Branta canadensis*.
Sandpiper, *Tringoides*.
Villets.
Red or Rice birds, *Dolichonyx oryzivorus*.
Wild Duck, Geese, Brant, &c.

Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in question. This would require a great amount of space. In designating game we are guided by the laws of nature, upon which legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.

GAME IN MARKET.—The game market is pretty well supplied at present, especially with woodcock and several varieties of ducks. The regular hunters and sportsmen are very busy just now, and to this fact may we attribute the abundance of the most edible species of the *aces*. Woodcocks are quite plentiful, and the greater portion come from New York State. They retail at \$1 per brace. The ruffed grouse is more of a stranger than is usual at the present time, owing to the rain storms at the West. Price \$1 per brace. Prairie chickens same rates. Grey squirrels bring twelve and a half cents each; not much demand for them. Venison is coming in from Minnesota and retails at thirty cents per pound. Quails are comparatively scarce, so bring \$4.50 per dozen. Canvas back ducks are worth \$3 per brace, black heads \$1, and red heads \$1.50. The teal and other varieties are sold at the ordinary price.

—We acknowledge the receipt of a splendid haunch of Adirondack venison from Dr. G. G. Kennedy, of Roxbury, Mass., which our friends aided us in doing full justice to. We ate the venison; they furnished the current jelly. The thanks of the party were tendered to the doctor. Faith! we couldn't do less.

GAME WANTED.—Fred Mather, Esq., of Honeyey Falls, Monroe county, N. Y. enquires for certain species of game which our correspondents should be able to supply. He says:—

"I have plenty of white fronted geese, but will buy if offered. I also want teal and perhaps other ducks that will domesticate. I have lots of wood ducks. I want to know through 'Gopher,' or some one else, some of those market gunners who might save me some wing-tipped birds for breeders."

—A rifle association has been organized at Edgewater, Staten Island, under the title of the "Castleton Heights Rifle Association," for the promotion of rifle practice. The organization numbers forty members, and a match will shortly take place.

QUOQUE.—An association has existed for a number of years known as the Old Hunters of Quoque Plains, and which has held two meetings annually, Fall and Spring. The Fall meeting was held on Tuesday, on grounds owned by the Association, in the middle of the plains. A reorganization was made, the name being changed to the Hunters' Association. Wells Tuthill was chosen President; Messrs. Charles Rodgers and George A. Terry, Vice Presidents; Eliza Wells, Treasurer, and Samuel Tuthill and Chauncey Tuthill, Secretaries.

LONG ISLAND.—Oct. 19th.—Ducks are plenty, such as black ducks, broadbills, grey ducks, pintails, coots, &c. Most all varieties of birds are to be found here on the 20th except geese and brants; their time to make their appearance is from the 1st to the 10th of November, when they are quite abundant. We have experienced gunners at this place, men that have followed shooting for thirty years. They are prepared with live stools for geese and brant, also house and waterfowl, and other shooting. We have also good quail, and rabbit, and partridge shooting. The Bag and Count Ocean View House is situated within 200 feet of the Great Shinnecock Bay and overlooks it. All bird: passing over the bay can be seen from the verandah of the hotel. This is large and affords the best of accommodations for sporting men. Ammunition furnished at the house for all those that wish to save the labor of bringing it with them. Gentlemen who visit the Ocean View House will be sure and buy tickets at James Ship on Thirty-fourth street, New York, for Good Ground Station, Sag Harbor Branch, L. I. R. R., where a stage will convey them to the house.

✓ **ADIRONDACKS.**—Oct. 23.—Parties are having grand deer hunting this month on the north and south banks that flank the Raquette river between the Bog and Hedgehog rapids, a distance of twenty-five miles or so. Geo. Munger is out all the time; he is one of the best guides here. I regard this section as the best deer country in the Adirondacks, though sportsmen are rather jealous of imparting information as to specific localities. By taking the Watertown Railroad to DeKalb Station, and driving to Charley Peluso's or Haw's, you can get all the sport that heart desires. Weather glorious, nights frosty.

—Rather good rifle shooting is thus described by the editor of the *Troy Whip*: "We have seen a man load his rifle in his left hand and toss a chip with his right hand into the air, and then bringing his rifle to his shoulder, put a bullet through the chip."

CONNECTICUT.—Hartford, Oct. 25th.—Come here if you want good partridge shooting. The birds were never more numerous. I saw a bunch of 400 brought in yesterday, en route to a market; and thirty or forty brace per man is nothing uncommon. I regret to say that nearly all are taken by snaring, a practice that ought to be stopped. Take the Canal Railroad from New Haven.

MASSACHUSETTS.—New Bedford, Oct. 26.—Mr. Gustavus A. White, Jr., of the Sheridan House, shot 16 woodcock, 13 quails, and 5 partridges. Mr. White is considered one of the best shots in that vicinity.

There are plenty of partridges, pheasants, and a number of woodcock in Munson's Cove, about fifteen miles south of this place on the Martinsburg branch of the Penn. R. R., and duck at this season are numerous.

Bonner started. The first, third and fourth heats were won by Bonner, and the second by May Bird. Best time—2:30.

—The Hudson River Fair was attended by over 6,000 on the second day. The first trot, for a purse of \$1,000 for 2:40 horses, brought out four competitors, but Lady White won in three straight heats. Best time—2:35. The next race, for a purse of \$1,250, was contested by four horses, and was won by Nellie Walton in three straight heats. Best time—2:33.

—A vast crowd attended the last day of the Fair of Hudson River Agricultural Society. The first trot, for horses that never beat 2:30, was won by Catskill Girl in three straight heats. Best time—2:34. The second race, for a purse of \$1,500, for horses that never beat 2:37, was won by Tom Keeler in three straight heats. Best time—2:26.

—About 8,000 people witnessed the third day's races at the Weldon (N. C.) Fair. The first race (trotting) was won by Stratton's Susie Kurtz in 3:33, the best time ever made in this State by four seconds. In the second race Herndon's Henry Clay won. The third race was won by James Grant's Bill in 2:30. In the running race Dozier Hope went half a mile in fifty-three seconds.

—The first regular meeting at the Gentlemen's Driving Park, in Bergen County, N. J., was held on the 21st. The first race was for a purse of \$700, for horses that have never beaten 2:35. The entries were A. B. Snyder's s. s. Andrew, Thomas Lee's br. g. Judge Bedle, J. J. Anderson's b. m. Fanny W., J. Scullen's blk. g. Frank, and J. Wilson's br. m. Maul. Snyder won the first purse in 2:42, 2:43 and 2:43. The second was for a purse of \$800, for horses that have never beaten 2:35. There were ten entries. H. Gilbert's s. g. Harry Gilbert, came in first, and A. A. Einstein's blk. g. Black Crook, second.

—The races at Paterson last week were quite spirited. The first for a purse of \$700 for three-minute horses was won by Andrew in three straight heats. Best time—2:42. The second race for a purse of \$800 brought eight to the starting post. Won by Harry Gilbert. Best time—2:38.

—The racing of the Gentlemen's Driving Park Association, near Paterson, New Jersey, was continued last Friday. The first race, for a purse of \$700, for hores that have never beaten 2:40, was won by W. S. Tom's b. g. Phil O'Neil, Jr. The second race, for a purse of \$900 for horses that have never beaten 2:29, gained by John Splan's b. m. Bella. The race for all teams for a purse of \$500 was won by William B. Best time—2:46+.

—The unfinished 2:33 race, at the Rochester Park, was won by Colbourne last week; the 2:45 race by Bay Jimmy, and the 2:38 race by Charlie Howe.

—The trotting at the West Side Park last Tuesday was witnessed by 500 persons. The first trot was for a purse of \$400, for horses that never beat three minutes; mile heats, two miles in five harness; \$250 to the first, \$100 to the second and \$50 to the third. Daisy won in the straight heats. Time—2:49, 2:43½, 2:46. The second race was for a purse of \$600, for horses that never beat 2:40; mile heats, best three in five, in harness; \$550 to the first, \$175 to the second, \$75 to the third horse. Manse, Adelina, Phil O'Neil and Nelly Murray were the contestants. The former won in three straight heats. Time—2:43¼, 2:42½, 2:43.

—At Washington Park, Providence, the race for 2:50 horses was won by Johnnie Babcock, Hamlet second and Harry Whitford third. The race for 2:38 horses, purse \$400, was won by Ned Forrest, Prowess, second, Belle of Hudson third. Time—2:36½, 2:37½, 2:38½.

—The most exciting event of the past week at Deerfoot Park was the contest between American Girl and Copperbottom for a purse of \$1,000. The latter won the first heat in 2:38; the former the next in 2:27; the one following in 2:26½, and the fourth in 2:28. After the race Mr. Lovell offered to match American Girl against Goldsmith Maid or any other trotter or pacer in the country for \$2,500 a side, mile heats, best three in five in harness.

—A large crowd witnessed a trot at Boston last Saturday afternoon by Dan Mace's stallion Jay Gould, against Goldsmith Maid's time of 2:14. The following is the result:—

First heat.....	2:30½
Second heat.....	2:2½

The horse was withdrawn at this point, having scratched himself on the second heat.

—The races at the Pimlico (Baltimore) course opened last week with a mile dash for all ages not winners since July 1—\$350 for the first horse, \$50 for second. There were fifteen entries—Harry Bassett, Gray Planet, Lottie Moon, Resolute, Carlina, Rosebud, First Chance, Keene Richards, Hattie O'Neill, Chief Engineer, Boz, Audubon, Frank, Stanford and Jury. Harry Bassett came in a winner, Gray Planet second and Lottie Moon third. Time—1:44.

The second race was the Dixie Stakes for three-year-olds, two miles, \$300 subscription, \$100 forfeit; Colonel Mac Daniel to add \$3,000; the club and horse to receive \$1,000 from the Maryland Jockey Club; the third race to receive \$500 out of the stakes; closed January 1, 1873, with twenty-eight nominations. The value of the stakes and the winner is \$11,300. The following horses started—Picoló, Rutherford, Brigand, Aaron Pennington, Paladin, Vandalia, Dublin, Moses Primrose, Jude Thurman, Madge, Josie B., Carlina, Bonaventure, Ed. Breathitt and Grinstead. Won by Vandalia, Madge second, Brigand third, Rutherford fourth. Time—3:35.

The third event was a two-mile heat for all ages; \$500 to first horse, \$100 to second. Mate, Bessie Lee, Bannerette and Colonel Nelligan started. Sandford's Mate won by a head, Bannerette second, Bessie Lee third. Time—3:37½. Then came a hurdle race, two miles over eight hurdles; \$100 to first, \$75 to second and \$50 to third. Five started. Won by Limestone, Daylight second, Moonstone third, First Chance fourth, and Austine fifth. Time—3:59½.

—The second day of the Baltimore races was an exceedingly brilliant one, as the contestants embraced the best horses in the Union. The first race, for two-year-olds, closed with twenty-eight nominations. Eight horses started, as follows:—P. Lorillard's James A.; H. P. McGrath's Chesapeake and Calvia; E. A. Clabaugh's chestnut colt by Vauxhall; J. W. Hunt Reynolds' Amella; Colonel McDaniel's Betty Ward colt; A. Belmont's Rhadamanthus, and M. H. Sandford's Firework. Firework was the winner.

riad by two lengths, Anilla second, James Ashird, and Riadamianth fourth. Time—1:45. The second event was a selling race for all ages; one and three-quarters miles; horses entered to be sold at auction immediately after the race. Purse, \$400 to first horse, \$100 to the second. The starters were—Preakness, carrying 125, and not to be sold, having 7 pounds extra; Cariboo, 103 pounds; Allie, 103 pounds; Galway, 163 pounds; Resolute, 103 pounds; Canna, 103 pounds; and the others, 103 pounds. The horses were started at the quarter-mile pole, and got off well together. Preakness won the race by a neck, Resolute second, Galway third, and Cariboo fourth. Time—3:08.1. The third contest was a mile-hat race for three-year-olds that have not won a sweepstake race at Jerome Park, Long Branch, Saratoga, or Buftonmore; purse, \$100 to the winner, \$50 to the second, and \$25 to the third. The starters were—Lottie Moon, Josie B. second, Botany Bay, Larry Hart, Lottie Moon, Josie B. second, Botany Bay, The Hoaxer, Bob, Paladim, Judge Thurman, and Rutherford. Lottie Moon won the heat by two lengths, Josie B. second, Botany Bay third, Bob fourth, Judge Thurman fifth, Rutherford sixth, Larry Hart seventh, The Hoaxer eighth, and Paladim and Bettie Clapham distanced. Time—1:45. The second heat and the race were won by Lottie Moon, Josie B. second, Botany Bay third, Botany Bay fourth, Bob fifth, Rutherford sixth, The Hoaxer seventh, and Larry Hart distanced. Time—1:45.1. The fourth race was the Gentlemen's post stakes of \$25 each, play or pay, welter weights; 1½ mile; the club to add \$400; second horse to receive stakes to the amount of \$100. The starters were—Limestone, Robert Carter, Fred, Fadla—L. R. M. second, Fred, Limestone, and Ruby entered and rode to Dublin. Limestone won, coming in a length ahead of Fadla—L. R. M., with Dublin four or five lengths behind the latter. Time—2:19.

The third day of the Baltimore races was equally interesting as the previous ones. The first race was for a purse of \$400, one mile, for two-year-olds; the winner of the Central Stakes to carry five pounds extra. The race was won by Aristides, the Betty Ward colt second, and Anieli third. Time—1:44½. The second race was a free handicap sweepstakes for all ages, of \$25 each if not declared out, with \$500 added; the second horse to receive the stakes to the amount of \$100; two miles and a half. The race was won by Aristides, Shylcock second, Bannerette third, and Harry Bask fourth. Time—2:07. The third race was for a Compensation purse of \$500, mile heats. The first heat Grinstead won by half a length, Planter second, Aaron Pennington third, Survivor fourth, Josie B. fifth, Botany Bay sixth, and Stockwood seventh. Time—1:45½. Grinstead also won the second heat and the race. Time—1:45½. The fourth contest was a match race for \$100 a side, between Captain Moore's O'Neill and Desmond's Mollie Darling. O'Neill won by four lengths. Time—1:46. The fifth and last race was a good steeplechase of one mile, for two and a half miles; closed with a slight subsidence, but only two starters—namely, Trouble, entered by J. D. Vaneyck; and Austrine, entered by Lawrence and G. Lorillard. Trouble took the lead at the start, and gradually increased the gap to about one-eighth of a mile, going under a strong pull. It taking the last hurdle, below the grand stand, he stumbled and threw his rider over his head. Austrine then passed him, and, before Trouble's rider could recount, was about fifty lengths ahead. After this Austrine bolted twice before taking the track, when Trouble again shot ahead, and won the race in 6:45. The time being 6:45. The rider of Trouble had his collar-bolt broken, and his head cut by the fall, but was not seriously hurt. In the second race, two and a half miles, Balkancel made the fastest time on record, beating Litchbold's time at Monmouth by one and a half seconds.

—The last day of the Baltimore races was the best attended of any. The first race of the day was the Breckenridge Stakes, for three-year-olds; two miles; \$500 subscription; half forfeit; the club to add \$1,000, of which \$500 to the second horse; closed with eighteen nominations.

The starters were three in number—Sandford's Brigand, Lewis & Co.'s Vandalite, and Chamberlin's The Hoaxer. At the start Vandalite immediately went in front, and came in an easy winner by fully ten lengths, Brigand second, and The Hoaxer a bad third. There was really no contest in the race, Vandalite making the race to suit herself and winning as she liked. Time—3:35.

The second race was for a handicap purse of \$400, for all horses that have run during the meeting; one mile and a quarter; weights to be announced immediately after that last race on the third day; acceptances to be made at that time. The horses were: *Black Hawk*, 100 pounds; *Corliss*, 101 pounds; *Stanford*, 4 years, carrying 95 pounds; *Bannatyne*, 3 years, 100 pounds; *Stockwood*, 6 years, 93 pounds; *Brown's Paladin*, 3 years, 75 pounds; *Bethune's Rosebud*, 4 years, 87 pounds; *Weldon's Radi*, 5 years, 111 pounds; *Wilson & Co.'s Bette Clapham*, 3 years, 75 pounds; *St. Paul's Fairdale*, 7 years, 111 pounds; *Donahue's Cariboo*, 4 years, 100 pounds; *Wagon Wheel*, 3 years, 75 pounds; and *Chamberlin's The Hoaxer*, 3 years, 75 pounds. *Kadi won*, *Audubon* being second, *Rosebud* third. Time

The third race was the Bowie Stakes, for all ages, for \$2,000. Five horses started, Bowie's Picco, 3 years, carrying 95 pounds; Lewis & Co.'s Bessie Lee, 5 years, 111 pounds; Jennings' Silent Friend, 5 years, 114 pounds; Hunt Reynolds' Whisper, 4 years, 108 pounds; and Burton's Jack Frost, 4 years, 108 pounds. The race was won by Jack Frost, who took the second and third heats, Bessie Lee winning the first heat. Best time—7:33.

The following are the winner stakes—

THE WINNING STAKES.	
A. B. Lewis & Co.	\$17,500
M. Sandford.	2,200
A. M. Barton.	2,450
DeDaniel.	1,450
W. Collins.	1,000

A. P. Gress.	75
A. Belmont.	50

—The noted trotters Occident, Judge Fullerton, and Gloster have been entered for the \$6,000 purse race which is to come off at San Francisco November 7th.

—A great four-mile race for \$25,000 is to come off Nov. 14th under the auspices of the Pacific Jockey club. Thad. Stevens, Joe Daniels, Katie Pease, Hubbard, Henry, Alpha, Hocking, and Hardwood have entered. Other parties East and in Oregon have sent entries and money by mail and telegraph.

—The Newmarket Houghton meeting began in London on the 26th. The race for the Criterion stakes was won easily by Garterly Bell by three lengths. Lady Love coming in second, the same distance ahead of Balfe. The betting just before the start was 8 to 1 against Garterly Bell, 14 to 1 against Lady Love, and 5 to 2 against Balfe. There were nine starters.

—At the Carlton Park races, at Toronto, last Saturday, the attendance was good, Lieut-Gov. Crawford, and many prominent sportsmen being present. The hurdle race was won by Helen Bennett, Frank Raas being second. The handicicap race, for Dominion-bred horses only, was won by Jim Christie. The steeplechase was won by Gladiator. The next race was a heat race, the second heat of which was won by Moonlight.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our Editorial Rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly advising us of any omission in this respect. Prices of books inserted when desired.

BOOKS RECEIVED.

PRAIRIE AND FOREST. By Parker Gilmore. N. Y.: Har-

Our friend Parker Gilmore is just the man to proudly and deservedly bear the name "ubique." His stories of game and fish, together with a full account of the game of North America, a concise history of the habits, haunts and peculiar traits, make this a work of much value to every American sportsman. One seems to roam with him the mighty prairies of the Northwest, as well as the numerous preserves of smaller game. He is as familiar with the Hud-on Bay country as the Adirondacks. He knows the rod and gun, and we can give to our many readers no better recommendation of the value of this book than to say that in their good faith no sportsman's library is complete without Gilmore's "Famiae and Forest."

LOSING TO WIN. By Theodore Davies: Sheldon & Co.,
New York, Publishers.

This is a tale of American social life, which deals with the prominent tubers on the fair face of our sociology. The special correspondent, the strong-minded woman—if noisy declamation for ideal wrongs entitle her to such a term—and kindred subjects are sketched with fluency if not with depth.

LINLEY ROCHFORD. By Justin McCarthy: Sheldon & Co. New York.

Any work from the pen of Justin McCarthy is sure to possess force and individuality and to have a purpose in view, so that readers are not only regaled with graphic writing, but also presented with a picture of life founded on the most pure and healthy moral sentiments. The present work is no exception to the rule, so readers will find it a pleasure to follow the career of its personages.

My LIFE ON THE PLAINS. By Gen. G. A. Custer, U. S.

A.: Sheldon & Co., New York, Publishers.

This book is a compilation of the various sketches published by the author in the *Literary* from time to time, the only changes being the addition of some Indian portraits and that of the General. The style is concise and informal, there being no effort at what is called "fine writing." This is an advantage in works of this sort, for persons prefer the simple narrative to any literary effects. The tales are interesting, as they give a graphic idea of Indian character and mode of warfare; and a sketch of the captivity of some pale-faces spaces them with romance. The remarks on the best mode of dealing with the red men and the causes that lead to their taking to the warpath occasionally are *myopes*, and give us an idea of the racialities of the Indian agents.

THE MAGAZINES.

The *Galaxy* for November contains a capital assortment of concise articles which are both varied and interesting. "Dean Stanley," "The American Woodlands," "Salmon Fishing in Canada," "The Jewish Passover," "Penikese," and the "Rarity of Great Singers," which are only a few of its table of contents, show the excellent material from which one may call mental pleasure.

We find the following pleasant bit in the article on salmon fishing in Canada, and think it too good to be lost to such of our readers as may not take the magazine, especially as it is thoroughly characteristic of enthusiastic anglers:—

[illegible]

MARRIED.

SANFORD-BAXTER.—On Wednesday, October 21st, at Trinity Church, Rutland, Vt., by the Rev. William J. Harris, D. D., E. HARRISON SANFORD, of New York, to MARY W., daughter of John N. Baxter, Esq., of Rutland.

—It is asserted that five hundred pounds of frogs are consumed daily in New York. They are caught chiefly in Canada, and are sent here in salt sacks, laid flat on the floors of freight cars, and containing each about a hundred frogs. An average of five per cent. die in the train. Each female frog is said to spawn over a thousand at a time, but not more than fifteen hatchlings to attain full growth. The latter are often taken by their own species and eaten by snakes. They are usually taken to the hook, but bite at it only when their heads are above water. A bait is often unnecessary. The frog catcher frequently brings his hook under the jaw of the frog without creating alarm, and jerks it straight into the flesh. He is then easily lifted into a bucket.

Green Hart, Split Bamboo, Log Wood, Fly
and Salmon Rods, a Specialty.

HAZARD POWDER CO.,

MANUFACTURERS OF

Sporting, Rifle and Target

GUNPOWDER.

"ELCTRIC," in 1 lb. cansisters.

"AMERICAN SPORTING," in 1 lb. cans and 6 lb.
kegs.

"DUCK SHOOTING," No. 1, 2, 3, 4 and 5 grain, in
and 5 lb. cans and 6 lb. kegs.

"KENTUCKY RIFLE," in 1 lb. and 5 lb. cansisters.

"KENTUCKY RIFLE," in 1 lb. and 5 lb. cansisters.

"SEA SHOOTING," in 1 lb. and 5 lb. cansisters.

Superior Mining and Blasting Powder.

The above well-known Gunpowders are supplied by
the company's agents in every prominent city, and in
the various mining districts of the United States and
by all dealers in Guns and Sporting materials, or
wholesale at the office of the Company.

88 Wall Street, New York.

A. G. HAZARD, President.
Thos. S. Pope, Secretary.

Orange Sporting Powder.

ORANGE LIGHTNING POWDER.

The strongest and cleanest Powder made. Nos. 1
to 7, packed only in sealed 1 lb. cansisters. The coarse-
st and especially are recommended to owners of fish
breech-loading guns, giving great penetration with
very slight concussion.

ORANGE DUCKING POWDER.

For water fowl. Very strong and clean. Nos. 1 to
5. Packed in metal kegs of 64 lbs. each, and in canis-
ters of 1 and 5 lbs.

AUDUBON POWDER.

Very quick. For woodcock and quail Nos. 1 to 4.
Packed in metal kegs of 124 lbs. and 64 lbs., and in
pound cansisters.

ORANGE RIFLE POWDER.

The best for rifles and for all ordinary purposes.
Sizes Pk. P.F.G., P.F.G., the last being the finest and
most used. Packed in wood and metal kegs of 25
lbs., 124 lbs., and 64 lbs., and in cansisters of 1 lb. and
5 pounds.

All of the above give high velocities and less residu-
um than any other brands made.

INTERNATIONAL

EXHIBITION.

OFFICE OF THE
UNITED STATES CENTENNIAL COMMISSION,

In accordance with the several Acts of the Congress
of the United States, providing for the celebration of the

Centennial Anniversary

of American Independence, there will be held in FAIR-
MOUNT PARK, Philadelphia, in the year 1876, an
INTERNATIONAL EXHIBITION
of Arts, Manufactures, and Products of the Soil and
Mine.

The Exhibition will be opened on the 19th of April
and closed on the 19th of October.

APPLICATIONS FOR SPACE.

To secure space for exhibits in the Buildings or the
Park, early application should be made. The neces-
sary forms for application, together with the Remun-
erations for Exhibitors and needed information, will be
forwarded on application to the Office of the Centen-
nial Commission.

A. T. GOSHORN,
Director General.

Field, Cover, and Trap Shooting.

By Captain A. H. BURGARD.

CHAMPION WING SHOT OF AMERICA.

This book contains 16 chapters and about
400 pages, a full and instructive account of the expe-
rience acquired by Captain BURGARD in twenty
years of hunting deer and shooting Wild Turkeys.

Also the most successful methods of shooting Wild
Ducks, Wild Geese, and Cranes. And the best ways
of hunting deer and shooting Wild Turkeys.

Sporting Dogs, their breeding, and how to break
them.

THE COMPLETE ART OF SHOOTING ON THE
WING, with full and clear instructions for young
sportsmen, by means of which they may become
crack shots.

The habits, haunts, and varied flight of birds in
their seasons.

Pigeon Shooting as an art, with the rules of the two
Championship Batches and report of champion
matches.

EDITED BY CHAS. J. FOSTER.

Published by J. B. FORD & CO., 27 Park Place,
New York. For sale by all book-sellers and the lead-
ing gunsmiths. Price \$1. Sent by mail by the pub-
lishers and by Captain Burgard, Lehigh, Logan
county, Illinois. Also for sale at office of Forest and
Stream, 17 Chatham Street, N. Y. Oct 1.

AMERICAN WILD FOWL SHOOTING.—BY J.

W. LONG. A practical treatise on the habits, ha-
bits and methods of shooting, also specific explana-
tions for building boats, blinds and decoys, the
training of water retrievers, and other valuable mis-
cellaneous information, by a professional duck shoot-
er. 12mo, 320 pages, illustrated, \$2.00. To be
had of all book-sellers and the leading gun stores, or
will be mailed to any address, post paid, on receipt of
the price, by J. B. FORD & CO., Publisher,
New York, 27th. 27th Park Place, N. Y.

THE SWALLOW'S FAREWELL.

WITTH songs and flowers we follow the Spring,
Queen Spring, as she flies to her distant lands;
Over land, o'er sea, our restless wing
Terries not, save where her footstep stands.

The sunbeams flash on our flitting breasts,
To lighten our beautiful Mistress' way;
And, when for a moment her fleet foot rests,
Over her head we hover and play.

Men cannot see our beautiful Queen,
But they think Spring follows wherever we fly;
And they cry to us—Stay, that the woods may be green!
And—Rest, that the Winter may not come nigh!

But the beautiful Spring is flying, and we
Must fly with her—fly with her over the land;
And follow her—follow her over the sea,
For her guard, in a vast, invincible band.

For see! the Autumn with fiery hand
Is touching our haunts in the tall green trees;
And ruthlessly soon his flaming brand
Shall bid our bright homes flare in the breeze.

And soon the armies of Winter shall march,
The legioned frosts, o'er the lands below;
Whose feet the fountains and rivers parch,
Whose hands hurl arrowy hail and snow.

Poor men! your beautiful Spring shall die,
Stricken and slain by the Winter, if we
Did not shield her flying, and with her fly
Where never a Winter's breath may be.

But fear not, far tho' she fly from you,
Long tho' the tyrant Winter reign,
For his forces vainly her feet pursue,
And safe shall she come to you yet again.

Far in the lands where you weep her gone,
She shall gather armies and mighty bands,
She shall borrow the arrowy shafts of the sun,
To drive the Winter out of your lands.

The west wind and south shall her chariot be,
When with force invincible on the track
Of the pallid Winter she march, and we
And Summer and joy in her train come back.

Selected.

keeping up the fire, had prepared a repast of steaming cups of chocolate and sponge cakes, which was followed by the charming little gossip about the company at the dance, and a good deal of joking about the compadres and comadres, of which Miss Nita received such a share that she vowed she would stand it no longer, and rushed off to her room.

"Now, Mr. Irving," said Colonel Forrester to me at breakfast the next morning, "we do not start for the mountains until after dinner, so if you would like to learn something about sheep raising you had better join me on my round to the stations. Here I was like the Alderman, between two civic dinners, or the jackass between two trusses of hay. I had expressed to the Colonel a desire to learn something about this great source of his wealth, and here was the opportunity. On the other hand, Miss Nita, I knew, expected me to help her tie up some flowers, and to make believe assist in the preparations for the camping expedition; but duty prevailed over inclination. Miss Nita pouted, and said that if I preferred a lot of sheep to her society, I was welcome to them. "Ah, but Comradita," said I, "if I am ever to have a ranch of my own, you know I must learn something about the business."

As we rode along to the first band, which we found in the canon, the Colonel imparted to me much valuable information. Said he: "The greatest risk we run in our business is in having two or three successive droughts, or dry seasons, without rain enough in the winter to make a heavy crop of grass. This alfalfa, which you see growing everywhere on the plain, is an indigenous species of clover, which, in the spring, after the rains have ceased, makes itself into hay by becoming detached from its roots at the ground. This furnishes the summer food for the sheep, during which season, however, they must have water, hence, the necessity, in securing a sheep range, to be certain of a sufficient and unfailing supply of this article. The great drawback to this country is the want of water. From May until October, or sometimes as late as December, no rain falls, and all fruit trees, vegetables and flowers must be artificially irrigated to keep them alive and in bearing. Many persons from the East come here during the winter, when the rainfall has made everything green and bright, and commence their operations as though this state of things was to continue. The result is loss and disappointment, which might have been avoided had they looked at the country when at its worst. A large portion of our immigrants have so far been a class of poor whites from the Southern States, who are content with just a sufficiency of corn and pork, and beyond procuring this, make no effort to improve or embellish the 160 acres which Uncle Sam and the pre-emption laws gives them free of cost. The want of good society for his wife and children is another drawback to the Eastern man. The better class of natives, than whom, although ignorant and uneducated, no people could be more simple-minded and hospitable, are fast dying out, or their descendants are amalgamating with the American population. These lower counties have always been a Botany Bay for the whole United States, that is, since the discovery of gold, but this state of things is changing, and we only want railroads to bring us a class of people who have both enterprise and capital to develop the wonderful resources of the country."

"What breed of sheep do you find to suit the climate best?" I asked.

"The Spanish Merino, by far; some cross them with the Cotswold, and others prefer the French Merino, but I prefer the pure Spanish. We shear twice a year, but owing to the presence of a great deal of burr clover on the ranges, the fleeces are nearly all "burry." Our wool is looked upon as about the poorest in the Eastern Market, but it varies greatly in grade as the producers are varied in their endeavors to improve the breed of sheep. But it is in the wonderful increase that the real profit lies. We look for a band of ewes to double in number each year; the number of twins born compensating for losses of lambs by accident or otherwise. A large portion of our shepherds are *Basques*, from that province at the foot of the Pyrenees.

They have the advantage over the native Mexican or Indian in being accustomed to the work, and in being fond of neither drinking *aguardiente*, gambling, or cockfighting. Most of them become proprietors themselves and return to their native country rich men." Observing a number of goats with each band of sheep, I asked the Colonel the reason of their being there. Said he: "There appears to be something in the peculiar odor exuded by the goat, which is conducive to health in the sheep. Whether this is the true explanation I am not prepared to assert, but certain it is that they do not thrive so well without their companion. On many ranches the goat's milk is used exclusively, both for drinking and making cheese."

Returning to the house, we found that the preparations for the coming trip were concluded, and, after dinner, the cavalcade started for the mountains. The Senora and Miss Inez, with old Juana to assist in the cooking and dishwashing, occupied the spring wagon, and behind them came a rougher vehicle, drawn by mules, and filled with the bedding, etc. The Colonel, Miss Anita, Don Pablo, and myself were on horseback, and, not confined to any regular order of marching, dashed here and there over the plain; now chasing a rabbit from his form among the *tunas*, or prickly pears, and now jumping our horses over the gulleys which the rains had washed in the soft earth. Entering the thick belt of oaks, the trail carried us for awhile under their cool shade. Emerging from them on to a sloping bench at the foot of the mountain, we looked back over the tree tops and obtained a magnificent view of valley and ocean. Santa Monica and the buildings of the mission were far below, and looked like little card houses, the bright tints of the vineyard contrasting strongly with the darker green of the orange and olive orchards. Off to seaward the island of Santa Rosa, opposite Santa Barbara, looked like a dim cloud resting upon the ocean. Leaving the wagons to follow more leisurely, we spurred our horses up the hill, and a short ride carried us to the mouth of the canon, and in sight of the rough board shanty of our friend, Grizzly Bill. One can hardly imagine a wilder spot. From up the dark recesses of the canon a stream came dashing down over its bed of rocks, forming here and there pools of clear water large enough for one to swim in. Bill's house was ornamented with two rows of bee hives in front of it, from the entrances to which a constant stream of busy little workers were entering, laden with the spoil of many a wild flower on the plain below, or departing for a fresh load. The proprietor had turned a piece of land adjoining into a vegetable garden, and, being entirely free from frosts, could regale himself with green peas or tomatoes at almost any season of the year, but watermelons were his specialty. The ladies, arriving soon after us, took possession of the house, while we were shown to an oak tree, under which we were to find shelter for the night. Bill always cooked out of doors in fine weather, and we found an elegant fire ready for our culinary attempts; not a "white man's fire," blazing and smoking over the tree tops, but a bed of hot coals, at which Juana, in a few moments, had prepared the afternoon tea. The Colonel took his fishing rod and went off up the stream to catch some trout for supper. Bill was making preparations to empty a hive in order to procure a supply of honey. Don Pablo was assisting in unloading the wagons, and getting the house ready for the ladies' occupancy, and as I seemed to be like a landsman abroad, "in every one's mess and nobody's watch," I took a gun and went off alone on the side of the hill, where every little patch of chaparral seemed alive with quail. At sunset all had returned—the Colonel with a goodly string of speckled beauties, and I with a dozen or more birds, which Miss Nita assisted me to pluck. Bill's cooking apparatus consisted of an immense gridiron, which was stretched over the fire, and not only supported the indispensable coffee pot, but left plenty of room for either broiling or placing the frying pan. The latter, filled with freshly caught trout, was sizzling away merrily. Great slices of venison, cut from a haunch suspended in the tree overhead, were broiling on the coals, and my contribution was

Santa Monica.

For Forest and Stream.

RANCHE LIFE IN SOUTHERN CALIFORNIA.

BY WM. M. TILESTON.

[Continued.]

Shortly after midnight our party, all but Don Pablo, took their leave, but most of the dancers remained until daylight, and some even stayed to breakfast. Colonel Forrester having taken charge of the spring wagon, which had conveyed his wife and daughters, I was reduced to the companionship of a sleepy vaquero for my ride. Perhaps the best I could have had under the circumstances, as it involved no conversation. The night, like all nights in Southern California, was very cool, almost cold, indeed, and brilliant in starlight. The great mountains in their deep shade looked weird and strange. The far off sea horizon, indicated only by a line of light in the West, appeared illimitable in distance. The dark shadows of the oaks dancing on the sword as their branches were swayed by the night wind, seemed ghostlike. The mournful wailing of the coyote as he prowled around a sheep fold, the occasional hoot, hoot, of a night owl, and the rapid pounding of the horses' feet on the hard road, were the only sounds. I followed closely behind the wagon, where my little *comradita*, well wrapped in shawls, was riding beside her father, and occasionally looking back to see, as she said, if the coyotes were carrying off her *compadre*. What a welcome change from the glare and dust of the ball room to the luxuriously appointed parlor of Colonel Forrester's house, where the faithful *servienta*, Juana, not content with

Fish Culture.

FISH CULTURE IN VIRGINIA.

LEESBURG, Va., October 28th, 1874.

EDITOR FOREST AND STREAM.—

A small beginning in fish culture has been started in this town. About two dozen or more brook trout have been secured alive from a stream flowing into the Potomac near town, and lodged in a spring in town prepared for making an inexpensive experiment in hatching. An ample supply of water is at hand, and we have doubts whether there is enough water to raise any considerable quantity of fish. However, we succeed in hatching out fish that we cannot raise, we mean to put them in the Tascara or Town Branch, close to the spring we are now using. Our object is to demonstrate to the farmers the feasibility of the plan. If we succeed, we will let you know.

A few black bass were caught and taken by our anglers, Mr. W. B. C. and Dr. M. secured ten fish of that kind, and yesterday Mr. D. caught fifteen of the same sort of fish. I am sorry to hear from good authority that Major Ferguson failed to make any arrangement with the owners of the Big Spring Branch for his fish farm, so that our county has lost an opportunity, we believe, for a profitable enterprise. T. W.

STOCKING PONDS WITH BLACK BASS.

GREAT progress has been made in the last five years in the distribution of the black bass, especially in New York and in the New England States. Two hundred or more ponds and lakes have been stocked, and yet we are continually receiving letters of inquiry, which show that people have very imperfect information in regard to the habits of the fish, and the best method of introducing them. Some inquire for the spawn, supposing that they are propagated like the salmonidae. But all attempts to take spawn from this fish have been failures, so far as we are informed. Some ponds have been stocked with the fry, but it remains to be seen whether this will prove successful. The fry are very small, and remain but a few days over the hatching and are hatched, so that it requires very close watching to capture them. They are removed just at the time when they are said to have the protection of the parent fish, and they are all liable to perish in new water among other species of fish. The common and the most reliable method of introducing the bass, is to transport adult fish from well-stocked ponds to new localities. This, when properly done, has never been known to fail. In most of the States there is legal protection to the fish for three years, generally granted by special act of the legislature. But this is not long enough to secure the object. It should be in all cases five years. The fish do not bite freely until after the spawning is over in May and June, and they do not usually reach their new home until July or later, so that there is no fry from them until the second year. The fish generally selected for transfer are from one to three years old, measuring from three to twelve inches in length. Fish of this size are not only more numerous, but they bear transportation better, and are more readily acclimated, than when larger. They are

moved with a good deal of difficulty in hot weather, especially when the journey requires more than twelve or fifteen hours. With the most skillful management, there will be a considerable loss. In the Fall months there is much less loss.

There is a great want of information in regard to the character of the water suitable to this fish. We have many letters from the owners of horse-ponds, a half acre or less in extent, having neither springs nor water running through them for a portion of the year. The bass wants clear lively water with rocky or gravelly bottom, and the more of it the better. It wants room for itself and for the poorer kinds of fish upon which it feeds voraciously. It does well in the mill-ponds upon manufacturing streams, and if the head waters and reservoirs are stocked, they will in a few years be found in all the waters below. They flourish also in natural ponds of twenty acres or more. Some decline to stock these ponds or lakes because they are generally free to the public. But this is short sighted policy. A large pond or lake stocked at a cost of one or two hundred dollars, and protected by law for five years, will furnish better sport to the gentlemen or company who undertake the enterprise than they could find in any small pond of their own. In suitable water black bass multiply very fast, and after they once gain possession, their numbers can never be very seriously reduced by hook fishing. The annual spawning will more than keep up the supply. There are thousands of ponds and lakes in the Northern and Middle States of from one hundred to a thousand acres, producing only the poorer kinds of fish, that might easily be stocked with bass, and add largely to the food supply of the people.—*American Agriculturist*.

TROUT.—In the latitude of New York brook trout commence to run up the streams to spawn in October. Further North they are later, according to the temperature of the water and the climate. The males go up a week or ten days before the females to prepare the beds, then return and choose their mates, in the doing of which they have many battles. At this time the fins of the males are very bright with white and red; their abdomen is dark brown, so that they are easily distinguished. As they spawn from 1,000 to 2,000 eggs a pair, it is very evident that if some plan is adopted to protect the eggs and young fry they would increase very fast. As the largest and oldest go up and spawn and return before the younger and smaller ones, the tendency is to lose the best eggs being eaten up by the last run. Trout will not eat their own eggs, but in clearing the bed will eat each others' eggs.

—The success of salmon culture at Newcastle has now become fully demonstrated. A few years ago these fish were almost unknown. The artificial process of breeding has been applied upon about a mile and a quarter of Wilmot's Creek, with the following results. The numbers of adult salmon which have entered the reception house during the past few days are as follows:—Previous to the 20th ultimo ninety-eight had been secured; on the 20th, nineteen; on the 21st, twenty-one; on the 22d, forty-five; on the 23d, seventy-three; on the 24th, sixty-eight; on the 25th, sixty-six; on the 26th, 141; on the 27th, 212; total, 743. Over and above this score in the fish house, a still greater number have been observed in the open creek engaged in spawning. Hundreds can now be seen daily in the ponds and breeding ground of the establishment.—*Canadian Monthly*.

—A fishway of the most approved pattern has just been built at Baring, Maine.

—Prof. Baird is endeavoring to obtain permission from the Government to erect a building at Wood's Hole, Mass., for the purpose of making collections of fish and examining spawn.

—About 50,000 salmon eggs, brought from California, have been placed in the hatching house of Dr. Pratt at Elgin, Illinois.

—Twin Lakes, Wisconsin, will soon be stocked with 25,000 salmon fry. For this most necessary improvement it is indebted to the Waltonian Club.

—Mr. Wilmot, of Canada, having decided upon erecting a fish house on Soper's Creek, for the propagation and protection of salmon, a neat and suitable one has been put up. The place is under the supervision of Councilor H. Ford. There are at present nineteen salmon spawning in the house.

For Forest and Stream.

THE BIRDS OF NEWFOUNDLAND.

(Continued from Vol. 3, No. 4.)

THE THRUSHES.

The migratory thrush, or American robin, is the commonest of all the turdidae in Newfoundland. From its red breast and familiar note, the robbers call it the "robin." It arrives in April, and in May its eggs are found in the nest. These are of an unspeckled blue, and resemble those of the fieldfare.

Mr. Reek enumerates no less than thirteen species of warblers in Newfoundland, all of them being migrants. The most common is the yellow warbler, called by the inhabitants "yellow hatter." It makes a very pretty little nest in low bushes, somewhat resembling that of the English goldfinch. One of the earliest Spring migrants is the yellow, red-poll warbler, and the black and yellow warbler is also tolerably common. The Canada flycatcher and the American redstart arrive in the end of May, or beginning of June. The latter is called "goldfinch" by our settlers. The American tit lark and the Maryland yellow throat are found in considerable numbers.

THE SWALLOWS.

The white-bellied swallow is the only species of swallow seen throughout the Summer; while few specimens of the cliff and barn swallow are met with. The sand martin and the purple martin are occasionally met with.

The American butcher bird visits Newfoundland in its periodical migrations, but it is doubtful whether it breeds here. The yellow-throated flycatcher is tolerably common, and arrives in June. The black-cap titmouse and the Hudsonian titmouse are both non-migratory, and breed in the holes of trees.

FRINGILLIDÆ.

The American pine grosbeak is common throughout the year, but most abundant in Winter, when they get together in small flocks. The American crossbill is common throughout the year, and an early breeder. The pretty little bird called the white-winged crossbill is very abundant in Winter, and is called here the "spruce bird," from the fact that it feeds on the cones of the white spruce. The snow bunting is very common, but does not breed here, as also is the snow bird, both being Summer migrants. There is a fine species of sparrow, called here the "hedge sparrow," but is really the fox-colored sparrow. It sometimes breeds on the ground, and at others in low bushes. The rusty blackbird and the crow blackbird are both Summer migrants.

CROWS.

The Canada jay is very common here, and remains throughout the year. "Whiskey jack," as it is often called, is almost as tame and familiar in its habits as the English robin redbreast. When in the vicinity of houses it will eat raw meat, fish, potatoes, bread, etc., and is said to store away cranberries for Winter use. The American crow is a common Summer migrant, frequents the sea coast, breeds in trees, and lays four or five eggs. The blue jay, or "silkent jay," as it is called here, is not common.

PARTRIDGE.

Having in a previous paper described the ptarmigan, I shall only now enumerate the different species found here. These are the Canada grouse, or spruce partridge, a rare visitor, and the willow grouse, the only lowland, or sub-alpine species indigenous to Newfoundland. They invariably roost on the ground, although they are shot sometimes when feeding on the tops of birch or alder trees, more especially when the ground is covered with deep and light snow. Their food consists chiefly of the buds and tender shoots of birch, alder, black spruce, and juniper; but they are especially fond of the partridge berry and cranberry. Another species called rock ptarmigan, or, as the settlers call it, "mountain partridge," is rarely found below the line of stunted black spruce, except in the depth of Winter, when they descend to the lowlands for food.

BITTERNS.

The only species of the heron family met with here is the American bittern, a Summer migrant. Generally a pair of bitterns are found frequenting the margins of wooded lakes and ponds throughout the Summer. They arrive in May, and depart in September. The American bittern makes a curious thumping noise, very much resembling the noise made by fishermen when driving oakum into the seams of their boats. It is probably a result of its violent name of "stake driver," in the United States, and "corker" (caulker), in Newfoundland.

POULTRY.

The American golden plover is very abundant in Autumn, and the ring plover, the piping plover, and the grey plover are all pretty common in the Fall of the year. They are not seen in Spring, so that they must take some more direct route than via Newfoundland to the breeding grounds in the far north.

SNIPE, SANDPEPS, CURLEWS, ETC.

Wilson's snipe is a Summer migrant, arriving in the end of April, and it soon commences to breed. When the female is sitting on her nest, she frequently utters a loud, drumming and making a peculiar noise with its tail which may be heard a considerable distance. The grey snipe and the American jack snipe are also periodical visitors. Of sandpeps, we have a large variety. Bonaparte's sandpiper is very common, and may be seen collecting in flocks in the Fall of the year at the seaside, and generally so tame that a dozen or twenty may be killed at a shot. The yellow-bellied sandpiper arrives in May and departs in October. From their incessant cry of "will-lick" they get that name here, and in the south of the island they are sometimes called "nasary." The Esquimaux curlew is by far the most common species, arriving by thousands in the Fall, but rarely in the Spring. They feed on the whortleberries ("huzz") which stain their feathers posteriorly a rich dark purple. They arrive here in the end of August, and remain a month. They are exceedingly fat at this time, and most delicious eating.

(To be Continued.)

—The British ship Scindia arrived here a few days since from Calcutta, having on board one of the most remarkable natural curiosities the world has ever seen. It consists of a short horned, sacred Brahmin bull, born in Nepal, called the "Gaur," and is the property of the Hon. Captain Denison Folger, formerly of this city, but lately a resident of Calcutta. The bull itself is a curiosity, and is one of that description of animals held in great reverence by the natives of India on account of its traditional sacred character. But in this case a novel *bisus nature* renders it a most singular creature. The brute portion is symmetrically formed with a glossy coat of fawn colored hair, and well shaped body and limbs. But protruding, as it were, from the left side of the hump on the back of the neck of the animal is a wonderful and regularly shaped, in nearly all respects, human arm. The deltoid and triceps and biceps muscles are well developed, particularly the latter; the joint at the elbow is flexible, the forearm rather attenuated, the wrist as fully flexible as in the human arm proper, while the hand is composed of four distinctly marked fingers, two of them connected together. This extraordinary appendage to an otherwise well formed body does not appear to give the creature any inconvenience or pain, generally hanging listlessly by its side, except when it is angered or annoyed, when its arm rises as if the possessor felt inclined to "strike from the shoulder." The animal is quite healthy, enjoys a ravenous appetite, the nice grass of its native clime being its favorite food, and does not seem to have any bodily ailment, but is on its long sea voyage. If not disposed of in this country, it is the intention of the importer to take the creature to England, and secure it a place in the London Zoological Gardens, where such novelties are highly prized. It would prove a unique attraction to the natural curiosities in our Central Park. It has already been visited on the Scindia by several scientific gentlemen of this city and Brooklyn, where the ship lies, near the Fulton ferry.—*Herald*.

—It is on record that simultaneously with the outbreak of an epidemic, like the cholera, birds desert the fated town. This phenomenon has been observed in St. Petersburg, Riga, and in cities of Prussia, in Hanover, Galicia, and Southern Germany. Some scientific men suppose the birds are warned by the poison in the atmosphere, and instinctively fly from it.

—Mr. Klippart, of Ohio, at a recent Hartford meeting of the American Association, gave the details of his discovery of a large number of skeletons of the fossil hog of America, to which brief reference had been previously made by Professor Newberry, in his report on the geology of Ohio. These were found while digging the Artesian well of the city of Columbus, and were obtained at a depth of from twenty to thirty feet. Several skeletons were complete, and the whole series is so complete that it furnishes the means here, before waiting for determining the entire osteology of the animal. This hog is the *Platygus compressus* of Le Conte, and is closely allied to the peccary, although with a longer and very slender snout.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Nov. 1, 1874.

Animals received at Central Park Menagerie for the week ending October 31st, 1874:

One Ring Necked Pheasant, *Turdus torquatus*. Presented by Mr. L. H. Stedwell.
One Capuchin Monkey, *Cebus capucinus*. Presented by Mr. Henry S. Gibson.

One Goat, *Puleia Americana*. Presented by Mr. J. C. Courcy.
One Zebu and Calif. *Bos indicus*.
One common Jackal, *Canis aureus*. Hab. India.
Four common Boas, *Boa constrictor*. Hab. South America.
W. A. CONKLIN.

Woodland, Lawn and Garden.

NOVEMBER AND ITS LABORS.

PREPARATION OF BEDS—SELECTIONS OF SHRUBS AND TREES—HINTS FOR PURCHASING, &c.

THE autumnal tints are beginning to change; the purple of the chestnuts, and the harlequin colors of the liquidambar, are scarcely seen, unless lying at the foot of the trees. The glowing beauty of the flower garden has gone, and the last roses are just beginning to show their heads under the bed. The shrill notes of the yellow hammer, the screech of the blue jay, and the far off note of the wood pigeon, remind us most forcibly that we are near the waning months of the year.

Now is the time for amateur cultivators to take a sort of Fall inventory before the frost king has sealed up the earth so that you can do no more work within your garden grounds. Your flower beds, and the glory that once glowed there, have departed, and left you with a clean slate, upon which you can, if you please, write a still more glorious remembrance for the next Autumn's review. Your month of labor is not gone, neither have you filled out your full season unless you have cleared off the rubbish, removed the old and decayed leaves from your flower beds, dug up deeply, manured fully, and mixed in the soil, sand, peat, manure, and fertilizers of your trade, such as your beds require. Fold not up your hands to rest, Mr. Periwinkle, or Mr. Cowslip, unless you have put in the most ample order your preparatory bed for the growth of your best and most choice tulips. Do not talk of going "gunning" until after you have spaded up the currant bed and well manured the same; cut out, while you are about it, all the superabundant wood, and burn it, with the old debris and leaves, at one end of the bed. While you are doing this work, which is fitting for the three months of September, October, and November, you are to a very considerable extent gaining much time to do at comparative ease what you would do very badly in the Spring months of April and May. In those months you are of necessity very much hurried, and consequently cannot do this kind of work so well as you can in the Fall. You know how great a difference you find in the quality of nursery plants if you take them in the Spring. If you have your trees lifted with good, unbroken roots, and in good condition, you will get them oftener in the Fall than in the Spring. In the Fall the season's sales are over, and the trees for the early season's orders are now nicely heeled in, or in the capacious cellars of the nurseryman awaiting the Spring orders. At the first breaking of the Spring planting months you are not hurried to make your purchases for the Spring or plants. You accomplished this work in the Fall, and now you rejoice over it. You can now leisurely visit the nurseryman and take your time in making selections of trees. In the hurry of Spring every one desires to be served first, and is often served the worst. You have only to spend in looking on, as we have done in Spring time at more than one of our large nurseries, to see the manner in which Michael and Patrick "snake 'em up" to believe in the cracking and splitting and cutting off of the main roots. If many of the trees we have seen lifted from the ground, by what were called careful nurserymen, could speak, they would cry out with anguish at the rough usage they often receive. And could you reasonably expect to have your order put up as orders should be, and as the nurseryman's printed circulars promise they shall be. You will not believe too highly in the veracity of the printed circulars of even our best nurserymen, for as honest and high principled as we know some of them to be, they cannot oversee the taking up, matting, and delivering of half their plants.

When you are ready to set out your shrubs or trees, either fruit or ornamental, go to the nursery yourself, or send an agent you can trust, and select the trees you desire. Have them lifted carefully without breaking the roots, and pay for them only when they are satisfactory. Or, if you do not take your trees in the Fall, at the time of your purchase, tie a white tape around them, and having made your purchase be sure you pay for it, at the same time making a memorandum of the trees you have bought.

This will be found a good plan to pursue, even if you do not wish to set out the trees in the Fall. Much of the real loss accruing from trees dying in the Spring may be really laid at the door of the nurserymen, for lack of roots, and a lack of knowledge of the business, by the operatives and employees of our nurseries. By selecting your trees in the Fall you will scarcely ever fail in getting your money's worth, and have the satisfaction of knowing your trees are really in fitting condition to be set out.

We shall refer to the subject of nurseries at some length in a future number of FOREST AND STREAM, when we shall endeavor to answer the enquiries of quite a number of our valued correspondents.

OLLIPOD QUILL.

THE LAST DAYS OF AUTUMN.

IF you propose any new alterations or improvements in your lawn or flower garden, now is the time for making them. Lay out new walks, cut evenly the grass edging, and gather with care the leaves and place in heaps under your barns or outhouses. Sprinkle over them lime and ashes. You will find this Fall labor a gain for the Spring. Give good drainage to all undrained grounds. You will find your account in doing this work well.

HOUSE PLANTS.—Of such plants as you desire to save for next year you will cut back both root and branch, and let them lie in a shady place for a week, when they will be well established. In potting anew, be careful to sift the earth well into the pots previous to putting the same into the cellar or cold frame. Make your cuttings at this time of all such choice plants as you desire to propagate.

CANNAS.—Take up these roots very carefully; otherwise you will not have any luck with them.

CHRISTANTHEMUMS.—To those who love these late blooming plants, we say, just as soon as they have found good strong buds you can pot for the Fall and Winter blooms. Those not taken up should be staked well, and they will bloom finely, even in quite cool weather.

PERENNIALS.—These plants are sometimes left out in their beds for two, three, and even more years, but this we deem to be quite objectionable, for the reason that when lifted, and their roots divided and reset in charcoal, they will produce much finer flowers.

DALIAS.—This is the time to lift and label your dahlias roots, first drying them thoroughly. Choose a good, dry, warm, sunny day, and do the work leisurely, and be sure you do not break any of the roots.

BULBS.—All the hardy kinds, I mean, such as tulips, hyacinths, jonquils, crocus, crown imperials, should be planted by November 12th, sure. The more tender bulbs, like the gladioli, the tiger flower, etc., should be removed after the frost has nipped their leaves, and be dried off and stored for the next season in a cool, dry situation, where they will not freeze.

PROTECTION.—Give protection to half hardy plants, shrubs, etc., by laying coarse sedge grass in small quantities over them. An excellent covering for the same will be found in the boughs of the red cedar; it lays closely, and yet gives necessary passage to the air.

Do not cover bulbs too soon, as they may heat and rot. They will, when in the earth, stand a tolerable cold night. Plants of the hardy kinds, as well as the tender, more delicate kinds, should always have some protection, as they develop a handsomer and finer flower.

OLLIPOD QUILL.

WILD SHEEP IN CALIFORNIA.—In Spring and Summer the males form separate bands. They are usually met in small flocks, numbering from three to twenty, feeding along the edges of glacier meadows, or resting among the cattle-like crags of lofty summits; and, whether feeding or resting, or scaling high cliffs for pleasure, their noble forms, the very embodiment of muscular beauty, never fail to strike the beholder with liveliest admiration. Their resting places seem to be chosen with reference to sunshine and wide outlook, and, most of all, to safety from the attacks of wolves. Their feeding-grounds are among the most beautiful of the wild Sierra gardens, bright with daisies and gentians, and mats of blooming shrubs. The wild sheep eats little besides the spicy leaves and shoots of the various shrubs and bushes, perhaps relishing both their taste and beauty. When Winter storms fall, decking their Summer pastures with a fresh bloom of snow, then like the blue birds and robins, our brave sheep gather and go to warmer climates, usually descending the eastern flank of the range to the narrow, birch-filled gorges that open into the sage plains, where snow never falls to any great depth, the elevation above the sea being about from 5,000 to 7,000 feet. Here they sojourn until Spring sunshine unlocks the cañons and warm the pastures of their glorious Alps.

In the months of June and July they bring forth their young, in the most solitary and inaccessible crags, far above the nest of the eagle. I have frequently come upon the beds of the ewes and lambs at an elevation of from 12,000 to 13,000 feet above sea level. These beds consist of simply of an oval-shaped hollow, paved out among loose, disintegrating rock chips and sand, upon some sunny spot commanding a good lookout and partially sheltered from the winds that sweep passionately across those lofty crags almost without intermission. Such is the cradle of the little mountaineer, aloft in the sky, rocked in storms, curtained in clouds, sleeping in thin, icy air; but, wrapped in his hairy coat, cherished by a warm, strong mother, defended from the talons of the eagle and teeth of the sly coyote, the homie lamb grows apace. He learns to nuzzle the purple daisies and leaves of the white spire; his horns begin to shoot, and ere Summer is done he is strong and agile, and goes forth with the flock, shepherded by the same divine love that tends the more helpless human lamb in its warm cradle by the fireside.—*Oerleand Monthly*.

FLORIDA WEATHER.—The Press says:—

"The weather is now perfectly charming. We have had a week or so of heavy blowing, but this has calmed down, and we are now enjoying the Indian Summer of the region—cool and refreshing at night, balmy and delightful in the day. The gardens are flourishing, and we have never seen a finer display of oranges. The blows seem to have driven the fish, especially the big fish, into the harbor. The galeons are enjoying themselves with the sport of catching bass off the fort battery. The city is perfectly healthy; the doctors have a few green and melancholy expressions of countenance, and the only time that a sickly smile glimmers on the features is when a horse runs away with a cart, or they look up at the workmen on the giddy scaffold."

—At the botanic garden, Oxford, the Mexican *Dasylirion acrochordum* recently threw up a flower stem which, when twelve feet high, grew at the rate of six inches in twenty-four hours. The *Nelumbium intemum* (the sacred bean) is reported this season as producing perfect seeds.

—James Scannell, a young farmer residing in the township of Denholm, was treed by wolves in Edge's swamp, about thirty miles north of Ottawa last week. He had a gun with him, and killed one and wounded two others with partridge shot, the only ammunition he had with him. The killed animal was torn to pieces by his comrades.

The Kennel.

DOG BREAKING.—No. 8.

IN order to more readily teach our pupil to back another dog's point when he is taken into the field and hunted on game, he should know that "Toho" is the command to stop or halt, which we teach him after he has become prompt in charging, using the check cord as in the first lessons. Provide yourself with some morsels of food when the dog is hungry, and having fastened the cord to his collar, as before, take him into an apartment or yard, where no one can attract his attention, and throw a piece of the food where he can see it fall. He will naturally run for it. Let him do so, but when he comes near to it pull the cord sharply and cry out "Toho" in a loud tone. He will probably drop or charge, remembering the lesson you first taught him. This is what we desire, so long as he stops. Continue this until the use of the cord is not required, and he will halt to the verbal command, and at the same time keep him perfectly familiar with the down charge by signal, and to dropping to shot if you have determined to teach it, and have begun it.

In order to encourage our young dog to quick movement, and to cultivate in him a free and speedy gait, we should take him with us in our walks as often as possible, extending our rambles to the suburbs of the city, where there are open fields and plenty of room. For a time keep the cord attached to his collar, and let it trail after him as he moves about; it will not impede him as much as might be expected, especially if you select a strong one about the diameter of an ordinary lead pencil, and "point" the end with thread to keep it from fraying. You will find it will greatly add to the control you may have to exercise over him, and have the effect of impressing him while he is at liberty that you are still master. On these walks, accustom your dog to the sound of the whistle you intend using for him, summoning him from time to time that he may become perfectly familiar with it. Practice him, while you are out, in the same lessons you began at home, until every lesson is obeyed promptly; and when he charges walk away from him, each time extending the distance, insisting upon his remaining so until ordered to hold up.

No doubt he will notice, and perhaps show an eagerness to hunt the sparrows and other small birds you may come across in your walks, and probably point when he scents them, from natural instinct. This we do not check, but rather encourage for a short time, as it will give a greater desire for the chase, and when ready to be put on game, and once shown to him, he will soon choose between the two, and readily distinguish the difference.

Your walks should be more frequent the nearer you approach the shooting season, when you shall want to go into the field, and confirm and put to use the lessons you have imparted to your dog. We have thus far said nothing in regard to breaking setters and pointers to retrieve, intending to give our views and experience upon that branch of training in some future article, and can only now say we have shot over both, and greatly prefer the retriever, feeling confident in our individual case that the lifting of dead game by our dogs in no wise detracted from their live birds, nor lessened their staunchness in pointing them, which was equal to that of most setters, albeit we did not insist upon pointing dead before the order fetch was given, but gave the command directly after the dog had charged.

We shall now want to enter the field with our beginner, and give his first lesson in actual work.

THE DASCHHUND.

THE daschhund, or German beagle, bids fair to soon become a favorite dog in this country, as we are daily having inquiries in reference to where and how the species can be had. We only know of one gentleman who breeds this variety of hound, and his stock is too limited to supply even the smallest portion of the demand that is made upon him. Within a few days we have learned that several persons have ordered, or are about to order, them from Europe, where the breed is found in all its purity. In the neighborhood of our cities feathered game is becoming so scarce that those who are fond of field sports, and who can only find time to be absent from home for a day or two, feel that setters and pointers are of no use to them. Hence the demand for the interesting beagle, for the purpose of hunting the small American hare, which is still comparatively abundant in our suburbs. We doubt not that before long regular foot packs will be organized, as they exist in England, and that much enjoyment can be found in following the slow but certain trailing of the daschhund.

We will take this opportunity of requesting our foreign correspondent to give us the names of some of the breeders of reliable strains in both Great Britain and the Continent, so that our readers who desire good breeds may procure them.

The daschhund would not only be sure on the trail of our small hare, but would follow and unearth it when it seeks the burrows of other animals for safety. In some portions of Europe this little hound is used for deer driving, and on account of its intensely crooked and short legs its gait is so slow that the game moves gradually before it, offering better shots and greater chances to kill.

Great objections have always been made to the use of our larger hound for the driving of deer to the gun in

many portions of the Middle and Eastern States, as it renders the game wild, and if not brought down run great distances, making the attempt for a second drive useless. In some counties of Pennsylvania and New York still hunting is only allowed, but we have no doubt the objection could be overcome in the use of the dachshund, as its movements are so slow that it can easily be followed on foot. The German beagle not only possesses a remarkable nose, but is also a hard fighter, a good ratter, and is often employed in Europe for the pursuit of the badger. It is almost the counterpart, in shape and color, of the black and tan hound, and, if not for its deformed, short, and crooked legs, would be taken as a dwarfed specimen of the breed. The *Chasse Illustrée* of Paris, for July, contained a fine cut of several of these hounds, and we doubt not it will be the coming dog.

IRISH WATER SPANIELS.

THIS celebrated breed of dogs, for retrieving ducks or any kind of game on land or from water, seems to be scarce in the Western country. I am somewhat surprised at this, as, in my opinion, for retrieving ducks they have no superior. Their color (liver) is particularly adapted for the purpose; they are large, strong, and remarkably handsome and affectionate, with great courage. I regret to notice in the different bench shows inaugurated this season, they have not been included in the special premiums, as to the sportsman who delights in duck shooting there is no more valuable auxiliary in securing game than this breed. They are bred in great purity by J. S. Skidmore, Nantwick, England, and some few specimens from his stock have, during the past year, been imported into Canada and the United States. I have recently seen a dog of his breed, although not directly imported from him, at work in the West, and a better retriever of ducks I never saw. No sooner is the gun raised than his eye is on the birds, and if one falls he is almost sure to recover it. In water, rice, or mud he is equally as good, never refusing to go even in the worst places, from which many dogs would balk. I once owned one of this breed which was a remarkable dog. He would not remain in a bough house located on land, preferring always to station himself on the outside, close to the house, where he could watch the passing birds. If a duck was going by without notice he would give a low whine, as much as to say, "don't you see them." He was remarkable for marking where game fell, and if, in shooting, birds fell into the water, dead, he never went for them unless bid to do so. But let one fall wounded, and begin to swim off, and he would make a rush for it. If birds dove, he would stand in the water and look until he saw the ripple they made, and follow them until they showed their bills above the water; then, when getting close enough, would dive, and invariably secure the birds. As he did not retrieve birds that fell dead in the water, unless bidden, he would always, when the day's sport was over, and all ready to start home, take his stand in the bow of the boat, and as the boat approached dead birds pick them up and place them safely in the boat.

Now, if such dogs as these can be had, let it be made an inducement for parties to breed them. Let them be entitled to the same chance for premiums at our bench shows as pointers or setters, and the day is not far distant when the pleasure of duck shooting will be greatly enhanced by the recovery of a large number of wounded duck, which are now entirely lost.

Bench shows, recently inaugurated in this country, will create a desire for the best breeds of dogs, and tend to greatly improve the stock; but let all breeds of hunting dogs have equal privileges in these shows, and many of the mongrels now used for sporting purposes will become extinct.

SHAMROCK.

Chicago, Ill., October 27th, 1874.

ALLOWING POINTS.—A correspondent writing about the recent dog trials at Sleaford, England, makes the following remarks about the number of points allowed, and from these we should say that the system recently adopted at the Tennessee tournament is far superior to that in vogue across the Atlantic:—

"Now as to reckoning points. It has been said in some English journals that it appears to be an anomaly for a dog to win a trial without obtaining a single positive score, but only through the negative score of his adversary. I can't say I see this line of reasoning. I say that if you have two individuals before them at Sleaford, but it is quite possible, to my imagination, for a very bad dog, put down with a very good one, to so bother him, that in half an hour all the points may be negative instead of positive. For instance, a bad dog with a turn of speed, and a propensity for running in, might put up every bird in a country before his better educated opponent can make the requisite number of positive points to put him. I say that if you have two dogs down together you must judge them by a certain scale of points, whether they be positive or negative. There is the same difference between them at the finish, whether the points be all positive, or whether the extreme points of both be positive and negative, or both negative. In a greyhound trial, which is a quicker business altogether, and much more difficult to be calculated, the judge, when judging after his dogs, only reckons the score of the winning dog, the dog which is ahead, though each dog may win and lose the course twenty times over. Thus, a dog, A, makes 3 for a run up, and 1 for first turn—4; his opponent, B, gets in, and makes a couple, that is 2 still to A; not 4 to A and 2 to B. A then makes a couple; 4 to A. B makes a wrench and a kill, say it, leaving A winner by one point. This is much more quickly and readily done; it would be impossible to make the same number of points, not by each in a long course, and to butch them at the finish. In field trials of pointers and set-

ters, which are comparatively slow, there is nothing to prevent the positive and negative system of reckoning from continuing, besides it is much more satisfactory, and admits of a more ready comparison between dogs, that is, not actually "antagonized," or in the same stake. This is a point of interest with some.

"Now, as to the value of points. The most difficult problem of all! The simpler it is made the better.

"Of positive points. I think a point should be 3, a back 2, a drop 1, all being natural. A forced back or drop by the hand or voice of the trainer, I think, should go for nothing in this part of the score; good rounding (on a sliding scale) from 1 to 3.

"Of negative points. Simply flushing 2 (demerit), refusing to back 2, false pointing from 1 to 3 (according to circumstances), breaking fence 1 or 2 (according to circumstances), breaking point and running in 4, chasing 4, blinking 4.

"Disqualifications. Absolute gun shyness, chasing wing or feather out of the field.

"Additional points, to be added to the score of one or both competitors at the conclusion of the trial, to be left, of course, to the discrimination of the judge or majority of judges.

"From 1 to 10 extra—for pace.

"From 1 to 10 extra—natural style.

"From 1 to 10 extra—breaking.

"On reviewing the above, it will be seen that the negative points are in greatest abundance, and properly so. In like manner, it is very probable that negatives will preponderate in the majority of the trials, but the actual difference between the opponents will be quite as easily determined, though, by this system the actual excellence, judged by a standard of perfection, will not be so readily given."

EXTENSION OF RABIES.—In the *Veterinarian* for September, Mr. G. Fleming, M. R. C. V. S. (H. E.), says that so little was known of the geographical limits of rabies until within a few years that we are often in doubt whether it has been recently imported into regions where it is now witnessed, or whether it was always prevalent there. Earlier travelers have stated that it was unknown in Asia Minor, Egypt, Algeria, and Arabia, but now there is abundant evidence of its presence in these regions. How far the malady may owe its extension to its contagious properties, or to the importation of dogs from countries where it exists, is difficult to decide. It is certain, however, that rabies has not been witnessed in Australia (where nevertheless considerable alarm is beginning to be felt, owing to the present large importations of English greyhounds), nor in New Zealand, nor does it appear in South Africa and Madeira, though European dogs must have been largely imported at various times. Why have these countries remained exempt from the scourge? The contagion breaks out sometimes in an alarming and truly epizootic form in countries where it has not been previously noted, as in the West Indies in 1783, and Peru in 1803, without any reasonable cause being assigned. It was imported into La Plata, in 1806, by dogs belonging to English officers; and in 1813 by English dogs from the Bay of Bengal. With regard to Sweden, the malady has been frequently noticed in Sweden, Denmark, Norway, Russia, and Lapland, but there seems to be some doubt as to Siberia, Kamchatka, and Greenland. From the descriptions given by Drs. Kane and Hayes of a disease amongst the sledge dogs of these countries, however, it would appear highly probable that it is also prevalent there at times. From the symptoms detailed by Hayes, this disease certainly bears the greatest resemblance to rabies, but as the initial symptoms do not appear to have attracted attention, and it was only when the more violent indications appeared that its existence was noted, it would be difficult to speak decidedly as to the actual nature of the malady.

—The mean annual death rate from hydrophobia for fifteen years to every million of inhabitants is only 5. There is good reason to believe, however, that in recent years that rate has rather increased. Up to 1866 the mortality for England for any one year, through the malady, has not exceeded twenty-five. In 1866, however, when there was an extensive outbreak in Germany, the mortality rose from 17 to thirty-six, and when active measures were adopted, the number fell in 1870 to thirty-two; but in 1871 it reached the unparalleled number of fifty-six. All persons bitten by rabid dogs did not become infected, though the number who escaped varied. The most recent French statistics give 40.31 per cent. of the number given who were infected, and a previous estimate gave the number at thirty-three per cent. In our country, and especially in Austria, the mortality was somewhat higher; and in Bavaria from 1863 to 1867, 563 persons were bitten, sixty-nine of whom died. Much depends on the susceptibility of the person or animal bitten, and the frequency of the bites. Dogs and cats are most susceptible to the malady; next in order come mankind and pigs; then ruminating animals, the sheep and goat being more susceptible to the disease than the ox.—*Veterinarian*.

RECIRE FOR DOGS.—The following recipe may be found useful to some of our readers, or their dogs:—

PERKINS, October 23d, 1874.

EDITOR FOREST AND STREAM:

I see in your last issue Cobb of Bridgeport wants a recipe for his pointer pup that one effected the same as I cured him by giving him a pint of Tobacco Juice boiled with tobacco leaf and boil it for half hour make it pretty strong I gave my pup the whole dose at once for I had no idea it would cure him but I think half this is plenty for one dose.

B. E.

—A fox hunting club has been organized in Baltimore, which will keep a pack of sixty hounds.

—A fair at which dried fish was exhibited was held recently at Eastport, Maine. The Fishing Society, after enjoying the odor of the display, partook of a dinner together in the evening.

—Assistant Surgeon Elliott Cones, U. S. A., our correspondent, has been ordered to appear before the examining board in New York, for examination for promotion to the grade of surgeon.

—Not a house can be rented in Lake City, Florida. Good sign.

The Horse and Course.

—The managers of the Jerome Park are entitled to the thanks of all gentlemen who frequent the race course for pleasure for their action in two cases last Saturday. This was to rule Hugh Gaffney and John Coffee from the track for fraud in throwing races. This is a most timely movement, and one which will meet the approbation of every true lover of the horse. The throwing of races is of too frequent occurrence to be tolerated any longer, and if our managers would preserve the course from the vile offence of gambling and speculation, they should in all instances follow the lead of Jerome when such flagrant outrages are brought to their attention. The lesson imparted will bring wholesome results—which will prove of great benefit to the morale of racing.

—The extra day given at Jerome Park last Saturday was one of the most enjoyable of the season, as a splendid field of horses competed, so that the races were in next instances contested with spirit.

The first race there were thirteen entries, twelve of which were colored on the cards as starters; but when called to face the flagman only five responded to the summons. These were George Ayre's brown horse Blind Tom, carrying 148 pounds; Lawrence and G. Lorillard's chestnut colt Resolute, with 140 pounds in the saddle; M. A. Littell's gray mare Mary Clark, with 145 pounds; M. J. Tully's bay gelding Vesuvius, with 148 pounds; and A. H. Torrence's bay horse Moonstone, with 148 pounds.

Owing to the action of Gaffney, the rider of Resolute, Moonstone won the steeplechase. Time, 4:25½. Gaffney was ruled off the course forever by this action.

The second event was a selling race, with three starters, a mile and an eighth. Those that came to the post were R. W. Walden's bay gelding Mildew, to be sold for \$300, carrying 98 pounds; J. G. Bellune's bay gelding, by Hurry, \$200, 85 pounds; John Coffee's brown colt B. F. Curver, \$1,000, 108 pounds. The latter was pulled at the drop of the flag, and all the way was never suffered to go near the other horses, and was beaten fifty yards. The judges called the jockey of Curver into the stand, and being fully satisfied that the jockey had orders from the owner to pull the horse, John Coffee, the jockey, and the horse were ruled off the course forever. Mildew won the race by a neck in 1:59½.

The third race was a handicap, for all ages, one mile and a half, and had for starters Lawrence and G. Lorillard's bay horse Shylcock, with 114 pounds up; Thomas Purser & Co.'s bay colt Grinstead, carrying 98 pounds; J. W. Weldon's bay gelding Kadi, 108 pounds, and James Thompson's chestnut filly Emma, with 86 pounds up. Grinstead was a great favorite, Shylcock the second choice. Shylcock ran a grand race, winning in the best time ever made, less a quarter of a second than that recorded to Grinstead, in 1:40 pounds, and, four years old, at Jerome Park, in August, 1870. Shylcock's was a much better race than Grinstead's, as he carried his full weight (114 pounds), while Grinstead had eight pounds off. Time, 2:38.

The fourth race was between hacks, gentlemen riders. The starters were Girl of the Period, five years old, ridden by Peters, carrying 151 pounds; White Horse, five years old, ridden by Mr. H. Center, weighing 151 pounds, and Sinner, four years old, ridden by Mr. J. M. Purdy, having a saddle 145 pounds. Girl of the Period was the great favorite over the field. She won the race very easily, having galloped away from the others at the fall of the flag. All the gentlemen rode gracefully, and were neatly dressed. Distance, half a mile. Time, 50½ seconds.

The closing event of the day was the Grand Handicap Steeplechase, for which ten horses came to the post. These were A. H. Torrence's chestnut gelding Thomas Purser & Co.'s, and his bay horse Moonstone, with 155 pounds up; George Ayre's bay colt Diavolo, 140 pounds; Lawrence and G. Lorillard's chestnut colt Resolute, with 140 pounds; A. P. Green's brown horse Harry Booth, 140 pounds; Geo. Ayre's brown horse Blind Tom, 148 pounds; Lawrence and G. Lorillard's chestnut filly Austine, 135 pounds; M. A. Littell's gray mare Mary Clark, 145 pounds; M. J. Tully's bay gelding Vesuvius, 148 pounds; and J. S. Cassel's bay gelding Impenetrable, 142 pounds. Trouble was the favorite over the field at 3 to 1 in many instances. The favorite won the race, Diavolo second, Resolute a good third. Time, 4:18.

—About 300 persons attended the Fleetwood Park races last Monday. First in the programme was a sweepstakes for \$1,000, mile heats, best three in five, in harness, between Thomas Tremble's bay mare Lady Tremble, John Hasset's bay mare Meria, John Murphy's sorrel gelding Sorrel Jake, and P. Fleming's gray gelding Willie. Willie won the first heat, Sorrel Jake the second, Willie the third, Lady Tremble the fourth, and Willie the fifth heat and the race. Best time, 2:41.

The second event was a match for \$200, mile and repeat, in harness, between John George's sorrel gelding Red Cloud and Owner's bay mare Lady Kate. It required three heats to decide it, Red Cloud proving the victor. Best time, 2:54½.

The next race, also a match for \$200, mile heats, best three in five, was between D. Kelly's bay gelding Harp, to wagon, and T. Walker's bay gelding in harness. Four heats were trotted, Knapp winning the first, third, and fourth of the race. Best time, 2:52½.

—Two contests came off at Prospect Park on the 27th, the first being between horses that had never beaten three minutes previous to making their entries. There were twenty-one horses named, but only nine came to the post. These were:—Black mare Catskill Girl, brown gelding Falmouth Boy, bay gelding New Dorp, sorrel gelding T. J. Stevens, bay mare Elsie Deans, bay gelding Chestnut, bay gelding Hampton, brown horse Comper and black gelding Arden. The latter was the favorite previous to the race, afterward Catskill Maid became the choice. She won the race in three straight heats.—Best time, 2:28½.

The second race had ten starters of the twelve entries, and was between horses that had never beaten 2:33. The starters were brown mare Carrie, gray gelding Royal George, bay mare Lady Sayre, bay mare Ella Madden, bay mare Lady Morrison, bay mare Lady Annie, bay mare Adelaide, gray mare Horse N., black gelding Harp, brown gelding Lady Weldon, and Carrie was the favorite and won the race. Best time, 2:29½.

—The trotting at Prospect Park Fair Grounds last Wednesday was the very best that has taken place at this beautiful course during the year. Four events came off, the first two being unfinished trots of Wednesday, the third a team race that took five heats to decide, and the fourth trot, after six heats were trotted, had to be postponed on account of darkness.

The unfinished race for 2:39 horses brought out Rarius, May Bird, Arthur, Phil O'Neil, Pauline and Lady Sonnenberg. Rarius won the fifth heat and the race in 2:30.

The second unfinished race of the previous day was won by Blanche, she making the fifth heat in 2:34.

In the team races there were three double competitors, namely: Listener and Adonis, Ella Madden and Regulus and Lady Woods and Carrie N. The former were the victors, having gained the third, fourth and fifth heats. Best time, 2:41.

—Three trotting matches came off at Prospect Park last Friday. The first was for a purse of \$1,000 for horses that have not beaten 2:30. The competitors were—Bella, Vanity Vair, Ben Morrell, G. B. Daniels, and Lady Dahlman. After nine heats the former was declared victor. Best time—2:24. The second race, for a purse of \$600, for horses that have never beaten 2:40, brought out a large field, but Rarius won. Best time—2:30. A purse of \$2,000 for horses that have never beaten 2:30, brought out Sensation, Goldstut and Huntress. The former was the victor. Best time—2:23.

—Mr. H. N. Smith, the proprietor of the Fashion Stud Farm, gave a purse of \$1,000 to be trotted for by his bay horse Jay Gould and Mr. Richmond's bay gelding Sensation, mile heats, best three in five, in harness, on the track of the farm last Monday. Besides the purse race, Goldsmith Maid was to make three trials to beat her record—2:14—in company with a running horse. Jay Gould won in three straight heats in very good time. Best time, 2:23. Goldsmith Maid made three attempts to beat her record, but the best she could do under the circumstances was 2:18.

—The trotting season on the Hudson closed on the 29th ult. with a small attendance. The first race was for 2:50 horses, purse of \$900. Four horses competed. Won by Boy. Best time, 3:34.

The second race for special premiums of \$300 was won by Berkshire Boy. Best time, 3:24.

—The Spring Valley track has witnessed some very close competition during the last meeting. Seven heats having been run sometimes to decide a victory. On the 29th ult. William Lewis won the 2:40 race, Emily Soldene the special race in 2:40, and Mary A. Whitney another special race in 2:36.

—In the trot at Baltimore, on the 29th ult., over the Herring Run Course between American Girl and Copperbottom for \$2,000, American Girl won the first and fourth heats in 2:19 and 2:21. Copperbottom won the second and third heats in 2:21 and 2:19.

—The trot between American Girl and Copperbottom, which was commenced over the Herring Run course, was finished last Friday, American Girl winning the fifth and sixth heats, and Copperbottom being distanced. Time—2:39.

—In a race at the Harrisburg Driving Park last Tuesday for a purse of \$500, Twilight won in three straight heats, for seller second, Ella third and Hannah D. fourth. Time—2:39; 3:24; 3:34.

Copperbottom paced against time at Bishop's trotting track, Baltimore, last Saturday. He started to beat 2:18, and won, making the time in 2:17.

—The great race between Occident and Judge Fullerton at San Francisco, last Saturday, drew a throng of spectators. Fullerton was the favorite, but the friends of Occident were confident of success, and backed their opinion freely. Occident was driven by Budd Doble, and never made a slip in any of the heats. Fullerton, who was driven by Hickox, broke badly in the start after the last heat, losing about seven lengths, which he could not regain. The first heat was won by Fullerton, and the second and third heats and the race by Occident. Time—2:19, 2:18, 2:22. Probably \$50,000 changed hands on the result.

—The race for the Cambridgeshire Stakes, (England), the principal event of the Newmarket Houghton Meeting, came off Tuesday, 27th ult. and was won by Pent Eric, Chieftain coming in second and Lord Gowran third. Out of 190 subscribers forty-two horses started, with seven to one laid against Pent Eric, and sixty-six to one each against Chieftain and Lord Gowran.

Pent won quite easily, coming home in a common canter, Chieftain beating Lord Gowran three lengths for second place. Liventure, the winner of the Cesarewitch, who carried seven pounds penalty therefor, was fourth. Khedive, who before the start became favorite at five to one, passed under the string among the last of the field.

—Apology, the horse which recently won the great St. Leger race in England belongs to a Yorkshire clergyman of the Church of England, Rev. Mr. King, who entered it under the name of "Mr. Laudo." The stakes which he won at St. Leger amounted to \$23,000. The singular divine, although eighty-two years old, is such an indefatigable sportsman that he is wheeled out for partridge shooting in an arm-chair. His Bishop—the Bishop of Lincoln—said he had expostulated with him, but without effect, for raising race horses.

—A match was run in London last Saturday for \$2,500 a side between Mr. Dawson's ch. c. Prince Charlie and Mr. Aumont's ch. c. Pent Eric. Prince Charlie won easily. The former was the winner at the recent Newmarket meeting.

—Almost weekly we beg the indulgence of contributors, whose favors are necessarily deferred by pressure upon our space, and yet complaints increase in two-fold ratio. If our friends will be as patient under delay as the editor of this paper is under the lash, their prospects of eternal happiness will be measurably increased.

—A cup full of ripe strawberries was picked at Southernland's River, in Nova Scotia, last week. They must have ripened in the shade.

—THANKSGIVING in New York State November 26th. Something is brewing with respect to Turkey.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed no later than Monday in each week.

HIGH WATER, FOR THE WEEK.

Date.	Boston.	New York.	Charleston.
Nov. 5	9 7	5 52	5 7
Nov. 6	9 47	6 33	5 47
Nov. 7	10 2	6 25	6 25
Nov. 8	11 4	7 47	7 4
Nov. 9	11 41	8 23	8 11
Nov. 10	11 59	9 6	9 40
Nov. 11	12 20	9 48	10 2

IMPORTANT TO YACHTMEN.—We have had compiled, and shall print next week, a complete record of the yachting season of 1874, up to October 23d, giving the name, club, number of races sailed, number of times first in, with and without allowance, and number of first, second and third prizes taken by every winning boat this Summer. We trust the record will prove useful to our yachting readers. We shall print with record of the regattas sailed subsequently.

UNIQUE CANOE VOYAGE.—Mr. J. Bishop, of Manchester, N. J., whose proposed trip in a paper canoe through the inland waters of the country, from the Atlantic seaboard to the Gulf of Mexico, was announced in the FOREST AND STREAM about six weeks ago, long ere any other journal learned of the fact, has now commenced his travels. He set out from Troy, and reached Bordentown, N. J., a distance of 250 miles, in sixty-four hours. After resting a few days in Bordentown he went to Philadelphia, whence he sets out from that city for Cape Henlopen. On his passage down the Hudson he reached New York in the evening, and crossed the bay outside of Staten Island against a head wind and tide, and met no mishap, with the exception of shipping a little water. His canoe is of the Nautilus type, and was designed by the Rev. Baden Powell, author of "Canoe Traveling." The boat is made of a single sheet of paper, without seams, and the skin is about an eighth of an inch in thickness. It is fourteen feet long, twenty-eight inches beam, with eight and a half inches depth of hold, and has a high bow and stern. Its weight is fifty-eight pounds, or, with the entire outfit, seventy-three pounds.

—A yacht club has recently been organized at Port Orange, Florida, naming itself the Hoboken Yacht Club of Port Orange. The club intend building a club-house on the banks of the Halifax River, and have offered its name to the Hoboken Yacht Club, of Hoboken, New Jersey, the hospitable and freedom of their grounds. At the election for officers for the ensuing year the choice resulted in the following board: For Commodore, John B. Allen; for Vice-Commodore, Edwin Snow; for Treasurer, E. Marcie; for Recording Secretary, Alvin Day; for Corresponding Secretary, Peter B. Dobbins; for Measurer, William Cannon. Several yachts are being built on improved models, which will be added to the club this Winter.

—A match to decide the championship of the Harlem River is talked of to take place at an early day between the "Slady Side" and "Sylvan Dell." The preliminary meeting has been held by the friends of both boats, but nothing definite has yet been accomplished; but as the sum to be competed for—ten thousand dollars—is quite an important item, it is possible that the contest may come off. It is to be hoped that no calamity will result. The following is some of the best time made by steamers to Albany:

No. of Landings.	Time.
C. Villard	6 42
Daniel Drew	6 51
Alida	6 51
Drew	7 14
Francis Skiddy	7 24
South America	7 29
Sylvan Dell	7 43

—George Brown, of Halifax, has accepted the challenge of J. H. Sadler, the English champion, to row a five-mile race, with a turn, for \$5,000. The race to take place either at Halifax or at Springfield, Mass.

CANOEING IN JAPAN.—"Times are dull now in the way of amusement" says the *Japan Gazette* of Takei and Yokohama of August 4th, "but to-morrow afternoon at sundown there is to be a canoe race." We reproduce some of the names of the canoes; of course there is a Rob-Roy, and a Wave, but then there are such euphonious appellations given to the crafts, as the Jiggy, Jiggy Maro, and the Pompano Maro and Shira Sagi. It inclined to wager on such events, we should suppose that the name of Jiggy Jiggy Maro, would have certainly carried that particular craft through.

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating localities for good hunting, fishing, and trapping, and giving advice and instructions as to outfit, game, weapons, rod, distance, season, expense, resources, trails, species, governing rules, etc. All branches of the sportsman's craft will receive attention. Anonymous Communications not Noticed.

B. Hartford.—Your favor on hand and accepted.

TO CORRESPONDENTS.—Several valuable miscellaneous contributions are deferred for want of space.

J. H. D., Davenport.—Will be pleased to hear from you at any time. Your subjects will prove interesting.

W. S. T., Omaha.—All large-eyed dogs are subject to what is called weeping. It is in no way injurious to the animals.

G. T. E., Milton.—Will you give me the address of Edward Purdy, of Westchester, Nova Scotia? Ans. Address Amherst P. O., Nova Scotia.

MAGDON, Philadelphia.—Your article on the Magnetawan Country, Canada, is very opportune as well as instructive. It will appear in our next issue.

E. G. City, Mr. H. Stewart, of the *American Agriculturist*, has a fine farm adjacent to this city which he will sell for \$4,000. It contains good shooting and fishing grounds.

F., Chicago.—What will cure a dog of the mange? Ans. An ointment of green lodge of mercury—one part to ten of lard is said to be excellent. Rub into the flesh quite thoroughly.

S. L. T., Philadelphia.—What is good for sore eyes in dogs? Ans. Wash its eyes with a weak solution of sugar of lead. If suffering from distemper, Rackam's distemper balls are said to be good.

FANCIER, City.—What is good for tapeworm in a dog? Ans. 1 oz. of kousso. Put it in a pint of hot water and when cool add some lemon juice. Give this as a draught, then a small dose of castor oil.

H. G. P., Providence, R. I.—We believe Boyd's patent combination metallic shells, for safety and desirability, equal to any shell manufactured. Liked either than at any other time. In the ponds of New Jersey it is still tolerably abundant, but on account of the use of seines at all seasons, it is steadily diminishing in numbers.

READER, New Orleans.—Will you please inform me, through your "Answers to Correspondents," where and at what price good decoy ducks (black ducks and teal) can be bought? Ans. Can be bought at most any gunsmiths in this city, or other large cities of the North and West. Price, \$8 to \$12 per dozen.

PIKE, Philadelphia.—Fall and Winter are the principal seasons for taking pike. In the latter part of October and in November this fish takes the lure more readily than at any other time. In the ponds of New Jersey it is still tolerably abundant, but on account of the use of seines at all seasons, it is steadily diminishing in numbers.

E. W. C., Seward, Neb.—Can you give me the address of anyone that deals in supplies used by taxidermists? Should like to hear of some dealer in Chicago, or some Western city? Ans. Fred Kaempfer, 127 Clark street, Chicago. Can you tell me what the eyes of stuffed birds cost? Ans. Can buy a fair lot, assorted, for a few dollars. In "History of North American Birds," by Baird, Illustrated? Ans. Yes.

J. A. B., Springfield, Mass.—I wish to get a few days' good duck shooting about Thanksgiving time. If you will give me the name of some good hunter, or some land owner on the Connecticut River in your area, issue, you will greatly oblige? Ans. Address Richard Payne or Henry Rogers, who is known at Squire Rogers, as Stony Creek. There is also good duck shooting in vicinity of Saybrook, Naonk, and Bridgeport.

AMATEUR, Fall River.—Where can I get graying with which to stock our pond? Ans. Messrs. Mather of Honeoye Falls, and A. S. Collins, State Hatching House, Caledonia, in this State, and Mr. Clark, of Clarkston, Mich., are all propagating graying, but we doubt if they have any to sell. For you may only mode of obtaining them would be to catch them in Michigan. See Seth Green's and Fred Mather's letters in FOREST AND STREAM, Vol. 2, pages 213, 228, 232.

H. L. C., Philadelphia.—Received reply through paper of October 2d, which was perfectly satisfactory. You mention Chincoteague Island as a good ducking ground. If not considering me annoying, I would ask the following: How do we reach there? Can you give name of party or place to write, wherein can write and get information? Ans. Write to Captain J. Coffin, Berlin, Md. You can reach Chincoteague via Del. R. R., and from Berlin to Coffin's by stage. Good fowl shooting on Sound and fine quail shooting on main land.

ESQUIRE, New York.—I have been looking through your papers, but have not seen an account of proper charge for a gun for rabbit shooting. I have an English gun, 13 bore, 8 pounds weight; will you please inform me through your paper the proper load for it and size of shot and powder? Also if the "Commodore's Signal Book" would give any information in regard to depth of water on Jersey coast, from Sandy Hook to Barnegat Bay? Ans. 1. The charge is different, according to tastes of the shooter. The usual one varies from 2 to 3 drachms of powder and from 14 to 15 ounces of shot. Any good powder will answer. 2. We do not think the book you refer to gives the desired information.

DACHSUND, West Philadelphia.—In a late issue of your paper there is a short notice of the German Dachsund. Will you answer the following queries concerning it through your correspondent's column: 1st. Are there any breeders of these dogs in this country? 2d. Can you mention the names and address of any English breeders? 3d. What modern works contain a description of this breed of dogs? 4th. We know of but one. Mr. Basil, Hooke's Express office, 2d. We cannot at present but will procure them for you. 3d. None yet published in this country, and as the dog is comparatively new in England, we know of no work referring to it, except the short description in Stonehenge's book.

F. M. T., City.—A party of three desire a few days' duck shooting this Winter on Gunpowder Creek, Md. I am entirely at a loss to know whom to address in that section of the country for particulars, such as proper size of gun, where we can be accommodated, and the like. We know of a man, Perrymanville, Md. You can shoot there only from 10 o'clock till time after November 15th, although season begins November 1st; colder weather necessary to bring ducks from the North. Also write to James Nixon (hotel) Havre de Grace, Md.; shooting there Mondays, Wednesdays and Fridays from sink boxes. Tuesdays, Thursdays and Saturdays shooting against shore. We are anxious to drive the ducks from the flocks. These parties can rig you out, completely.

J. H. M., Elmira.—As we are going to stock the Chemung River this Winter, we thought we would apply to you for a little information. 1st. What is the best time for putting in the fish? 2. What fish would you advise us to get? 3. How are we to go to work to protect the fishing interest in this vicinity? 1st. We would advise putting the fish in your river this Autumn, before their eggs have grown large, for bass of any variety spawn in April and May. 2d. Would recommend the *G. nigrifrons* as most easily procured, although *G. salmoides* thrive in waters where they have been transplanted, not so well adapted as the Chemung River. 3d. Prohibit prohibition from land owners bordering the river against fishing for five years, and better if you can have county laws against angling passed.

REST, Pittsburgh.—My setter dog, from some cause unknown to me, received very sore eyes during the hunting season last year. The first I saw after hunting him in a hay field. He would not let me touch the eye is all inflamed, and runs all the time. Considerable water in the corners every morning. Have tried almost everything, with no effect. Can you devise a remedy, or tell me of something that I could get to cure or help him. I fear he will be of no service to me this Fall, if I can't find something to relieve him? Ans. If the washing of your dog's eyes every morning and morning with castile soap and warm water, and applying a very weak solution of nitrate of silver to the corners of the eye, will not allay the inflammation, he has doubtless an obstruction of the eye duct, which will have to be operated upon by a competent veterinary surgeon.

R. S. H., Peckskill.—I want to get some information in regard to duck shooting on the Jersey coast and in the Delaware and Chesapeake Bays during the months of January and February. Will you give me the benefit of your knowledge in regard to the same? I would like to know the best place, the best and quickest way to get there, etc. If it is not imposing on your good nature too much, please let me hear from you the first part of the week? Ans. Barnegat and Tuckerton are the best points for ducks on the Jersey coast; both can be reached via N. J. Southern and Tuckerton Railroad. The shooting will be better there from Nov. 1st until January 1st, and afterwards, March and April would be better. In January and February, if you cannot make it, make it a good shooting trip in January and February, write to Capt. J. Coffin, Berlin, Md., who has facilities for giving you a good time and comfortable quarters in his hotel. Berlin can be reached from Philadelphia via Del. Railroad, where Coffin will meet you and drive you to his house on Chincoteague Sound.

RIFLE CLUBS.

THE recent International match has accomplished a most important result in this country, as it has caused all matters pertaining to rifle practice to receive the consideration they deserve. We are in receipt of letters from various portions of the Western Atlantic and the Pacific States in reference to the subject, and all the correspondents make inquiries about the Creedmoor rules, so that they may follow them literally, and reap whatever advantages they may possess over others.

Many of the writers express the patriotic desire to organize clubs on no other grounds than that they may reveal the best marksmen in the country, so that there can be no possibility of the Americans returning from their next contest without the laurel wreath of victory. This is a most excellent motive to prompt the action, and we hope it will become general throughout the whole Union. Some give as a reason for the organization of clubs, the advantage which it would give our men in war, by teaching them steadiness, coolness and accuracy of aim, while others argue that it imparts vigor to the frame, and elevates into a science a study which is now deemed little more than guess work. All these assertions are good enough in their way, and have some weight, but we hope that our riflemen will never be called upon to test their weapons on anything more important than a target or fleeing game.

Calls have been issued in one or two cities in this State, in Chicago, and in towns in Minnesota and California, for the establishment of rifle clubs, and all have been received with marked approbation, not only by sportsmen, but by the leading citizens, prominent among whom are the officers of the National Guards; and from this we should infer that ere the Winter is over these clubs will be quite numerous in several States. The representative of the FOREST AND STREAM in Chicago, General Webster, Major Brand, and other gentlemen of the same city, have already discussed the project of a club, and from present indications it seems as if that Western metropolis would soon boast of one second to none, except our own celebrated Amateur Club.

In Scott County, Minnesota, a region of hunters, an organization will be established ere long, and as the members express a desire to practice throughout the Winter, we shall, no doubt, hear some good reports from them early in the season.

California is also paying a fair share of attention to the subject, and this is a strong indication of its general interest, for if the men of that Eldorado, who are supposed to be wrapped up in naught but the procuring of gold, can be aroused into action, it seems plausible to suppose that the citizens of our Eastern States, who have more leisure time to spare, and more opportunity and convenience for practice, will not lack in enthusiasm.

The first step for popularizing rifle exercises in the Golden State has been taken recently by the military authorities, they having offered some excellent prizes for competition between the various company and regimental organizations. This will have a most salutary effect, so we should not be surprised if our next International "team" contained a representative of the Pacific riflemen.

This general interest in rifle practice is a good indication of the result of the recent contests at Creedmoor, and reflects much credit on our Amateur and National Clubs, who, unaided, aroused our people from their lethargy, and gained us a victory from the accredited best marksmen in the world, and thus enhanced the reputation of our country, and proved that it was pre-eminently the land of riflemen.

If this enthusiasm continues, our next "team" to the Green Isle will be a national one, in the most literal sense, and if they should return victorious, then will the whole country be entitled to share in the honor.

PARISIAN SPORTS.

THE nobility and other gentlemen of Paris, who are attached to the sturdy pleasures which always characterize nations in the most advanced civilization, and who support with enthusiasm all exercises that tend to mental and physical progression, have undertaken the project recently, of establishing at Billancourt an institution in which all the national sports are to be represented. This will be founded on the broadest basis, so that no pastime worthy of receiving the support of ladies and gentlemen will be omitted. Many of the sports are a necessity, if the gay Frenchmen would equal their Saxon or American kindred in equitation, rifle practice, natation, or rowing, and all are interesting from their high standard as educators of physical prowess and endurance. According to our Paris exchanges, this grand sporting centre will contain a hippodrome so arranged as to be adapted to trotting, running and steeple chasing, a school of equitation, a stand for rifle practice, and to which will be annexed a shooting gallery for exercise with the pistol and shot gun, a grand stand for pigeon tournaments, a school of natation and rowing, a skating pond, a fencing, boxing and gymnastic academy, a course for hunting hares with greyhounds, and having field trials of pointers and setters, and all hunting dogs in fact, and a large space where polo, cricket, croquet and tennis can be played.

This grand institute will also contain a large covered pavilion for various pastimes, a reading and *conversacione* rooms, and a restaurant complete in all appointments, and presided over by a famous *chef de cuisine*.

This arrangement omits no national sport worthy of

mention, so that it possesses all the necessary elements of success.

The gay Parisians with their usual enthusiasm will undoubtedly make this aggregation of courses and buildings the finest of its kind in the world; indeed we do not know of any country that boasts of so complete a circle of sports, so that we must give our Gallic neighbors the credit of being the first to inaugurate a complete school of physical education and blending business and pleasure most happily together. This proves that our Gallic kindred are more interested in these many accomplishments than they generally receive credit for, and that the higher classes are second to none as lovers of refined sports.

If such an institution were established in the vicinity of the City of New York it would fulfill a high purpose, and, no doubt, receive the support of our most prominent and influential citizens, at least all who are interested in those exercises which are always supposed to grace the virile gentleman and sturdy soldier. We need something of this sort to educate our young men in accomplishments which are necessary to their health, and of use to them in every day life.

The hoarding of money does not constitute the whole purpose of life; indeed its use is very limited if one has not the physical health to enjoy the comforts it brings, so that the first duty is to gain sturdy, bounding health, by engaging in manly exercises, then one can appreciate the value of the yellow metal. It is a very radical defect in our sociology that effeminacy is not deemed a defect in our young men, for if it were, they would then pay more attention to gaining strength as well as money, and instead of indulging in sybaritical pleasures they would devote their time to attaining distinction in those accomplishments which ever characterize virile natures, and which are the most marked characteristics in all conquering nations.

ANTICOSTI.—In the first three published numbers of this journal, August 1873, will be found the only description extant, we believe, of the Island of Anticosti, in the Gulf of St. Lawrence. Something more than a year ago its colonization was attempted by a company which seems not to have acted in good faith in all respects; or else its judgment was unfortunate. At all events reports against its honorable and financial integrity have been freely printed. The condition of the settlers who located under its auspices has also been represented as deplorable. In view thereof, Mr. J. U. Gregory, Government Agent at Quebec, was dispatched in a thoroughly provisioned steamer to ascertain the condition and judge of the prospects of the settlers. The report of his investigations, as furnished to the Minister of Marine and Fisheries, is printed in the Quebec *Chronicle* of 27th October. From it we learn that, however justifiable the reports of destitution may have been last Spring, it appears that, save in one instance, there is no absolute want existing now. So long as the settlers depended upon the promises of the Company for assistance they were in a deplorable condition, houseless, hungry and discouraged. The arrival of the stores of the Napoleon III., in the Fall of 1873, was a God-send which enabled them to struggle through the Winter, and as soon as they began to work for themselves, they experienced comfort. There are some 350 families upon the island. At English Bay are 210 families, chiefly Newfoundlanders. They were comfortably housed, and had cultivated patches of land very successfully. At Ellis Bay was found a farming establishment where the agent saw "fine horned cattle that would do credit to any stock raiser." At South West Point of the Island, families were found in great want, owing to their having placed reliance upon the promises of the Company, and the failure of the fisheries in their vicinity. In fact wherever the promises of the Company were depended upon by the settlers, they suffered want and privation. It is plain that the most reckless mismanagement must have prevailed. If the Company is crippled to-day the incapacity of the agents who undertook to prepare the settlements must be held accountable, for the settlers have done their utmost to fulfil their obligations. Anticosti is not the howling waste it has been pictured, but a fitting home for a particular class of the population of the Gulf of the St. Lawrence. It is vastly more inviting than Labrador or the North Shore, to whose people the condition of the settlers of Anticosti is opulence itself.

FIRES EVERYWHERE.—Seldom has the country experienced such a general and wide spread drought as during the three months past. With the exception of infrequent local showers, there has been no rain since August over an area of territory that stretches from Maine to Texas, and from Minnesota to the Gulf of Mexico. Fortunately the drought came too late to materially curtail the crops; but the death of water in certain sections is most seriously felt by mill owners and those who use it as a beverage. In those States West of the Missouri River, especially, the suffering for water to drink is really painful. Lately we made a tour Westward through ten States into the Indian Territory, and throughout the whole route, we found the water courses nearly dry. Through beds of rivers that usually flow in ample volume, rivulets barely trickled. In Southwestern Missouri, Kansas, and the Indian Territory, the beds of creeks were totally dry, and the game deserted the country. Those farmers who had water in their wells sold it by the barrel to those who travelled a dozen miles to get it. Vegetation is everywhere parched; the prairie grass is dry as tinder, and when set on fire consumes in a flash. Over the limitless expanse dense clouds of smoke rolled up all day in all directions, and the blaze of a dozen running fires lit

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INFLUENCE IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
135 SOUTH THIRD STREET, PHILADELPHIA,
CORNER OF BROAD AND MARKET STS., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 6, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms, and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, November 6th.—Trotting at Dexter Park—Billiard Tournament at Tammany Hall, N. Y., for the National championship.

SATURDAY, November 6th.—Trotting at Dexter Park—Billiard Tournament—Trotting at Bay District Fair Grounds, San Francisco, Cal.

MONDAY, November 9th.—Billiard Tournament.

TUESDAY, November 10th.—Billiard Tournament.

WEDNESDAY, November 11th.—Billiard Tournament.

THURSDAY, November 12th.—Billiard Tournament.

A CHALLENGE FROM THE PACIFIC.

WE have received a letter from San Francisco, in which Company E of the First Regiment, California National Guard, express a desire to shoot against any equal number of men belonging to the "crack" regiments of the N. Y. N. G., at 200 and 500 yards; the conditions to be the same as those at the recent military match at Creedmoor. They will shoot either for friendly supremacy or for a trophy to be furnished by the losing "team." As the object of this challenge is to arouse an interest in rifle practice in the Golden State, it is to be hoped that one of our regiments will accept it, and by this means enhance its own reputation and foster a most desirable exercise. If international contests are interesting, those between various sections of our own country should not be less so, as they cause an emulation which yields the most satisfactory results, by bringing out the best shots, and encouraging all in the attempt to attain an honorable distinction in so manly and honorable an accomplishment. Each "team" can shoot on its own grounds, and by this means save the expense of a trip across the continent. If this challenge is accepted by a New York company the terms of agreement can be readily arranged, as each "team" can shoot the same day and then telegraph the scores. This would simplify the matter and leave our city regiments no excuse for refusing the challenge, and permitting the Californians to boast that they could find no "team" in our National Guard that would dare to contest with them for the supremacy. We hope, therefore, that the gauntlet will be taken up ere the winter sets in. Any communication relative to the matter, addressed to the office of the FOREST AND STREAM, or to Captain H. J. Burns, Sheriff's Office, San Francisco, will receive prompt attention.

up the night. The damage done in various ways on these vast plains is very considerable, but small when compared with the results that follow fires in the woods, such as we find are raging in a dozen different States at once. In the Dismal Swamp, Virginia, among the "knobs" of Pennsylvania, along the Paw Handle of West Virginia, in the dozen counties of Ohio, Indiana, Illinois, and Kentucky, on the Highlands of the Hudson River, in this State, in the Southern part of Alabama, in Wisconsin, in Canada, and in fact, all over, fires are burning in greater or less degree, in some cases attaining the magnitude of almost uncontrollable conflagrations, destroying vast areas of valuable timber, barns, dwellings, and stock, impoverishing farmers and scattering destruction. The Peshtigo conflagration and fires that raged two years ago on the borders of the great lakes, were more terrible in the loss of life they entailed, but we believe that such general and widespread fires never before consumed simultaneously so much of the wealth of this country.

CANADIAN SPORTSMAN.—We have received some copies of a paper bearing this title, from the Dominion, and from its tone and style, we have no doubt, but it will receive a warm welcome among the lovers of the rod and gun. Canada is one of the finest game and fish regions in the world, and, therefore, needs a journal devoted specially to these and kindred sports, one that will look after their interests, and be the exponent of all that tends to preserve the first, and graphically sketch the others.

If the new paper fulfills its mission, it will be to Canada what the *FOREST AND STREAM* is to the United States, and will, therefore, accomplish much good. We wish our contemporary the most unbounded success.

CONNELIAL.—At Port Chester on Saturday morning our worthy and esteemed friend J. W. Warren, the gentlemanly and energetic Superintendent at Lord & Taylor's, Twentieth street and Broadway, took unto himself a lovely companion for better or worse, for the better we believe, as his genial disposition will ever make him what his wife would most desire.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

MOOSE. *Alces Melos.* Snipe and Bay Birds, Willets, Elk or Wapiti, *Cervus Canadensis*. Caribou, *Tarandus Rangifer*. Hares, brown and gray. Red deer, *Cervus Virginianus*. Wild Turkey, *Melospiza galapago*. Squirrels, red, black and gray. Woodcock, *Scolopax rusticicola*. Quail, *Orizix Virginianus*. Huffed Grouse, *Aythya americana*. Pinnated Grouse, *Tetrao Canadensis*. Wild Pigeons. Wild Duck, Geese, Brant, &c.

[Under the head of "Game, and Fish in Sea," we can only specify in general terms the several varieties, because the laws of States vary so much that were we to attempt to particularize we could do no less than publish these entire sections that relate to the kinds of game in question. This would require a great amount of space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

GAME IN MARKET.—The market has a fair quantity of game at present. Baltimore and the counties along the Chesapeake send large numbers of red-head and canvas-back ducks, and Long Island is the principal depot for black-heads, mallards and widgeons. Teals are abundant, and generally hail from the West. Ruffed grouse and prairie chickens are comparatively plentiful; but woodcock are scarcer than they should be at this season. Quails are also limited in number. New York State and Connecticut furnish all that are in market, as the weather has been too warm in the West for some time to allow good shooting. Canada snipes nearly all the snipe and plover, so they are scarce. Venison is quite abundant for this season. It comes principally from the interior of this State and from Michigan. Rabbits and squirrels are very profuse, and hail from Connecticut and Long Island. The prices paid are the same as last week.

—Frost in this vicinity this week, with snow and ice along the Canada border, will drive our dilatory migratory birds to Southern climes; and consequently we may expect to hear of wild fowl shooting "all along the line" from now to the end of the season. There is another flight of woodcock still to come. These are small, hardy birds which have been lingering in Canada; usually very fat and strong of wing, and difficult to hit. They are expected daily, and Humphrey Hartshorn, the veteran sportsman of Long Island, is on the *qui vive* for them. He despises any kind of game less trying to one's skill. They will tarry but a day or two when they come. Very few bags of quail are reported from Long Island. Nevertheless, birds must be in the cover somewhere, and we know of certain sportsmen who are going out to find them. Ducks are numerous in the Great Peconic and Noank bays, and vicinity. After the present cold spell, until the middle of December, the sport will be splendid. Those who wish to hunt deer on the Island will have to do their business before the 15th of November, at which time the close season begins.

MAINE.—Portland, Oct. 30th.—Partridges (ruffed grouse) absolutely swarm in Maine; I never knew them so abundant. Black ducks and green-winged teal have also been unusually abundant. We intend to have a law passed this Winter prohibiting the killing of moose for from three to five years. It is about time, as moose are nearly extinct in Maine. **MAC.**

MASSACHUSETTS.—Shooting wild ducks is now the most popular amusement. Around Gloucester the sportsmen are paying their attention to sea birds, which are now plenty in the harbor and Squam River.

ADIRONDACKS. Oct. 30.—In the course of eighteen visits

to the North Woods within the past twenty years, I have never found partridge (ruffed grouse) so abundant as at this season. **W. C. W., of Boston.**

—The young men of Mount Vernon, N. Y., are talking of getting up a rifle club according to the Creedmoor rules, and to practice regularly.

ILLINOIS. *Potomac*, Oct. 23.—Snipe plenty round here. I have seen two black, one of six, and the other containing as many as twenty birds. **D. H. E.**

—Fox Lake, Illinois, is becoming a perfect Mecca for sportsmen, especially those fond of duck shooting. Two men killed 420 there in two days.

WISCONSIN.—Madison, Oct. 28th.—The weather during the past month has been charming. I think it could not be excelled in any country. Shooting, in consequence, has been poor. Several parties have been camping in the marshes of the "Upper Cat Fish," beyond Lake Mendota, all so far, with indifferent success. Very few ducks and geese have been bagged. We must have rough weather before good shooting can be had. Fishing during the entire month has been unusually good, and large numbers of black bass, both varieties, have been captured. Lake Mendota is now full of ducks, geese and brant, but they are beyond the reach of sportsmen—they only fly to their feeding grounds on the distant prairies and return. The marshes and fly-away places are not visited by them to any extent. **T.**

—All-pinnated grouse shooting is over for the season, as the birds are packing and very wild.

DISTRICT OF COLUMBIA.—The law prohibiting the shooting of partridges having expired, the woods are crowded with gunners, the greater portion of whom are negroes. Small game is plentiful, but with such destruction as is going on there will not much longer be any left.

FLORIDA.—The Florida Press says that wild ducks and sea birds are coming in daily. The markets, both the meat and fish, are well supplied. Some of the finest beef we have ever seen here is offered, and in the fish market, every variety of fish, fat and fin. A string of a dozen fat mullets for five cents; other varieties in the same proportion. "Fine green turtle abound in the harbor. On Tuesday two were captured which weighed respectively 101 and 69 pounds.

CALIFORNIA.—Deer are very plentiful in the mountains around Gilroy, and the hunters are slaying them in large numbers and shipping them to the San Francisco market.

—Over three thousand deer have been killed near the head waters of Mad River, within a year, the skins only being used. Legislative action is called for to put a stop to such wholesale slaughter.

—One of those very rare animals, a silver grey fox, was killed about half mile above Washington, Yolo county, California, recently. It is the first of the kind seen there for a long time, and is quite a large specimen, measuring from nose to tip of tail three feet and a half.

—Game is reported exceedingly abundant in Humboldt county at present, as myriads of ducks and geese are swarming on the lakes and tiles.

OREGON.—Game of all kinds is exceedingly profuse, and hundreds of sportsmen are out daily after wild geese, ducks, sharp-tailed grouse, deer, and even bears. Two boys near Corvallis killed a large cinnamon bear of the fiercest persuasion one evening last week. The bruins, three in number, were raiding upon the swine pens, when a well-directed shot from a needle-gun brought down the largest one, when the others fled. A number of hogs had been killed by bears in that vicinity this Fall.

VIRGINIA.—Alexandria, October 29th.—Black bass have been caught at the old coal wharf and in the canal above the basin, the anglers using grasshoppers for bait.

An immense rock fish was caught on Friday last in the canal, above the water gate, weighing over fifty pounds.

Partridges are said to be scarcer than ever known before at this season of the year. They are either driven away or killed off by the numerous gunners in this vicinity. Eighteen colored men and boys were counted at one time last week returning over the creek bridge from hunting.

Two gentlemen with a pair of fine pointers hunted nearly through Jefferson township, or some beautiful fields, and only succeeded in starting two small coveys of two, one of seven and the other of five. Their entire day's sport consisted of five partridges, two larks, and one venerable rabbit.

A gentleman who went hunting, last night, on the south shore of Hunting Creek, returned this morning with six fat opossums.—*Gazette.*

MISSISSIPPI.—Corinth, Oct. 28th.—I have only tried "bob white" once; it is too hot as yet, and too much high grass, weeds, and leaves on the brush. I slept last night with a window open, and without any covering except a sheet until nearly daylight. And the days are quite warm. My friend "Junior" Capt. John N. Duncan—who always shoots straight powder—has bagged three or four deer and a dozen and a half bobs, killed one afternoon since the season opened. I made a raid on "Scissors" the day before yesterday and bagged eight, and one pigeon, when I had to stop on account of a most fearful headache, superinduced by looking up in those infernal high trees, and the jar of the gun. Squirrels are very numerous, Junior killing twelve yesterday in a short time. A few pigeons have made their appearance, but they never come now as they did in the long ago, when you could stand on any hill, morning or afternoon, and shoot until you were tired at the passing legions of them as they went to and returned from the feeding grounds. No ducks, a very few turkeys, some deer six or eight miles from town, and I fear me that the supply of quail is not so abundant as was thought in the Summer. **GUYON.**

TENNESSEE.—Hunters are out now every day after game. A perfectly white deer was killed not far from Clarksville on the 9th inst. There was not a spot of any color except white upon him, even the hoofs being of that color.

MONTANA.—Game of all kinds is exceedingly abundant, but the buffalo, deer and bear above all. The cervus family is slaughtered in large numbers. Hounds are now used freely in hunting, so that chasing the fox and stag is a sport often enjoyed. Pigeon shooting from traps is receiving marked attention from the best shots in the Territory.

CANADA.—I spent two months in Canada this season in the vicinity of the quaint old city of Quebec; was too late for Mr. *Salmo Salar*, but had capital trout fishing. Woodcock are curiosities this year in Lower Canada and Maine, and my brother brings the same report from Nova Scotia. There were no English snipe in the St. Lawrence Valley from Sorrel to Crane Island up to October 4th, and even the great Tantremer Marsh in New Brunswick was nearly bare this year. **MAC.**

—Hunters who have returned from the north of Frontenac report an abundance of deer and other game.

—We understand that a pigeon match has been made between Carroll Livingston, of this city, and Mr. Peters, of Philadelphia, for \$1,000, to shoot fifty birds each, English rules.

—A match took place at Tom Stagg's, Chicago, October 29th and 30th, for a Parker gun, owned by J. Butler & Co., valued at \$250; \$10 entrance; 15 single birds; 24 yards, 80 yards boundary; Kennicott Club rules. Wind blowing a gale, weather very cold and disagreeable; birds quick and strong. The wind blowing the birds away from the shooters, it required quick work to secure any. Two thirds were carried outside of bounds by force of wind.

* Fell dead outside of bounds. * Fell within bounds, but was not gathered within the required three minutes. * Cap snatched.

CREEDMOOR.—The ninth competition for the *Turf, Field and Farm* badge was held at Creedmoor last Saturday. The day was exceedingly windy, yet the general shooting was good. It was generally thought that this contest would decide the ownership of the badge—the terms of the competition requiring that the trophy be won three times before becoming the final property of the winner—as Messrs. Wingate, Collins and Madison had each been successful in two competitions. Messrs. Collins and Madison took part, Madison making but 14 points and Collins 16. In this latter Mr. Collins was tied by Mr. J. O. Kelly, who made a precisely similar score, 16. At the conclusion of the match, these two gentlemen decided the tie by one shot each, Mr. Collins making an outer, receiving 2, while Mr. Kelly made a center 3, winning the badge and first entrance money by one point. The next competition for the badge will take place Saturday, November 28. The following is the score:

EVERY NUMBER OF THE *FOREST AND STREAM* WILL RECEIVE FREE A COPY OF THE BEST AGRICULTURAL AND FAMILY NEWSPAPER IN THIS COUNTRY BY ADDRESSING *Moore's Rural New Yorker*, 78 Duane street, New York.

—The Executive Committee of the National Rifle Association met at the office of the association, No. 93 Nassau street, last Thursday afternoon to listen to several protests which had been raised on several points. Colonel Church presided, Generals Shaler and Woodward, and Lieutenant-Colonel Gilchrist were helping present. The case of Private Irwin, of the Seventy-ninth Regiment, in the Gatling gun match, was first taken up, and after much talk, referred to the full board for settlement. The matter between Messrs. Fulton and Yales as to what constitutes a breech-loading rifle, was then taken up. Lieutenant Fulton had placed a cartridge in his breech loader, and then completed the charge by putting the powder-wad and bullet down from the muzzle. He explained that he did it to save time from loading cartridges at home. He insisted, however, that his was a breech loader, and the particular mode of loading did not affect the conditions of the match. General Shaler thought his mode was simply loading the cartridge and not the gun. It was finally unanimously determined to award the contested prize to Lieutenant Fulton. An attempt was then made to fix upon a definition of a breech loading gun, but the hour being late, the previous motion was reconsidered, and the whole matter referred to the full board.

—To encourage rifle practice among the members of the California National Rifle Association, \$1,000 has been given to the Major-General Commanding by the State authorities, and he has allowed the following sums for each competition:—For the best regimental target practice, \$100; for the best cavalry company target practice, \$50; for the best infantry company target practice, \$50. Competition for said prizes will take place in May and June next, before a Board of three United States army officers, and the awards will be made on the 4th of July following.

—The rifle tournament of the Second Connecticut regiment was held on the 25th at New Haven. The teams shot at 200 and 500 yards for team prizes, and individuals at 200 for the Col. Smith gold medal. A team from the First regiment was beaten by a team from the Second. A medal was also shot for by commissioned officers. Owing to the fog in the morning the shoot was not concluded at night. This was the second annual tournament, and the average shooting was much better than last year. The Penabody rifle was used.

—The Rifle Tournament of the Second Regiment, Col. S. R. Smith, closed on Wednesday. The first prize for company teams, at 200 and 500 yards, was won by Company K, of Wallingford; second, by Company I, of Meriden, and third by Company E. Corporal J. M. Lane, of Meriden, won the first prize for individual excellence at both ranges, making 33 out of a possible 40. The Colonel Smith medal was won by Quartermaster-Sergeant S. Park Brown, who made 18 out of a possible 20, at 200 yards. The Barrie medal was won by Adjutant J. S. A. Baker. The shooting has been much better than last year, the winning team scoring 201 out of a possible 220. The twelve best scores, five shots each at 200 and 500 yards, sum up 337, an average of over 28 out of a possible 40, surpassing the corresponding twelve best scores of the Twenty-second regiment of New York at Creedmoor, which summed up 235, an average of 24½ out of a possible 40.

—We have been shown a double barreled, muzzle loading shot gun, made for Mr. Norman Eldridge, of Granby, Conn., by Messrs. Cooper, Harris & Hodgkins, of Broadway, about two years ago—length, 28 inches; 11 bore; 8½ pounds weight; 4 inches drop; 12½ inches from heel-plate to front trigger; laminated steel; walnut stock. Its greatest peculiarity is its extreme drop and the shortness of the stock; but those who might at first be tempted to guffaw at the awkward-looking tool, cannot but feel how mechanically and with what readiness and comfort it fits the shoulder, arm and eye when brought to bead. We hear of several gentlemen who purpose ordering stocks of the same pattern, and we ourselves shall lose no time in putting in our application, for we cannot but feel convinced that its use will practically explain away many muffled shots which have reluctantly been credited to nervousness or bad marksmanship. Mr. Elwood prefers a 11 bore gun for general shooting.

SAN FRANCISCO, Cal., Oct. 20th, 1874.

EDITOR FOREST AND STREAM.

The regular monthly match of Co. E, First Regiment N. G. C., was held at Bay View, October 17th. Fifteen members shot in the first at 200 and 500 yards, 6 shots each distance. Target at 200 yards 2 and 6 feet, 500 yard target, usual size, 6 feet by 6 feet. Rifle, Sharp's military, No. 16. Weather, rainy in the forenoon, afterwards clear. Wind, hardly perceptible. I append the scores of the best 12 in the first class.

PISTOL PRACTICE.—We are pleased to acknowledge the receipt of the following complimentary note from Mr. J. S. Conlin:—Fond of pistol practice ourselves, we naturally feel interested in imparting such information to our readers as can be obtained relative to the science or art.—Ed.]

830 BROADWAY, NEW YORK, Nov. 2, 1874.

EDITOR FOREST AND STREAM.

I am pleased, Mr. Editor, to notice the interest you manifest in practice with small pistols, as the popularizing of small-arm shooting will do away in a great measure with the numerous accidents that attend the handling of pocket fire-arms by those unskilled in their use. It is a well known fact that not more than one in fifty knows anything either as to accuracy of aim or the manner of holding a pistol.

By keeping the attention of the public called to this fact, your reputation as a public benefactor will be established.

—The Delaware County Republican says:—A movement will shortly be made by a number of persons in this city and its vicinity to form a rifle and target society, and a rifle range, auxiliary to the Sportsmen's Club of Philadelphia. Such a society is greatly needed.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, <i>Morone chrysops</i> .	Weakfish.
Tompano.	Southern Waters.
Snapper.	Trout (black bass).
Grooper.	Drum (two species).
Kickhale.	Kingfish.
	Striped Bass.

FISH IN MARKET.—Fish has been scarcer within the past few days than it was last week. The Southern waters are furnishing a large supply of blue fish, which sell at eight cents a pound. Smelts are abundant and retail at from twenty-five to thirty cents per pound; king fish is common and varies from twelve and a half to twenty-five cents, and fresh mackerel from New England is worth fifteen cents. Salmon trout from the Western lakes brings fifteen cents; whitefish from the same locality, bring eighteen cents; sheephead from the coast of Virginia and Maryland twenty-five cents, and weakfish twelve and a half cents. Flounders are quite abundant, and retail at ten cents per pound.

—The fishermen on the South side of Long Island are having remarkable good luck this Fall. Large shoals of blue fish have recently passed along the shores and great numbers have been taken off Freeport, Islip, Babylon and Southampton. Several tons were caught at the latter place during the past week, and are shipped to New York. At Westhampton a fishing company caught nearly 4,000 and another company took about 2,000. The fish average about five pounds apiece and are very fat. The oyster season, too, is now fairly under way and bids fair to be very successful, and to give employment to a large number of men at good wages. They find a ready sale at from fifty cents to \$1.25 a bushel.

—A strange fish was washed ashore at the east end of Staten Island one day last week. It was from four to five feet long, and weighed about sixty pounds. It has neither dorsal nor ventral fins, but large flippers, under which were its gills, and above and below two formidable horns. The mouth was very large, and furnished with formidable teeth above and below. The head was about two thirds the entire length. Hundreds of people viewed it, but nobody could tell what it was.

—A petition is in circulation in Sayville, in this State, in the interest of the oyster planters of the neighborhood, asking the Legislature to amend the laws, or rather to enforce the provisions of such as are now in force, regulating the taking of oysters in the Great South Bay.

—Large quantities of lobsters and crabs are now being caught along the shores of Staten Island, and fishing with hook and line for striped bass and blackfish is unusually good, in consequence of the continued fine weather.

—There was a fine specimen of a muscalonge on exhibition at Sullivan's last Monday, sent by Charles E. Whitehead, Esq., who was caught in Lake Huron, and weighed thirty-eight pounds.

THE PROVINCETOWN FISHERMEN.—Forty sail of cod fishermen have arrived from the banks and the bay with 38,500 quintals, and there are ten more sails to come. The latter have been reported, and their catch will increase the aggregate to 50,000 quintals, being an average of 1,000 quintals to a vessel. Last year, at this date, fifty-six sails had brought in 71,710 quintals, and this quantity was subsequently increased, by the arrival of second fares, to a total of 80,000 quintals, giving an average of 1,339.14 quintals to a vessel, and a total catch of 30,000 quintals more than the entire products of this year. One vessel only, the Camilla, has this season returned to the bank for a second fare.

Notwithstanding this large decrease in the catch, there is nevertheless compensation in the prevailing higher prices. A year ago to date sales for larger cod had averaged less than \$4 30 per quintal, and the market is still better, less promising. While several vessels have come in without fares, incurring serious loss for owners and sharmen, the majority of the fleet will realize more net profit from their voyages than was obtained last year from an unprecedentedly large catch.

—The Georgesmen are bringing in very good fares of halibut at late.

—According to the Cape Ann *Advertiser*, the shore mackereling fleet have mostly abandoned the business. Some of the vessels have hauled up, and others are fitting out for haddock fishing, which will be quite extensively prosecuted through the Fall and Winter season. Messrs. Judson, Tarr & Co., of Rockport, have leased a wharf at the Fort, and will have four steamers employed in this branch of the fishery.

The Newfoundland and Grand Menan herring fisheries will also be extensively engaged in the coming season. Four vessels have already sailed for the former port for cargoes of salt herring, and others will soon follow. The frozen herring fleet will be off the latter part of next month and early in December, and some forty or fifty sail will engage in its prosecution.

The bay fleet are engaged in slowly, five vessels having arrived the past week, and several others are on the homeward passage. Most of the fleet will probably be along by the middle of November. There have also been ten arrivals from the Grand Banks the past week, second trips, the vessels averaging good fares of codfish.

—A Washington correspondent sends us the following notes, which will prove gratifying to State Fish Commissioners and encouraging to resident anglers:—

Great Falls of the Potomac, Oct. 26th.—The Great Falls Club has been made illustrious. Mr. John Hancock, the son of a house noted for its skill in angling, has accomplished the biggest feat of the kind ever known on the Upper Potomac. He fished a half a day, (Thursday, the 22d of October), and took thirteen black bass, banties every one. On Friday he captured twenty-four more; on Saturday fifty-eight accepted the tempting bait and found a hook in their noses, and on Sunday thirty-three more were hooked for a journey to Washington, making in all one hundred and thirty-eight, more black bass than any one man ever caught before in the same time in the Great Falls Fishing Grounds. In weight they averaged about two and

a half pounds and were as fat as pigs. The Club propose to have a grand celebration in honor of the event and to crown Mr. Hancock "King of Fishermen" for the ensuing year.

—It seems that sharks are beginning to become numerous in those parts of the St. Lawrence which are now being fished for porpoise. The fish, though dangerous to man, are not wholly useless. The skin may be converted into a sort of leather of considerable value; a good deal of very tolerable oil can be obtained from the liver, and though the flesh is coarse and poor, it is by no means absolutely unobtainable. Not only is shark occasionally eaten at sea for a change from salt provisions, it is employed as food in some places of northern Europe, and its fins are preserved in some places for the Chinese market, where they are sold as a delicacy.

THE LABRADOR FISHERIES.—The following letter from the Secretary of State relative to the discussion as to the status of Labrador in the Washington Treaty, and which involved the whole of its commerce in fish, has been published:

DEPARTMENT OF STATE,
WASHINGTON, D. C., Oct. 26, 1874.

To Hon. B. H. Bristol, Secretary of the Treasury:

Sir: In referring to your letter of the 14th of October, and to previous correspondence, on the question of the relations of Labrador to the Dominion of Canada or to the Colony of Newfoundland, and particularly to the question in your note of the 14th inst., whether Labrador is or is not accepted as a part of the Dominion of Canada or of the Colony of Newfoundland, I have the honor to inform you that the Department of the Interior, in the absence of duty under the Treaty of Washington, I have the honor to inclose you a copy of a note from Sir Edward Thornton, Her Britannic Majesty's representative, dated the 26th of October, upon that question, in which he informs the department that the whole of Labrador, outside of the Province of Quebec, is under the jurisdiction and government of the Colony of Newfoundland, and is actually included in the territorial limits of that colony. In the absence of this information, now communicated, it has not been possible to furnish an earlier answer to your letter. I have, therefore, the honor to inform you that the whole of Labrador being included in and forming a part of Newfoundland, the provisions of article 18 to 25 of the Treaty of Washington have been extended thereto, in pursuance of article 23 of the same treaty, and that the exemptions which by these articles are extended to the Dominion of Canada are equally applicable to Newfoundland, including Labrador.

—By the arrival of the steam tug Cabot, from Labrador, bringing dates to the 21st ult., from that coast, the *Harbor Grace Standard* is enabled to lay the following particulars before its readers:—

"The sailing fleet from the north had returned thence, the larger crews having caught from 350 to 600 quintals each, and the smaller ones from 250 to 300 quintals. From Cape Harrison to Indian Harbor a good improvement had taken place in the cod fishery since last reports, and from that locality southward a little improvement had also been made. The boats were catching occasionally from two to four quintals per day. The lateness of the season was somewhat unfavourable to the cod fishing operations, so that we may estimate this year's catch at an average of 110 quintals per boat on the southern part of the shore, will give a fair average voyage. Herring operations had commenced on the 6th ult., when, up to the 11th, the netting was pretty general. A storm from the northeast then interfered with the catching for a few days, causing damage to nets, and forcing the herring into deep water. After the gale had subsided netting recommenced again, and fair catches were being made. In seining, very few bars have been secured, and most of them lost, owing to the seines having been overturned by the sea and tide. However, with another good week's success, it may be safely calculated that our usual herring cargoes will be secured. The quality of the fish is reported as very fine, and, with strict attention given to them this year, our customers may be certain of a good article in their market this Fall."

—A seventy-eight pound codfish was shown in the Halifax fish market last week. It was the largest seen for many years.

—The American fishing fleet of Cape Breton, are reported doing poorly lately. Some vessels have made fair catches of mackerel, but the majority have taken but few.

—Large bass have been caught during the past few days from off the battery, near the fort, at St. Augustine, Fla. Mr. Francis Rantee one day caught a bass which weighed forty-five pounds, and measured about four feet in length. Some fifteen of these monster bass have been caught at that locality.

There is very good trout fishing, in its season, in the vicinity of Granby, Connecticut.

—English herring, fish seldom seen in our waters, were taken quite plentifully from the river at Pawtucket, R. I., last week.

THE FISH OF IOWA.

DAVENPORT, Iowa, October 15th, 1874.

EDITOR FOREST AND STREAM.

Excepting black bass, perhaps the finest table fish of the inland waters of the West is the pike perch, whose misnomer is white salmon, and in some places white-eyed pike. This fish has the same name in Ohio and on the Saginaw. In the latter stream it attains a large growth, sometimes reaching even twenty pounds weight, or more. Young ones taken in the river as they rise as heavy as described, but the largest has been taken from the Mississippi and is not described eleven pounds. It has himself killed quite a number from five to ten pounds in weight. The greatest destruction of this fish is by seining in the Spring, when they are exposed for sale in the market for ten cents a pound.

At the last session of the Legislature of Iowa, an act was passed making a small appropriation for fish culture and the establishment of three commissioners. In this act there was some protection provided against the wanton destruction and wholesale extermination of different varieties of fish. But, unfortunately, neither Iowa or Illinois has such exclusive jurisdiction over the waters of the Mississippi that the fish therein can be properly guarded. Possibly Congressional legislation might be invoked to prevent the killing of the white rainbow, or pike perch, and other species in the midst of their spawning season.

On Saturday, 10th instant, I hooked four pretty specimens, of pike perch, and, after some play, succeeded in landing two, one weighing three pounds, and the other seven and a half, which made a glorious Sunday morning breakfast.

I am told that this fish is not found below the upper rapids of the Mississippi, which terminates here at Davenport, though I cannot give reliable information upon this point. I think its habitat is the rocky bottom of the stream, where the upper or lower rapids. My principal object, however, in this communication, is to direct attention to another fish, a near relative to the foregoing. It is what is popularly called the black, or rock salmon, but in reality a different species of pike perch. It seldom attains over four pounds in weight, and is caught in abundance down to half a pound. This fish is not common to Eastern waters, but, as far as the writer knows, is confined to the West. It is sweet and delicious as a table fish, and should receive protection. The writer and a friend one afternoon took thirty-four of these fish in the Mississippi, where they abound, though the books give but little notice of it. I. Frank Forester there is a reference to it, but not in a personal observation, his description being taken from the Key. In a personal observation, the journal I noticed that the grayling of Michigan was sometimes called the black salmon, and on this account, had my attention more particularly directed to the same named fish in our waters; but I am satisfied that it is simply a variety of the pike perch. Perhaps this is the same fish named Richardson's pike perch—the Canadian salmon—described on page 194 of Forester's Fish and Fishing. An officer of the army, now located at Rock Island Arsenal, a most enthusiastic devotee of the rod, informed me that he threw away the first fish of this kind caught by him, thinking it kindred to the mullet, or stone roller, a species of fresh water sucker. The fish in question is, to my eye, a beauty; dark olive patches on the back, white ventral fins, tipped with red, dorsal fin large, prominent and spinous, and caudal fin wavy with rays of light and olive. The writer regards it as one of the sweetest and most delicious fish that inhabits our waters, and there it is in goodly numbers, a ready bait, and a vigorous puller, and is more gamey than its larger cousin.

It is quite a transition to pass from the above fish to the brook trout, yet I cannot resist a few remarks touching this gem of the fish world, which is closing my desultory observations. There are no trout streams in Iowa, except in the extreme northern part of the State, the streams being too sluggish for them in prairie land. The writer, in early July last, explored some of the tributaries that empty into Root River, in southern Minnesota, which, at La Crescent, empties into the Mississippi. His first excursion from a small dam well stocked with black bass at Hoka up to Indian Spring, the source of the stream, was rewarded with no success. With rod and fly exploring, he found no chance for a cast amid the overhanging brush, but saw and startled many fine trout. Adopting the style of the country, he tried the common angler worm, and caught between thirty and forty, one thirteen inches long, not fifty yards from the spring. There are some three or four trout streams close in this vicinity justly noted, which the writer contemplates exploring as early as the mountain laurel blooms next season. While touching upon trout, permit me to narrate an incident that may possibly be interesting to some fishermen. It is strictly genuine, as the lawyers say, to the subject matter before us.

The writer was, many years ago, challenged by Squire Quigley, a resident of Young Women's Town, to walk back to Pennsylvania, to fish for trout in Young Women's Creek. Eagerly dashing into the stream, a few miles from its mouth, he secured some seven or eighty pretty trout before the Squire had adjusted his rod. Meantime the latter was busy in lifting the rocks along the shore of the creek, and when he did get to work the trout were caught so rapidly that the fly fisher was obliged to abandon his imitation, and adopt the bait used by the Squire, if only to save his distance. This bait was called by him the image fish, so lifting a stone quietly he found it lying beneath as still as an image. It was about the length of a little finger, cylindrical in form, and when disturbed darted from one stone to another. This bait is tough and white, and the trout leap for it as though accustomed to the food. I have found the same image fish in the same stream in the East, and thought the mention of it would be of service to fishermen. I am informed, on pretty good authority, that this little fish is known and used as bait in English waters, and is there called the lotch. Yours, truly, J. H. R.

MURKIN FURNACE, November 24, 1874.

EDITOR FOREST AND STREAM:

I read with interest an article entitled "New material for fly rod," in FOREST AND STREAM of July 23d, page 371. The writer promised to report the test of his rod on large trout. For one I should be glad to hear how the rod worked, as, if it was satisfactory, I want to make one of the same material. C. E. C.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other out-door Clubs will kindly mail their contributions not later than Monday in each week.

—On Oct. 31st the Germantown and Merion cricket clubs had a match—one innings a side—on the Germantown grounds, which resulted in the success of the former by 119 to 61. Weckham's 24, John Large's 24, Tom Hargreave's 22, and Cooper's and Fox's 16 each, were the leading scores.

—Mr. Outerbridge has added to the Cricket literature of America another of his ably written pamphlets, the last work from his pen being a pamphlet describing the proceedings of the Halifax Cricket Tournament in August last, containing the full scores of the games and complete statistics of this noted tourney. The book is a presentation work and it can be had by enclosing address with a postal stamp for postage on application to Box 2764, Philadelphia post office.

—In the match at Philadelphia between the "Foreigners" and the "Natives" of the Athletic and Philadelphia clubs, the latter won in a second innings game by 11 to 4. The "Foreigners" included Hicks, Bechtel, Craver, Eggeler, Sutton, Holdsworth, Gedney, Murman, and York. The "Natives" were—Miller, McBride, Batin, Reach, Anson, McGarry, McMullin, Fulmer, and Donnelly.

—The death of John Lillywhite will give into other hands the compiling of Lillywhite's Guide, of which John had charge. It can be greatly improved by an explanatory appendix to each rule. Lillywhite was a strong bat and good bowler, but a poor fielder. He was highly esteemed by the cricket fraternity.

—Mr. David L. Read of the Philadelphia club has resigned from that organization. They will miss the services of an ardent partizan and an able secretary. Frank McBride, too, who started the club, has left it.

—The Boston "team" for 1875 will be White, Spalding, O'Rourke, Barnes, Schaffer, George Wright, Leonard H. Wright, McVey, Beals, and Manning, all gentlemanly and reliable, as well as skillful, professional players.

—The professional contests since our last issue were as follows:—

October 27—Hartford vs. Athletic, at Hartford.....	10 to 3
October 27—Boston vs. Philadelphia, at Boston.....	11 to 7
October 28—Boston vs. Athletic, at Boston.....	10 to 7
October 28—Hartford vs. Philadelphia at Hartford.....	9 to 4
October 28—Boston vs. Athletic at Worcester.....	10 to 9
October 29—Atlantic vs. Philadelphia, at Brooklyn.....	9 to 6
October 30—Hartford vs. Boston, at Worcester.....	17 to 1
October 30—Philadelphia vs. Hartford, at Philadelphia.....	13 to 5
October 31—Boston vs. Hartford, at Boston.....	13 to 5

—The professional championship ended Saturday, Oct. 31st, and the result of the series of contests for the world's pennant is the success of the Red Stocking nine of Boston as champions for 1874, with the right to fly the pennant during 1875. The Mutuals occupy second position in the race, and the Athletics third. The full record of games played won and lost up to Oct. 31st is as follows:—

CLUB.	Athletic.	Baltimore.	Boston.	Chicago.	Hartford.	Philadelphia.	St. Louis.	Western.	Games Played.
Athletic.....	1	2	3	3	5	6	9	33	56
Baltimore.....	1	3	4	3	5	3	3	22	55
Boston.....	6	6	9	7	9	5	9	17	70
Chicago.....	4	4	9	3	4	1	2	24	59
Hartford.....	4	8	5	9	1	4	1	17	54
Mutual.....	4	1	6	5	9	8	1	42	65
Philadelphia.....	1	6	4	7	4	5	1	29	58
St. Louis.....	1	3	18	31	37	25	33	232	...
Games Lost.....	23	38	18	31	37	25	33	232	...

Out of the 280 games which formed the full series to be played between May and November, 232 have been played, leaving 68 games to be played up to Oct. 31st, the Boston club being the only contesting team to complete their full series of ten games each. The disbandment of the Baltimore nine threw out all their 47 games, and left the other seven contesting nines occupying the following positions in the race:—

Club.	Games won.	Games Lost.	To Play.
Boston.....	43	23	4
Philadelphia.....	31	21	8
Chicago.....	29	30	10
Atlantic.....	19	32	8
Hartford.....	19	35	11
Totals.....	185	185	48

The average of runs to a match for the winning nines in October was 9.16, and for the losing, 4.7. For September the average was 9.5 and 4.26. The last series of the average since May. Except in April, the average has not been nine and a half in any month of the season. This shows very fine play.

—A Chicago paper says:—"Meyerie, Cuthbert, Treacy, and Malone will undoubtedly contest themselves with the new St. Louis club. Joe Simmons is also an applicant for a fielder's position in that nine. Cummings' demand of \$3,000 will be agreed to by the St. Louis directory, it is said, if he will accede to cut loose from Hicks, who is not wanted." If this is so, unquestionably the St. Louis club are paying dear for their whistle.

—On Oct. 30th the Stars of Newark visited Paterson, and in a game with the Olympics they were defeated by a score of 18 to 4. Foran led the score, as he did in the Resolute match, with the West Ends. In this game Brown, Buncle and Roberts of the Nassaus, and McCabe of a New York nine, took part on the Star side. In fact it was a picked nine against the Olympics.

—On Oct. 29th the Staten Island club defeated the Silver Stars at the Capitoline Grounds by 21 to 3.

—On Oct. 23d the Resolute of New York played a pretty game with the West Ends of Jersey City at the latter place and won by a score of 8 to 1.

—The Staten Island club's match with the Eastons has been postponed by the latter club, and the Bridgeport game will not be played until the 10th inst.

—On Oct. 31st Hoboken was the scene of a lively contest at foot ball between contesting sides of Rutgers and the Stevens' Institute. The result, after six games had been played, was a "Chicago" for the Stevens' boys, Rutgers winning all six games.

—Warren White goes to Chicago with Hastings, and Stevens and Fleet, Dehlman and Pike to St. Louis. The Chicago club retain Glenn, Devin, Peters, Zottlin, and Forges, and they are to have the Canadian player Kearl, and Snyder.

—The professional clubs for 1875 will include the Athletic, Boston, Chicago, Hartford, Mutual, Philadelphia, and St. Louis; besides which there will be the Atlantics, the Westerns of Keokuk, and the Reds of St. Louis.

—An Atlantic "team" is talked of composed of Rule and West of the Chelsea's, Smith of the Concord's, Booth and Sweeney of this season's Atlantics, Treacy of the Arlington's, and Daescher, Redman and Rogers of the Nassaus.

—The Hartford "team" for 1875 will consist of Allison, Bond, Mills, Carey, Ferguson, Burdack, York, Remsen, and Tipper, with a new change pitcher and catcher to be added.

—The Boston cricket club defeated Harvard by 130 to 53 in a match played at Cambridge, Mass., October 24th. Pettit led the Boston score with 55, Clarke scoring 23, Dwight's 27 being the best on the side.

—On Oct. 26th the White Stockings played the Frankins a close game, winning by 2 to 1 in a full game. The Whites, the same week, defeated the Westerns by 7 to 0. On Oct. 24th they defeated the Frankins by 5 to 1.

—On Oct. 29th the Reliance club of Brooklyn defeated the Jasper College nine by 11 to 5 at Manhattanville. The Reliance "team" included Larkin, Roberson, Swandell, Powell, Dover, Hodes, Hibben, Bradford, and Clinton.

—Egler and Hall will strengthen the Athletics for 1875, and with Clapp, McBride, Anson, Fidler, Sutton, Reach, Sensenderfer, and two new men, a fine "team" will be raised.

—McGeary of the Athletics—says a Chicago paper—and not Snyder, is to be catcher of the White Stockings. It happens, however, that they have engaged Higham at \$2,000.

—At Weymouth, Mass., on Oct. 24th, the White Stockings and Fleetfoots played a pretty game, marked by a score of 5 to 4 only in favor of the Fleetfoots.

—The Atlantics were to have "gone West" on Oct. 30th for a few weeks play with the Chicago nine, but the latter would not guarantee expenses, and so they did not leave.

—The Mutual "team" will include Mathews, Start, Nelson, Daescher, Pearce, Hatfield, Geer, and McGee.

—The St. Louis "team" take Miller and Bradley, from Easton, and Fulmer, McMullin, Cuthbert, and Treacy.

—Brainard is to be the pitcher of the Westerns next year. A good and reliable man.

—The Philadelphians retain Cummings, Craver, Mack, Haldsworth, and Bechtel.

—During the last visit of the Westerns to Chicago they were defeated by the "Whites" by 10 to 2.

—Notwithstanding the lateness of the season athletic exercises are still vigorously prosecuted at Boston. A handicap race off at Beacon Park on the 28th instant, the prizes offered being \$130, \$50 and \$20. The distance was 40 yards, and the peculiar form of the sport had never before been witnessed in that section of the country. The several runners were classed off for three heats; John Grahaln of Lawrence and John Melrose of Boston in the first heat; the first to have 114 yards from the scratch and the other 153; Bart. Tinnache of Boston 124 yards and Christy Black of East Boston 1st in the second; Edward McEvoy of Boston 15 yards, Andy Tufts of Lynn 15 yards, John Hourigan of Boston 18 yards. Each of the heats were run in their order, the allowances from 140 yards being made. In the first Melrose was the victor, in the second Tinnache, and in the third McEvoy. The handicap was accordingly made up by those last named, and the result was Tinnache won the \$130, Melrose the second money and McEvoy the third.

—The velocipede race on the Westchester County Fair Grounds, near White Plains, last Wednesday, between Frank Shaw, champion of the United States, and Henry Naylor, champion of England, which was to decide the championship of the world, was won by Shaw.

—O'Leary is bound to make a name for himself. He has already made a remarkable record, if all accounts are true, but he is anxious to get the sporting men of Chicago to recognize his peculiar abilities, and to champion him against more famous, but, perhaps, inferior pedestrians. He claims that he can out walk Weston or any other disciple of this sort of exercise, and he is doing all he may to induce Chicago betting men to think likewise. Recently, in the presence of several of them, he undertook a twenty-five-mile tramp at Dexter park. He had stated that he could accomplish that distance in four hours and thirty minutes. The assertion was doubted, and in proof of it the trial was made. He finished his task in four hours and twenty-five minutes, coming home on the 25th circuit of the track perfectly fresh, and apparently ready for a similar undertaking. The assertion, however, is not a considerable confidence in his ability. There is some prospect of negotiations for a match between him and Weston. He also offers to bet \$1,000 that he can walk fifty miles in eight hours and forty-five minutes; and that he can besides beat the best time made in Europe or America during the present century. The Hibernian is evidently in earnest.

—E. Daniels arrived from Boston last Saturday, and L. Newhall has reduced himself down to 126 pounds, which will place him in proper condition for the tournament.

Billiards.

—The Brooklyn Amateur Tournament, now in progress at Samuel's Billiard House, near the post office, Brooklyn, is increasing in interest as the games progress, and the coming week's play promises to be quite exciting, as the result will be to indicate the coming champions. Indeed, one of the contestants, Mr. Knight, has secured such a winning position already that it will be difficult for any of his adversaries to reach him. Next to him stands Mr. Pfannkuchen. The record up to Nov. 2—no games being played on the 3d, election day—is as follows:—

Player.	Games played.	Games Won.	Games Lost.
Knight.....	8	7	1
Pfannkuchen.....	4	3	1
Beiss.....	4	3	1
Dorian.....	3	2	1
Pfiet.....	2	1	1
Vanhook.....	2	1	1
La Torre.....	4	2	2
Buckhart.....	5	2	3
Kavanaugh.....	4	1	3
Vanderwerker.....	4	1	3
Ferris.....	3	0	3
Clark.....	3	0	3
Total.....	45	23	22

The best average made to date was 2.62, by Knight, he also making the best runs. The games played in the afternoon are open to lady visitors, for whom special seats are reserved free.

—THE FRENCH GAME TOURNAMENT.—The gathering of billiard experts in contests at the three-ball French carom game, which was commenced at Tammany Hall on Nov. 4, promises to be a very fine display of the beauties of the most scientific billiards. There are to be thirty-six games played on the 11th—exclusive of ties and games to decide them—and in these contests Messrs. Ubassy, Garnier, Vignaux and Rudolph will represent France; Messrs. Daly, Slosson and Daniels, America, and the Dion brothers, Canada. Ladies are admitted free, and every arrangement has been made, calculated to make the tournament a creditable success. Mr. Daniel E. Gavitt will conduct the tourney.

—The great National Billiard Tournament for the championship of America, and \$2,500 presented by M. Delany, the patron of the wire cushions, commenced last Wednesday evening at Tammany Hall. The following prominent billiard players take part in it, viz:—A. P. Rudolph, M. Vignaux, F. Ubassy, A. Garnier, C. Dion, J. Dion, G. Slosson, M. Daly, being an array of Knights of the Cue that have never before tilted on the same field, so we may expect some remarkable playing, and, perhaps, the longest runs ever made before in any tournament.

—Monsieur Tivag has prepared a very excellent speech for the opening of the tournament, and it will, no doubt, be appreciated, as his oratorical abilities are well known to his many friends.

—Mr. Slosson is the only one representing the West in the billiard tournament now going on in this city. Slosson, in practice with an amateur, recently played a game of 300 points, French, winning by 300 to 30, and making the fine average of 20.

—Ubassy & Vignaux, with the assistance of the players mentioned, gave an exhibition in their rooms, corner 14th street and Broadway, which was largely attended by the lovers of billiards. Some very fine play was developed.

—The pools at Maurice Daly's have been very lively, with Vignaux the favorite for the championship.

For Forest and Stream.
LA NOCHE TRISTE.

A SKELETON sat on a mouldering tomb
And he laughed with his rusty jaws,
As he wiped the dew of the humid grave
From his skull with his bony claws.

He laughed, "Ho! ho!" The air is cold,
And the midnight breeze is fresh;
But my bones are stout, for the worms were kind,
And I feel no cold in my flesh!"

The glow-worm gleamed in each cavernous orb,
And the phosphorus glowed in each bone,
O'er the sepulchre were thrown.

And the skeleton sang, "I love the light
Of the cold and ghastly moon;
I love the smell of the graveyard dank
And I love the night owl's tune.

"Oh! 'tis merry to sit in the still churchyard,
To laugh at the sons of men,
Poor worms who toil for a narrow grave
That the worms may feed again.

"For the good and the bad shall fare alike
And shall feed the crawling crew;
The prince with the crown shall lay him down,
And the false with the brave and true."

The night owl hooted a hoarse refrain
To the skeleton's dismal tune;
A vampire's wing swept darkly by,
Blotting the crescent moon.

All hideous things that love the night
Joined in the goblin rout,
Toads, bats, and snakes, and shining shapes,
Which danced my couch about.

Oh! wouldst thou view that ghoulish feast?
Wouldst face those spectres pallid?
Then nap, like me, too somnolently,
On the soothing lobster salad.

J. J. Roemer.

For Forest and Stream.

Three Weeks on the Magnetewan

SOME of your readers have heard of the Magnetewan River, but no doubt the majority of those who indulge in the pleasures of the rod and gun have never done so! There are plenty of those who believe in, and "swear by," that imagined paradise, the Adirondacks. Very good! If four dollars per day to a guide, few deer and a leaky boat, be paradise, I'll have no more of it! One can have good sport, both with the deer and trout, and at far less expense, in Pennsylvania, either in Pike or Elk counties, or in some parts of Maine, or New Hampshire, but is restricted more in regard to time and extent of grounds. I speak from experience, for I know them all; but *expense*, the cost of the fun, is with me to be taken into consideration, as I suppose it is with others as ardent as myself. The largest trout I ever killed was taken out of the Saco River, within sight of the Kearsarge House, at North Conway, N. H., a place fished to death, and Frank Lucy, at whose house I was staying at a much cheaper rate than on the fashionable side, knows that we started a herd of seven deer the next day, when up at the headquarters of the Swift River. That was my favorite stamping ground for a long time, until the infection of high charges spread, and as friend Van Wyck, of Brookline, had killed all the trout but a few to sample by, I looked out for a new field to operate in, and am happy to state have found it.

If you have the courage to accept this manuscript, and my fellow fishermen and gunners the patience to read it, you and they will find a true, unembellished account of a spot one hundred miles, or nearly so, square, that is as little known to the public as if it were situated in Florida or California. I allude to the country lying North of Lake Rosseau, East of Georgian Bay, in Lake Superior, and North as far as you care to go. My estimate of its extent is merely a conjecture; look on any map of the Dominion

of Canada West and judge for yourself; with Lake Simcoe, or Rosseau for a starting point, you cannot help finding it. It is known in Canada as the Magnetewan District and Free Lands of Muskoka!

There were two of us who left Philadelphia one Sunday night at 11:35 on the Pennsylvania Railroad for Niagara; tickets there and return, good until Nov. 1st, \$13.50. From there to Hamilton, Ontario, to spend Monday night. Up and away early Tuesday morning for Toronto, reaching that city Tuesday at 11 A. M. Here came up our first difficulties—*money value*. We had to have our Yankee trash discounted into the equally *hard looking* Canadian paper money, which we preferred to silver, as being lighter. My bright looking, crisp \$100 greenback left me, and in its place I received \$90 in the raggedest, dirtiest looking money I ever saw, resembling the Confederate paper of the late war for all the world.

Dinner was procured at a regular English chop house for thirty cents each, including a bottle of *genuine* Bass & Co., (think of it, Horatio!) and then off on the 2 P. M. train for Orillia. What curious people our English cousins are! They sneer at us Americans on account of our easy familiarity in strange places, but of the two, their habits of exclusiveness and "keep-your-own-distance-young-fellow" style, was so strange to us that we hardly knew whether to laugh at them or be angry. My companion is accustomed to be answered when he puts a question to a stranger, but when on one or two occasions the only answer he received to his queries was a "stony British stare," as Tennyson calls it, the American wrath was aroused; and later, when we were going from Gravenhurst to Washago, via stage, he confided to me his intention of picking a quarrel with a young Englishman who was aboard, in order, as he expressed it, to "take it out of him for the nation!"

We reached Orillia at 9 P. M. and put up at the Queen's Hotel. Every town in Canada has a Queens, if it is only a shanty with two rooms on a floor, and two floors, it is still The Queen's! After supper we, heaping the click of ivory, strolled into the billiard room to find a carom and a pocket table in full swing. Watching our chance we each picked up a Canuck for opponents, and to my friend's intense gratification, succeeded in laying them out; whereas the cues were put up and all gathered around to see those Yankees work the three-ball game. They seemed as if they had never heard of either Joe or Cyille Dion!

Wednesday at 9 A. M. we started behind a fine pair of black ponies to fish Sturgeon River; why so called no one can tell, except it may be that trout have been seen there that have been thought to be something else from their size. We had "Doc" Lawrence, of Orillia, for a guide, the fisherman and horse doctor of the place; drove twenty miles, put up at a log cabin, and came back in time for dinner the next day, with three hundred and ten fine trout. I cannot tell the incidents of that day, for I must get on with my story. We stayed at Orillia until Saturday, during which time we saw a salmon-trout brought in from one of the neighboring lakes that weighed seventeen pounds and three quarters. There is good trolling to be had in Lake Couchiching for bass and muskallonge. Orillia is on the extreme Southern end of this lake, and Rama, the Indian town, is five miles northward. Harper Bros., of New York, have lately published a book, "Forest and Prairie," in which mention is made of the hunting in this vicinity; but of that I can say nothing, as we were there for fishing in June.

I have seen as many as eleven Indians on the lake, within sight, at once, and as their dresses were of all colors, the sight was as pretty as it was novel.

On Saturday we said farewell to Orillia and took the train for Washago to spend the Sabbath on Lake Rosseau, from which point I was to push still further into the wilderness, and my companion to return to Saratoga, as he expressed it, to where he could once more see a New York *Herald*, and feel that he was an equal with his fellow men! From Washago to Gravenhurst is a stage ride of fourteen miles. From Gravenhurst to Rosseau you go via steamer,

a most delightful ride through numerous islands, resembling Lake George; here and there rocky bluffs rising straight out of the clear water. No clearings except at long intervals, and that to us was the greatest novelty of all. Lake George and Winnepesaukee are both fine in their way, but few persons have ever known what it was to ride from 5 P. M. until 12 M. on a moonlight night, as we did, and see the shores of the lakes covered with forests down to the very edge, just as they have stood for hundreds of years. No break or sign of civilization, except at long intervals. No house on the shores, no boats on the water, except here and there a canoe with an Indian in the stern. Here and there we turn into a cove wherein would be two or three coveys of ducks, who would scatter and dive at the sight of our great boat. I cannot say how long the steamer Nipissing has been running on those lakes, but certainly not over two or three years, and even if the marvellous ride up and down the Muskoka River were omitted, it would be worth the while of a, over of nature to make the trip to Canada for that alone, even if there were no deer or trout. We reached Rosseau at midnight and stayed at Pratt's. Now Pratt is a Yankee, or he would have called his house The Queen's. He came from Pennsylvania some years ago. He has traveled all over the world in his time, and has settled in that out-of-the-way spot with his wife and daughter, as he says, for his life; he is a queer case, but a capital fellow if taken in his humor; and as the English people who stop there have a horror of jokes and detest the joker, Pratt has a rather hard row to hoe; but his independence protects rather than injures him, for a more independent, thorough Yankee never lived. He is an enthusiastic sportsman, and as soon as he discovered that among the arrivals were two fishermen from the States, English stock was unsettled until Pennsylvania and New York were comfortable!

On Sunday two ladies objected to going to church, as a bear had been seen to cross the road near the hotel. At dinner one of the gentlemen said that while taking his morning walk he had seen a deer in a potato patch near the house, and a real wild one at that, and it excited little comment.

On Tuesday we parted; my friend for Saratoga and New York; I for the wilderness in its glory. Taking my passage on a buck-board, politely called the stage, I rode thirty-four miles, reaching the end of the road at 9 P. M., having dined on fresh venison at a log-house at noon. Venison for supper and then to bed in a loft of Miller's log-house—no saw mill within forty miles—sleeping on straw, with three other men in the room, as soundly as if at home. The Onie Falls sang me to sleep, for the Magnetewan runs within ten rods of the house. I was up early, and out into the chill air, traveling with my split bamboo rod in the direction of the falling water. There were two falls on my side of the river, where the water foamed and eddied like miniature whirlpools. The bank was steep, and as some brush prevented my obtaining a good cast at the lower fall, I made a detour through the woods and came out at the upper one. Here was good casting room, and here I knew would be some big fish. Joining my rod and noosing on two flies I stepped out on a little ledge and away they went to where the water was coming round in a second eddy. A dark object turned over on the tail fly and made for the bank on my side, the line being thirty feet out. Heavy trout, thought I, but before I could think anything else, there was a terrific rush, and up came a black bass out of the current, shaking his head like a terrier to free himself of the hook. He succeeded, and reeling up and casting again, I hooked another. I landed him, and as soon as possible pitched him in again, for I wanted trout and not bass. I suppose I caught eight or ten as fast as I could disengage them and cast again. I knew there were trout in the pool, and big ones, too, for I had seen one rise, and there were no indications why there should not be others, but it seemed as if the bass were out in force and kept the trout away. So, instead of throwing out into the middle of the pool, I drew the line in and let

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

CALIFORNIA FISH CULTURE ILLUSTRATED.

WE have to thank Mr. E. Conkling, of Morrisania, who has been with the United States Fish Commissioners in California all Summer, for some very fine photographs of the commissioners, their encampment, the hatching house, and the species of salmon indigenous to the California waters. The first photograph shows the members of the commission arriving at camp, with all their paraphernalia of blankets, rifles, and knapsacks. The background is formed by a steep hill, which supports a profuse growth of small coniferous trees.

The next gives a picturesque view of their home on the McCloud River. This home is a rude board cabin, perched on the bank of the river, at the base of a whitish rocky bluff, and almost buried in foliage. The third shows the hatching tent, a mammoth stretch of canvass, where the eggs are prepared for propagation, and the fourth sketches the rustic bridge which crosses the stream, and the quaint wheel used to pump water into the troughs. The fifth imparts a vivid idea of the character of the headquarters and the primitive wilderness which surrounds it.

A second series of smaller photographs shows the salmon of the region in various conditions. The first displays the female after spawning, when she is attenuated by her severe labor and tedious journey over cascades and through rapid currents, and the next shows the male and female together. A splendid photograph of the heads of these gives us an excellent idea of their supreme ugliness, for they do not at all resemble their Eastern congeners in beauty of outline. The upper maxillary, which is broad and pointed, curves downward at the anterior termination, and this gives the visage quite a fierce aspect. The head of the female is more regular than that of the male, yet that, also, is ungainly enough to entitle it to be ranked as rather ugly. Other photographs show the dorsal outlines of the species, and the form of the salmon grills.

All the pictures are interesting as works of art, let alone their importance to naturalists and fish culturists. A full account of this commission was published in *FOREST AND STREAM* about six weeks ago, so we think it unnecessary to refer further to it at present.

THE CALIFORNIA SALMON.

Last week we printed a summary of the distribution made of the salmon ova obtained in California. Herewith we give the sequel, in part.—Ed.]

ACQUETON SPRINGS, NEW HOPKINS, Pa., Nov. 9th, 1874.

EDITH FOREST AND STREAM.—Through the kindness of Prof. S. F. Baird, Mr. Livingston Stone shipped me on the 14th of October, from California, 150,000 salmon eggs, which arrived in splendid order on the 21st. They were immediately placed on floating screens in water 62° Fahrenheit, and to-day are all hatched, with a loss of less than 9,000, or 2.66 per cent. As they are intended for the Aqueduct, Lake and the Delaware River, I shall use the greatest care to rear them, and hope to see rare sport for the lovers of the rod.

J. B. THOMPSON.

CALIFORNIA LOBSTERS.—Some months ago—June, we believe it was—the aquarium car transported some cans of Eastern lobster eggs to California for propagation there. The result is shown in the following letter from Mr. Redding, State Fish Commissioner of California, which has been mailed to us by Livingston Stone, Esq. Our readers will at once perceive the importance of this little item of news. If lobsters have obtained a foothold in the Pacific Ocean, think of the commercial consequences and results!

SAN FRANCISCO, CAL., October 27th, 1874.

MR. STONE.—Let me congratulate you. Mr. Throckmorton has just brought in fifteen young lobsters for me to see. They are one and a half to two inches long, and were taken this morning in the bay in a catch of ten pounds of shrimp, and selected from the catch. So these lobsters lived and have hatched. They will be preserved in alcohol, and you can see them when you come down.

B. B. REDDING,
California Commissioner of Fisheries.

ENFORCING THE FISH LAWS IN NEW HAMPSHIRE.—The subjoined article, taken from the Manchester *Mirror*, shows that the conservators of game and fish in that State are in earnest:—

"We doubt not that more or less trout have been illegally taken from Lake Winnepesaukee during the present spawning season, but there is no question that mainly through the efforts of Commissioner Wadleigh, the slaughter by the barbarous spear has been essentially checked. The Commissioner has acted firmly yet judiciously. Giving full warning that all offenders would be prosecuted to the full extent of the law, he has, by personal solicitation and influence, interested many fishermen, to whom the 'spear and jack' are not unknown, in seeing that the laws for the protection of fish are respected. In Lacota this sentiment took the form of a 'mass meeting' of fishermen, presided over by the veteran Nate Wadleigh, which took strong grounds in favor of observing the laws.

"A force of fish wardens has been appointed, many of whom have zealously entered upon their duties. Two arrests have been made for spearing trout upon Sanborn Bay, and one upon the lake. We would appeal to the better feelings and judgment of fishermen, to abandon the nefarious and illegal system which is rapidly depopulating the lake of trout. The public do not look upon them as heroes, nor upon the law as oppressive, and will back the officers in giving all violators who may be captured the full benefit of the law."

—The California Fish Commissioners have spent half of their next year's State appropriation (this year's was used up by the aquarium car) in the procuring of young salmon from the United States fishery on McCloud River, to be planted in the Sacramento, and the number thus to be planted, including the State's proportion from the hatching at the fishery, will be about 1,500,000. Some of the black bass and catfish imported in the aquarium car have been frequently seen in the streams in which they were placed, and appear to be thriving.

—We see a statement ascribed to our old friend Seth Green as to the proper care and treatment of gold fish, to which we do not altogether subscribe. We have had a pond of gold fish for some twenty years, and find them harder than even catfish. They will live with less food than any fish of which we have any knowledge, or in mud-dier water, and they will bear as much handling or rough usage as any, without any perceptible effect. We have taken hundreds of large sized specimens with the hook, played them for some time, drew them out, and then threw them back again without any injury. Seventy-five were caught for the fountain basin of the great sanitary fair held in Philadelphia during the war, were dropped in a barrel and hauled to the city, and if any of them died we did not hear of it; but we did hear that they were sold at the end of the fair at a dollar apiece. Among other things, in another statement, Mr. Green is made to say that while fish have sharp sight, and are sensitive as to any jarring of the earth, as by stamping, or of the air by the discharge of a gun, they can not hear. We have published this fact from our own experience nearly or quite a quarter of a century ago.—*Germantown Telegraph*.

—The Fish Commissioners of Maine have located fishways on the dams on the Presumpscot River, but the owners of the dams refuse to build them, and the county commissioners have the matter under consideration.

WHEN BLACK BASS SPAWN.

HAIGSTOWN, MD., November 7, 1874.

EDITOR *FOREST AND STREAM*.—

A recent fishing excursion, otherwise almost fruitless, developed the fact, hardly accidental, that the black bass (*Micropterus salmoides*) do not spawn uniformly in the Spring. Because of a fearful fog, my catch—on the Potomac, near Williamsport, Md.—was limited to four fish, two males, weighing each twelve ounces, and two females, a pound each. While examining the gill covers of one of the latter, holding her securely, I noticed the pressure caused the expulsion of a number of ova; and by "stripping," quite a quantity was expelled. I then "stripped" the males, and got from each a few drops of milt. Upon my return I opened them all carefully, and while finding no special features in the males, found each female having two fully developed sacs of ova, one of them apparently entirely ripe. I estimate the number in each at twelve thousand ova. Inquiry on the spot fails to find any similar cases, yet no one that I have met has given attention to the point. I am pursuing inquiry wherever I can, to learn of other similar cases. These fish were taken in water which ran in a mill race from six to eight feet in depth, with shallows a mile distant either way, the bottom rocky throughout, and where they apparently gather for Winter quarters.

I hope any of your readers having information will give it; and those interested may make inquiry. If there be other seasons for spawning than Spring, it is well that the habit be definitely learned. You will note that all of the catch were young, and it can hardly be that so well developed ova would occur so far in advance of the usual season.

The above suggests inquiry, which is full of interest to us all, in view of the positive value of the bass. The base of the Potomac seem to be far more uncertain than elsewhere. I have fished on the loveliest of days over ground on which a week before, or a week after, yielded me grand sport, and that, too, under adverse circumstances, when the best of bait and tackle would not have "wakened a cat," at other less propitious intervals I couldn't help catching. Do you find it so elsewhere?

Very truly yours,

ALBERT SMALL.

Natural History.

THE ENEMY OF THE RATTLESNAKE.

THE hog has never been the recipient of many compliments from writers of natural history, nor have they given it the honor of being useful as a destroyer of noxious vermin; yet it is entitled to more respect than is usually allowed it in the latter category, especially when in pursuit of rattlesnakes and kindred reptiles. A correspondent in a late issue of the *FOREST AND STREAM* mentioned the fact of hogs trailing a rattlesnake, as hounds would a fox or hare, and finally overtaking and killing it. This power of scent is a quality the suide were not supposed to possess, yet the fact is true that no animal can excel it in pursuit of the reptile, for it seems to be the fiercest enemy and most determined hunter the latter has to contend with. The perseverance and sagacity displayed in following the trail of the serpent to its burrow is very remarkable; but it is not less so than the apparent enthusiasm with which the chase is carried on, and the pleasure expressed at the death of the foe. Turning droves of hogs among the haunts of the rattlesnake was formerly the most common method in several portions of this country of exterminating the vermin, and it is yet the most successful that can be devised. The contest between these adversaries is very interesting, as each displays its peculiar mode of attack and defence, and enters into the struggle with all the fierce vehemence of its nature. Neither ever refuses a challenge to combat, for they apparently understand that they are natural foes, and that the sooner the battle is over the better, as come it must on some occasion. In preparing for the struggle, the hog raises its bristles until they seem one mass of quills, like those of a porcupine, and cautiously approaches the enemy; the snake at the same time erects its head, and assuming a vigilant attitude, prepares for defence. The hog then falls on its knees, and by slow movements crawls by side-long motion toward its foe. When within reach the snake darts forward, and the hog dexterously catches the fangs in the fat of the jaws; the blow is repeated, and the hog, having been smitten on

one cheek, deliberately turns the other. This the animal continues to do until the snake has not only exhausted, for the time being, its poison, but also its strength. The hog then deliberately rises from its knees, and regardless of consequences, seizes the serpent near the head, and putting its forefoot upon its squirming body, strips the reptile through its teeth, and thus tears it to pieces. If the hog, as is sometimes the case, happens to be very lean, and the poison fangs thereby strike the circulation, its death is the result, but this event is of rare occurrence.

THE BEISA ANTELOPE.—The antelopes are a numerous family. Their principal characteristics is the cylindrical and annulated form of their horns; which in the antelopes are never angular or ridged longitudinally. The various species comprise animals which greatly differ in size; one species, which is the smallest of all horned creatures, being no larger than a hare; others stand from 34 to 4 feet in height at the shoulders, and weigh some 800 to 900 pounds. One species inhabits our Western plains, the Prong-horn Antelope, which is perhaps the most elegant and graceful of all our wild animals. It is only since the English invasion of Abyssinia, that the Oryx Beisa, a new species, has been observed by naturalists, and until recently no living individual had been captured. A specimen has within a short time been added to the magnificent collection of the Zoological Gardens of Regents Park, London.

The Beisa Antelope differs from a well known, closely allied species, the *Leucoryx* of Northern Africa, in having straight horns, and by its peculiar markings. It is of a cream color, with black bands upon the face and legs. Its length of face is 17 inches, from its ears to the root of the tail it measures 4 feet 7 inches, the tail is 26 inches in length, including the brush, which measures 11 inches. The height at the shoulders is 3 feet 7 inches, and the length of the horns is 2 feet 6 inches. The courage and strength of this graceful beast is such that it readily kills and frequently vanquishes and kills the lion, and when wounded it charges the hunter with great fierceness. These animals feed upon coarse grasses, and occasionally browse upon the shoots of acacias and other trees. They feed in the morning and evening only, and drink at mid-day. They run in herds of ten and less in number, although single animals are occasionally met with. They are exceedingly cautious and wary, and can only be approached with difficulty. By the capture of this rare animal the natural history of Africa, of which we have so much yet to learn, has been enriched in a notable degree.

—Advices have been received from Professor E. D. Cope, paleontologist of Lieutenant Wheeler's surveys, of the discovery of a vast bed of coeene vertebrate fossils in New Mexico. The Professor had discovered no less than twenty-five or thirty new species, embracing eight or ten new genera.

A large lot of natural history specimens, collected by Mr. Charles E. Aiken, has been received at the office of the Wheeler surveys. They number over fifteen hundred, one hundred and fifty of which are of birds alone.—*Washington Sunday Herald*.

—Upon a ranch in Nevada, on the Carson River, there is a herd of twenty-six camels, all but two of which were bred and raised in Nevada. Some years ago nine or ten camels were imported into that State, but of these only two lived to be acclimated, and from this pair have been raised twenty-four. The camel may now be said to be thoroughly acclimated in that State.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
NEW YORK, Nov. 8, 1874.

Animals received at Central Park Menagerie for the week ending November 7th, 1874:

One Touque Monkey, *Macaca mulatta*. Hab. Ceylon. Presented by Dr. H. A. C. Anderson.
One black-handed Spider Monkey, *Ateles melanochr.* Hab. Costa Rica.
One red-billed Tree Duck, *Dendrocygna autumnalis*. Hab. South America. Presented by Rear Admiral Napoleon Collins, U. S. N.

W. A. COSKILL.

Woodland, Lawn and Garden.

THE ENGLISH SPARROW.

A Red Hook farmer asks, "if we can recommend the propagation of the English sparrow; if they are destructive to grain, etc.

We know that, notwithstanding the great value placed upon the English sparrow as an insect exterminator, there are sober sides to this question. They are, we allow, pretty, social birds, and by the denizens of the sunshiny city thoroughfares deemed good company, and no one must deprive them of their daily crumb. That they have good service in exterminating the mother miller moth, which deposits the eggs of the worms that eat the maples of our large cities, we have no doubt; but this is not all these English sparrows do. They increase and multiply with exceeding rapidity, and have already become a pest in some portions of the country—notably in New Jersey. They are by no means content with feeding on the vicinity of gardens, they do not feed ravenously upon the worms, or tree insects and moths. They will not, unless extremely hungry, eat the canker worm of the elm and apple trees, and there are some four or five other insects common to the garden that the English sparrow has too nice an appetite and stomach to digest.

It is very well to romance upon these birds; but when we have a clear, prosaic letter, asking us as an agricultural authority whether they are a benefit or a pest to the great agricultural community, it spoils the romance, destroys the poetry, and reduces all the fine stories to a simple question, Do they do good or harm in the end?

We have opened one of the sparrows occasionally, and found its crop filled not with the most noxious of insects, but with by far the greater proportion of the little black cricket, the green chafin, and others of the most harmless kinds of insects. We never found in the crops of the sparrows opened and examined a single rose bug, or any other bugs of the hard scale, or shelled beetles.

In concluding this article, we would certainly say, that we do not hesitate to urge the necessity of keeping them away from grain fields, particularly rye and wheat. In our large wheat fields they would prove the greatest enemies, and if suffered to breed unmolested for a few years would, we fear, prove more damaging to the Western farmer than even the occasional grasshopper visitation.

In a future paper we shall speak of our native birds as the friends of man, and give some reasons why they should be carefully protected.

OLLIPHOD QUILLS.

WILD FLOWERS IN OUR WOODS.—There are numerous wild flowers in almost any of our woods that are the objects of our admiration. We have made a list of quite a number of these, which we know by careful experiments to be admirably well suited to cultivation in the garden.

We mention first the *Antennaria margaritacea*, or the pearly everlasting, which is one of the well known wild flowers of our pastures and woods. It is a modest, unassuming little flower, of pearly scales, covering a tiny yellow centre. Who has not seen its little golden eye peeping up from its quiet home? Do we not consecrate the tombs of our loved ones with these blossoms of the immortal pearl? Surely we love it more in any other place. It would ever perpetuate; hence we plant it in our gardens, and make it an object of our tenderest regard.

We often pass by insignificant and unworthy our attention flowers that in other countries are held in the highest estimation. Our humble pasture and woodland friend—a flower that comes the nearest to what are called the English balsam pride, is an everlasting flower in its wild state. It is well known in all our Northern States as "pearly everlasting," from its very peculiar shade of color, being a beautiful pearl, not to be seen in any other place. The strictly botanical name of this plant I find to be *Antennaria*. Though closely related to the "life everlasting," or balsam, it is not the same plant, and should not be confounded with it.

The little annual *Grapholium polycephalum* is a good plant, but less of globe shape, and its flower heads are of a dingy grey, and no botanist would confound it with its pearly friend, the perennial everlasting, which throws up a number of stems of foot in height, and are finely branched. These stems are downy, with long, narrow, woolly leaves, green on the upper surface, woolly on the under, and when once seen are ever remembered. The flowers grow in what are termed corymbs, or heads. These heads, though not larger than a common pea, are composed of many florets and pearly white scales, which give the flower its beauty, and add much to its value as a Winter coverlet in its bed. This flower so much resembles the French immortelle, that it is often gathered from our American pastures and woods to meet a ready sale at a high price in Parisian markets. To collect and dry these flowers may yet develop their market value, and we would like to suggest to some of our lady readers this pleasant recreation, which may be made quite profitable to them. We have met with good success in our transplanting experiments, the flowers growing larger, more stocky, and more fragrant. Will not some of our friends collect a few of these flowers, and give us the result of their experiments?

Many other forest flowers are worthy of attention, and our experiments with them may be noted hereafter.

OLLIPHOD QUILLS.

AGRICULTURAL THEORY.—In looking over a copy of an English agricultural gazette, we were strikingly impressed with the want of successful training of those who are destined by choice and inclination to give the densest and up to the edge of husbandry." Our American schools also fall immensely below the standard wants of what constitutes a thoroughly educated and practical agriculturist. And we find that very few of those who have become quite successful as agriculturists in Europe had anything approaching what is called a liberal education. On the contrary, very few of those cited adopted this as their calling until late in life.

Farmers' sons and laborers of common intelligence have nearly always supplied this important field of labor. It demonstrates to our own mind that farming is a business which requires no small share of energy, attention, and skill—that it cannot be set up as a tin shop, or with any hope of success with no other education than our common schools give upon tried state, or by a few years of labor with a common farmer. It requires an ingrained love for the pursuits of agriculture, taught, as they should be, in the most thorough manner, every branch being fully understood and loved, not because the young man has some capital, and has become disgusted with city life, or is sentimental upon green fields and rustic life; but any young man of only ordinary intellect, without any training at school, and do not let the name of the business, and stand at the same time the best appearance of his field of labor, will be safe to stay upon the ground and occupy it, as he is just the man to reap the reward of his vocation.

OLLIPHOD QUILLS.

SLIP PROPAGATION.—Our lady friends may with a little care save themselves quite an outlay for plants, especially if their garden is a large one and calls for the use of many varieties. Procure shallow pans or saucers, in number sufficient for your plant slips; fill these full of coarse sand, and keep the same quite damp. Place these saucers in a warm situation, and do not let the sun become too hot. Now place the cuttings of the desired plants. All that is necessary to success is to keep the saucer in full light in a warm place in the sitting room, near a window, and the ordinary heat of the room will do all the rest. As soon as the plants have rooted they should be placed in earth, and will then grow well.

OLLIPHOD QUILLS.

ANSWERS TO CORRESPONDENTS.

E. B. P., Salem, Mass., writes:—I am almost discouraged in my attempts at cultivation of small plants, fruits, and even flowers, much as I love them. I am almost ready to believe what I have heard said, that "horticulture is only a fight with weeds and insects." From your abundant knowledge can you give me a word of consolation?

*Never give up to the insects. Go to work at once. Hand pick and kill what you can; give a decoction of quassia and quinine chips through a fine syringe to one lot; administer sulphur in fine flower form to another, and to others a dose of strong soap suds and tobacco water. Keep on the watch and the slaughter for a week with persevering industry. Hire the boys in the neighborhood to kill the big bugs by the hundred, and the small ones by the pint. You will by these means be sure to clean them out, and you will have as fair a crop as any of your neighbors.

As an aid to your efforts in the blossoming season of the peach, the apricot, and plum, hang upon the limbs of the trees open mouthed preserve bottles, half filled with honey water, or molasses and water, and you will catch quarts of all kinds of wasps and evil disposed insects. I always use such precautions, and find my pay for my labor. Do the same, and report your success.

OLLIPHOD QUILLS.

JOSEPH OMEN, Illinois, writes to know whether quails eat the early corn.

Quails do not deprecate upon corn, although seen in our corn fields near the woods at all seasons. Having the same erroneous idea when quite a lad, I often wondered what so many quails found to eat in the corn field, and thought I would watch them carefully. I supposed they pulled up the corn for the sweet kernel. I had observed a large flock of quails busily at work in the corn field near the woods day after day, and noticed them very carefully. I found their habits were just like the incidents related in a former number of FOREST AND STREAM of a farmer boy's experiment and observation in Ohio. His notice was particularly called to the regularity of their operations in taking row after row, and working the field, as it were. This incident recalled vividly to mind my own observations and experience. On killing three of these quails, and opening their crops, I found no corn, but innumerable striped and chinch bugs, though not a single cut worm. I have since that time made several experiments to test this fact, and have found it true with one or two very trifling exceptions. That the quail does not eat corn at some seasons I do not say; but generally, when other food is abundant, I believe corn to be the food least appreciated by them.

OLLIPHOD QUILLS.

THE COCOANUT TREE.

PHILADELPHIA, November 6th, 1874.

EDITOR FOREST AND STREAM:—

In your Answers to Correspondents about the cocoanut tree, is there not a mistake? I have seen many a one, and never saw one a bit like a cherry tree in form, and think them very ugly. Those that I saw were some of them fifty feet high, and not a branch for thirty feet. They grow like a palm—a bunch at the top, the nuts growing amongst the leaves, and neither branch nor leaf for many feet from the ground. The tree is girdled from root to branches with rings, and I think anything but handsome.

B. W. H.

Your description is quite correct. The cocoanut belongs to the family of palms. The editor of this paper is unable to ascertain how such an improper description as is referred to was admitted to these columns.—Ed.]

The Kennel.

DOG BREAKING.—No. 4.—RETRIEVING.

IN England it is considered damaging to a setter or pointer to allow them to retrieve, and it is argued that the contact of dead game with the nose of either has the effect of diminishing their susceptibility in scenting live birds. In America few broken dogs can be sold unless they can retrieve, and almost the first question asked, is: "Can he fetch?"

We confess we much prefer shooting over a retrieving setter, and always train one of a brace to this usefulness, and in our individual case have never had steadiness at point or charge one particle lessened by it. Probably it may be attributed to our strictness in breaking our dogs to perfect obedience in dropping or charging and remaining so until the order fetch was given. It is also held by trainers abroad, that if a dog is taught to retrieve he should be made first to point dead before being allowed to lift it. This is considered unnecessary by Colonel Hutchinson, from whose admirable treatise on dog-breaking we quote:

"Some good sportsmen maintain that a retrieving setter or pointer, on finding a dead bird, ought to point it until desired to lift it. This training they hold to be advisable on the ground that it conduces to the dog's steadiness by diminishing his wish to run forward on seeing a bird fall; but the plan has necessarily this evil consequence, that should the setter when searching for the dead bird come across and point as he ought, any fresh game, on your telling him to fetch it—as you naturally will—he must spring it if he attempts to obey you. Surely this would tend more to unsteady him than the habit of lifting birds as soon as found?"

We believe, also, that the ordering of a dog to fetch while standing a live bird which, in mistake, is thought to be the one just killed, would tend to puzzle in a great measure; but we likewise know that an intelligent animal soon learns that after the report of the gun he is expected to seek dead and fetch it, and if properly trained awaits the command to do so, and in a majority of cases sees where or about the direction of the bird's fall, and while going for it, if he winds a fresh bird, will point it, owing to the difference and nature of the scent, and likewise its situation.

In this country the sportsman, as a rule, owns but one

dog, and it must be his setter and retriever combined, and therefore the most useful.

We begin as soon as possible with our puppy, if we wish to teach him to retrieve, by allowing him to play with a ball, or an old glove thrown first a short distance from him, each time allowing him to tug and pull at it when he brings it. Increasing the distance gradually as you throw the glove, and after he fetches, giving him a reward in the shape of a morsel of food. The most difficult part of the task, however, is when we wish and command him to fetch when he has not the inclination to do so. Determination, and probably severity, will be required at this point, and we have adopted this plan with success. When he refuses the order, drag him to where the object lies, saying fetch in a distinct tone, place it in his month, and by holding your hand under his jaws and forcing him to retain it, lead him back to where you first stood, all the while saying fetch. This may have to be repeated many times before you succeed in gaining perfect obedience, and the patience of the calmest temper is apt to be tried. We follow the plan of rewarding again just as soon as the order is obeyed, and we have stated our adoption of this plan from the training of a six months old puppy alluded to before. Having become successful in teaching him to fetch, as in play, we one day commanded him in a rather severe tone, which he did not comprehend in the least, and would not answer to; taking him by the neck we shook him rather roughly, forced the object into his mouth and pulled him after us. Feeling we had been too severe on the young dog, we gave him a piece of biscuit, and in a few minutes attempted the ordering again; he obeyed at once, and ever afterwards we experienced no trouble whatever. A good plan to confirm your dog to retrieving birds is to take him to a pigeon match and allow him to witness the whole proceedings; but we advise that he should be taken into the field on game first, and be thoroughly broken to charge and to remain so until you order him to fetch; if he is not, nothing would be more damaging.

DYING OF GRIEF.—About two weeks ago a man named Parcells, a blacksmith residing near Dobb's Ferry, went hunting "coons" at night. His companions consisted of a neighbor, residing close by, and a faithful dog, apparently a cross between the setter and fox hound. While searching for game at Sneed's Landing, on the Hudson River, Parcells approached the brink of the Palisades, and by some mishap lost his balance and fell down a distance of thirty feet. His friend having missed him sought him, and by diligent search found him lying where he had fallen, and his faithful dog by his side moaning piteously. On attempting to approach the body, the usually friendly animal strongly protested by growls and threatening attitudes, and even jumping forward whenever the effort at drawing nigh was essayed. The man seeing that his companion was seriously injured, went for aid, and in a short time returned with a surgeon and some friends, but the dog, which lay with its head across the body, refused to let them touch the treasure it so faithfully guarded. They were at length compelled to club him most unmercifully to drive him away from his post. An examination proved that life was extinct, so the remains were placed in a boat and a piece of canvas thrown over them. The dog, half dead from the beating, on seeing the disposal made, jumped into the boat also, and seeking shelter under the cover, placed his head across his master's face, and remained there until a landing was effected. The body was then placed in a wagon and conveyed home; but no sooner had it been covered than the loving friend again sought his old post.

After the burial the dog became much depressed, refused its food, and wandered listlessly about, moaning in a low, nervous tone, and heedless of everything. He would pay no attention to any of the inmates of the house, and all their efforts could not cause him to manifest any signs of recognition. After dragging along for a week, apparently without food or water, and suffering from a severe nervous prostration, he finally died—a martyr to his own love.

PORTABLE FOOD FOR DOGS.—Our readers may remember that not long since we advised the use of a portable food for dogs, especially where Western trips are taken by the sportsman, when it is often very difficult to obtain proper nourishment for pointers and setters. In response to our recommendation Mr. John Krider, of Philadelphia, has lately imported from England a large invoice of Spratt's celebrated dog biscuit, a sample of which was handed us for our inspection. It is manufactured in cakes of about a quarter of a pound each, and composed of proportionate parts of animal and vegetable matter, submitted to great pressure; it is claimed to be proof against fermentation and putrefaction and is extensively used by sportsmen abroad. Three or four of the biscuit, soaked for two or three hours in warm water, will make an ample meal for a dog doing hard work during the shooting season, and the cost per pound is about equal, if not less, than that of refuse beef. We are particularly pleased that a portable food can now be procured by sportsmen, and should advise again, that a similar article be manufactured in America, feeling confident it would meet with a ready sale. The Spratt dog biscuit has been tried by many Philadelphia sportsmen, and we daily hear much in its praise.

ADVICE TO PURCHASERS OF DOGS.—After purchasing a setter or pointer do not be discouraged, and do not condemn, if after he has been sent from a distance to you, he will not at once work as you desire and expected in the field. No matter how well a dog has been broken, it is

not reasonable to suppose he can immediately transfer his affections, nor do for you as he had done for his former master, until he becomes thoroughly reconciled to his new home. We remember a case where a fine setter, splendidly broken, was purchased by a gentleman at a distance, and after two days journey by express, the dog reached him. Anxious to try the animal at once the buyer drove up to the train on its arrival, and the setter was immediately transferred to the wagon and taken to the field that his merits might be tested. Of course the poor dog failed in every respect, through the fatigue he had undergone by railroad and on account of the total strangeness of the surroundings, and was returned forthwith with the information that he was worthless. He was purchased shortly afterward by a sportsman more judicious and rational than the first, and thoroughly satisfied with him, he often refused double the price he gave for him. Such cases occur frequently, and our advice is, become first acquainted with your new dog before condemning him and the seller, and only after perfect rest and acquaintance with him, take him into the field.

THE POINTS OF SHOW DOGS.

THE BEAGLE.

Head intelligent, eyes most expressive and lively, the head much finer in all proportions than that of the harrier which it much resembles; sharp-nosed; body very compact and muscular; short legs; height from twelve to fifteen inches; color same as harriers. This class is judged almost similarly to the harrier, but so few come under the eyes of the judges, that the breed has not been taken so much notice of as some others; and to define all the separate points required is very difficult. The above will give an idea of what is really wanted for the show dog in the beagle class.

POINTS IN JUDGING.

Head.....	15 Back.....	10
Neck.....	5 Loin.....	10
Legs.....	10 Hind-quarters.....	10
Feet.....	10 Stern.....	5
Shoulders.....	30	100

FOX TERRIER.

Head long; forehead flat; ears thin, fine, and pendant, carried flat to face and almost V-shaped; eyes sharp; but not prominent, or too large; cheeks lean, with a large, sharp, powerful jaw; nose black, with a good mouthful of sound teeth, not undershot; neck fine but muscular, not throaty, set into the shoulders lightly and elegantly, with proportioned depth of chest, neither too thick nor too wide; fore-legs straight, but muscular arms, with a nice round strong lower leg with a round cat-like foot; back straight, not too long, with well rounded ribs, short, well developed loin; hips wide; stifles muscular; hock not too straight, or so as to give a stiff bull-dog-like appearance, with a nice substance of bone and muscle on the lower leg; stern set on straight, not carried over the back, although carried gaily.

POINTS IN JUDGING.

Head.....	25 Body, including hind quarter.....	20
Jaw.....	5 Ears and loins.....	20

Fincher's Guide.

A FOX CHASE.—A correspondent writing to us from distant Deer Lodge, Montana, sends the following sketch of a regular old-fashioned chase after Reynard. It seems that the West is after all the home of true sportsmen, for though defying all dangers to amass a fortune, yet they spice their life quite frequently with a dash after the buffalo, deer, antelope or fox, and receive new vigor from their many sallies after the game with which their country abounds.

The knights of the saddle and spur gave the hounds another long run on Saturday afternoon as a "farewell" to Mr. John Pemberton, who left for Missouri on Tuesday. Among other trophies brought in were two splendid foxes. The one first flushed was a scrub out of luck, and was easily overtaken; but the second was a "medicine" fox, and proved so leggy that the pack had a run of over three hours before they holed him. As an instance of the sagacity of Reynard, we give the following incident of the chase: After a two hours run, on coming to a stream, both dogs and fox were badly jaded—the fox but a short distance ahead and wheezing at every jump. After crossing, Reynard slowly jogged up the bank, and, turning square about, stopped to see what the hot pack at his heels would do in crossing. The little general reckoned the cool stream would prove too inviting to be resisted by his pursuers, and he was right; for as they plunged into the water they came to a dead halt. Some laid down, others looked wistfully up the bank, but all preferred the water to the trail. Seeing this, his lordship of the brush leisurely walked into the shade of a friendly tree, faced the tired hounds, and quietly stretched himself on the grass, as much as to say "I'll take a little rest myself; so you shall have now the best of it." And there the rogue lay with an eye on the pack until they got rested—perhaps five minutes—and were urged up the bank to the scent again. At the first note Reynard, as fresh as a daisy and with a look of defiance at the hungry band behind, sprang up nimbly and sped away like the wind—over hill, down ravine and through thicket he flew, with the music of the pack hurrying him to his best, and the clatter of hoofs telling him that some one would be in at the death. But in vain the game little fellow ran; in another hour he was forced into his castle, there capitulated to the spade, and was brought into town alive.

—The first grand fox hunt of the season, under the auspices of the Staten Island Shooting Association, took place on Wednesday. The meeting, which was called for half past nine o'clock A. M., met at Mr. Jaycock's farm, at Butcher's, between Bull's Head and Graniteville, on the north side of the island. All gentlemen in Richmond county and vicinity owning hounds were invited to participate in the chase.

IS THE TORTOISE A GAME BIRD?

LAWRENCE, Kan., November 5th, 1874.

EDITOR FOREST AND STREAM:—I have to add my testimony to that of the gentlemen who have, so far, noticed that game dogs will work on and point the land tortoise. I saw a goodish dog do it a few days since. "In the months of many witnesses shall all things be established." On the bosom of the stream shall many things do the light. I have also noticed a cat catching grasshoppers and eat them, and have seen a rat do the same. B.

—We see in the New York Sunday Herald the advertisement of a "Dan Demon" terrier. What breed of pups can this be? "Perhaps it is one that is the very 'de'il' for rats."

Yachting and Boating.

All communications from Secretaries and friends should be mailed no later than Monday in each week.

LIST OF RACES AND WINNERS FOR 1874.

—We print herewith a list of the yacht races for 1874. This list was prepared by a gentleman in Boston, who is too modest to allow his name to be used, as his efforts are devoted only to this journal, and he does the work on no other ground than the desire to have the calendar properly represented, and enable inquirers to know the winning boats by a reference to dates. This gentleman occupies one of the highest positions in the yachting circles of this country; and from the thoroughness of his labor one can readily surmise his acquaintance with the matter under consideration, and his close attention to the subject.

This document will be found of very high importance by all yachtsmen, and the lovers of their sports, as it is the only one prepared on the subject; and even this has been done as a special compliment to the FOREST AND STREAM for its devotion to yachting, and the usual completeness of its reports on all these subjects. Thus while we are enabled to lay before our readers a valuable document, we are, at the same time, complimented by the very warm letter accompanying it, and the many queries sent us relative to the matter. We are pleased to learn that the effort of this journal in this class of elegant pastimes has been recognized by the best authorities in the land, and that they feel it their duty to sustain our efforts in every way possible. For this kind consideration we beg leave to tender thanks to the gentlemen who have so freely and ably aided us in making our yachting reports the models of completeness and thoroughness they have been deemed to be.

May 15.—Charleston regatta. Emmie wins.
 May 18.—Philadelphia, Philadelphia Yacht Club regatta; first class, Willie Kleitz, first prize; Albert Dager, second prize; Albert Eggleston, third prize; second class, Richard Hiddle, first prize; J. B. Brewer, second prize; S. A. Slano, third prize.
 May 20.—South Boston, Match, Mabel beats Lizzie.
 May 21.—South Boston, Dorchester Y. C., first regatta; winners, Schr. Curlew; C. B.'s, first class, Kelpie; second class, Firefly; third class, Water Witch; fourth class, Tulip; second class keel, Fearless.
 May 30.—Fall River, Alpheus beats Lackawanna and Glend.
 May 30.—Sny Pond, Arlington Y. C. regatta. Clara wins.
 June 2.—Detroit, International Y. C. regatta for third class; Nettie, first prize; Lulu West, second prize.
 June 3.—Detroit, I. Y. C. regatta second class; Adelaide, first prize; Fleeting, second prize.
 June 3.—Tom's River, T. R. Y. C. regatta; Oscar Robinson, first prize, Lulu, second prize; Ida, third prize.
 June 4.—Gowanus Bay, Match, Dart beats Crow.
 June 4.—South Boston, S. B. Y. C., first regatta, Keels; first class—Starlight, first prize. Second Class—Fearless, first prize; Uncle Moses, second prize. C. B.'s first class—Queen Mab, first prize; Popsy, second prize. Second Class—Maud, first prize; Mabel, second prize.
 June 6.—Dorchester, D. Y. C., first Championship regatta; Keels, first class, Sunbeam; second class, Fearless; C. B.'s, first class, Nimbus; second class, Mabel; third class, Maud; fourth class, Tulip wins.
 June 10.—New York, A. Y. C. regatta, second class sloop Flyaway wins.
 June 11.—New York, N. Y. Y. C. regatta, Tidal Wave takes first class schr. prize and Bennett Challenge Cup, Maple takes second class schr. prize, Grace first class sloop prize, Wayward second class sloop prize.
 June 15.—New York, Columbia Y. C. regatta; winners, Cabin Sloops; Commodore, Open Sloops, first class, Journeyman; second class, G. B. Deane; third class, Tugboat.
 June 15.—New York, Brooklyn Y. C. regatta; Schr. Tidal Wave, sloop, first class, Odine; second class, Scholmer; third class, Wm. T. Lee; win first prizes with and without allowances. Schr. Comet, sloop, first class, T. B. Asten; second class, Kaiser; third class, Brooklyn, win second prizes with allowances.
 June 15.—Washington, American Y. C. regatta; winners, first class, Americas; second class, Columbia; third class, Spray.
 June 15.—Philadelphia, Pa. Y. C. regatta; first class, George Hoff, first prize; Class S. Astin, second prize; second class, K. F. Hiddle, first prize; J. B. Brewer, second prize.
 June 16.—Tarrytown, Tarrytown Y. C. regatta; Phantom, first prize; Annie, second prize.
 June 17.—Boston, East Boston Y. C. regatta; winners, Keels, first class, Guel; second class, Lidie; C. B.'s, first class, Mabel; second class, Sunbeam.
 June 17.—Savannah regatta; first class, Coquette; third class, Nannette, win; second class, Hattie Hull and Emma, tie.
 June 17.—Lynn, L. Y. C. regatta; first prizes, first class, Maric; second class, Expert; third class, Mabel; second prizes, first class, Lillie; second class, Kate; third class, Lizzie.
 June 17.—Salmon regatta; first prize, Phil Sheridan; second prize, Victor.
 June 17.—Marblehead regatta; first prize, Fearless, Jr.; second prize, Leader; third prize, Itambler.

June 17.—Williamsburgh, W. Y. C. regatta; winners, first class, Melvin; second class, Boreas; third class, Dolly Varden; fourth class, Orient; fifth class, S. M. Rodgers; sixth class, N. Jackhie.
 June 18.—South Boston, S. B. Y. C., First Championship regatta; Keels, second class, Fearless, first; C. B.'s, first class, Ripple, first; Naiaid (Queen, second; second class, Maud, first; Unique, second.
 June 20.—San Francisco, Match, Freda beats Minnie.
 June 20.—Dorchester, D. Y. C. Second Championship regatta; the following boats for the second, third and fourth prizes: Keels, first class, Sunbeam; second class, Fearless; C. B.'s, first class, Nimbus; second class, Mabel, and fourth class, Tulip; Water Witch, third class C. B. wins, tying Maud.
 June 22.—Halifax, R. H. Y. C. match for challenge cups; Kate wins in second class.
 June 25.—New York, N. Y. Y. C. Ladies' regatta; winners, C. B. sch's, first class, Tidal Wave; second class, Comet; sloop Vision.
 June 27.—Brooklyn, Long Island Y. C. regatta; sloop, J. S. Gaze, Union Pr.; Phoebe D., Club Pr.; Open Boats, first class, Brooklyn U. and C. Pr's; second class, Joe Saunders, U. and C. Pr's; third class, Only Daughter, U. and C. Pr's.
 June 29.—Put in Bay, I. Y. C. regatta for first class; first prize, Cora; second prize, Annie Culbert; third prize, Lena.
 June 29.—Washington, Match, Fannie Bell beats Spray.
 June 29.—Jersey City, Oceanic Y. C. regatta; first class, Brooklyn; second class, Emily P.; third class, first prize, Tough; second prize, Alleppo.
 June 30.—Jersey City, J. C. Y. C. regatta; first class, Incognita; third class, Irene; fourth class, Annie.
 July 1.—Swampscott, Eastern Y. C. regatta; first class schr's, first prize, Foam; second prize, Halcyon; second class schr., Fearless; second class sloop, Nimbus.
 July 1.—Halifax, Royal Halifax Y. C. Corinthian Matches.
 July 1.—Grosbe Isle, I. Y. C. regatta for third class; Emma wins first prize, with and without allowance; Kittie takes second prize.
 July 1.—Southport regatta; winners, first class, first prize, Mystery; second prize, Ada; second class, first prize, Ripple; second prize, Gracie; third class, first prize, Fearless; second prize, Ella.
 July 3.—Oyster Bay, Seavanhaka Y. C. Corinthian Sloop Match, Vision wins.
 July 4.—Dyster Bay, S. Y. C. regatta; winners, schooners, Triton; sloops, first class, Vindex; second class, Fel Scen; third class, Mary Emma.
 July 4.—Detroit, I. Y. C. regatta; first class, first prize, Cora; second prize, Annie Culbert; third prize, Ida; second class, Fleeting; first prize.
 July 4.—Lynn, L. Y. C. regatta; first class, first prize, Lillie; second prize, George Manson; second class, first prize, Mabel; second prize, Expert; third prize, Fleeting; third class, Curlew, first prize; Lucy, second prize; George, third prize; fourth class, June Bug, first prize; Humbug, second prize.
 July 4.—Portland, P. Y. C. regatta; first class, Ray; second class, Gracie, third class, Frolie.
 July 4.—Perth Amboy, P. A. Y. C. regatta; first class, first prize, Brooklyn; second prize, J. M. Chapman; second class, Emily P., first prize; Chi Psi, second prize.
 July 4.—Wilmington, Carolina Y. C. regatta; Little Walter, first prize; Renta, second prize.
 July 4.—Albany, Albany Y. C. regatta; C. B. Knowles wins.
 July 4.—Long Beach regatta; first prize, Infant; second prize, Nellie Squire; third prize, G. W. Ruby.
 July 5.—San Francisco regatta; Annie Stoffer, Champion, and Gazelle win.
 July 4.—Watappa Lake regatta; Jennie wins.
 July 4.—Salmon regatta; first class, first prize, Clithere; second prize, Nettie; second class, first prize, Phil Sheridan; second prize, Comet; third prize, Shadow; third class, first prize, Foam; second prize, Emma; third prize, Ripple.
 July 4.—Wakefield regatta; first prize, Leader; second prize, Adelaide.
 July 4.—Quebec regatta; first class, first prize, India; second prize, Lena; third class, first prize, Wildfire; second prize, Dolly Varden; third prize, Loniea; fourth class, first prize, Spray; second prize, Eva M.
 July 4.—Boston regatta; first class, schr's, Fearless, first prize; Azalea, second prize; sloop, Coming, first prize; Nina, second prize; second class, schr's, first prize, Vindex; third class, Emma; keel sloop, first prize, Mist; second prize, Starlight; C. B. Sloops, first prize, White Cup; second prize, Clytie; third class, C. B.'s, first prize, Fearless; second prize, Kelpie; third prize, Mabel; Keels, first prize, Ruby; second prize, Fearless; third prize, Gleamer.
 July 4.—Grandport regatta; Starline wins.
 July 4.—Greenport regatta; Fannie, first prize; J. O. Wells, second prize.
 July 6.—Swampscott, Beverly Y. C. first regatta, first class, Eva, first prize; Faneon, second prize; second class, Perl, first prize; Isis, second prize; third class, Tulip, first prize; Pink, second prize. Champion pennants for best actual time, to be won three times, were taken by Eva, Perl and Isis.
 July 10.—St. Augustine, Gae Regatta Club regatta, Gae wins; at a previous race Carrie won.
 July 13.—Philadelphia, match for \$300; Albert Dager beats Willie Kleitz.
 July 13.—Beverly, B. Y. C. Second regatta; Surf, first class, and Nora, third class.
 July 14.—Beverly, B. Y. C. Third regatta, for caps presented by Wm. Scholer; first class, Eva; second class, Perl; third class, Pink, win.
 July 16.—Long Island Sound, M. Y. C. regatta; first class, T. J. Crombie; second class, Skip Jack, win.
 July 17.—South Boston, S. B. Y. C. Second Championship regatta; C. B.'s, first class, Eva, first, Fannie, second; second class, Maud, first, second prize; second class Keels, Fearless, first, Uncle Moses, second; Maud and Fearless winning for the second time and taking the first championship prizes.
 July 18.—Dorchester, D. Y. C. Third Championship regatta for third class C. B.'s; Bristol wins, tying Maud and Water Witch.
 July 18.—Quebec regatta; first class, India, first prize, Lena, second prize; second class, Maud, first prize, Wildfire, second prize; third class, Frank, first prize, Dolly Varden, second prize; fourth class, Komp, first prize, Lottie, second prize.
 July 20.—Boston, Bunker Hill Y. C. regatta; winners, Keels, first class, first prize, Quimper, second prize, Annie M.; second class, first prize, May, second prize, Bull Bow; first class C. B.'s, Lillie, first prize; Ada, second prize.
 July 22.—New Hamburg, Central Hudson Y. C. regatta; Fidget wins.
 July 25.—Nahant, B. Y. C. Fourth regatta; first class, Waik takes pennant, Eva, first prize, and Firefly second prize; second class, Perl, first prize and pennant; Maud, second prize; third class, Tulip, first prize and pennant; Pink, second prize.
 July 26.—New Orleans, Lake End regatta; winners, third class, Jennie, first prize; Maggie Welsh, second prize; fourth class, Gazelle, first prize; Robert E. Lee, second prize.
 July 27.—Canton regatta; Fritz F. Buckelmeier, first class, and Anne Lane second class, win.
 July 27.—New Hamburg, C. H. Y. C. Match for plate presented by Commodore Grinnell, Mollie wins.
 July 28.—Provincetown regatta; winners, first class, Whinnepknocker, first prize, Myriam B. second prize; second class, Tidal Wave, first prize, Alice W. Hooper, second prize; third class, Sam Weller, first prize, Franklin, second prize.
 July 29.—Newport to West Chop, Bk. Y. C. Race, Schr. Comet and sloop Quiver win.
 July 30.—Stapleton, St. Y. C. regatta; first class, Maud, first prize, Elizabeth, second prize, Queen, third prize; second class, Edith, first prize, Cygus, second prize, Winnie, third prize.
 —East Weymouth, Scrub race; Thos wins.

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INTERESTS IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
125 SOUTH THIRD STREET, PHILADELPHIA,
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent, for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tourist," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 30 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 12, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements must be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

FRIDAY, 12th.—Billiard Tournament at Tammany Hall, New York. Trotting at West Side Driving Park.

SATURDAY, 13th.—Trotting at the New Dorp Club grounds, Staten Island.

MONDAY, 16th.—Billiard Tournament.

TUESDAY, 17th.—Billiard Tournament.

WEDNESDAY, 18th.—Billiard Tournament.

THURSDAY, 19th.—Billiard Tournament.

THE IRISH TEAM.—Major Arthur B. Leech, captain of the famous Irish Team, has lately been making an extended tour (perhaps we should call it a long range) over the West and South, from which he returned last Monday in jovial spirits, fine form, and much improved in weight, calibre, and penetration. His purpose is to remain in the city until the 18th, when he will aim to reach the other side of the Atlantic and home. While at New Orleans he was the recipient of a beautiful gold medal from the New Orleans Rifle Association, which is now being engraved by Tiffany & Co. It is very massive, say one and a quarter inches in diameter, and displays the United States and German flags in enamel. The Rifle Club is composed largely of Germans. Wherever the gallant Major went, he was tendered hospitalities of the most liberal and graceful description, the most public of which he felt constrained to decline. Indeed, he expresses himself with enthusiastic affection toward America, and promises to return again. Meanwhile, he will publish, and has already partly written a history of the visit of himself and his comrades to America, detailing all the incidents of the Rifle Match and Tournament, the adventures of the hunters in the West, and his own individual jaunt across the country. The book will be of 300 pages 12 mo., and will undoubtedly meet with a marvellous sale. But four of the Irishmen now remain in the country. Milner is hunting in Colorado, and Bagnall and Kelly remain in Chicago, the former as nurse, and the latter as invalid, he having previously contracted his sickness on the Western prairies. Rigby left on the 4th.

Next week we shall print a sketch of the Hunting Trip of the Team in the Indian Territory, which circumstances have compelled us to defer thus long.

A variety of interesting matter—especially in the department of Rational Pastimes—is crowded out of this issue.

WOODCOCK SHOOTING.

OUR recent article on woodcock has received the approbation of a large number of our correspondents, and its principles have been supported by several journals which devote a portion of their space to sketching the work of the Nimrods and Waltons. We have found, thus far, only one who objects to slaughtering the birds in Summer, and his article will be found on another page. From the numerous communications received, all of which argue on the steps necessary to the preservation of the bird, we should deduce that the work of the hungry pot hunters was the principal cause for the scarcity of this pet of the sportsman, and next to that the indiscriminate destruction of both the old and young birds early in the season by persons who think more of the silly boast of making a large bag than in doing good shooting. We can admire the spirit of the man who scorns to kill mere fledglings on economic as well as sportsmanlike grounds, as much as we detest the vanity of him who slaughters them for the purpose of displaying his prowess and vaunting of it to his friends.

Our assertion that the only way to preserve this game was to enact statutes forbidding the destruction for a certain number of years, has already been taken up by some clubs, who will take prompt action at an early day to have the Legislature of their respective States pass laws forbidding any assaults upon it for a specified period, and suppressing all Summer shooting. If this work is prosecuted vigorously, the legislators will not dare to oppose it; and the consequence of this will be that woodcock will become quite numerous again, and will give our sportsmen an opportunity of testing their skill, and a very important member of our family of birds will be preserved on this continent.

In framing laws for the action of the State Legislatures, the clubs should remember that those suitable for one portion of the country are not adapted to others, owing to the difference in the seasons and the migratory habits of the bird.

Two general statutes could, however, be framed, and these would be broad enough to apply to the whole country, if they were based on climatic influences; for, owing to the various phases of temperature in different sections of the country, the bird is a stranger in one place when it is very abundant in another, so the laws must be framed on these distinctions if they would not be injudicious and oppressive.

We know of States where a woodcock cannot be found in October; so to prevent shooting them in this region before that month would be wrong, as it would not allow sportsmen to enjoy the pleasure of such exercise, whereas in other places any attempt upon them previous to that time would be a radical folly, as they thrify there long enough to give persons all the shooting they should need.

If our Eastern and Western clubs will unite in the effort for the preservation of this fine representative of game birds, they will be enabled to preserve it from extinction, and enjoy for many years hence the pleasure of bagging it, but if they do not, they will have to go far afield ere they can obtain the sensation of tasting its delicious flavor.

This effort of protection is needed; so we hope to hear before long that the true sportsmen of the country have taken some action in the matter, and that they have preserved the bird from extinction.

THE INTERNATIONAL RIFLE MATCH.—The following criticism on the International Rifle Match at Creedmoor, appears in an English contemporary:—

"Between each shot careful cleaning of the barrel was a general rule; the Americans bestowing a longer time than the Irish to this business, and, as the end shows, obtaining a certain benefit for their pains. It may be now fairly conceded, notwithstanding the difference of opinion concerning the muzzle or breech, that the usual disaster of a bullet's eye by Mr. Milner on the wrong target, and of a defective cartridge fired by General Dakin—incidents which led to the natural "ifs" and "had its" of disappointment, but, in this case of such worthy competitors, free of rancor.

May we now turn our attention to the work done at the match, which appears to be of a class worthy to be termed "magnificent." The men in action have been sufficiently lauded for their possession of sustaining power through so long and arduous a task, calling into exertion the keenest faculties of the brain, nerve and eye; demanding constant and extreme tension of mental and physical forces. With the details of the scores your readers are already fully acquainted, so it will now be sufficient to simply generalize them.

Each team fired 270 shots, and each missed only seven times. In ordinary circumstances double this number might have been looked for. The Irish team obtained, in 263 hits, 149 bull's eyes, 107 centres, and 7 outers; while the Americans got in 263 hits, 153 bull's eyes, 96 centres, and 11 outers, the target being 12 feet wide and 6 feet high. The actual scores were, respectively, 931, 934.

Now, if this work be compared with that which, theoretically, or on the system of averages, could be expected from small-bore weapons of known superior workmanship and character, we shall find that six steady good men would probably obtain 108 bull's eyes, 96 centres, 54 outers, 12 misses, and score 829. Also, that if all the six rifles were put into such good fixed rests, that nothing but the natural deviation of the rifle could disturb the accuracy of

aim at the central point, we shall find that they would probably register 138 bull's eyes, 108 centres, 24 outers, without misses, scoring 934, with the same ranges and rounds, and all defects of cartridges being excluded. The work, therefore, of these two teams is justly to be styled "magnificent;" for these men—with all their variations of temperament, imperfections of sight, of nerve, and other disturbing influences which flesh is heir to—performed better work than the mechanical fixed rest could record. Yet, before stating this too decidedly, it may be a question whether, when the fixed rest has been used to test the merits of a valuable rifle, the human precautions of cleaning the barrel between each shot, the careful weighing of ball and powder, are really adopted; for if these things be neglected, the register of the rest cannot be taken as the final measure of the accuracy of the rifle. But the work done at this match appears to have been surpassed by both teams at the trial practice two days previous. We have not detailed scores before us, but the total scores, for the same men, are given: for the Irish, 938 marks; for the Americans, 944—work which was sufficiently a measure of the bitter strength to be put forth in the contest to ensue after the next forty-eight hours.

ASSOCIATION FOR THE PROTECTION OF GAME.

OPENING MEETING FOR THE ENSUING SEASON—THE POACHERS TO BE VIGOROUSLY PROSECUTED.

THE first Fall meeting of the Association for the Protection of Game was held Monday night at the residence of the President, Royal Phelps, Esq. A large number of members were in attendance, and the chair was occupied by Mr. Phelps. After the reading of the minutes of the last meeting, held in May, the Secretary read the correspondence which had taken place in the interim with different game protecting societies throughout the country, particularly the Game and Fish League of New Hampshire, Maryland Association for the Protection and Preservation of Game and Fish, the New Jersey Commissioners of Fisheries, and the Worcester (Mass.) Sportsmen's Club.

Robt. Furey, Esq., of Brooklyn, complained of violations of law by use of set nets in Gravesend Bay that had meshes of less than two inches; but as Gravesend was beyond the jurisdiction of this society, the formation of a protective club and the appointment of a constable were suggested as the first preventive steps to be taken, after which the society would assist at Albany in procuring requisite legislation.

The President reported that, in compliance with the resolution of the club, the committee to whom was referred the subject of uniformity of game laws in different States, had had the documents in relation thereto printed and sent to ninety-three game protecting organizations in different parts of the country, suggesting the holding of a national convention in this city in the month of November. Very soon after they had done this, however, the State Association called a convention for the 9th of September, at Niagara Falls, for the same purpose, and the committee thereupon felt constrained, as a subordinate organization, to suspend all further action, not doubting that the State organization would realize the responsibility which now rests on its shoulders, to see to it that an important subject properly attended to until it is carried to a successful issue.

Mr. Charles Hallock, of FOREST AND STREAM, said that the Association did not think the Niagara Convention was composed of the very best material in the country, and inasmuch as the representation and the number of voters for officers was so small (being only thirty-two), while the number of States and Territories was forty-six, it could scarcely be considered a national convention. While they considered the President and several of the officers men of high intelligence, they thought the matter might be placed in better hands, but did not want to appear antagonistic to the other body. He therefore begged to concur in the remarks of the Chairman, recommending that the committee be discharged. The committee were then discharged, on motion of the Chair.

The President reported that the jury in the suit against Capwell and Storey, charged with having in possession forty trout during the closed season, had rendered a verdict against the association, and that an appeal had been taken to a higher court. The President stated that he had good reason for believing that the jury gave a verdict for the defendants simply because of the severity of the penalty, viz. \$1,000 for the forty trout, or, in case of failure to pay the fine, one thousand days imprisonment.

The President then announced and said that he was confident that many parties were smuggling trout regularly to New York markets contrary to law, and suggested the propriety of placing private detectives on the cars in order to arrest the professional sportsmen, who were habitually violating the statutes. The suggestion of the President was enthusiastically received, and the Treasurer was ordered to place \$3,000 at the disposal of the Executive Committee for the purpose of detecting, rewards, and prosecutions during the present season.

The following gentlemen were unanimously elected members of the association:—Messrs. Gouverneur Morris, Dr. Walter R. F. Day, Benjamin H. Bonney, Henry C. Carey, Martin Van Buren, Mathias Nichol, and Gov. Dix, (honorary member.) The by-laws were amended so as to make the entrance fee \$25, and the annual dues \$10, remaining the same, and limiting the number of members to 100.

A list of cases was then read showing the number of persons prosecuted for infringing the game laws, and the verdicts which had been rendered in favor of the association.

The organization determined by a unanimous vote to submit to the next Legislature the following proposed amendment to the game law, respecting fish and game. The amendment reads as follows:—

REASONS FOR THE AMENDMENT.

1. The first object of the amendment is to prevent the destruction of valuable trout ponds by putting pipe, pickered or other voracious fish therein to eat up and destroy the trout. This is done only out of pure cruelty by revenge for the loss of a trout as is presented. Half a dozen pickered will destroy a trout pond worth \$1,000. The action, as it now reads, covers only the poisoning of trout.

2. The second object of the amendment is to make the offence one of malicious mischief under the Revised Statutes (2 R. S. 839, sec. 15, R. Edmonds' Stat. at Large, 711, sec. 16), and punishable in the same manner.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Siriped Bass, *Zocon lineatus*.
Wentfish.
SOUTHERN WATERS.
Trot (black bass).
Drum (two species).
Kingfish.
Striped Bass.
Shorthead.
Tatlofish.
Sea Bass.

FISH IN MARKET.—The only change noticeable in the fish markets from last week is the comparative scarcity of blue fish, which retails at twelve cents per pound, and the absence, in a modified form of snails, which now bring twenty-five cents per pound. The South is contributing the highly edible red-snapper and grouper. These come principally from Florida where they are caught in large numbers. Lobsters are also getting scarce, the greater portion of those in the market hailing from Boston. They bring ten cents per pound at present. Bass is quite plentiful and sells at the usual rate. Oysters are very abundant and some of them are exceeding large, many of those from the Chesapeake being monstrous in size.

—There is an unprecedented demand at present for Blue Point oysters, they being considered the finest variety in the market.

—We learn from Virginia that some few days ago about sixty large vessels were dredging the mouths of the Rappahannock and Piankatank rivers, and that all the canoes that could rig up a scrape or dredge were about going into the bottom. At the rate the oysters are being taken up by these means the oyster rocks will soon be naked. Most of the vessels are from other States.

—A large shark has been captured at Cape May. It measured eight feet in length, and on being opened it was found to contain a twelve pound mackerel, besides a number of small fish, all alive and apparently well.

—Mullet are very abundant at Biloxi, Mississippi, and other points. The flavor of the mullet when cooked is superior to the famous mackerel, making a much more delicate dish. We understand that the fishermen of Biloxi propose to catch and pickle them in the New Orleans and other markets.

LOUISIANA.—*Mandeville, November 3.*—Red fish are biting in Lake Pontchartrain now. Angling for these fish with rod, reel and cork from a boat at anchor is the finest sport in the world. It is equal to casting the fly for the far famed salmon. The red fish is full of pluck, and will take out the line a long distance, and when reeled up is off with the bait and again until exhausted. Nothing can surpass his beauty when just hauled out with his glistening copper coat set with spots of black, and when broiled, with butter sauce, few fish rival him in the delicacy and excellence of his flavor. Green trout (black bass) fishing in all our shores is at its zenith upon the appearance of frost, and red fish, sheepshead, croakers, and sea trout are taken with hook and line in large numbers in Lake Pontchartrain.

J. E. L.

—A few days since a school of black fish were driven ashore and captured at North Truro, which numbered 616. The next day they were sold by auction, bringing \$5,777.55. The purchasers expect to realize for the oil at least \$30,000. The captors numbered at least 300 men, women and children, and 100 boats, all sharing the sum realized from the sale. The fish were mostly large, weighing from two to four thousand pounds. There were three or four little kittens, weighing from 150 to 400 pounds. This is a welcome contribution from the sea to the pockets of the fishermen and others, for every one who took part in the driving in has a share. The number previously driven ashore this fall on the Truro coast was 1,165, making a total of 1,305, and yielding 27,900 gallons of oil.

—A correspondent of the St. John's *Telegraph*, writing from Pubnico, N. S., states that there are 136 French families, owning 63 schooners engaged in fishing on the Banks of Newfoundland, and all well to do, and it is estimated that two-thirds of the Gloucester fishing captains are natives of this part of Nova Scotia. Of the value of these fisheries we may form an idea, when, from the little settlement of Lockeport alone, there will be sent this season 70,000 quintals, valued at \$850,000. During the season just closed, 17,400 barrels of porgy oil have been manufactured in Boothbay, Me., or about 435,000 gallons, amounting to the handsome sum of \$157,700. The fish have also yielded a residuum of about 5,800 tons of "chum," valued at \$53,800, making a total of \$231,000. The value of the oil made in the adjoining town of Bristol is about \$500,000—making \$731,000 in the two towns. Quite a number of barrels of silver eels, embedded in wet seaweed, have been sent from Nantucket lately, for the Boston and New York markets. Bringing in the neighborhood of \$20 a barrel, they are quite a profitable article to export. So says the *Mirror*. Quite a business is now being done nights catching herring in Ipswich river and bay. Some dozen boats, with three men in each, take from eight to fourteen barrels nightly. Schooner S. C. Noyes, of Newburyport, is hauled in the mackerel fleet from that port this season, having landed 1240 barrels.

—A sturgeon, weighing 75 pounds, was caught in Lake Simcoe last week.

—The fish weirs in the vicinity of Yarmouth, Mass., have taken large quantities of bass during the past two weeks. They have been very successful this season.

TWIN LAKE TROUT FARM,
NEAR CANAN, CONN., November 12, 1871.

EDITOR FOREST AND STREAM:
While about it, I may as well say that the story of five barrels of bass being sent out of our Twiss is evidently a *canard*, and a very large one at that, as after diligent inquiry, no such streak of bad luck can be traced to its source or its author—at least by any one hereabout.

Yours, &c.,

E. S. PEASE.

The Colleges.

—The students of Tufts College had a splendid field day on the 4th instant, and enjoyed it exceedingly well. The most important event was the mile race. The contestants were F. B. Harrington, '77; W. W. Dodge, '78; J. H. Bradley, '78. Harrington led from the outset, and made the score in five minutes and thirty-eight seconds, which beats Harvard by three seconds. The principal pedestrian sport was the 100 yards race for silver vases. For this B. L. Dwinell, '76; E. C. Churchill, '77; H. L. Whitehead, '77; P. N. Noyes, '77; and J. Q. Frost, '76, were brought into competition. Dwinell finished first in 104, Gurner in 111 seconds, and these respectively received the two vases offered. Harvard's time was 11-3-10 seconds, and that made at Saratoga 104. The wheelbarrow race afforded a deal of sport, and the two burlesque trophies of victory were awarded to H. L. Whitehead and J. Q. Frost. No prizes had been offered for jumping, and the late mention made that it would be a part of the day's sport detracted somewhat from the merit of the exhibition. However, several entered at the last moment, and the biggest standing jump was made by Harrington—9 feet and 7 inches. Perry ran and jumped 17 feet 64 inches, which is a long way ahead of any of the colleges. H. L. Whitehead won the sack race, and the sport concluded with a three legged race.

CORNELL UNIVERSITY, ITHACA, November 24, 1871.

EDITOR FOREST AND STREAM:

Notwithstanding the poor position which our crew held at the finish at the regatta at Saratoga last July, the interest in athletic sports was never so manifest as at present. Perhaps defeat is necessary in order to teach people to be more careful and thorough in all future preparations. Whatever the reason, the fact remains that nearly every member of the University at present takes more interest in athletic sports than ever before.

Rowing, base ball, and foot ball each receive its share of attention, and that kind of attention which brings success in the end. We attempted a regatta on the 10th of October, but the wind seemed unwilling, and after having two boats swamped in the first race, four six-oared crews having started, and the others being disabled, or going to the assistance of the submerged crew, the regatta was declared postponed. A postponement has been made to be till next Spring. The class boat club have united into a single club, under the name of the Sprague Boat Club, thus giving us, in place of the old cambrus machinery, two clubs—the Tom Hughes and Sprague—with which to contend. Boating in the future at the University. It is believed that this will be much better than the old plan. It certainly cannot be confined exclusively to the sterner sex, for during the past year a crew of ladies, under the instruction of one of the professors, have made rowing their "specialty," and right well have they, through pleasant and stormy weather, performed their exercise. Well may they put to shame many of the club's crews, who fear to venture out if the weather is bad, or there are any indications of a storm. A week or two ago this crew took a little pull down the lake of twenty-two miles, and returned the same day, making the entire trip of forty-four miles in twelve hours. Item for Mr. Clark's "Sex in Education." In base ball the following games have been played: September 19th, '76 vs. '77, '77 winning by a score of 44 to 24; Sept. 24th, '77 vs. '78, '78 winning by 34 to 24. From these games the University nine was selected, and practice together, having their first game on Saturday, October 14th—Forest City, or Ithaca vs. University. Forest City winning; score, 20 to 10. October 17th—Hobart College club vs. University. Hobart winning; score, 22 to 15. October 31st—Syracuse University vs. Cornell University. Cornell winning in seven innings; score, 25 to 12. In all these games some excellent playing was noticed on both sides; but a great deal of practice is necessary to make our club what it should be. The material is good, all that is needed being practice.

In foot ball the following is the record: September 10th, in order to initiate the freshmen, the juniors played them a game, and as a matter of course beat them three straight goals. September 19th, '77 vs. '78. In this game '78, protesting by its playing with '76 to the week before, played a fine game, and by a score of 17 to 10, made the victory theirs. The two goals played yet the freshmen kept the ball from their goal in the last inning for an hour and ten minutes, being the longest inning ever played. I believe, at the University. September 25th the Buckeyes (Ohio) and Bark Peeters of Penn., played a close and well fought game, but the Ohio Buckeyes proved a little too much for the Bark Peeters, winning three out of five goals. October 10th, the Buckeyes of Ohio and Canada worked for the honor of their respective homes, Delaware winning four out of five goals. October 15th forty of the dwellers upon the hill descended into the valley and played the dozens thereof, also forty in number, but the players were so evenly matched that the game resulted in a tie—two and two. The best fought and played game of the season, however, was that on Saturday, October 21st, between '76 and '77, forty men on a side. It might appear from the result that it was all one-sided, since '76 won in three straight goals; time, 23, 35, and 45 minutes respectively; but the sides were very evenly matched, and both played well, except that '76 possessed the most skill in placing, distributing, and playing her men.

In athletics proper much has been done, and a day was appointed for the games, which place twice a year, but on account of the weather they were postponed till next Spring. There are at present twelve men in training, as a foundation for the University crew for next year, and with this start and the winter work in the gymnasium, it is hoped that a good crew may be turned out next year. There are also several single rowers, who have been practicing all the Fall, and who now present a very fine appearance on the water, and who can make very good time.

J.

AMHERST COLLEGE, November 7th, 1871.

EDITOR FOREST AND STREAM:

Though Amherst was not represented at Saratoga last July, the Fall regatta has shown that there is in this college some excellent boating material. The almost extinct interest in this department was again excited by an energetic few, prizes were offered by the townspeople, and class crews organized. As Amherst owns but two shells, it was arranged that the classes should row in pairs, the two successful crews to have a second trial. The prizes for the two crews were a set of six pairs of silver oars, and the winner of the second trial a set of six silver oars. The course selected upon the Connecticut was one and one half miles up, then a turn, and the same distance back, making three miles.

Saturday afternoon the college repaired to the river, the seniors with their white ribbon, the juniors, royal purple, the sophomores, red, and the freshmen, blue. The water was quite rough for the first race between the seniors and juniors, though not materially impeding the race. Both crews made a fine start, the juniors took the lead, and despite their poor steering, kept it through the race, gradually distancing their rivals. Their time was 18 minutes 54 seconds; that of the seniors 19 minutes 21 seconds. Mr. Scoville, the senior stroke, who has pulled twice at Spraguefield, is considered one of the best rowing men in college, but his crew could not beat him.

After some delay, came the race between the sophomores and freshmen, which resulted in a victory for the former. Their time was 18 minutes 47 seconds, and that of the freshmen 19 minutes 18 seconds. This superiority in time over the other crews was due to the better condition of the water. The freshmen were forced by their rivals into shallow water, where their oars stuck in the mud, though through some technicality

their claiming a foul was not entertained. As Wednesday drew near the excitement grew more intense, until the afternoon, when it was at fever heat. The same boat had been the juniors and sophomores, and each claimed it, but it gave it to the sophomores, who also had the choice of positions. The seniors meanwhile (for that's the way we do here in college) had done all in their power by coaching and encouragement to aid the sophomores, while the juniors had the sympathy of the freshmen, who appeared bedecked with junior purple. After very waiting, the crews started, down into the river, where a broken rudder, the wind compelled the junior crew to row back a mile to the boat-house for repairs; then another mile to the line. There is a moment of silence, and the voice of the Commodore is heard over the water, "Are you ready? Go!" and they are off. The second man of the juniors catches a crab, and for a moment the sophomores have the lead. Then follows a short pull with power to row, each struggling for the lead, which, at the moment, is the juniors. For twenty strokes to the minute—the juniors row a row. At the turn their bow oars slip from its place, and for an instant they cease rowing, then on again, with another spurt toward the finish, and amid ringing cheers the purple crosses the line in 18 minutes 6 seconds, the red following in 18 minutes 28 seconds.

The time made shows that the regatta was a success, and from the leading undeveloped, the college may hope to send a good crew to the next regatta.

The athletics, Saturday, Nov. 7th, were well attended, and proved successful, though the short time for preparation—only four days—was insufficient for the necessary preliminary practice. The contests with the successful competitors were as follows:

1. Standing Dash, 100 Yards—Won by H. S. Knight. Time, 10 sec.
2. Throwing ball a Distance—This was decided upon an average of three throws, and the prize was awarded to W. H. Williams, whose average was 3.9 feet 5.1 inches. The best throw was by D. M. Pratt—350 feet 9 inches.
3. Standing Long Jump, Running Long Jump, and Hop, Skip and Jump—The prize was awarded to C. S. Nash. Total distance, 47 feet 11 inches.
4. Three Mile Walking Race—Won by R. W. Patton, in 26 min. 50 sec.
5. Running High Jump—Won by L. Vinton, who jumped 4 ft. 6 in.
6. Sack Race, 100 Yards—Won by C. S. Sanders. Time, 36 seconds.
7. Three legged Race, 100 Yards—Won by W. R. Ely and H. S. Knight in 34 seconds.
8. Two Mile Running Race—Won by Dr. W. C. Morrell, in 11 minutes 51 seconds.
9. One-half Mile Running Race—Won by C. T. Barker, in 2 minutes 19 seconds.
10. Wrestling Match—This was by far the most interesting thing on the programme, and was won by F. C. Newman. LIBERAL.

PRINCETON, November 7th, 1871.

EDITOR FOREST AND STREAM:

The first attempt made by Princeton to have a regatta of her own was inaugurated this afternoon. Throughout the whole Fall, thus far, the candidates for the Freshmen and University crews have daily appeared in the canal, and every day have been rowing, but as yet no regatta has been visited as, did not deter them from rowing as usual. The rowing season, however, closed finally to-day with a large race between the '78 crew and the Sophomores, who contended so successfully in the Freshman race at Saratoga last July. The course, though not measured, was probably a little more than a mile and a quarter in length. After a rather exciting race, the Sophomores crossed the line a length and a half ahead of the Freshmen. The Sophomores were considerably out of practice, some of the men having rowed but very little, if at all, at this season. The Freshmen did exceedingly well, and if they fulfil what they promise, they will not be the last crew in the race next summer. They evinced admirable pluck and great strength in the race. Though they rowed rather easily and gracefully, they were not followed by a half a mile from the water. Their stroke seems very effective, and bids fair to equal that of the last year's Freshmen crew. The following are the men who rowed in the '78 crew to-day: Stevenson, stroke; Reid, No. 2; Van Lennex, No. 3; Karge, No. 4; Miller, 5; Hitchcock, bow; Butler, '76, coxswain. The Sophomores had all the members of their old crew, as well as H. Butler, '77, S. S. Crossman. The judges were Messrs T. Hall and J. W. Taylor, of last year's University crew.

After the above affair a scrub race occurred between Messrs. Nicoll, '77, and Captain Biddle, '75, of the University crew, and Messrs. Butler, '78, and Greenough, '75. The former two named rowed in a pair oared working boat, with coxswain, while the latter used a pair-oared shell. The result was a tie.

If present indications prove to be true, Princeton will be represented by an able crew, a member of the senior class, in the single scull race, as well as in the University and Freshman races next summer. The field games of foot ball of the season will be played here next Saturday, the 14th instant, between the Columbia College, New York, and Princeton twentys. A well contested and interesting game is expected.

QUINTUS.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other outdoor Clubs will kindly mail their contributions not later than Monday in each week.

—The Manhattan club has gone through the past season very creditably indeed, considering that they were defeated by their grounds and were only enabled to play from June to September. They defeated the Prospect Park and Staten Island clubs, and were defeated by the St. George and Prospect Park clubs, winning four and losing three of the seven games played by their first eleven. Of second eleven games they won four and lost two, the Staten Island club alone defeating them. Their first eleven taking the averages of the players as the test—as follows: Cannel, Gilbert, Hoberken, Hayward, McDougall, Greig, Errington, H. Tucker, Heywood, and Lonergan.

RESULT OF MATCHES, 1871.

Games played, 13; Won, 8; Lost, 5.

1st Eleven Matches.

Date.	Where played.	Opponents.	Result.
June 27.	Hoboken.	Staten Island.	Lost by 11 innings.
July 4.	Prospect Park.	Prospect Park Club.	Won by 88 runs.
July 23.	Staten Island.	Staten Island Club.	Won by 73 runs.
Aug. 5.	Hoboken.	St. George's Club.	Lost by 35 runs.
Aug. 20.	Hoboken.	Staten Island Club.	Won by 24 runs.
Aug. 25.	Hoboken.	Prospect Park Club.	Lost by 21 runs.
Sept. 12.	Staten Island.	Staten Island Club.	Won by 15 runs.

2d Eleven Matches.

Date.	Where played.	Opponents.	Result.
July 11.	Staten Island.	Staten Island Club.	Lost by 12 runs.
July 30.	Hoboken.	St. George's Club.	Won by 6 wickets.
Aug. 11.	Hoboken.	Staten Island Club.	Won by 73 runs.
Sept. 8.	Hoboken.	Pateron Club.	Won by 103 runs.
Oct. 1.	Staten Island.	Staten Island Club.	Won by 18 runs.
Oct. 7.	Hoboken.	St. George's Club.	Won by 68 runs.

ANOTHER TEST OF ENDURANCE.—When Weston failed to walk five hundred miles in six days the *FOREST AND STREAM* asserted that the feat was possible by those who had mental and physical stamina, and who looked more for an honorable reputation rather than for money. The person who now proposes to do so is Mr. John T. Judd, a well known professor of athletic training. Professor Judd, under the name of John Davidson, has already accomplished several wonderful feats of the kind, and he believes himself fully competent to accomplish this. He has, for instance, proven his endurance by walking 105

hours, or four days, four nights and nine hours, resting only twenty-eight minutes in every twenty-four hours; that is to say, in the whole time about two hours. This is probably the most remarkable exhibition of mere endurance that has ever been made. On several occasions he has walked 100 hours, with only a cessation of thirty-eight minutes in every twenty-four hours, and he for thirty minutes in every twelve hours carried an anvil weighing 115 pounds on his shoulders. As far as distance is concerned, he has made 100 miles in 19 hrs. 47 m., 32 s., walking time, and in doing this he carried the anvil over every every twelve hours for a distance of half a mile, which he made in six minutes. These facts demonstrate that Judd may possibly succeed in accomplishing the feat in which Weston and so many others failed. The effort will be commenced at the Third Avenue Rink the first or second Monday of December, and instead of commencing at midnight, as Weston has done, he will begin early in the morning when fresh from his couch. The professor, if successful, will have accomplished a wonderful feat, and will not be forgotten by gentlemen interested in physical prowess and endurance.

—A game of quoits was played a few days since in the town of Middleton, near Madison, Wisconsin, between John Brown, of Madison, the champion quoit player of the "Dane county Caledonian Club," and John Flick, of Middleton, for \$10 a side, twenty-five being the game. The game was won by John Brown. Score—Brown, 22; Flick, 14.

—Edward Mullen won the championship walking match from New York to Philadelphia, coming in two minutes ahead of W. E. Harding. Time—23 hours and 55 minutes. They were met in Chestnut street by a band of music, and escorted by about 10,000 persons to the Grand Central Theatre. The pedestrians left New York at 12:15 P. M., on Tuesday.

—On November 3d Riverdale was the scene of a lively contest at base ball between the Gentlemen and Boys, the latter winning by the score of 23 to 26.

—The Troy and Resolute clubs, of Fall River, very creditably to themselves, had a difference and played a match together to decide the disputed game on October 31st, the result being the signal success of the Resolutes by a score of 23 to 16.

—The Reliance club of Brooklyn defeated the Chelseas in their third game together on November 5th by a score of 10 to 6, thereby winning the local championship pennant for 1874.

—The Nassaus whipped the Staten Islanders November 7th, by 13 to 11, in Brooklyn.

—On November 6th the Directors of the Boston Club gave a complimentary dinner to their players, on which occasion a very festive time was enjoyed, at which nearly a hundred people sat down, including several of the first merchants of the city, members of the press, &c.

—On November 8 the Nassaus were defeated at Prospect Park by the Concordes, the score being 11 to 9.

—The Bostons and King Phillips played at Rockland, Mass., November 5th, the Red Stockings defeating the amateurs by 16 to 6.

—On November 3 the Staten Island men had a close and exciting contest with the Reliance of Brooklyn, the result being the success of the Island team by 4 to 1. The Reliance won the first game by 10 to 5.

Billiards.

—The National Billiard Congress for 1874, for the championship of the United States, at the three-ball carom game, 300 points up, each with two and three-eighth balls, was inaugurated on Wednesday evening, 4th instant, at Tuxedo Hall, with Daniel E. Garrit, Esq., as General Manager, Neil Bryant, Esq., as referee, and Mr. Knight as marker. The following players composed the contestants for the honors:—A. P. Rudolph, Maurice Daly, Joseph Dion, Francois Ubassy, Cyrille Dion, Maurice Vignaux, Albert Garnier, Edward Daniels, George F. Slosson. The Hall was arranged in a very perfect manner, so that all of the spectators could overlook the game, and see every shot made distinctly. The games were played on a five by ten table, manufactured by W. H. Griffith and fitted with Delaney wire cushions. The table was gotten up in the best style of the art, and was a credit to the firm. The prizes—the emblem and \$2,500 cash—divided into different prizes, were presented by Matthew Delaney, Esq. The Hall opened with a numerous and respectable audience, which included many of the fair sex, who occupied a prominent position on the platform. The game opened with the Brothers Dion. Joseph Dion took the lead, playing with his usual energy and nerve. Cyrille did not play with his usual good fortune. Joseph Dion ran out in his 12th inning, his highest score being 106; his average, which was 25, was unusual. The second game was between Albert Garnier and A. P. Rudolph. The latter annoyed the audience for some time by his refusal to play. After being adjusted, the game began. Both men played well, the result was the defeat of Rudolph, who scored 186 to Garnier's 300, which was not distasteful to the audience. The second day opened at 2 o'clock in the afternoon, with Joseph Dion and Daniels of Boston. Dion won the game in the 26th inning. His best runs were 30, 42, 65 and 76. Daniels, 14, 20 and 43. The game closed with a score for Dion of 300 to Daniels' 117. Average—Dion, 11 7/13; Daniels, 4 2/25. The next game was between Maurice Daly and Slosson. Daly ran out in his 14th inning. Highest runs—27, 25, 45, 61, and 96; Slosson, 15, 18 and 19. Daly's average—21 3/7; Slosson, 5 11/13. The evening session proved by the large attendance the interest that was felt by all lovers of the game. It opened with Garnier and Daniels. The latter played well, but was no match for his opponent. Garnier's highest runs, 24, 25, 30, 73; average, 9 3/8. Daniels' highest runs, 22, 28, 40; average, 5 11/32. Next in order was the game between the new star, Vignaux, and Ubassy. Vignaux is very easy and graceful in his manner, and is very brilliant in his shots around the table; but in this tournament he will find foes who will contest his advance for the championship inch by inch. Ubassy played with excellent judgment and skill, but Vignaux proved too strong for him in this game, he having made 300 points to Ubassy's 223. Vignaux's highest runs were, 30, 35, 36, 42, 63; average, 14 2/7.

Ubassy's highest runs, 26, 44, 88; average, 11 1/20. On the third day the game commenced at the usual hour in the afternoon, opening with C. Dion and Rudolph. Dion played with marked effect and scored rapidly—ending the game in 22 runs. Rudolph made a mark for himself in disporting a shot that did not count, and caused an unpleasant feeling towards him by the audience. Dion's highest run, 73; average, 14 2/7. Rudolph scored but 117 points in this game. The next game was between Vignaux and Daniels. The latter in this game made some very difficult shots, which the audience appreciated. He made but 177 points when Vignaux closed the game, but did not play as strong as usual. His highest run was 93; average, 12 2/3. The evening game opened with a well filled house, and a representative one. The contestants were, J. Dion and Slosson, who made excellent efforts to defeat Dion, rolling up a well fought 54; but when Dion closed the game his count was 183. Dion made the largest run, 111, that has been made thus far in the tournament. Dion's highest run, 111; average, 15. Slosson's highest run, 54; average, 9 3/20. The next in order was between Daly and Vignaux, two worthy knights to be tilted against each other. Both made many superior shots, but failed in counting several times, which a very tyro might have made. The game was won by Vignaux after a very exciting contest, in which the audience manifested intense interest. Vignaux's highest runs, 41, 36; Daly's highest runs, 53, 60.

The fourth day, Ubassy and Daniels opened play, the former winning by 300 to 104. His average was 12—13, and best run, 104, obtained by some beautiful caroms and careful "nursing." Daniels' highest run was 28. The next game proved noteworthy, from the fact of its being marked by the highest run of the tourney. The contestants were Vignaux and Slosson, and despite the uphill work, the Frenchman gave the Chicago champion to do, Slosson rallied with such spirit as to give Vignaux quite a shake up. The score at the close of the 6th innings, stood at 174 to 12 only in favor of Vignaux, and yet he won by 300 to 275 only, Slosson making a very pretty rally run of 83. The best average was but a little over 11. At night Joe Dion defeated Daly by 300 to 260, a beautiful run of 150 being the feature of the Canadian's play, while Daly's best run was 68. The average did not reach 12, despite the large runs. The last game of the first week's play was the contest between the two French experts, Ubassy and Rudolph, who neither specially distinguished themselves, the best average not reaching 8. Rudolph won after a lengthy contest by 300 to 296, Ubassy tripping up on a run of 24, when he had the game almost in his hands.

On Monday afternoon—the fifth day—three games were played, Cyrille Dion defeating Daniels by 300 to 128. The average was small, the winner's game being 7 3/4, and the best run 58. Then came the defeat of Rudolph by young Slosson, the latter obtaining a winning lead in the game by a beautiful run of 83, Rudolph's best run not exceeding 49. Slosson averaged 9 and over in this game. The game of the afternoon was between Ubassy and Garnier, and the game went by default as it were, for Ubassy, when Garnier had scored 273 and had but 27 points to get to win, he also having the balls in excellent position for a long run, missed the referee's decision, and actually spread the balls over the table with the butt of his cue. One result of this ungentlemanly action was the refusal of Mr. Bryant to act further as referee, and the election of Mr. Isadore Gayrand in his place, Ubassy necessarily forfeiting the game to Garnier by the score of 273 to 241. Garnier's average was 10 20.

In the evening two exciting games took place, Daly playing Rudolph under disadvantageous circumstances, inasmuch as the American was suffering from a boil under his arm; still he managed to defeat the Frenchman after an exciting contest, in which Rudolph held the advantage up to the 26th innings, when Daly by a brilliant rally scored double figures in three innings, and finished with a score of 300 to 271. His average was 10 20, and his two best runs 56 and 51, Rudolph's best being 74.

The last game on Monday was between Garnier and Cyrille Dion, the former having an easy task in winning by 300 to 133, though Dion led off promisingly with 23. Garnier's runs of 76, 59 and 68 were rapidly scored. His average was 15. Dion's best run was 39. The appended score of the tourney up to November 9th, inclusive, gives a concise view of the position, the figures showing the won games, the cyphers the defeats, and the . . . the games yet to be played:

Players.	Vignaux	Garnier	J. Dion	Daly	C. Dion	Ubassy	Slosson	Rudolph	Daniels	Games Won.	Games Played	To Play.

Chess.

THE CHESS SEASON OF 1874-75.—The chess season in the metropolis is now in full operation, and things promise to be more than ordinarily lively and interesting, inasmuch as two chess tournaments are now in progress—one at the Cafe Internationale, 294 Bowery, in which over thirty contestants take part, and one at the Brooklyn Chess Club, in which there are nearly twenty players, the former being open to all comers, and the latter to all players residents of Brooklyn. Besides the two chess resorts above named, there is the Knickerbocker Cottage, at 467 Sixth avenue; the Cafe Cosmopolitan, 111 Second avenue; the Turner Hall, 66 and 68 East Fourth street, and the chess room corner of Fulton and Nassau streets, which has recently been re-opened. In Jersey city, too, the club of that suburb have rooms at 81 Montgomery street. In Brooklyn, besides the club room in the Mercantile Library building, there are chess tables, free of access to all, at the rooms of the Christian Union, in Fulton avenue, opposite Elm Place. It will be seen, therefore, that ample facilities for practicing the noble game are presented in and around the metropolis this season.

We have in type an interesting score of a closely contested game recently played between Mr. Perrin and Dr. Barnett, at the Brooklyn chess rooms.

—The handicap chess tournament, open to all comers, and the first which has been held in this city since the one of 1869 is attracting considerable attention among New York chess players. The tournament is being held at the Cafe Internationale, and at its conclusion five prizes will be distributed. Before this happens upwards of five hundred games will have been played and about four weeks more will have elapsed. The most notable feature thus far is the defeat of Mr. Delmar, in two well contested games, by Mr. Alborini, a French army officer. There are thirty-four entries for the tournament, but it is not probable that all will play. The first-class players are Messrs. Delmar, Barnett and Mason; second class, Messrs. Dill, Barnes, Perrin, McCutcheon, B. Lisner and Alborini; third class, Messrs. Sanger, J. Lisner, Frankel, W. Townsend, Schultz, Goldman, Stanberry, Peck, Findlay, Murray, O'Neill, Pryor; fourth class, Messrs. Garrahan, Rones, Ferguson, Koch, Ellwell, Matheson, Linsbeck and Whitaker, fifth class, Messrs. Spear, Townsend and Edwards. The foregoing thirty-four players have been handicapped by Mr. G. H. Mackenzie, the champion chess player of the United States, and the tournament is governed by the laws laid down in Staunton's chess praxis. The following is the method adopted by Mr. Mackenzie in the handicapping of the players:—The players in the first class will give to the second class the odds of the drawn game; to the third class, the odds of pawn and two moves; to the fourth class, the odds of the knight, and to the fifth class the odds of the rook. The players in the second class will give pawn and move to the third class, pawn and two moves to the fourth class, and knight to the fifth class. The players in the third class will give pawn and move to the fourth class, and pawn and two moves to the fifth class. The players in the fourth class will give pawn and move to the fifth class.

THE BROOKLYN CLUB TOURNEY.—The contests in the tournament now in progress at the chess parlor of this club up to date, present the appended record of games won and lost.

Players.	Games Won.	Games Lost.	To Play.
Dr. Barnett	2	2	0
Delmar	2	2	0
Perrin	2	1	1
Mason	2	1	1
Seaver	2	1	1
Ellwell	2	0	3

THE CAFE COSMOPOLITAN TOURNEY.—Twenty-two of the sixty odd members of the "Down Town Chess Club" of New York, have entered the lists in the chess tourney of the club which was commenced over Cafe Cosmopolitan, No. 14 Second Avenue, on November 9th. The leading prize is a beautiful chess table, presented to the club by Mr. H. H. Hascock.

The rules of the game will be those observed by the last great chess tournament at the Vienna Exposition in 1873, and each competitor will have to play three games with each of the other twenty-one competitors.

The score of won games to date is as follows: Lipman, 2; Totter, 2; Rosenbaum, 2; Federor, 1; Schrader, 1; Gueppe, 1; Spencer, 1; Rosenblatt, 1.

THE CAFE INTERNATIONAL TOURNEY.—The thirty odd contestants in the tournament in progress at the Cafe Internationale, 294 Bowery, are rapidly running up the scores of victories and defeats in the series of contests, and thus far Messrs. Mason, Delmar, Perrin, and Dr. Barnett take the lead.

The score of games won and lost to date by those who are credited with more victories than defeats, are as follows:

Players.	Games Won.	Games Lost.
Mason	25	5
Delmar	18	5
Perrin	18	5
Dell	18	7
Murray	17	9
Peck	17	9
Townsend	16	11
Alborini	16	6
McCutcheon	16	8
Ellwell	16	11
Linsbeck	16	11
Barnett	16	2
Sanger	10	9

New Publications.

HANDBOOK ON THE TREATMENT OF THE HORSE IN THE STABLE AND ON THE ROAD, By Charles Wharton, J. B. Lippincott & Co., Philadelphia, Publishers.

This is a very convenient volume for all interested in the management of horses. The information imparted is practical and necessary to all who would know the diseases of the equine race, and become graceful and expert riders. The style is free and friendly; and by this conversational method the information is imparted in a pleasing, non-technical manner, so that the child even can readily understand it. This is a work that can be thoroughly and accurately read in the care of horses, or those who wish to become graceful equestrians.

FICIAL EYES,

19 N. William Street New York

VIENNA, 1873

For Merit.

Vanity Fair.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.:

Since a friend of mine was, with a transport
of Indian Shells, two pounds of "Castle Fair," which I declare
to be the best "Plaster" I ever used. I have very good
evidence in Vienna—London and Glasgow, and "Castle Fair" is
the King of all, by its aromatic flavor and the right sort of
strength. My friend in New York got as specimens of "Castle Fair" in
California, by that reason I apply immediately to you, begging
you to send me the articles and the best of the "Castle Fair" I
buy; and send the next summer to Germany. If there is
any more of the "Castle Fair" I will be glad to buy it.

Dr. J. H. HARRIS.

Professor of Anatomy in the University of Vienna

It is manufactured from the best

Virginia and North Carolina Leaf.

It is particularly adapted to Moore-
schau and Cigarette smoking—

does not bite or make the tongue
sore—is therefore unlike any other
tobacco in these respects.

W

Sportsmen's Goods.

SCHUYLER, HARTLEY & GRAHAM,
19 Mulden Lane, 20 & 21 John street, N. Y.
BREECH LOADING GUNS
A SPECIALTY.

We would call the attention of the public to our
Breech-Loading Shot Guns,
Manufactured by the following celebrated makers:
Messrs. W. & C. SCOTT & SONS (winners at the In-
ternational Gun Trial of 1878), J. W. WELBY & SONS,
W. W. GREENE, WESTLEY RICHARDS, J. HOL-
LIS & SONS, and other makers.

A full line of fine
PISTOLS AND RIFLES CONSTANTLY ON HAND.
DIXONS & HAWKLEY'S SHOOTING TACKLE.
To insure good shooting from Breech-loading Guns,
we would recommend the use of the

STURTEVANT BRASS SHOT SHELLS,
manufactured by the Union Metallic Cartridge Co.,
Bridgeport, Conn. These shells are the cheapest and
best in the market, can be easily re-capped with ordi-
nary caps, without the use of the implements neces-
sary in priming all other styles of shells.
BUSSEY'S PATENT GYRO PIGEON AND TRAP,
WITH CASE AND 100 BULBS.

Black's Patent Cartridge Vest.
This Vest affords
the best ar-
rangement for car-
tridges. The weight is
evenly distrib-
uted, so that it is
scarcely felt. Car-
tridges are carried in
this vest, which
when buttoned in
brass cases when
carrying loads up
the weight on the
chest forces the vest
back, so that the
chest is free and
forward, when
shooting is in
order. In ordering
send measurement
around the chest.
Price \$7.50.

AGENTS FOR THE
Union Metallic Cartridge Com-
pany's Ammunition,
WARRANTED THE BEST IN THE MARKET.
SEND FOR CIRCULAR.

Martin Pat. Imp. Safety Bit,
Patented April 6th, 1874.

The Martin bit is designed to be the easiest bit
made for a tender-mouthed horse, warranted to pro-
vide any horse from running away, pulling, kicking,
bolting, tossing, rolling or driving on any rail or
being driven from three to ten times. If on trial they
do not prove satisfactory, money in all cases will be
refunded.
Price list, C. O. D.—Coach Bits, first-class, nickel
plated, \$3.00; Road Bits, first-class, nickel plated, \$5.00;
Second-class, C. plated, \$7.00; Road Bits,
second-class, C. plated, \$5.00. Liberal discount to dealers.
N. Y. B.—Send within of horse's mouth.

ALL KINDS OF
Fishing Tackle
Made and repaired with the utmost despatch.
ALSO, CONSTANTLY ON HAND
THE BEST SELECTION OF TROUT AND SAL-
MON RODS, REELS, LINES AND FLIES.
Medals awarded at the World's Fair and American
Institute for our superior Artificial Flies.

Trout Business for Sale.
One of the largest Establishments in the country.

WELL STOCKED WITH TROUT,
Having a Dwelling for Superintendent,
OFFICE AND READING ROOM,
SHOW AND STOCK TANKS, WORK
SHOP, ICE HOUSE, HATCHING HOUSE,
Five Small Ponds and Three Large Ponds of an area
of over nine acres.
The property consists of over fifty acres. The ponds
are fed by about 100 Live Springs,
rising on the premises, some of which register 45 and
48°. The volume of two cubic feet of water passes
over the lower dam, with a fall of fourteen feet, con-
tinuously, and hardly varies, and never freezes, mak-
ing a good water power that may be utilized.

On the farm is a
Favorite Pic Nic Grove,
with dancing platform, &c.
The location is about 800 feet from depot, express
and telegraph offices, and
ABOUT ELEVEN HOURS FROM NEW YORK.
For further particulars address the Editor, or
J. W. WELBY & SONS, Forest and Stream Office.

WINTER.

HAIL! monarch of the leafless crown,
Hare seen save with a gloomy frown,
Willst thou for sceptre, robes of snow,
Thy throne, the stream's arrested flow;
Stern tyrant! whom the hastening sun
Dost loathe to serve, by vapors dun
Begirt, a melancholy train,
O'er nature holding saddest reign.
Lo! of thy rigor birds make plaint,
And all things 'neath thy iced frown;
Nor cheer'd are they by merriment;
In answer by the north wind told,
The envy of thy grievous sway,
When thou wouldst drive all hope away
From nature, yearning to restore
To earth the bliss it knew before,
When Summer ruled with empire mild,
And Autumn, still a ruddy child,
Lay cradled 'neath the greenery
Of whispering grove and laden tree.
The brook that prattled to the air
Of golden harvests, scenes as fair
As poet wraps in fancy's maze,
Could scarce enshrine in mortal lays,
Now rude and angry, hurls along
The hearers of his Summer song—
The branch and leaf that once repaid
His music with their tender shade—
And catching zephyr's honeyed tone,
To his sweet tuning, joined their own.
O bound, perchance, in dance slow,
Full faint he wends, and moaning low,
Fit dirge he makes o'er freedom lost,
In joy of which he wanton tossed
The falling blossom on his wave,
The water-nymphs to catch and save.
Now strip of his green bravery,
In piteous plight the weary tree
Is blown upon by mocking winds,
Whom changed now his sighing fans
From those gay playmates welcomed erst
In glees by his young leaves when first
They wove their merry breeze-tanget dance,
And broke their feathered lodger's trance,
What time the eastern wave did gleam
'Neath fore-feet of the golden team.
Nor busy now with tender care,
For coming brood the lilies prepare
Their airy cradle, rocked unseen
By Dryad hands behind the screen
Of leafy curtains, where no eye
Of mischief curious may pry.
The thrush that erst with wailing voice
Made all the tumbled brake rejoice
In echoes of his mellowed strain,
To mope in silence now is fain;
Nor ever pipes from straining throat
The varied wonders of his note.
So bleak the scene, so cold the day,
Too harsh, O Winter, is thy sway!

For Forest and Stream.

My Fishing for Salmon in California.

SOME months since I read in your most excellent paper a splendidly written article on salmon fishing at Humboldt Bay, by a gentleman of the army, whom I think I met here about those days, being myself, at the time, "one of the boys in blue." Had I known that he was a fisherman, I should have cultivated a closer intimacy, on the ground of a "fellow feeling," for fishing is one of my weaknesses. I might add shooting as another, and, my greatest of all, yachting. They are all of a kidney, and hinge together so harmoniously that either afford that enjoyment that only a true sportsman can fully appreciate. I am sorry for those who have no liking for either. As the song runneth—

Some people we in this world discover,
Far too frigid for land or for lover.

To think that there are many who neither shoot, fish, or sail! Such, certainly, don't get their share of the enjoyment this world affords, and have just cause to quarrel with fate that soaped them. They have as good grounds for complaint as the chap who met with little else but dis-

Selected.

appointment and such general wretchedness as to make life a burthen, and sued the old man for damages for having begat him.

California has ever been the paradise of the sportsman, and although by no means equal to what it was in earlier days, consequent upon an increased population and the march of improvement, it still affords a most faithful field for him. I am at the present writing sitting at my desk in a brick building of vast proportions, built upon ground that in 1855 was a favorite spot for English snipe. I have sunk to my boot tops in the marsh that was then a waste, but which to-day would sell at \$300 per front foot. The one hundred vara lot on which the building stands was then worth perhaps \$200—to-day it would sell for two hundred thousand. It is no place for a snipe now, certainly. We must go farther away to get good shooting; but still, I can reach ground in two hours that gives a good day's sport—quail, and perhaps a deer. Wild fowl are still abundant within an hour's sail, and many a mallard and canvass back I have bagged lately within five miles of town.

Speaking of shooting, let me quote here a letter received by an acquaintance from a friend of his who had borrowed his rifle, going to prove that a man may be enthusiastic on the question of guns and shooting, even if he can't spell. My friend sent for his rifle, which came with the letter aforesaid, as follows:—

"DEAR GEORGE:—I received your letter wishing me to send down our humble friend, the Rifle. George, I must tell you, for fear you won't find it out, as I believe you are better to bid cars and Rale Rodes than you are to hunt or shoot. I am in doubt of your going a hunt at all. Now about the Gun—it is one of the finest peases I ever fired. I can kill 6 grouse out of 7, 100 yards of hand, sarten. While I was out on my last hunt I killed 63 grouse, and all over 30 yards. Had or no Burde. I astonished the Big Stumblers to see me slute. I have taken nearly a hnd of Senerels from 50 to 75 yards, and a Black Burde can't get too his for me with that Gun. Don't you parte with this Gun, and send it bac, for I want too take a trips in the mountings, and I can't stir a fuch without that ar Gun, george. No moor from yours truly.
"P. S.—Send the gun back, george, sarten shure."

This is certainly a good account of the gun, and the party seems to shoot better than he can spell.

It may not be generally known that the salmon fishing on our coast is magnificent, although it was for years generally conceded that they would not bite at the hook, and the belief passed to a proverb. My official duties so absorbed my time that it was not until about six years ago that I was able to accept the repeated invitation of a friend, owning large lumber mills on the coast above, to accompany him on his usual October trip to his property. We drove our own teams, and a most delightful drive it was along the coast, and over the coast range of mountains, occupying a day and a half. As we approached the mills, our road for a mile lay along the banks of the river. I observed some fish, breaking with the unmistakable swirl of the trout family.

I said, "Hello, Harry, do you see that; are they large trout?"

He replied, "No; they are salmon."

"The deuce you say; you never told me that you had salmon in the river, and here I am unprepared, with no tackle but my little eight ounce rod and light trout gear."
"Well, you don't want any other, for you can't catch these fellows; they won't bite."

"Won't bite; did you ever try them?"

"Oh, yes, I have, and never got a raise."

"Did you try a fly?"

"No."

"Well, old boy, I will show you that they will bite before you are an hour older."

"You will fool away your time on those fellows. You can catch plenty of half pound trout, but nary salmon."

"A box of cigars that I land a salmon within an hour."

"Done. Firstly, they won't bite, and secondly, what would you do with one of those chaps with your tackle?"

"You shall see."

I made a hasty lunch, for I was eager for the fray, and I soon had my rod put together, and my slight hair and silk line on the reel, and we started for the river, only a hundred feet distant. A skiff was moored at a log, into

which I stepped, and giving it a shove was soon in the middle of the river, which, at this point was tide water, and perhaps a quarter of a mile from its mouth, where it emptied into the ocean. Selecting the largest fly I had, I bent it on, and planting myself firmly in the frail skiff prepared to cast. My heart beat violently, for although an old stager at fishing, I felt that I had work before me. My friend stood on a pile of lumber, smoking his cigar complacently, and several idlers gathered around, with suppressed chuckles, to see the city chap "fool away his time" in trying to catch a salmon with a hook, with a feather on it. They had lived there years, and never knew of one being taken with anything but a seine. Overhauling a good length of line, I made a cast. The fly lit lightly on the water, and danced along the surface, with no results. My friend smiled, and the stauding committee guffawed. Paying no attention, I made a second cast at a good distance. My fly had scarcely touched the water before there was a flash, a swirl, and, as I threw up the point of my rod, I felt a weight as if I had hooked a saw log; but it was only for an instant; the next my little rod made an obeisance that brought its tip to the water, and my little reel fairly hummed as the line sped out at a fearful rate, and up into the air six feet sprang the silver sided and astonished fish! Away he dashed up the river, my line hissing as it cut the water. I vainly attempted to turn him, but by bearing steadily and as hard as I dare with such light tackle, I finally got his head around. When nearly so, he made a shoot for the opposite bank, which was steep and rocky. Bang! he went, head first into the junk, which seemed to stun him a little; but he soon recovered, and then down stream he went, taking all the line I had been able to reel in. All this time the skeptics on the shore were shouting:—"There he goes; hold onto him!" I felt that I required all the skill and coolness that was in me. For one hour and ten minutes did the fight last; but at the end of that time I had him alongside the skiff on his side, with just life enough apparently to wag his tail feebly. Watching my chance, I reached down, slid my fingers into his gills, and raised him, and held up as handsome a fifteen pound salmon as ever mistook a Conroy's imitation for a genuine insect. I paddled ashore and laid him on the bank, with the hook still in his mouth, while my audience gathered around and expressed their astonishment as they examined the thread of a line and single gut snell, my friend, as much astonished as any of them, exclaiming, "Dog my cats, if I would have believed my own father if he had told me you caught that fish with this tackle, if I had not seen it myself!"

During the two days that I remained there I landed thirty-five more of the same sort, and had I been provided with strong tackle the number would have been a hundred. Of course I lost many, for my line got badly chafed with such severe work, and, shall I confess it, I dodged the big ones, jerking my fly away when I saw that the chap coming for my fly was too much for me. This was, I believe, the first time a salmon had ever been caught on this coast with a fly, and I think with a hook. I have taken many a one since, and now everybody fishes with rod and reel, generally using, however, the feather spoon and large, strong hooks. Conroy sent me out a ten foot bamboo three joint rod, a big reel, a Cuttyhunk bass line, and a dozen or two large flies, with double gut snells, and the way I walk the twenty-five pounders with that tackle is a caution. Last Fall I was up there with this rig, and a large, strong landing net, and caught them until my arms ached. I stripped down a thousand pounds, besides as many as I could squeeze into my wagon. My friend, who is up at his mills, writes me, "The river is full of salmon; come up! Alas! I can't go. Inevitable business chains me to this spot."

Why don't some of your gentlemen of elegant leisure come out and enjoy such fishing as they never had, and never will have elsewhere? They should be here now. The river I speak of—the Navara—is one of many that empty into the Pacific along the coast, all teeming with salmon. The distance is about a hundred miles—fifty by rail, and the bal

ance by stage or team. The ride is charming, good quail and pigeon shooting all along the road, and passable accommodations. At the Navara there is an excellent country hotel—neat, clean, and charges moderate, (\$2 per day). Ten miles above Navara comes Big River, equally good fishing; ten miles further the Noyo, and so on. The salmon run in the rivers after the first rain, and remain until the heavy rains raise the streams, and that ends the sport; but for a period of say two months it is the finest salmon fishing in the world. During the Summer months the heavy waters of the Coast Range at St. Cloud rivers afford splendid salmon and river trout fishing, easily accessible by rail and stage in eighteen hours. The scenery beautiful, climate delicious, a paradise for the sportsman. Mr. Stone, the United States Fish Commissioner, makes his headquarters at this point for collecting the spawn which he ships East. A visit to his camp is very interesting. At the Soda Springs Hotel, kept by Fry, an enthusiastic sportsman, the accommodations are all that could be desired, and charges very moderate. If you want to camp out, an Indian will pack your blankets, and you can spread yourself under a big tree, with no fear of a ducking from a passing shower. In my next I will tell you more of our sports, our fish, and our game. It is jolly to think of, and better, still, to enjoy.

San Francisco, California, Nov. 3d, 1874.

For Forest and Stream.

TROUTING UNDER DIFFICULTIES.

A TRUE EXPERIENCE.

I ALWAYS read FOREST AND STREAM with interest, especially the adventures of trout fishermen, and having been myself a disciple of West for the past fifteen years, and during that time met with various adventures, I may be pardoned if I relate my experience in "trespassing" on the meadow of a well-to-do farmer. The farmer referred to, for many years lived in the town of W—, County of York, State of Maine. From a neighboring mill pond flows a good-sized brook, for years past abounding in the "speckled beauties." The first quarter of a mile was thoroughly enough alternate with an meadow. After fishing this distance the sportsman comes to a fence, beyond which lies a broad, open meadow of another quarter of a mile in length, the farmer's house standing on elevated ground some thirty rods from the brook, and overlooking the entire meadow below. Jumping the fence the eye of the trouterman would at once rest upon a board sign posted near the brook which was the following: "Not to be trespassed on this meadow is forbidden." My first visit to this brook was some ten years since. I had heard of the brook, had seen baskets and "strings" of beautiful trout said to have been caught above and below, but had never heard of anyone being allowed to fish through the old man's meadow. The universal story was that "Old C—", as he was familiarly known among fishermen, and was at home to-day and drove us up to the pastures where we should "read down" his signs. Many were the devices of neighborhood sportsmen to fish that meadow. The temptation was very strong, increased fourfold by the good luck attending us above and below, as well as at the immediate entrance to the meadow, and what fishermen could resist the temptation to have a quarter of a mile of such fishing? The old farmer would sometimes be seen in our city, some eighteen miles from home, and he would be on their way to the brook, hoping to be able to fish it during his absence, but he invariably left his son at home to keep guard!

As I said before, it was about ten years ago that I had my first experience on the forbidden ground. With three others I drove to the town of W—, where we divided two and two, one party commencing at the mill pond and fishing down stream, and the other two parties commencing at the brook and fishing up. It was mutually understood that only one should enter the meadow at a time and each should appear entirely ignorant of the other's presence, in order that if we could not fish the enclosure, we might gain some satisfaction in seeing the old gentleman travel the length and breadth of his meadow to drive us out. I happened to be one of the party who fished from the brook down, (I always prefer fishing a trout brook down instead of up). My companion reached the meadow first and entered the forbidden territory. I remained concealed in the bushes just above, within hearing and seeing distance of what was going on. He had scarcely baited his hook and thrown it into the stream when a big, burly man came at full speed across the field from the house, and asked if he did not observe the sign forbidding fishing in his "meadow." At the same instant my friend pulled out a trout of evitable size and placed it in his basket. Words did not seem to have the desired effect, so the old gentleman commenced throwing sticks and stones into the brook, entangling the line and of course putting a sudden stop to any farther fishing. This soon convinced my friend that he had better retire, which he did, and related his experience to me. The poor old man had scarcely related his house when we saw one of our party enter the meadow from below, and immediately the farmer was seen to rush for the opposite corner of his field to go through similar proceedings, which, of course, resulted in his being a second time the victor. It was now my turn, and with inconceivable boldness I left my hiding place and in a moment were landing a good-sized trout, having been particular to have my hook baited and in readiness in order to make the most of my allotted time, which I felt must be short. I had scarcely placed the trout in my basket when I discovered the same burly form making his way toward me, with vengeance stamped upon his countenance.

"I allow no fishing here, sir; you are the third one I have driven out to-day."

"Ah! Is that so? Why don't you allow it?"

"Because you tread down my grass."

"But if I will pay for all the grass I damage, can I not fish?"

"No; you can't pay for it, and you cannot fish."

"But will you wade the brook and not touch your grass at all; now can't I fish?"

"No; I won't have any fishing here, anyway; I do not allow even my own boy to fish here, neither do I fish myself."

"Then you are not passionately fond of trout, as some of us are?"

"No! I would sooner go up to the mill pond and catch pickerel."

"There is no accounting for tastes," said I, and as I slowly retraced my steps to the woods above, I thought to myself that the man he must be, not to fish himself or allow his own boy to fish, and to refuse fishermen who respect his own judgment of the enviable feelings I had of that meadow brook, abounding, as it naturally must, with noble trout that had never been even pricked with a hook or frightened by the approach of a fisherman. What a feast was there, if one could only get at it! While meditating over the situation, I observed the fourth man put in an appearance at the opposite side of the meadow, and he, too, was in similar manner dealt with. We were all weary of our teams, and with half-filled baskets, sat down by the roadside near his house and lunched. Presently the old man came along and took notes of each and every one of us, asking our names (of course we gave our right names), and endeavoring to fix our countenances so as to remember them a second time. One of the party on giving his name as "James Jones, of Portland," was rather taken aback by hearing the farmer reply: "Now, Mr. E—, what is the use for you to lie; me and my darter traded high forty dollars worth at your store in B— only last week," showing that fictitious names would not work as well near home as they might elsewhere.

My second adventure with this farmer was the following year. In company with an elderly gentleman, who has wonderfully prolonged his life by his love of trout-fishing, we were nearly three score years and ten, and with whom I have the present season driven twice from ten to fifteen miles trouting, and tramped for miles in the broiling sun, a man who is to-day as sprightly and youthful as he was at twenty; in company with this gentleman I went to the same brook, and after fishing the meadow below, we together, climbed over the fence and commenced fishing. Scarcely had we thrown a line when I heard a stentorian voice shouting from the neighboring hillside: "Get out of my meadow." My aged friend being quite deaf could not hear the orders, and being disposed myself to "fight it out on that line" as long as possible, I paid no attention to his shouting and continued my fishing till his legs took the place of his lungs, and he presently made himself the third member of our party. My companion pleaded his inability to hear his orders, but reluctantly and entirely forgot that his exertion was good enough to read the "notis" posted at the entrance. I was, of course, recognized as having been there before, and for me there was only two alternatives; "pay me five dollars, Mr. H—, or I shall commence an action of trespass against you." Having never as yet been party to an action at law, and thinking it might be somewhat of a novelty, I concluded to tell him that he "better commence his action at once," entirely forgetting that his exertion renewed our fishing on the unforgotten territory of his neighbors, and I may add, we met with fair success. But the more I went there and was driven away, the more was my curiosity excited to know and realize the contents of that brook, and I resolved a third time to fish the meadow before the season was over.

Accordingly I made a third attempt shortly after, and went alone. Leaving my horse at the mill above, I fished down through the woods till I came to his fence, when I adopted a little strategy, hoping to be more successful than before. The meadow grass was quite high, and I concluded rather than lose the anticipated sport, I would crawl through the entire meadow. So lying down flat on my belly, I crawled under the fence, joined my rod and there lay in the tall grass, working my way to the brook, and pulling out the trout one after another. When I succeeded in capturing eight beauties and crawled perhaps ten rods, when probably my pole exposed my strategy, for on looking up I saw the old man approaching with a huge fence rail in his hand, followed by his son, a strapping, great country boy, with a club in his hand also. To me, just about that time, "discretion was the better part of valor," and in less time than it takes me to write this, I had my pole and bait unjoined, and with pole and basket I started for the woods as fast as my legs would carry me. Being a good runner I got quite the start of them, still I could hear their giving chase in the distance. Knowing the woods thoroughly they had the advantage of me. I ran till I was quite tired out, and then sat down in a thicket beneath some huge brakes, which quite concealed me, and taking out my lunch was quietly enjoying a fisherman's meal when they both appeared without discovering me, and I felt quite easy over my supposed escape. Presently, however, they commenced a return, and on the way back struck my trail and discovered my ambush. They at once made themselves acquainted. I found I needed no introduction this time. Their threats were entirely with words, not with clubs, and I soon ascertained that my bill of damages had suddenly doubled itself, and ten dollars instead of five was the smallest sum which I could have myself from the clutches of the law. I reasoned with them, and expressed a willingness to pay for all damage to the grass, (and if my memory serves me aright, I thought fifty cents would liberally pay for the amount I had injured.) Nothing, however, would satisfy them but ten dollars, and having but a small portion of that sum with me, I had to submit to his second threat of prosecution, and any soldier would I returned to the brook with them, and with an excessively covetous look at the meadow (in which I fear I broke the tenth commandment), I a third time "retreated in good order" to the woods above. As we parted I politely asked the "time of day," and suggested that if their dinner was about ready I would gladly accept an invitation to dine with them, since I had lost a large portion of my lunch in my haste to run through the woods. This they considered the height of impudence; my proposals were not accepted, and we thereupon parted.

Not hearing of the proposed "action," I thought perhaps a fourth trial might be made on the same favorable terms, and perhaps with better success. This time I decided to try the brook very early in the morning, perhaps before the farmer was up. Accordingly I drove one evening eight miles after dark, put my horse in a neighboring barn, and camped myself on the hay-mow for a short rest. At two o'clock I turned out in readiness for the brook, but found myself in a pouring rain-storm, which had come on during the night, and not being prepared for any such emergency I abandoned the undertaking and returned home without making the attempt.

And now comes the sequel to this series of adventures, which I think will be read with more interest than what I have already written. A few weeks after my fourth unsuccessful excursion, I received, through the mail, a letter bearing the postmark W—, and, of course, eagerly devoured its contents. I have preserved that letter to this day as a reminder of by-gone days, and to show to my

(trouting friends. Thinking this curiosity may prove of interest in connection with my story, I will copy it verbatim *et literatim*, with the exception of the names—

W—, June 7, 1867.

Mr. H—, Dear Sir:—I am compelled to either loose my hay crop in my meadow or protect it from men who go a fishing. You made a trespass upon it on the 26th of August last, & another on the 21st of last month after being forbidden both times. you are liable to 2 actions on each day besides calling your name & place of residence that which it was not. I have called at your office to see you twice, but you was gone from home both times I was told. I have made no noise & said nothing to any one about it did not intend to trouble you. Now all I have to say is that if I hear of you wish no prosecution & the thing to stop where it is just put a \$10.00 bill into a letter & direct it to J— C— W— M—E. & when I get it this shall be your receipt in full for both offences, otherwise I shall certain prosecute soon.

Yours with respect— J— C—

Here, Mr. Editor, was a subject for thought, for reflection, and for careful consideration. I consulted our "Revised Statutes" of Maine, and received such consolation as I could from reading the following sections:—

"Whoever willfully commits any trespass by entering the garden, orchard, pasture or improved land of another with intent to take, carry away, destroy or injure the trees, shrubs, grain, grass, hay, fruit, turf or soil thereon, shall be punished by a fine not exceeding twenty dollars, and imprisonment not more than thirty days.

"Whoever willfully enters any passes over any garden, yard or other improved field, after being expressly forbidden so to do by the owner thereof, shall be punished by fine not exceeding five dollars, or imprisonment not more than ten days."

Reading the first section above I felt clear as to my intention not being to injure or destroy his grass, and reading the second section, I thought the "fine" could not kill me, and as to the "imprisonment," I concluded if the Judge should think I could serve the county better for ten days than I could my own private interests, I would accept the situation. I therefore resolved to let the action begin at once, if he saw fit to commence it. I read and re-read his letter, showed it to my trouting friends, who seemed to enjoy it with me, and all expressed a desire to have the matter tested, even if I was to be the victim of circumstances. All at once a novel thought struck me, and I concluded to have some sport out of it, if nothing more. I had in my possession a lot of Confederate money, bills, scrip, bonds, etc., which had been given me as relics of the late war. It occurred to me to enclose to his address, as above, a ten dollar bill of this kind and see how it would strike the old gentleman. I did so, directing it as requested, without word or comment. The result of this was not known to me until a year afterward. Suffice it to say, that no prosecution was ever begun against me. The following season I was asked by a distinguished citizen, not now living, to accompany him on a trouting excursion the next day. I accepted his invitation, and before four o'clock in the morning were on our way into the country. Inquiring of my friend, I learned that his destination was the very brook on which I had so often tried so unsuccessfully to fish. He said, "I was going to fish 'right through the meadow.' I related to him my previous experience there, and said of course I must not be caught there again. He replied: "I have a little understanding with this man, and he has recently told me I could fish his meadow." "But of course he will not allow me to fish, with our old master as yet unsettled." "I think I can fix it so you can," was my friend's reply. When we reached the brook it was dark, but he was going to fish. He said he would remain in the meadow below fishing, while my friend drove directly to the old farmer's door and put his horse in his barn. I afterward learned that the following conversation ensued between farmer and fisherman:—

"Mr. C—, I have come up this morning to accept your invitation to fish this brook."

"You know I told you if you would come alone sometime you might fish a little while in the meadow after my grass was cut. Are you alone?"

"No; I have not come alone; I have a friend with me; he is down below, fishing."

"Who is he?"

"My friend Mr. H—."

"What, the one I have driven out from my meadow three times?"

"Yes, Mr. C—, he is the very same fellow, and you need be no more afraid of having him fish here after having me."

It required a good deal of persuasion on the part of my companion to gain consent for me to enter the meadow, but it was finally arranged (just how I never knew) that we should both enjoy a little sport in a brook never before fished. When told that I was to fish the meadow, I could hardly believe my own eyes when I saw myself climbing the fence, this time without fear of molestation. We joined our rods, and decided to make thorough work of it, and thorough work I think we did make. Never before or since have I enjoyed such downright sport. We fished till noon, when our baskets were more than full, and then, at the call of the farmer's horse, we went to the house, where I once more met myself to face with my old friend, the farmer himself. We shook hands cordially, I remarking: "I think I have met you, Mr. C—, on one or two occasions before."

"Yes, I think your face is familiar, and I believe I have a little note in my pocket-book which I take it you sent me."

"Then, you received my note, did you?"

"Yes, and here it is (producing the identical ten dollar Confederate bill). I thought it such a good joke that I concluded to let the matter drop. You got the better of me that time, Mr. H—."

"Well, Mr. C—, you did not say what kind of a note I must send, so I sent a Confederate note, thinking it might be a curiosity, if nothing more."

"Now, Mr. H—, whenever you want to fish, come right here and put up your horse and fish, only be careful who you bring with you; now come into dinner, wife is waiting."

To dinner we went, and seldom have I sat down to a better meal than was given us there. After dinner we renewed our fishing, and again filled our baskets, and again the horse was blown, and we were invited to supper, and again the farmer started for home, bringing with us the handsomest string of trout ever brought into the City of B—. They

numbered ninety-two, and weighed from one quarter of a pound to upwards of one pound each.

I think we must have been the first ones to fish that entire meadow for many years. I went there again a short time after, during the summer of 1863, but had no such sport as the first time, and I have fished the brook many times since, but it never disappointed so handsomely as the first time. The old gentleman has, within a couple of years, sold his farm and moved away, and that the brook is now open to all, and it has had such a "run" upon it that the present season it is considered worthless as a fishing ground. I often see my former friend, and he seems to enjoy a hearty laugh over the Confederate bill now as much as ever.

Another practical joke, once played upon him by one of our fishermen will bear repetition here. He had trespassed like the rest of us, and had been threatened with prosecution. The farmer came down one day and called at the gentleman's office to see if he would not prefer to settle the matter without an action. He found the gentleman in his office, who asked him to be seated a few moments while he went to the post office. The farmer took a chair and waited there nearly all day for the return, and finally made inquiries where he was, and learned that he had taken the train for New York shortly after he came into the office.

Such, Mr. Editor, are the not unfrequent experiences of trout fishermen, and while, perhaps, the sportsman may oftentimes be at fault, I am of the opinion that if farmers would be willing to accept a moderate compensation for fishing rights for crossing their meadows they would be doubly paid for all grass that is damaged, and save many hard words on both sides.

F. H.

Biddeford, Maine, Sept. 1, 1874.

For Forest and Stream.

A BEAR HUNT.

MY friend, Dr. B., and myself, sat on his veranda in the afternoon of a glorious Autumn day, lazily smoking long-stemmed pipes. It was one of those days when the air is just cool enough to brace up the whole system, and make every nerve and fibre in the body thrill with exuberant life. The frost had touched the forest, and the trees

had adorned in Arctian story, e're the dreadful sacrifice.

Stood arrayed in vesper glowing with the rainbow's richest dyes.

We had just returned from a deer hunt, and the antlered monarch—the trophy of the morning's chase—was being relieved of his hide in the back yard.

"This is getting monotonous," said the doctor: "we have hunted deer until I am tired of it. I move an expedition against 'bruin'."

And even as he was speaking, a clamor amongst the hounds and a rush by them to the front gate, gave evidence that some one was there. Going out we found an adolescent Arkansian mounted on a mustang. This youth was of the one "gallus," copperas-breeches breed, red-headed, and otherwise embellished with a con skin cap and a brass spur.

He opened his mouth and spoke thus:—

"Doo!" said he, "wants you to come down and bring some help, and all the dogs you can raise, and kill a bar that is about to ruin us. You see," he explained, "we planted late and our corn 'aint quite hard; that ar bar took to it by the time it was just in roasting-ear, and he haint left it yet. He is about the size of this boss, and his track is a durned sight bigger than any nigger's on this plantation. He comes in every night."

"You are just the boys we wanted to see," said the doctor; "we will be down to-morrow evening."

Messengers were immediately sent to three gentlemen who lived near, who owned some good bear dogs. The doctor and I went to work to get everything in readiness for a start the next day at noon, so as to reach the place where the bear was committing his depredations—fifteen miles below the river—before night fall. The gentlemen sent word that they would be on hand at the appointed hour, with about twenty-five good dogs that were "up to bear." Punctually at the time agreed upon, we heard their horns, announcing their approach. First rode our friend "Col. John," as fine a specimen of vigorous manhood as could be found; he was mounted on a powerful horse, and his whole "rig" proclaimed him a mighty slayer of the black bear.

"He was a stalwart knight and keen,
And had in many a battle been."

—With the bruin family. He was armed with a short, single-barreled rifle.

"On which deep scars of old wounds did remain—
The cruel marks of many a bloody day."

I think he called it a *ghager*; anyway, it was about the size of an old-fashioned, round, pine match box. If a ball, driven from it with a small howitzer load of powder, did not make *uma major* his everlasting quietus lake, he then went for him with his knife, and though the stab from it might not be altogether as wide as a church door, nor deep as a well, it was enough to do its work. The other two gentlemen were armed with double guns, from which they shot "buck and ball," and all carried the traditional "tooth-pick." The dogs, gaunt and grizzled, of a mongrel breed, a mixture of scott terrier, hound and bull dog. They were scarred and mangy, and some of them were as guiltless of hair as any of the largest *Pachydermata*, except on their flanks. The doctor had eight bear dogs, which increased the pack to over thirty, as ugly and savage brutes as ever gave chase to anything.

After lunch we were all off, amidst a baying and yelping that lasted a long time. We rode about an hour before sunset reached the place where the ranger was disposing of his "crap" without the intervention of a middleman. His cabin stood near the river bank, in a field of some twenty acres. The river made a detour of ten or fifteen miles, and then back to within a mile of the same place. Within this bend the cane grew rankly and thick-set; in many places the ground was covered with drift wood and debris from the overland river. The brush was thicketed the way in all directions. Here bruin had his home, and here we were to hunt him. While the rest fixed for camping, the Colonel and I walked out to the field to reconnoitre. We found signs all over the clearing, and the havoc the bear had made in the corn was something amazing.

"He is a whopper," said the Colonel, "and will lead us a lively chase."

On our return to the bivouac we found a smoking supper and a pot of coffee, hot enough to eat a moustache, and strong enough to float an iron wedge. We ate as only

hunters can, then after divers puffs at our pipes, some songs and stories, and a cup of potent "mountain dew," by the camp fire's ruddy light we turned in, wrapped in our blankets, on a bed of cane, with only the starry sky above us, but a blazing fire at our feet, and slept the sleep of the blessed. In the middle of the night, a little cold, I awoke and found the dogs lying around promiscuously, some comfortably curled up close to a hunter, but I did not disturb them. After replenishing the fire with some dry cottonwood I lay down. High in air I could hear the rustle of wings of the wild fowl, and the snoring of the doctor and Colonel John mingled soothingly with the puff of a far-away steamboat. I lay awake until the dawn began to dream of following stump-tailed plantigrades through interminable swamps, and trying vainly to shoot them with guns that would never fire. At daybreak we were astir, and after a hearty breakfast, loaded our guns and prepared for action.

"There must be no snapping," said the Colonel; "aim close behind the shoulder and low down."

The sun rose bright and gloriously as we mounted; a slight wind was blowing from the North, and everything seemed propitious. While the rest were sent to different points to intercept the bear, if possible, Colonel John and I went to put on the dogs. The hounds soon gave tongue on bruin's trail and worked it up in a brisk walk. This leads directly away from the field through the "au-sedest" brake of drifted cane on the river. As we advanced the trail grew warmer, the curs occasionally putting in a yelp; then came a hurst of canine noises, yelps, roars and bayings, that made each particular hair on my head stand on end, and every nerve and fibre in my frame thrill with wild excitement. "He's up," cried the Colonel, and uttering a yell that would have astonished Shacknasty Jack, he plunged into the thickest of the cane, as if he had been riding through a weed prairie. The bear led straight off, and I followed, as best I could, picking my way through the thickest cane.

"The Colonel will have him skinned before we catch up," said Jim, "if he follows on as he was going when he passed me."

The dogs had never stopped the bear for a moment, and he was leading them a tearing race.

"Let's renew our *spiritual* strength," said Jim, "and take a fresh start after him."

By this time silence had settled deep and still on the forest where we were, but we followed on in the direction that the chase had swept; finally we heard the bayings of the pack faintly borne to our ears, until it grew loud and boisterous.

"They are coming right back this way; let us cross that slope," said Jim, "I'll meet him if he comes this side."

So I rode up to the bank, which was very steep, and tried in vain to urge my horse to take it. I got off and tried to lead him down the bank, but he would not go. The pack was coming nearer and nearer; they were almost opposite, when, suddenly, with a crash, bruin came tearing down the bank on the opposite side; my horse, wild with fright, reared and pulled back, making it impossible for me to shoot; so bruin, with a right about, rushed back up the bank amidst the dogs.

My countrymen! Charging through the pack he lead off up the river.

"Why the thunder didn't you shoot?" cried Jim.

"How the deuce could I with this infernal horse dragging me backwards through the brush?" said I.

We finally followed on as best we could. Bruin was getting tired, and would stop occasionally and fight off the dogs. We struck a comparatively open ridge, and were riding hard when my horse stepped into a hole, executed some remarkable feats in ground and lofty tumbling, which caused me to leave my seat in the saddle and "walk off on my ears," and by the time that I could repair damages and get about half a pound of the sacred soil of Arkansas out of my gun barrels, the bear, dogs, Jim, and all had gone clear out of hearing. I mounted and rode on desperately, but soon heard the pack coming toward the river, near which I was riding. The bear was now fighting as he went into an almost impenetrable cane brake. Sometime he would stop for several minutes—as I could tell by the bayings of the dogs—and then come in the direction of the water. I rode on towards him until within about a hundred yards. I could tell that he had stopped and was at bay. I waited for him to advance, the pack off the river, and fearing that the pack of the party would get in first, I dismounted, and tying my bridle to a limb, walked towards the dogs; as I advanced the cane grew thicker, as it was "drifted" by the great overflow, so I found it difficult to make my way through it. Finally, I came near to where the pursued and pursuers were engaged in a sanguinary fight, for in every few minutes I could hear some of the pack yell in agony as he got hit from bruin's paw. My heart beat violently, and I could feel the blood coursing through the arteries in my neck, as advancing a little further I saw the immense beast, who was on a fallen tree six or eight feet in diameter, slowly walking up and down, with the dogs on each side of him. They could not do much with him as long as he held that position. I stopped a moment to collect myself and get my nerves steady, and just as I was about to advance the bear got off the river on my side and came slowly towards me. He had not seen me, and came on swinging his head from side to side. I stood at the foot of a large tree and he came directly toward me. When about ten or fifteen feet intervened, he turned a little to the right and made a rush forward at a dog. I stood with both hammers at a cock from the moment he got behind him, and as he turned his head round and fired. With a short he reared upon his haunches and struck out wildly with his fore paws. Taking quick aim at the centre of his breast, I pulled trigger again and sent the other charge clean into his chine. At this he doubled up his fore paws and came to the ground. With a wild roar the dogs seized him; their savage fury being terrible. They laid hold on every available part of his body and limbs, but their fierce wrath was spent on a lifeless carcass. After considerable trouble I beat off the dogs, and then blew a blast on my horn, which was answered by Jim, who came up promptly with refreshments.

The rest had heard the shots, and all were soon on the ground. We had no means of weighing the dead animal, and I will not risk my reputation, as a venacious bear-slayer, by saying how much it weighed. The rifle, he, at an early rate, came fully up to Colonel John's idea of a "whopper."

If any man wishes a rough day's sport, let him try a day after bear in a White River cane brake.

GUYON.

Corinth, Miss., October, 1874.

"TO FLORIDA FOR ONE HUNDRED DOLLARS."

EDITOR FOREST AND STREAM:—

In a recent issue of the FOREST AND STREAM I noticed an article descriptive of a \$100 trip to Florida, and as I "have been there" no more than one occasion, I am disposed to have my say.

Your correspondent states that the trip to Enterprise from Jacksonville will cost \$12, and to return \$2; entire trip, \$24. A large portion of this expenditure can be advantageously saved by the tourists making the trip in a small boat. If the seeker for pleasure camps out at a particular point on the river, he will soon tire of a daily view of the same objects and crave for pastures new. A person who proposes spending several months in the State would find a boat journey pleasant, as well as instructive.

Let two or three excursionists unite and purchase a second-hand bateau about eighteen feet long, which can be obtained at from twenty to thirty dollars in any of our Northern cities; supply her with centre-board, rudder, and a sprit or leg of mutton sail, costing in the aggregate from thirty-five to forty-five dollars. We visited Jacksonville a few days since, and made inquiries regarding the price of boats, and we have reason to believe that the boat would prove a safe investment, and that the cost price, if the boat was even abandoned at end of trip, her purchase would prove a more profitable investment than paying for passage up and down the river.

From Jacksonville to Pilotka, and at other points along the river, a sail can be used as a means of effecting a change of base; and when old Boreas fails in his attentions, an "ashen breeze" can be used *ad libitum*, and the river ascended at from two to three miles per hour. With a boat, the tourists could examine the various tributaries and lakes *en route*, and visit unfrequented localities, where excellent hunting and fishing can be secured. At Enterprise the tourists could secure a stock of provisions, and ascend the river to lakes Winder and Washington, and enjoy hunting and fishing in localities seldom visited by sportsmen.

Having lived in tents in more than one portion of the world, I flatter myself that I am an authority on nomadic subjects, and must differ with your correspondent regarding the construction of tents. He recommends one "with walls four feet high," but trappers will find an A-shaped tent seven feet to ridge, nine feet deep and seven feet wide, the most portable, easiest to pitch, best to shed rain, coolest under a hot sun, and last, though not least, the cheapest and easiest to make by the uninitiated. The cost of the material, at eighteen cents per yard, would be about five dollars, and the trappers could make it on board of vessel before reaching Jacksonville.

Food is an important item, and a proper fit out in the way of fishing tackle and sporting appliances would add to the culinary department as well as curtail expenditure for eatables. If unsupplied with strong-jointed rods, we would advise the excursionists to provide themselves, before leaving the North, with four strong; two Japan cane rods, (not bamboo,) a few spinners and spoons, and some strong lines and Virginia, Limerick or Cluestertown hooks. A mess of trout (bass) can be captured at any time by trolling with a spinner and line from 60 to 120 feet in length, in open water. But as lily pads exist in many lakes, ponds and rivers, a bob must be used. A very useful bob can be made by tying a few scarlet feathers to a strong hook. Line to be about three feet in length, and attached to the end of a long and stout pole. One must cautiously row the boat, and another skitter the open places between the lily pads. When a fish is hooked the fisherman must haul in his rod hand over hand, for if a large fish is allowed to play among the lily pads and foul the line the excursionists will be apt to retire to roost superfluous. The above has not been written for the benefit of those who are ignorant of the art of fishing, but require replenishing. The artistic mode of fishing for trout (bass) is with rod, reel, float, and minnow in open water. The uninitiated will ask how am I to capture minnows in the wilderness, where earth-worms cannot be secured for bait. I am disposed to aid the greenhorn, and would advise him to examine the stems of the lily pads, and in many of them he will discover a small hole. The stem is split open a borer will be attracted, and if the hole is with small hooks, are used in shallow water, and a supply of minnows can be captured. But by using a bob, a spinner, or spoon, a supply of fish can be secured at almost any point above Pilotka.

If three should unite in an excursion to Florida the cost of trip by sailing vessel and return would be \$90, and as a majority of vessels go out light, transportation could be secured for boat free of charge. Expense of food, \$40; small stove and cooking utensils, \$10; fishing rods and tackle, \$8; ammunition, \$12; tent, \$6. Leaving \$131 for provisions and incidental expenses. We have reason to believe that the boat would bring \$20, if not prime cost, which could be placed to the credit of the provision account. By the use of a boat the trip can be made for much less than the sum indicated by Fred Beverly.

AL FRESCO.

A GOOD RIFLE.—We will not charge for the following notice, though we cannot help thinking it will benefit the Rifle Company more than the FOREST AND STREAM. It is from J. H. Batty, who is now in Minnesota on his return from the Northern Boundary survey. He is collecting deer heads for mounting. He says:

Perhaps it would not be out of place here to speak of the merits of the improved Winchester rifle for the benefit of sportsmen. I have used one of this fall, and I find it to be the best shooting breech loading rifle for short range (from 50 to 300 yards) that I have ever used. In addition to its shooting quality, it is light and easily loaded, and has never been known of one of the Winchester guns (model of '73), to become loaded, or have the shells stick in the barrel when the gun becomes very dirty. The sights are decidedly an improvement on those of the rifles of some makers, and I have heard many old hunters say that the whole gun is "just dead medicine." In fact, the "Winchester" is the favorite gun for timber hunting, particularly in an Indian country, and some of the Montana buffalo hunters have already got them to use while running buffaloes.

—The New Bedford Standard announces the capture of 123 black bass at Cuttyhunk with a rod and line.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

THE STATE HATCH-HOUSE.

Seth Green, Esq., informs us that he has had great success in gathering salmon trout and white fish spawn this Fall. The State Hatch-House at Caledonia is full to superfluity, and Mr. Green is hatching a great many out of doors. Under these circumstances, he renews his offer of a few months past, in the shape of the card appended, which is really liberal, and no doubt will be thankfully and eagerly accepted by many persons wishing to stock depleted waters:

Any parties in the United States or Canada wishing to experiment in hatching salmon trout or white fish spawn, will be sent a few hundred on receipt of fifty cents (to pay for the package) by addressing the undersigned. Also parties desiring to experiment in rearing the young of the California salmon, will be given a few hundred, by going to the New York State Hatch-House for them. All applications to be made during the month of December. All kinds of fish will be distributed to the public waters of this State the same as years before. SETH GREEN, Rochester, N. Y.

It will be perceived on perusal of the circular that is appended herewith, that this offer is exceptional to the rules which make the Hatch-House products available only to public waters. The directions that are included in this circular will prove useful to applicants, and convey information which we are often called upon to give:

DIRECTIONS.

In delivering spawn and living fish from the State Hatch-House, the following rules have to be obeyed exactly:

Only public waters, and no private ponds, can be supplied.

The impregnated spawn of salmon trout and white fish can be sent, in October, to such places as have conveniences for hatching it. Living salmon trout and white fish, can only be delivered at Caledonia, and all persons wanting living fish of any kind must send a man for them, as there are six hundred and forty-six lakes in this State, not to speak of streams and rivers, and the means at the disposal of the Commissioners are too small to justify the attempt to deliver fish at the expense of the State. To avoid jealousy and dissatisfaction, no exception will be made to this rule. The expenses of the person coming for the fish will be fifty cents at Caledonia, and two dollars at Rochester, for cartage, besides their traveling expenses.

Young white fish are in condition to transport from the first to the tenth of February; salmon trout from the tenth to the twentieth.

Oswego bass, strawberry bass, white bass, rock bass, black bass, yellow perch, pike, perch or walleyed pike and bull heads can be delivered at Rochester at any time during the Winter months. Application to be made at 16 Mortimer street.

Milk cans are used to carry all kinds of fish. A five gallon milk can will hold two thousand white fish or one thousand salmon trout; or from ten to twenty of the other fish above named, according to their size.

All communications must be addressed to the undersigned, and must describe particularly the waters to be stocked, giving their names, locations and size, and stating whether the ponds have rocky or muddy bottoms, or have eel-grass, flags and pond lilies. The walleyed pike, rock bass, white bass, black bass, white fish and salmon trout are suited to clear waters with rocky bottoms, where the crawfish is to be found, and Oswego bass, perch, strawberry bass and bull heads will only live on muddy bottoms with flags and pond lilies. It should also be stated what kinds of fish are found in the lake.

It is almost useless to stock rivers which overflow their banks and flood much extent of country, as the fish are stranded by the receding waters and get into pond holes, where they perish in dry weather.

All fish should be deposited as near the head of the lake as possible, so they will not go into the outlet before they become familiar with the waters. The young fish should be deposited during the night, when most large fish do not feed, and will find hiding places before morning.

STEWART LINCOLN, Superintendent.

Office, 16 Mortimer street, Rochester, N. Y.
Office hours from 7 to 8 A. M.; 12 M. to 1 P. M.; 6 to 7 P. M.

HONORABLE SEYMOUR, Ulica,
EDWARD M. SMITH, Rochester,
ROBERT B. ROOSEVELT, New York,

Commissioners of Fisheries of the State of New York.

BLUE BACKED TROUT OF MAINE.

[Accompanying the following interesting note from G. Shepard Page, Esq., who is one of the officers of the American Fish Culturists' Association, was a box of trout of the nearly uniform length of eight inches, with backs of dark blue velvet pile, and sides liberally sprinkled with vermilion spots from gills to caudal fin. While in general appearance they resembled the common *salmo fontinalis*, an examination showed their form and markings to be decidedly different. There was no steel blue halo around the carmine spots, as in the familiar brook trout, and in shape they nearly approached the capelin or the smelt, being very narrow at the shoulders, and of uniform width throughout. The flesh had a yellowish tinge, and was rather insipid, we thought. Of a dozen which we opened a few had spawn in them.

We shall much value all information that our correspondent and the Maine Fish Commissioners shall favor us with. Meanwhile our thanks are bestowed for the gift of these interesting specimens.—Ed.]

New York, November 15th, 1874.

EDITOR FOREST AND STREAM:—Of course you have heard of the famous "blue back" trout of Rangeley Lake, Maine. They are never seen until the 10th of October, when

they swarm the different streams in countless myriads. They remain for 20 days, and then leave, returning the following year at almost the exact day, and always the exact place. Another most singular fact is that they are never taken larger or smaller than these I send you. The countrymen gather them by bushels and barrels, smoking and salting them for home use. They are specially exempted from the provisions of the Maine game law. I have received a large box of them, which I believe is only the second lot that ever came to New York. They were sent by my cousin, Henry C. Stanley, one of the Commissioners of Fisheries, who has taken 30,000 eggs, and will hatch them and stock other streams in Maine. If you desire, I will send you an article on them, giving many singular facts. We have taken at our hatching house on Bemis stream, Rangeley, to the present time, 300,000 eggs of the six and eight pounders. Sincerely yours,
Geo. SHEPARD PAGE.

THE FISHERIES OF FRANCE IN 1872.

[From the *Revue Maritime et Coloniale*, August, 1874.]

The Commissioners of Customs have just published a *General Exhibit of the Commerce of France with her Colonies and Foreign Powers in 1872*. From this document we see that the total commerce of France with her colonies and foreign countries during the year 1872 (imports and exports of every kind) is estimated at a total of \$1,928,750,000, being an increase of \$422,292,500 over the previous year, and of \$340,000,000 over the average (31 per cent.) over the average of the quinquennial period prior to 1873.

This exhibit shows that the share which the French flag had in maritime commerce—its total value being \$1,288,958,333 including exports and imports—was \$605,625,000. Of these \$605,625,000, \$106,250,000 belong to commerce with the French colonies and the great fisheries, and \$499,375,000 to international maritime commerce. The portion falling to the share of foreign navies was \$683,333,333.

The vessels which were engaged in codfisheries in 1872 reported 418,299 quintals of fresh and dried cod, oil, roe, &c., which is a decrease of 84,684 quintals from the year 1871.

The export of dried cod, with the benefit of a premium, amounted to 36,534 quintals, instead of 28,578 quintals in 1871.

The accompanying table has been published by the Ministry of Agriculture and Commerce; it contains statistics for the last few years, as follows:

1. Number of vessels engaged in the cod fisheries.
2. Direct export from the fishing stations to the colonies and to foreign countries.
3. Exports from French ports to the colonies and foreign countries.
4. The sums paid as premiums.

oving naturalist, and his efforts in deducing the kinship of all the higher species of the cervidae. That he has accomplished his work in the most complete manner is quite evident from his communication:—

LONDON, ENGLAND, October, 1874.

EDITOR FOREST AND STREAM:—

Some months ago you and the kindness to publish a short communication from me describing the glandular system on the hind legs of the deer, in which I pointed out some of its characteristics, and its great importance in determining species. In that paper I spoke of the absence of the metatarsal gland on our moose and caribou, and remarked that Dr. Gray had stated in "Knowledge Month" that those glands are present on the European elk, which is the reindeer, which, if true, would go far to establish that they were distinct species. I should probably have accepted the statement of that learned zoologist as establishing the fact, and proceeded accordingly, had not the more considerate caution of Professor Baird suggested that possibly Dr. Gray was mistaken in his statement, and that it was better to wait for a confirmation or refutation of that statement. One great object of that paper was to elicit positive information on the subject.

As my hopes in this direction were disappointed, I determined in May last to examine the matter for myself, which could only be done by a study of living subjects. I accordingly sailed for Norwegian Lapland, and in the last of June found myself in latitude 70° 30' north, near the northern continental limit of the reindeer range, and then proceeded to the point at which the two were distinct species, Sweden, Denmark and Germany, and now find myself in London, on my way home, having finished my researches with very satisfactory results.

While I find slight differences between our moose and the Scandinavian elk, and also between the European reindeer and our woodland caribou, which I will not now detail you to point out, there is not a shade of difference in their glands, the metatarsal gland on the hind leg of the European elk, there is no more vestige of a gland or of a tuft of hair than there is on our moose, or on an ox. But on the inside of the hock there is the same dermal gland of exactly the same size, form, location, and structure as on our moose, and it is covered with the same black tuft of hair, occupying the same horizontal position, small at the back end at the point of the hock, extending two thirds of the breadth of the leg at that point, forward, being much broader at the forward end, the hairs meeting together from above and below over the center of the gland, there forming a sharp comb. In every subject which I examined I found this tuft precisely the same, both in color, form, position, and structure, as it is on our moose, while in all these particulars it is totally unlike that formed on every other member of the deer family. So much for the moose and elk of Europe.

I was enabled to study many more specimens of the reindeer, both wild and tame, with results equally satisfactory, yet no more so than in the former case. I found the metatarsal gland entirely wanting on them, as it is on our woodland caribou, while the gland and tuft of hair covering that the glandular system on the hind leg corresponds precisely with that on our elk, (or *C. canadensis*). The corresponding size is the same, the location is the same, the tufts of hair and surroundings are the same, and it has the same peculiarity, that there is no naked place over the gland within the tuft, but the whole surface of the gland is entirely covered with the hair. This tuft is surrounded with the same belt of tan which extends outward from the posterior edge of the same size, location, and form as on the American variety. On the wild the color is a little darker than it is on ours, and so is the whole generally of a darker color, while on the tame the color varies with the general coat.

During my investigations, I had many opportunities of studying the red deer, or stag, of Europe (*C. Elaphus*), and was interested to observe that the glandular system on the hind leg corresponds precisely with that on our elk, (*C. canadensis*). The corresponding size is the same, the location is the same, the tufts of hair and surroundings are the same, and it has the same peculiarity, that there is no naked place over the gland within the tuft, but the whole surface of the gland is entirely covered with the hair. This tuft is surrounded with the same belt of tan which extends outward from the posterior edge of the same size, location, and form as on the American variety. On the wild the color is a little darker than it is on ours, and so is the whole generally of a darker color, while on the tame the color varies with the general coat.

On the wild the color is a little darker than it is on ours, and so is the whole generally of a darker color, while on the tame the color varies with the general coat.

I find many other points of similarity between our elk and its European cousin, if indeed they are not entitled to claim a closer relationship, with which, however, it is not necessary to trouble you now.

J. D. CATON.

× A HUNTING CAT.

NEW YORK, November 12th, 1874.

EDITOR FOREST AND STREAM:—

Your reference to hunting cats, in No. 14, reminds me of a very interesting feline at Harry French's Kenosha House, South Park Road, Colorado. His name is Vebey; his color was mottled with gray, and he was originally a Thomas. On one occasion he brought in a chipmunk and a small bird, both at once, alive and unharmed. He wanted to tease them both, so after due consideration he let the squirrel go, played with the bird, and ate it. Then he caught the chipmunk and repeated the amusement. He had the bird go first it would, of course, have flown away. He sometimes brings in a live hare, which his mistress confiscates for supper. At meal-times, or when hungry, this cat invariably sits up erect like a prairie dog, with his forepaws hanging down.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, }
NEW YORK, Nov. 15, 1874. }

Animals received at Central Park Menagerie for the week ending November 14th, 1874:

One Brazilian Tree Porcupine, *Corydactylus pyrocephalus*. Hab. Brazil. Presented by Mr. Wm. H. Baruch.
One Red Fox, *Vulpes fulva*. Presented by Mr. F. S. Webster.
One Raccoon, *Procyon lotor*. Presented by Mr. Lavinelle.
Two Boas, *Boa constrictor*. W. A. COSKIN.

THE SEA SERPENT.—A representative of FOREST AND STREAM went up to Hell Gate on Saturday to see the great sea serpent, whose capture had been reported in a morning paper. He records the result of his investigations as follows:—

ASTORIA, L. I., Nov. 16, 1874.

EDITOR FOREST AND STREAM:—

The wonderful sea serpent discovered in the Ferry Slip at this place on Wednesday last, proves on investigation to be only a dead *Boa constrictor*, which had probably been thrown over one of the many vessels passing through the Gate. It would have been impossible that such a snake could live any time in our waters at their present temperature.

F. BENNER.

RATHER SUSPICIOUS.—First Passenger: "Had pretty good sport?" Second Passenger: "No—very poor. Birds wild—rain in torrents—dogs no use. Only got fifty brace!" First Passenger: "Make birds dear, won't it?" Second Passenger (off his guard): "You're right. I assure you I paid \$1 a brace all round this morning."

IN A BOO.—The landlord of the hotel at the foot of Ben Meis told a story of an English tourist stumbling into a bog between the mountain and the inn, and sinking up to his armpits. In danger of his life, he called out to a tall Highlander who was passing by, "How can I get out of this?" To which the Scotchman replied: "I dinna think ye can," and coolly walked on.

Woodland, Lawn and Garden.

HOT BEDS AND COLD FRAMES.

WE have before us at this writing four letters from three different States inquiring about hot beds—how to make and manage them—and our answer to one will be found equally well suited to all.

If you would have your seedlings of either plants or flowers, you must take the necessary care to obtain them. The principal requisites for your frame will consist, in the first place, of an excavated bed or pit for the reception of your manure or fertilizer. The glass may be of any size you choose, provided you accommodate the same to your frame. After selecting a well drained situation, facing the South, you should set some cedar posts six feet above the ground in height, to which you will nail boards for a shelter, and you will want what you call a good protection can be found on the south side of a stable, or fence, or a brick wall, so much the better.

Now make your excavation or pit, accommodating it to the size heretofore determined upon. Drive down stakes, and board up the pit on sides and ends. The boards at the rear should be eighteen inches, and those at the front twelve inches above the surface of the ground. Your pit is now in condition to receive the manure, which should be composted from good stable manure, to make which you will turn the same over, throwing lightly into a heap such quantity as may be necessary for your bed. This may be done three or four times at intervals of two or three days, as may be somewhat determined by the temperature of the season, or the dryness of the manure, which, if very dry, should be covered with a little straw, or the best way to prepare manure to be to form the same into a compact, conical heap, much like a cock of hay, and let it remain until it smokes well, and then turn it over into another heap of the same form. This gives a good heat, as it is termed. I now fill up the pit with this manure until it is even with the ground, or nearly so, treading the same firmly and evenly all over the bed. Then I add good, rich, leaf soil, well broken up, six inches in depth, over the manure already placed in the pit, and place the glass sashes over the same.

You will find upon examination that it will not be a long time before your heat will rise to over one hundred degrees. Now carefully water your bed, and when the heat has fallen, as it will, to ninety-five, you may with safety plant your seeds. You will need to place a thermometer around the bed soon after you have done so, to gauge the temperature of the heat, as much will depend upon the right temperature in growing good plants, and it will be found very easy for you to do after a few trials. Besides many kinds of flower seeds, you may sow the seeds of the tomato, egg plant, cabbage, pepper, cucumber, melon, etc.

In a future paper we shall tell you how to care for your seedlings and plants, and how to conduct them through the different stages, from plant raising to plant perfection, and much other information necessary to be known by successful plant cultivators.

COLD FRAMES.—A properly arranged cold frame is not very unlike the pit of your hot bed, and may be made quite as efficient as a hot bed, after you have used it for the security of your plants from frosts during the severity of the winter months. It is made in the same manner, except large to unite a hot bed and cold frame under one sash. Make your cold frame as you have for your hot bed, with a good exposure to sun, and place your sash over the portion you wish to use for plant-growing over good, well prepared soil. You will find it necessary to keep your glasses over the same all day, particularly in the afternoon, before the heat declines. At night cover the glass with mats, etc. By so doing you will easily have at hand a bed of warm soil, into which you can put seeds that germinate quickly, and it will be found of great benefit to all such as would hurry up the backward seeds. You will air and treat your cold plants much like your hot bed plants, only one fact you must bear in mind—keep out the frost. In one portion of your cold frame you can place on the bottom six inches of coal ashes, and upon these ashes you can set your plants, which have, as you have said, by keeping out cold weather you will keep your plants in good condition.

OLLIPPO QUILL.

RENOVATING OLD ORCHARDS.—In many old orchards the ground needs more renovating than the trees. During the war an orchard in one of our States was occupied and used as a camping ground for a long period. This orchard, formerly a good one, was old and unfruitful. We recommended deep ploughing, root, and top turning, and good manuring, with careful attention to the trees. Two years afterward they were in a highly thrifty condition. In pruning, cover all large cuts with grafting wax. The amount of pruning will always depend upon the condition of your trees. If much old dead wood remains on the trees remove it, cutting it off smoothly with a sharp saw. Never use a dull saw in pruning trees. Remove, also, all the old limbs that cross each other, or rub one against the other. Leave the tops open and light. Much depends upon good soil, and a free circulation of air. In the autumn, apply a good quantity of stable manure. Lime and wood ashes, applied before the manure around the trees, and well dug in, will be found of great benefit, and will stimulate the growth. Do not in any case allow weeds, or briars, or suckers of any kind to accumulate around your trees, or in the corners or around the walls of your orchard. It is slowly but surely the ruin of your fruit. Sheep grazing in some of our States has been deemed beneficial to orchards, but we do not agree with the idea, believing that sheep do no good to an orchard, particularly in Autumn. They will browse the trees as well as shrubs. We admit the droppings are as good as a fertilizer; but we prefer the droppings without the sheep. Sheep will often gnaw the bark of orchard trees. We have thus given you the careful hints of our fruit treatment of old orchards, and our success has been entirely satisfactory.

OLLIPPO QUILL.

ANSWERS TO CORRESPONDENTS.

B., of Illinois, writes to know what books he shall use to obtain a good knowledge of agriculture.

We can recommend to your aid good works upon theoretical and practical cultivation of grasses, of rotations of crops, etc. Yet you must think, study, and bring forth fruits meet for the table. Of all men, the farmer should

be a cultivated man, and we know not why he should not be an intellectual man. To every intelligent farmer we need only point to the Hon. Marshall P. Wilder as to one who for many years has been known as the father of the scholar, and the finished gentleman. We say, therefore, the successful farmer must do his own thinking, as well as improving his land. While the great principles of agriculture remain the same nearly all over the United States, the modes of applying agricultural chemistry may differ. With different States come different modifications. Illinois and Wisconsin give us one soil, and New York and New Hampshire another. Vermont and Massachusetts give us their own peculiar features, and all have a correct manner of making the earth yield her most generous increase. Last Summer I was recommending a gentleman who had a very large crop of weeds upon his ground, and five boys, from ten to seventeen years of age, living in the sun, to set these weeds the other end up. "Well," said he, "I am going to do so; the crop will not be much (the crop was potatoes); I think I shall turn the hogs in and let them root them up." You had better turn your boys in and let them pull," was our reply; "these weeds will root out all your crop if you do not do so." I pointed to his neighbor's ground, a fine field of thrifty potatoes adjoining his own. I said not a word, only pointed. His answer was "Oh, Tom has got weeds on the brain." Now if a man has this disease on the brain, the sooner he goes into his field and goes to work the sooner he will get well of it. OLLIPPO QUILL.

MILTON, Gloucester, Mass.—How shall I plant and take care of the evergreen seeds?

The reason of your repeated failures, and which others also have, is that you do not take to your own lack of necessary care rather than a fault in the seed. Evergreen seeds generally germinate well. It is true that they require a peculiar kind of treatment to insure success in raising a fair crop. Where a very large quantity is not desired, I have found the following among the best means of securing a good crop of evergreens. This plan may be extended from a small bed to a larger one, or three or four may be necessary. First, you will need to choose a good ground, as though you would lay out a hot bed. Fill with carefully prepared light soil, and cover this frame with common hot bed sash. Raise this frame by placing half a brick under each corner, raising it three inches from the surface. This will give you a moist temperature, without which it is useless to think of raising evergreens from the seed. You will be quite careful to protect your seedlings from the frost, and to keep them in the shade, while you wait to see that your bed has a free, clear, circulation of air through the plants. I have found this treatment to be the best I ever used, and I have treated imported plants of the Norway spruce, of four inches in height, after a similar plan, with some slight modifications, with perfect success.

OLLIPPO QUILL.

J. J. Shelby, Ill.—Do not be at all afraid of the mining operations of your "thousands of moles." It matters not if they do run their underground trenches all over your prairie plats, as they do for your good, and for the preservation of the very grass roots you think they eat. The common notion of what moles do, while you are in your roots, is so far from its being hurtful to the products of the earth, it is one of their most effective protections, for it is in pursuit of earth grubs of every kind. This daily and nightly mining is for these insects, which are found in such great numbers at the roots of many of our grass fields. It is the presence and action of myriads of cut worms, etc., that cause grass in many places to die, and turn white at the top. The moles eat these little worms whenever they can gain a ready access to them. Let them pursue their labors unmolested, for they are among the good geni of the garden. It is stated upon good authority that a single mole devours annually 20,000 grubs, and it is sure death upon every earth worm. It is one of the most voracious of earth burrowing animals, and is always hungry. Take every care to preserve your moles. Do not trap or hunt them with dogs, but let them live to kill the insects.

OLLIPPO QUILL.

W. S., of Virginia.—What is the name and nature of the two insects infested in this box? I find one quite numerous in a small grove of very tall pine trees, many of the leaves of the tops of these trees being entirely eaten off by them, and the cuttings appear like saw dust. I have never seen them before in any of our Virginia or Southern pines. They are new comers here.

We have rarely seen this insect in our own section of country, and what there are of them specially perish from the vibration of different kinds of grass, who eagerly seek them as food. One of them is the *Phabina*, the night moth of the pine woods, and justly classed among the most destructive ravagers of the forests. The other is the *Bombus monacha*, which are bad insects when found in myriads, as they are in the great pine forests of Germany, where they cause a general turning out of the peasant husbandmen to destroy them. They are so numerous and so terribly destructive, that if lice are detected apply a remedy. It is useless to wait until the unfortunate wreath has removed the hair from his own skin, and spread his tormentors among his fellows. The pediculi, or lice, of which almost every animal has its own peculiar species, are not difficult to kill. A good scrubbing with soft soap and water will remove them. Louse, or any other oil, prevents their migrating, and destroys them; but the efficacy of the oil is increased when to every pint is added an ounce of impure carbolic acid, or of Burnett's zinc chloro-iodine solution. Decoctions of tobacco and stavesacre also poison the vermin, an ounce to the pint of water being generally used. Where the animals have been much infested, a second dressing should take place about a week after the first, and brushing, cleanliness, and usually a more liberal diet are enjoyed.

OLLIPPO QUILL.

LICK ON CATTLE.—The North British Agriculturist, in an article on vermin on cattle, gives some suggestions as to how to treat the pest. It would take time by the foretop, and at the slightest indication of their presence make a prompt examination, and if lice are detected apply a remedy. It is useless to wait until the unfortunate wreath has removed the hair from his own skin, and spread his tormentors among his fellows. The pediculi, or lice, of which almost every animal has its own peculiar species, are not difficult to kill. A good scrubbing with soft soap and water will remove them. Louse, or any other oil, prevents their migrating, and destroys them; but the efficacy of the oil is increased when to every pint is added an ounce of impure carbolic acid, or of Burnett's zinc chloro-iodine solution. Decoctions of tobacco and stavesacre also poison the vermin, an ounce to the pint of water being generally used. Where the animals have been much infested, a second dressing should take place about a week after the first, and brushing, cleanliness, and usually a more liberal diet are enjoyed.

THE COCONUT TREE ONCE MORE.

PHILADELPHIA, November 12th, 1874.

EDITOR FOREST AND STREAM:

The mistake regarding the coconut tree, made in your *Answers to Correspondents*, is easily explained as an oversight. The description given answers perfectly, if not to the nature of the coconut, at least of the cocoa tree. The latter resembles a cherry tree very much in shape and foliage; its blossom of a dingy, light yellow color, is not handsomely shaped nor fragrant, but appears at almost any season of the year, and what is quite strange, sometimes breaks through the bark of the trunk a short distance from the ground. The fruit which yields the luxury of chocolate for our breakfast table, resembles in shape, size and color, our musk melon; the beans of which the chocolate is made lay imbedded in a thick, oily pulp, resembling fresh lard, arranged around a central stiel. The seeds of the melon. The beans are freed of the pulp by washing in water, and dried in the sun, when they are ready for the market. The shell of the cocoa bean makes, in the shape of cocoa tea, a very wholesome morning drink for persons of feeble digestion. Another preparation of the fruit of this tree is cocoa butter, a well known remedy for sore eyes, as well as some diseases of the skin. The word of the cocoa tree, although very hard, is not used for other purposes than fuel.

The cocoa palm, or coconut tree, is correctly described by "B. W. H.," but I disagree with this correspondent when he calls the tree "anything but handsome," although *de gustibus*, you know. The tall, slender shaft, with its crown of some ten or twelve feet long, feathery leaves of brilliant green, is certainly a pleasant sight to the traveler in the tropics; a group of them appears like an antique temple, with lofty, graceful columns, and is to the weary wanderer the promise of a cool resting-place and delicious refreshment, while the constant motion of the arched, plume-like leaves, elicits the sensation of a soft breeze, and their low whispers invite to slumber. Both trees—the cocoa tree, as well as the cocoa palm—are denizens of the tropic and semi-tropic zones, and the former especially is found wherever the Spaniards have not at least a temporary hold on the land. I have no doubt, therefore, that "T. T. G." has the best chance in the world to inform himself, by a trip to Lower California, of the nature and usefulness of both the palm yielding the coconut, and the tree furnishing one of the most nutritious articles of the breakfast table. A. V. L.

The Kennel.

DOG BREAKING.—No. 8.

WHEN we have perfectly broken our setter or pointer to the charge by verbal command, raising of the hand, and to dropping to shot, which we advise by all means if the trainer has the time and patience to teach, and the dog is obedient to the order, "toho," we desire for the first day or two when he is taken into the field on game, to have the companionship of a fellow sportsman with a thoroughly broken and experienced setter or pointer. Attach a long cord to the collar of your beginner, say fifteen yards in length, and allow it to trail after him. He will naturally watch the movements of the old dog, and when game is scented will be eager and perhaps headstrong. When the old dog draws on the birds and points, the youngster may of his own accord back at once; if he does not, endeavor to be near enough to have command of him by the cord and check him with a sharp jerk saying, "toho," holding him firmly. Have your companion flush the bird, (we advise that the quail should be the first bird upon which he is hunted), and as they rise, and at the report of the gun jerk the cord again smartly, saying, charge, and make him drop. If a bird has been killed and you have taught retrieving indoors, command him to fetch, after *insisting* upon his keeping the down charge for a minute or so. He may not be successful in finding it for a time, if so, assist him in searching for it, saying continually, fetch. If you discover the bird before he does, call him to you and have him lift it from the ground, and after you take it from him reward him by notice and caress. By this plan, repeated for several times, you gradually impress on your dog the utility of that which has been insisted of him before taking him into the field.

During the day you will no doubt have many opportunities of confirming in the puppy the backing of another dog, using "toho" always as the command to stop, punishing with the cord for disobedience and non-observance of the order. A puppy that has the example set him in ranging by a quick dog is wonderfully improved in speed always, but we are opposed to a continued companionship of the young and old dog, for fear the beginner will be satisfied with only backing, and finally grow into a lack of independence when used in the field with other dogs. Therefore after you have succeeded in merging the lessons taught at home into actual obedience and utility on game, hunt him the balance of the first season alone.

At different times while he is ranging in the field, move in the direction you wish him to take, waving your hand towards it also, then suddenly take an opposite course, waving that way also. In this manner you can soon teach him that he must go to whichever portion of the field you desire, by motion of your hand.

You cannot be too particular in the first season on game in insisting upon absolute obedience. Give your dog an inch and he will take advantage of a mile, and be always looking for an opportunity to have his own way. Never allow him to flush for you; it will grow upon him and when he has a chance will do it while out of your sight.

We recommended in a former paper the taking of your dog to a pigeon match in order to perfect him in retrieving. This we have done with advantage, but unless great care is observed it will do more harm than good, and it must by no means be repeated, nor should it be attempted unless he has been worked on game.

—A hound belonging to one Scudder (last name) was tied to the end of a rear car on a Canada Southern train during the stop at Wyandotte. His owner bet that the dog would keep up with the train and come into Detroit all right; and he did, not being pulled a foot of the way. Was it a slow train or a fast dog?

SORE EYES IN DOGS.—After hunting setters and pointers in countries which abound in Indian grass, their eyes become affected and inflamed on account of the small particles of fuzz and seed which drop from the tops and fall into them, causing an irritation which if not attended to is often very difficult to allay.

On returning from a day's hunt in such localities it is well to wash the eyes of your dog with lukewarm water and castile soap. This little attention may save you an immense amount of trouble.

We know of a setter whose eyes from this neglect are suffering from such an inflammation that has now grown to be chronic. An application of a weak solution of nitrate of silver, or acetate of lead morning and evening will remedy, when the eyes are greatly affected.

ENGLISH GREYHOUNDS IN AMERICA.—Our readers may not be aware that the coursing of the Western hare, or what is called the jackass rabbit, by greyhounds, is fast becoming a favorite amusement with our army officers located at frontier posts, especially in Texas, where ground well adapted to the sport is convenient.

We learn that shortly after the civil war a party of English sportsmen visited Texas with a retinue of servants in charge of a number of setters, pointers, retrievers and greyhounds, and during their stay in the country were hospitably entertained by some of our army officers at one of the forts, who before the departure of the sportsmen home were presented with the greyhounds they had brought with them. The breed has been carefully kept up, and many courses are now run in proper season, giving entertainment to the officers while not engaged in the more exciting and dangerous sport of Indian hunting.

We doubt not that the Scottish stag hound might also give great sport in running down and bringing to bay the larger game of the West, and furnish additional amusement to our representatives of the army while in their border homes.

TALLY-HO!

[From Our Own Correspondent].

MEMPHIS, Tenn., November 14, 1874.

SPORTSMEN are just now reaping rich harvests with the dog and gun, as well as the rod, both in this State and in Arkansas, where the prairies abound with game, such as chickens and quail, and plenty of deer can be found in the cane, while the lakes abound with game fish, and the bayous and river bottom afford ample amusement for those who are fond of burning powder behind huge flocks of ducks, mallards, teal, and almost every other known species, as well as wild geese, which have just begun their Southern flight. But for the warm weather that has prevailed for the past week, the shores of the Mississippi would have been literally "lined" with the "honkers." Another sport enjoyed here by a few is fox chasing, and hardly a week passes but that a chase is gotten up and participated in by about a dozen worthies, who when they cannot get a trail to start on in the country, "import" their stock from the middle portion of the State or from Mississippi, and after being turned loose, generally enjoy a chase of from three to seven hours, always returning with their game, although wearied by the labor. In this connection, I might state that in the way of fox hounds, there are half a dozen packs owned here in the city, one pack of which, owned by Mr. J. W. Alley, are said to be the finest and keenest in the State; as an illustration of which fact I need only state that on a recent chase one or two of them took a trail known to be eighteen hours' old, and followed it, making a day of splendid sport for their followers. Generally, however, as I mentioned before, the "birds" are imported from the country districts, where they are trapped at the den; and cost laid down here about five dollars each, and at that rate one man living at Centerville, Hickman county, proposes to supply the hunters with all they desire to chase, and in his letter guarantees each and all to be sound and lively. As yet the chases have not resulted in any broken limbs or heads to the hunters, from the fact that fences are not over five or six rails high, and ditches not over four feet wide, and in nearly all cases there is a convenient gate or pair of bars by the former, and a neat little bridge to the latter, and then you know the horses are not yet in this section educated to jumping; but in due course of time the amateur chasers will have an idea of the beauty of a ten foot ditch or an eight rail fence, and likely will then appreciate a first-class chase more fully perhaps than did the guest of Davy Crockett, when the latter individual had his abode in Middle Tennessee. Years ago, as the story goes, he invited an eastern gentleman to visit him, and upon his arrival could think of no better method of entertainment than to give him a fox chase; with the result, as his guest stated, that a lively red animal some distance from the hunters, who took their stand upon a hill and waited, the dogs in the meantime coming nearer and nearer until their loud baying could be plainly heard, when old Davy, almost wild with excitement, asked his guest if that wasn't splendid music—meaning the baying of the hounds—and getting no reply, repeated the question, when his guest placed his hand to the back of his ear, and listened attentively, and then declared that he couldn't hear any music for the noise the dogs made! Davy was satisfied—and so will our hunters be.

IN ARTICULO MORITIS.—We regret to learn from a correspondent of the following afflictive dispensation:—

NEW YORK, Nov. 13, 1874.

EDITOR FOREST AND STREAM:

Mr. Rat, the owner of the Dachshund, which took the prize at the Minerva Bench Show, has had the misfortune to lose him. After killing eleven rabbits with him on the 9th instant, in Morris County, N. J., he placed him in the freight room at the depot for safe keeping, where he accidentally found some rat poison, from the effects of which he died on Thursday the 12th.

A. J. H.

Shot Gun and Rifle.

GAME IN SEASON FOR NOVEMBER.

Moose, *Alces Macchi.* Snipe and Bay Birds. Willets. Elk or Wapiti, *Cervus Canadensis.* Caribou, *Tarandus Rangifer.* Hares, brown and grey. Red Hare, *Lepus Virginianus.* Wild Turkey, *Meleagris gallopavo.* Squirrels, red, black and grey. Woodcock, *Scolopax rusticola.* Quail, *Oryx Virginianus.* Bobolinks, *Ammodramus.* Pine Grosbeak, *Pinus Capito.* Wild Pigeons. Wild Duck, Geese, Brant, &c. Plover.

[Under the head of "Game, and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary so much that there is to attempt to particularize we could do no less than publish these entire issues first relative to the State of game in question. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will only create confusion.]

GAME IN MARKET.—The game market is fairly stocked at present, and some species of game are, as a consequence, cheaper than they were a week or two ago. The first wild turkeys of the season have come from Illinois, but they are not yet abundant enough to make them fit for the tables of any but those who have the means to pay for such *bonnes bouches*. Ruffed grouse is one of the most common birds on the table, and that retails at \$1.25 per brace. All received are in good condition. It hails principally from Connecticut, New York, and Illinois. Prairie chickens are rather scarce, but all received are in prime condition, fat and succulent. They retail at \$1.50 per brace. Quails are becoming more numerous, and as a sequence have descended from \$4.50 to \$3.75 per dozen. The West is the largest shipper. Ducks are quite abundant and hail from nearly all portions of the country, but the best are those found along the Chesapeake Bay and the waters in its vicinity, and they bring a higher price than those from any other section. Canvas backs retail at \$3.50 per brace, red heads at \$1.50, black heads at \$1 and butter balls at seventy-five cents. Venison is scarce yet, so brings twenty-five cents per pound. Minnesota is the largest shipper. Canadian hens which are very abundant, bring \$1 per brace, and Connecticut rabbits fifty cents. Wild pigeons stall fed are worth \$3 per dozen, while flight pigeons bring only \$2.25, but this difference is more than compensated for by the excellent condition of the former. Grey squirrels are so cheap that they can be purchased for five cents each, and robins bring only \$1 per dozen. The latter are used principally by invalids, and occasionally they decorate a hotel table.

LONG ISLAND.—The following information respecting one of the best duck-shooting regions on Long Island will be valued by our readers. We have more than once called attention to this locality:

Good Ground, Nov. 18th.—On account of the very warm weather during October and part of November, the ducks have not been killed in the same abundance as heretofore during that time of the year, but now the cool weather has set in, and the duck shooting is good. We claim to have the best duck and goose shooting at the place of any on the Island, and we have every reason for the belief that Shinnecock Bay is the first shooting ground for birds after they leave their breeding place. The geese have made their appearance, and gentlemen can get geese or ducks at this place any day when the weather is favorable for shooting. We have gentlemen from all parts of the country. We have had numbers from Boston that come here to get game birds, such as heads, redheads, &c. Our ducks will be during the cool weather, mostly from points and shore. The cooler the weather the more the birds come in under the land for a lee. I presume we have as good outfits for the accommodation of gentlemen as can be found at any shooting place. When we go for geese we use live stools invariably, as dead stools are of not much account at the present time. We have about two hundred live geese that we use as decoys. Our guides are experienced men, and will make everything pleasant for gentlemen visiting the place. We have had numbers of gentlemen from New York and Brooklyn, and not one of them has left this place without a big bag of birds, and many times more than they wish to take away with them. If you wish a list of the number of birds killed at this place, I can forward it to you at any time. Gentlemen visiting the Bay View House will be sure and buy tickets for Good Ground station, where they will find stage for the House. The hotel affords good accommodation. Address Mr. V. B. Squires, Good Ground P. O.

MAINE.—Calais, Nov. 9th.—You ask your correspondents about woodcock; I would say, they have been very scarce. I commenced to shoot some last of July, and when I had shot forty-six, I had only found three birds of this season. After the wing quills got hard, I could not tell, certainly, the young from the old; an sure very few young were raised about this season. Snipe and ruffed grouse breed later and have been abundant.

G. A. B.

Late letters from Moosehead Lake, Me., state that partridges are as thick now as black flies in August.

MASSACHUSETTS.—Salem, Nov. 14.—Cover shooting this season has been rather poor. Woodcock, snipe, quail, partridges are found scattering; rail have been quite plenty, and held on late. Quail shooting is now about all that is left, and is very good, though the dry weather makes it bad for the dogs.

R. L. N.

RHODE ISLAND.—Canvas-back ducks are getting more abundant, so they sell now for \$3 per brace.

Wild geese are passing over the State on their way to their Southern home, so sportsmen are reaping a harvest. Thirteen covies rewarded one man in Fayette county for one night's labor last week. The animals must be very abundant.

PENNSYLVANIA.—According to a Pittsburgh newspaper, the grey squirrels in the Allegheny Valley are engaged in a general migration. They draw their recruits from all points, and may be seen daily swimming the river in large numbers and pursuing an easterly course. Old farmers

said that such a migration has not taken place before since 1846, and regard it as the forerunner of an extremely severe winter.

Messrs. Dimars, Birdseye, and another gentleman visited Blooming Grove Park last week, and bagged twenty brace of ruffed grouse.

A heading hunter recently returned from a week's gunning in Bedford county with one wild turkey, one coon, one large black duck, two long-billed snipe, three woodcocks, fourteen pheasants, twenty-six wild pigeons, and twenty-eight gray squirrels.

Lumburg, Berks County, Pa., Nov. 12.—Partridges are abundant, but the strict laws in vogue prevent their slaughter. Cotton tails are being reduced considerably by the many sportsmen of this section. Squirrels are scarce, and this is attributed to the wholesale slaughter of former seasons. Other game scarce also. O. D. S.

MARYLAND.—*Washington, D. C., Nov. 12th.*—Three friends shooting last week, one near Summitsville, Md., about twelve miles from Washington, killed 11 rabbits, 6 partridges, 3 gray squirrels. The other two guns near Broad Creek, on Potomac, killed 38 partridges. Another on White Oak bar, between Alexandria and Washington, killed 18 ducks, black and red heads. A few canvass backs seen in lower river, but still scarce. Rabbits and partridges very plentiful. L. A. B.

—Quail are plentiful in Delaware and Maryland, but owing to the present Autumn drought, the birds keep entirely near the water, and as there has been no rain for weeks, the coverts are not compelled to seek the stubbles for food. Hence complaints are heard on all sides of the difficulty ducks have had in finding or scenting birds. We predict that after a rain and some cool weather, more satisfactory reports will reach us. The Autumn flight of snipe has just arrived in the section of the country near Dover and Milford, Delaware, and we notice not a few woodcocks in the large bags from this region. As a rule, the land owners of the country prohibit promiscuous shooting on their plantations, reserving their coverts for their friends only. Wild fowls of all varieties are plentiful in the waters of Delaware and Maryland, and big guns are cracking continually.

NORTH CAROLINA.—*Judge Tufts, C. P. Keeler, and B. F. Ricker, Esqs., of Boston, have gone to their headquarters at Monkey Isle, Currituck Sound, on their annual fall shoot, where they always meet with success in inducing large numbers of water fowl to make a permanent stop in answer to their lured invitations. N. Curtis, Esq., a member of the club, will soon join them. We hope to be advised of their experiences and success.*

IOWA.—*Messrs. Wilmarth, Taylor and Brice, of Chicago, report very fine duck shooting near West Liberty, Iowa. The marsh and lake are almost covered with the different varieties of water fowl.*

WISCONSIN.—*E. O. Dory, at Puckaway Lake, Wisconsin, reports much better shooting since the cold snap, and birds not as wild, many hunters having left during the warm weather.*

ILLINOIS.—*Chicago, November 12.*—The cold weather of the last few days has made duck shooting much better than at any time this year in this vicinity. Parties have gone in nearly every direction, and are anticipating "good times." Most of the birds in market are very fat and large. Quail are very numerous in all parts of the State. The Calumet, as usual, has been overrun so far this season, and the weather having been so pleasant, very few have made their usual large scores.

MISSISSIPPI.—*Corinth, Nov. 13.*—Since my last I have been after Bob White once, with Duncan. The birds did not lie well, and the dogs were fearfully headstrong and unmanageable, as some of them had not been in the field since last season. However, we managed by heavy doses of dog whip and some talk to get them in some sort of a position, and although the wind was blowing almost a gale, we brought to bag two dozen out of three small coverts, and were in the field only three hours. Birds are very scarce, and as there is no "mast" on the pin oaks, we will have but few ducks. Yours, GUYON.

LOUISIANA.—*New Orleans, Nov. 10.*—A party of choice spirits, amateur sportsmen with the rod and gun, visited Chef Menteur on Sunday and enjoyed a splendid day's sport. Dividing into two squads, they separated, one to try the water and the other the feeding grounds of the wild game. The fishermen were very successful, securing a large green trout, many weighing over three pounds each, besides a number of redfish and flounders. The hunters were equally successful, one of the number bagging thirty-seven blue ducks. During their stay they were well cared for by Nick Shanaville, at the New Club House, who not only supplied them with boats, but provided well for the inner man.—*Picayune.*

FLORIDA.—*New Smyrna, Nov. 2d.*—The thermometer this morning 59°. Ducks coming in clouds. We shall soon have sport.—G. J.

CANADA.—A party of five Canadian gentlemen killed six deer and one hundred and fifty partridges one day last week. A large moose was recently shot in Haliburton. Deer and game of all descriptions are reported as being very plentiful in this vicinity.

CANADA.—*Toronto, Nov. 14.*—Our "Gun Club" held their annual meeting at their club room on Yonge street, on Tuesday evening last. The following are the officers for the ensuing year: Clifton Shears, President; George Crawford, Vice President; Wm. McNabb, Secretary and Treasurer; F. H. Marsh, W. S. Coen, G. F. Shears, Executive Committee. The following is a list of the members of our club, Mr. James Wagered he could kill fifty pigeons in an hour from a plunge trap, and to-day tested the "say" of ye Nimrod. Result: fifty-one birds killed and fifty-nine shot at in twenty-one minutes; rather rapid work, and first-class shooting. After the fifty bird test, eight of the members present at the match shot at five birds each, and the following is the result:

Names.	Score.	Total.
Mr. Shears.....	11110	4
Mr. Marsh.....	11110	4
Mr. Moore.....	11110	4
Mr. Crawford.....	11110	4

Wind blowing strong and quite cold, and birds went like the wind. The club are in a most prosperous condition, and will hold their usual weekly shoots during the winter, snow birds and pigeons. I have been so circumstanced this Fall that I have not had my usual trip to the Plains, and

the shooting of most every description has been very poor so far, with the one exception of quail, which are very abundant.

—**Mr. J. K. Miller, of the Irish Team,** recently returned from the Plains, and reports plenty of game of all kinds. He killed a few buffalo, deer, &c. Lord Masserene and Miller have just having got to port in Chicago during the last few days, under the escort of Messrs. Sherman, Thomas, Abbley, Foley, and others.

—**John Rigby, Esq., of Duluth,** the celebrated muzzle loading rifle maker, has left with J. S. Conlin, at his shooting gallery, No. 930 Broadway, Lord Masserene's rifle, for examination or for sale. Those who wish to see a fine piece of workmanship will do well to give Conlin a call. This gallery has added to its many kinds of arms a Remington military rifle, 23 calibre, so that the National Guard can now have an opportunity of practicing during the winter months, and improve themselves in the accuracy of their aim, and be prepared for Creedmore in the Spring.

—Our regular Chicago correspondent sends the following notes of pigeon matches, etc.:

Quite an interesting pigeon shoot was had at the Gun Club grounds, for the purpose of entertaining the distinguished visitor, J. K. Miller, of the Irish rifle company, who also participated in the sport. Appended is the score of the first match, shot at 20 yards rise, according to the English rules:

J. K. Miller.....	1	1	1	0	1	1	1	1	1	9
A. D. O'Neill.....	1	1	1	1	1	1	0	1	0	8
E. Thomas.....	1	1	0	1	1	0	1	1	0	8

Another match was between Eddie Thomas and George Sherman, the latter shooting doubles to the former's singles. Thomas won by a single bird.

Afterward a sweepstakes was shot, most of those present taking part. Abe Kleinman came out first winner. It is proposed to hold matinees of this sort at Stagg's every Tuesday as long as the weather will admit.

At the regular monthly meeting of the Kennicott club, held last evening at No. 87 Washington street, it was decided to hold a club shoot for the handicap medal as soon as the birds can be procured, and a committee was appointed to handicap the members.

WINTER FIELDS FOR SPORT.

It will be seen by the following correspondence that our friends in North Carolina have tendered to the readers of FOREST AND STREAM a very generous offer, which we doubt not some of them will be glad to accept:—

WELDON, N. C., November 5th, 1874.

EDITOR FOREST AND STREAM:—

We inclose a copy of a letter from Mr. Randolph, and recognizing the value of "printer's ink," send you a little information in regard to this section of the South. We have leased the old "Kitty House" in this place, and knowing that the traveling public like, especially from the North, we are prepared to accommodate them in every way. Our coats are from New York city, and our servants will be polite and attentive. To the sportsman we can offer many attractions, deer, turkey, quail and squirrels being abundant, and within a short distance of the town. Weldon is at the junction of four important railroads, and on the direct line to Florida. The Richmond, Petersburg, and Weldon, the Seaboard and Roanoke, from Norfolk to Weldon, the Wilmington and Weldon, to Wilmington, and the Raleigh and Gaston railroads, centre here. Travelers leaving New York at 9 P. M. breakfast here at 5:30 next morning, and leaving New York at 9 P. M. take supper here the next evening at 6:30, and connect with the sleeping car for Savannah, Ga.

Polio's Ferry is eighteen miles from Weldon, on the Roanoke River, where we can accommodate every other day. We will take charge of any party who wish to come for sport, and guarantee satisfaction in all cases. Will send competent cooks and servants whenever desired. Yours respectfully,

MCLACHIE & RUSSELL.

POLLICK'S FERRY, N. C., November 5th, 1874.

EDITOR FOREST AND STREAM:—

As it has been suggested to me that you have Northern friends who are fond of hunting, I tender you a letter from Mr. Weldon, the gentleman who has leased the old "Kitty House" in this place, and who is prepared to accommodate them in every way. We have an abundance of deer, wild turkey, duck, and quail, and some game and pigeons. We have also an expert hunter, man, with good dogs, who will accompany any party you may see fit to send down, free of charge. Saddle and horses free, provided saddles and horses furnished. Yours respectfully,

J. G. RANDOLPH.

SUMMER WOODCOCK SHOOTING, &c.

THE BETTWOODS, November 2d, 1874.

EDITOR FOREST AND STREAM:—

In your issue of the 29th, you publish an article on the scarcity of that "ne plus ultra" game bird—the woodcock—and the probable causes leading thereto, and the remedy—*i. e.*, make the close season from Jan. 1st to Sept. 1st, or better yet, have a general State law passed prohibiting their being killed for two years, (five would be better).

The experience of the writer has been that Summer cock shooting will surely and quickly make this desert location where they were formerly very plentiful, and that, for the past five or six seasons they have greatly decreased in numbers, and I have not the slightest doubt that it is owing mainly to the Summer slaughter, as the following short sketch will show:—

In November, 1866, in company with two fellow sportsmen, I was following a covey of quail that had been flushed and scattered, when one of the dogs came to a stand, handsomely backed by the others, when, having been ordered to "go on," I jumped a woodcock, which was speedily knocked down, and found to be a fine, full grown hen bird. This was followed by a stare and talk all round. What was the bird doing there? &c. It was in quite an open field of rag and smart weed, some two to three rods from a brush thicket, or timber of any kind, the nearest being full two hundred yards away, composed of chestnut and oak sprouts. It was decided to hunt the field, thinking there might be more, but not finding others we concluded to try the chestnuts. The first dog on the ground (my old Count, who has since gone where all good and bad dogs go—peace to his ashes, for he was a good, one) straightened, backed by the others, and a covey of quail, seven birds, rose to and for two hours and half we had everything our own way; then, as it was growing dusk, we started for home, arrived there, and upon counting heads found that we had killed seventeen and one-half brace of woodcock, twenty-one pair of quail, three teal ducks, and one grey heron. The following year we visited the same place and killed twelve brace, and in '78 we killed five brace, and in '79 seven brace, and in one half brace, in '71, one single woodcock; over the same ground in '72, two brace. Did not visit the locality in '73, but was speaking to a gentleman residing near there this past Summer, and he informed the writer that since there was such a demand for Summer woodcock in the large cities, there had been but a very few shot, and that the season was in July, that a party of market givers who, as usual as the season was in July, that came there and swept everything in the shape of a woodcock before their killing chirps just able to fly, as well as old birds; that one day they killed over thirty brace, a majority of which were bred not over

half grown. That was in 1870. That they again visited the locality in 1871 and killed eighteen brace. In '72 they again tried it, it was overcast, and they returned that if they ever visited that locality again they would be prosecuted for trespass.

The spot was not low, but slightly rising, and more open than otherwise, in some places quite rocky, but mostly covered to a depth of five or six inches with leaves from the chestnuts and oaks. I intend visiting the ground to-morrow, and will in a future letter inform you of the result. "Nox."

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this paper, designating answers for good hunting, fishing, outfitting, and giving advice and instructions as to outfitting, implements, routes, distances, seasons, expenses, remedies, traps, &c., &c. All communications should be addressed to "Forest and Stream," and will receive attention. Anonymous Communications not Noticed.

E. K., Taunton.—The best way to get a good dog is to advertise for one in our columns.

B. W., Pittsburg.—Read Answers to Correspondents in the last two numbers of FOREST AND STREAM, and you will find recipes for curing your dog's eyes.

A. H., Arlington.—Your reason for dogs not being able to scent the coverts is right. The cause is self-evident. 2. The probability is in favor of your dog recovering his normal condition that fall. 3. H. T. M., New Haven.—The makers of the Winchester cartridge claim that the proof charge for their shells is 12 drachms powder and 2 oz. bullet, and warrant the soundness of their shells. They affirm that they never have a shell burst.

H. C., Cambridge.—Where can one get the best partridge (quail) shoot, in North Carolina, in December, and when the best duck shooting is at that State? Ans. All kinds of game in abundance around Newbern and Norfolk and Currituck Sound. What game can you have a better take? Ans. Ten here.

G. W. B., Worcester.—The Little Bassett is but little known in this country specifically. The Dardie Dimont is one of the most celebrated breeds of terriers. Some assert that it is a product of the Scotch terrier and the bulldog, and others hold that it is a cross between the two. The above terrier and the Walsh barrier.

A. A. M., Putnam, Conn.—Do the eggs of toads, as of frogs, when hatched, produce tadpoles, or perfectly formed toads? Ans. The development of the toad is much like that of the frog, except that the eggs are not laid in masses, but in long strings, containing a double series of eggs placed alternately. The reptiles which are smaller and darker than the frog have to assume their perfect form until August or September.

G. C. K.—I have a 25 inch, 10 bore, central fire shot gun, made by Gen. of New York, and would like to profit by your experience in loading, sizes of wads, and arrangement of same, shot, powder, &c. Also as to whether there is any good locality for shooting within fifty miles of here? Ans. We use different charges of powder and shot for different species of game. For a general answer, see last three numbers of FOREST AND STREAM. 2. Yes; in Ulster, Sullivan, and Delaware counties.

J. M. E., Elmira.—Will you give me size and description of targets used at Creedmore for 200 and 300 yards? Ans. The targets at Creedmore are made of heavy slabs of cast iron, 2 x 6 feet, which are bolted together to form the requisite size; two slabs making the target used up to 300 yards; three that used up to 600 yards, and six that used over that distance. Each target has a bullseye and centre, and the remainder is called the outer.

Bolton, Mass.—Can you give me any information concerning the breeding of the gray squirrel in cages, for I have had them from two up to six, but could not get any young from them? Ans. Separate them into pairs, keep in separate wire cages, the larger the better, and provide them with earled hair, cotton waste, hay, and other material for making nests. The place for the nest should be out of sight, with an opening large enough to admit but one squirrel at a time. Keep cage clean, and feed liberally, but not abundantly.

S. S. S., New York.—I have a young dog, Newfoundland, which I am just learning to retrieve; has never been in the water; now about nine months old. I am told it will give him the mange to send him in cold weather. Is this so? Ans. Have never heard such a statement before. It may chill him and lead to sickness. 2. Why were the Creedmore targets made of iron? I have heard of them being made of wood. I have seen suppressed at Wimbledon some time ago, is not shot No. 2 in the enclosed diagram better entitled to count than No. 1? Ans. It is; but not according to the Creedmore rules, for one is a centre and the other an outer. This mistake arises from the form of the targets.

ENGLISHMAN.—Can you give me the name of a book telling when game can be shot in the month of the year? Ans. See the nearest approach to it in the Table of Close Seasons published by FOREST AND STREAM. 2. Is there any volunteer company in New York, which any one, not being a citizen, can join? Ans. Several. 3. Is the Remington rifle the best for a hunter to use? Ans. It is hard to beat. 4. Can you inform me where I can buy buckskin suits? Ans. Field, 739 Broadway. 5. Are the woods within easy distance of Brooklyn or New York, where I can shoot? Can be had? Ans. Yes; at Flushing, and further down Long Island.

PALMETTO.—Of whom shall I inquire about securing passage to Florida by sailing vessel, and what would the fare be, say to New Smyrna? Ans. Apply to Van Brunt & Bro., shipping merchants, 75 South street, Fare, \$5.

A. C., Philadelphia.—Please make room for this in your column of Answers to Correspondents. Do you know of any good shooting locality on the line of the Philadelphia and Trenton Railroad? Ans. There is no shooting of any consequence on the line of the Philadelphia and Trenton Railroad.

ELLISON.—Will you favor us by answering the following through your valuable paper: What is the fastest time on record made by steamships from New York to Queenstown, and name of steamer? Ans. The quickest steamship passage ever made from Queenstown to New York was in May, 1872, in 17 days, 13 hours and 55 minutes, by the White Star steamer Adriatic; from New York to Queenstown, White Star steamer Baltic, in January, 1873, made the trip in 7 days, 30 hours and 9 minutes; Inman steamer City of Brussels made the same trip in December, 1869, in 10 days, 10 hours and 10 minutes.

EX B.—I would like to know whether, if a scamp puss picked into my private pond, have I not a legal right to poison it, so as to remove all the fish, and then re-stock it? Ans. We do not think a prosecution could be sustained. 2. If so, what substance would entail the least after effects? Would it do to put in lime and afterward neutralize the same with its equivalent of sulphuric acid, and would the resulting gypsum injure the trout, or other fish? Ans. This is a question of fact. The usual and perhaps the safest and most efficacious way is to lime the pond.

SKILLFUL, Providence.—A complete cooking outfit should have the following things: Tin plates, cups and spoons, a little shovel for turning fish, chops, pancakes, and doughboys, copper camp kettles lined with tin and made to fit inside each other, an ax, hatchet, spade, fire-iron, knives and forks, coffee spoon, frying pan, a small Dutch oven, and a camp stool, the scotchman, a chain loop will be found useful. The oven is the most essential article of all. It will bake bread and beans, and roast meat and fish, and as a fryer pan it cannot be beaten. The pot being thick, keeps a more steady heat, thus preventing things from burning, and is far superior to the ordinary frying pan. To bake with an oven take a spade full of hot coals, and put them a few feet to "windward" of the oven. Set the oven over them, and cover the top of it with hot coals. Occasionally lift the cover with a sharp stick put through the handle of the lid, to prevent things from burning. Increase the heat of the oven when needed by adding new coals from the camp fire.

A WEEKLY JOURNAL.

Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 19, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, should be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle. We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

INTERNATIONAL COURTESIES.

AN English exchange devotes a column of its space to prove that international contests for supremacy in physical exercises do not produce kindly feelings, and that they accomplish nothing more than to suppress jealousy for a brief period. It cites for proof of this premise the matches between Americans and Englishmen, and those between the Australians and a cricket "team" from the Motherland. Making a general deduction from a particular assertion; is not very logical; nor will the comparisons made prove the reverse of the opinion so prevalent, that pleasant meetings between representatives of different nations are productive of much good, and cause the people to be attracted toward each other by their sympathy with the contestants.

So far as England alone is concerned, this argument might hold good, for it is, we believe, an axiom that Americans were never received there with anything warmer than a frosty courtesy whenever they went there to test the prowess of her sons. The last visitors, the base ball players, did not receive even a decent welcome, so as a matter of course they are not ecstatic about the hospitality of their Saxon cousins.

Now the case is entirely different in the United States, for here we never permit those who cross the Atlantic to meet our men in honorable competition to return home with the opinion that we are either cold, churlish or inhospitable; so the consequence is that visitors leave us with feelings of regret, and ever after speak of our nation in the warmest terms of praise.

The distinguished Irish gentleman who has returned to their own shores will certainly deny the assertion that these contests produce quarrels instead of courtesies, and bitter animosities instead of kindly feelings. When gallant men cross the sea to meet ours in a friendly struggle for honorable distinction, our code of ethics specifies that they should be treated with the distinction due to worthy and welcome guests, so we escape causes for being deemed inhospitable, by this action.

Neither are we constantly debating whether our visitors are of the pure *avul sanguis* or not, and whether our dignity ought to be so flexible as to bend enough to recognize them so far as to extend them a kindly greeting. Not being handicapped by such ponderous importance as our English

kindred assume, we can afford to send our guests home in pleasant moods, and cause them to remember our country with pleasure; for their social status is lost to us in their skill or gallantry. If the English people would be more natural, and not assume so much rigid dignity that every bow and word is measured, they would find that those who visit their shores to engage in tournaments of strength or skill, would always remember them with pleasure; and the assumption that international contests are more a source of strife and bickering than ought else, could never be made with any shadow of truth, whereas, now, it can, so far as England alone is concerned, be proved to a certain extent.

THE DEER OF LONG ISLAND.

THE brief period, two weeks, in which deer may be lawfully hunted on Long Island, expired by limitation on the 15th instant. During all the open season, the pine and scrub oak barrens where the deer range, literally swarmed with hunters and dogs, so that from dawn till even tide each day the persecuted animals had no rest. The result of the battue, from the best data we have, shows about two dozen killed. The country where the deer run embraces a tract nearly central, about twenty-five miles long by six wide, extending from West of Babylon to a point East of Patchogue. In no part of the United States, except in the "knobs" of Pennsylvania and West Virginia, do the deer attain such great weight, 200 lbs. being the average for a full grown buck; and certainly no section is better adapted to their natural propagation or to the comfort of the hunter, it being undulating, well covered, and interspersed throughout with ponds and running brooks of purest water. There is no limit to the feed; for, when it is scanty in the oak forests, the surrounding farms, fields, and hayricks afford abundant sustenance. The Winter's are mild, the soil sandy, and the thickets along some of the creeks so dense as to be absolutely impenetrable. In these the fawns may lie secure. It is on account of these natural advantages, no doubt, that deer still exist here, surrounded as they are by a cordon of civilization, with three lines of railways traversing their range at intervals only three miles apart! The partial protection of the law of course materially assists. No doubt if the hunting were wholly prohibited for a period of three to five years, and a stock of twenty-five to fifty does were turned loose on the preserve, Long Island would remain for an indefinite period the favorite and most prolific hunting ground easily accessible. In five years fifty does, by natural increase, would multiply to eight hundred head, allowing for casualties; for does often drop two fawns than one. We would fain encourage the passage of a law at once by our legislature, involving total prohibition for a specified time, and we know of the requisite number of gentlemen who would gladly contribute two or three animals apiece toward stocking the Island. Nevertheless, we are convinced, after carefully sounding the opinion of sportsmen, that while nearly all would accede, there are still a few influential gentlemen who are unwilling to forego for a brief period their annual romp among the scrub oaks, and the possibility of winning a trophy from this detectable hunting ground; and that these gentlemen would combine to prevent the passage of such a law, or to revoke it the next year after its passage.

We confess to a fascination attending a deer hunt on Long Island that is irresistible, and we would rather boast one trophy here than a score elsewhere. That we felt short of our effort and ambition this year, reflects no discredit upon our woodcraft. We spent three days on the hunting ground in company with the Rev. Dr. Duryea, whose gun often cracks among the Adirondacks, and with Col. Wagstaff, of Babylon, who is familiar with every inch of the territory. We listened intently to the bay of the hounds, and stood patiently at the favorite runways of the deer, but none came near, and those persons who bagged the game had reason to bless only their remarkable luck. So precarious are the chances here of taking a deer, when so many dogs are out and the cover is so thoroughly beaten, that it has become the law of the chase that whoever kills an animal must divide with other claimants. Sometimes the carcass is cut up and distributed, but it is more generally sold at auction to highest bidder.

Right glorious and exciting sport is it, on a bright November day like those just past, when the game is afoot, to watch or participate in the scurry through the "open," or into the thicket, with hunters on horseback and wagons at full tilt after the quarry; the bay of the hounds in all directions—far in the distance or close at hand! Such a promiscuous babel of bell-mouthed tongues is seldom heard at a deer hunt elsewhere; but we fear that the last echo will soon die away and be heard no more on the precincts of Long Island. Who will demand a prohibitory law?

A KNOT FOR THE LAWYERS.

WE print in another column a letter from G. Shepard Page, Esq., an officer of the American Fish Culturists' Association, descriptive of a variety of trout little known outside of the precincts of Rangle Lake, in Maine. It is called the "blue-backed trout," and makes its appearance only for a short period in October and November, and at a time when the killing of trout is prohibited by the State laws; but because of its peculiarities, which were explained to the law makers of Maine when they drafted and passed the existing law, this variety of fish is specially exempted from those provisions which impose a penalty for capturing trout out of season.

Being made aware of these facts, it seems, Mr. Eugene Blackford, of Fulton Market, received a consignment of these trout and offered them for sale openly on his slabs. Now, it happens that the laws of New York forbid the sale here of Trout out of season, no matter where they come from, and suits are now pending to test their validity; and inasmuch as trout are trout, the naturalists and the Maine law in this case to the contrary notwithstanding, it becomes an interesting question as to how far the action of our courts here is to be affected by the exemption in Maine. Of course, the exhibition of these sparkling trout upon the market slabs could not escape the vigilant eye of the officers employed by the New York Society for the Protection of Game, who at once proceeded to interdict their sale, and notified Mr. Blackford of his offence. The dealer protested, and pleaded the peculiar conditions referred to above, as calculated to relieve him from any liability to arrest or prosecution for selling trout out of season. The officer, who is eminent in legal matters, at once took some specimens of the fish to the best authorities in the city, and after fullest investigation and subsequent acquaintance with the facts as set forth regarding the peculiarities of this variety of trout, admitted his doubt as to whether an action in this case could be sustained.

As we have intimated, the case is an intricate one, and involves most delicate legal points, or, perhaps, we should say opinions; for certainly it is covered by no precedent. The object of laws for protecting fish is to ensure and increase the supply of food; and laws for different States are made co-operative in order to prevent evasion of their intent and purpose. Hence the law of one State prohibits the sale of fish coming from another State. If it did not, fish might be caught in one State, and then be clandestinely carried into and sold with impunity in another; and thus the object of the law—which is the preservation of fish—would be defeated. But, it so happens, in the case in question, that this particular kind of fish is available for food only when the law of New York prohibits trout from being sold in the markets of the State; so that the law really goes back upon itself and defeats its own ostensible object, by preventing the use, *as food*, of fish which it assumes to preserve as food. If this variety of trout could be caught at any other time than in October and November, the case would assume a different phase.

One of the strongest points that underlie the case is the fact that the Maine law does not recognize these fish as speckled brook trout, but specially designates and excepts them as a different variety. If, being such, they are not included in the New York State enumeration of prohibited fish, then the law of this State cannot touch them or their vendors.

We are not disposed to argue the question now, nor are we anxious to make out a case for an imaginary defendant. Our instincts are opposed to any relaxation in the law as it stands. We consider that there are economic interests involved of paramount importance, and we apprehend only trouble and detriment to arise from the occurrence of this anomalous case. Admit the exemption of these Maine trout in our markets, and the slabs will at once swarm with the common brook trout which none but an expert can distinguish from "blue backs;" and thus the object of our law will be defeated by leaving the door wide open for evasion.

THE COLLEGE ROWING CONVENTION.

THE Convention of the Rowing Association of American Colleges which met at Hartford last January, adjourned until January, 1875. There is a desire on the part of some of the colleges to hold the Convention at an earlier day, in order to determine upon the locality and programme, so that crews may be chosen and go into training as soon as possible; but the time appointed is already so near, that no change for an earlier date is likely to be made. New colleges are talking of joining the Association, and these especially will require every advantage and opportunity for instruction and practice to enable them to compete with the older crews.

Meanwhile the proposed secession or segregation of the New England Colleges continues to be urged in some quarters, and particularly by those colleges that were last year disaffected as respects the selection of Saratoga for the regatta course, and such a secession seems by no means improbable. Aside from any personal feeling that may remain from differences that obtained on grounds of morality, jealousy or expediency, it seems to us that much more serious considerations are involved. There is danger that the Rowing Association, already unwieldy from numbers, may become unmanageable. There is scarcely a straight-away course in the country of the regulation length, that will comfortably accommodate the present number of competing boats and give reasonable guarantee against fouling when under way. Fouling always produces hard feelings and reprimand, and fouls accidental are more than apt to be charged as designed. Besides, fouls mar a race, and render the result unsatisfactory to both the winners and the defeated. If the Intercollegiate Navy, already so large, is to be increased, not only can no regatta be held where all the crews can compete simultaneously, but the lack of requisite sea room in most waters, will confine the annual competitions to two or three localities; and this holding of the regattas always in the same places, would detract much from the interest that would otherwise be felt in them if a different locality were to be selected each year. Moreover, the multiplying of crews and the juxtaposition

position of rival interests, are not at all likely to promote harmony. They would rather engender animosities. At the same time the labors of the Regatta Committee would not only be rendered laborious, but almost hopeless.

From a still more prudential standpoint, it is evident that if the Rowing Association were to include memberships from colleges geographically wide apart, much time and expense, which could hardly be spared, would be involved in attending meetings, keeping up the necessary communication with each other, transporting boats to the annual place of the regatta, and the like. We are not disposed to be censorious in this matter; yet, while we heartily advocate physical culture and daily exercise for the sedentary, as tending to promote health and stimulate the mind, we shall always be conservative enough to oppose any encroachment upon the studies of the college course and those duties for the thorough performance of which colleges were specially instituted. The book and pen are the insignia of the student; not the oar and pennant. The claims of the first ought not to be usurped by the last. Already does the interest in boating matters so largely absorb the attention of students that, only a few days since, the facts as they exist provoked the serious discussion of the Faculty of a New England College. If this interest is to be stimulated and largely increased by the emulation of two dozen rival institutions, there can be no doubt that lessons will proportionately suffer, and the usefulness of the college course be seriously impaired. Our judgment is decidedly in favor of dividing the ranks of the Rowing Association, and not adding new recruits. Let the eight Colleges of New England constitute a navy by themselves, and the other colleges that affect boating form a separate organization. Eight boats is as large a number as can conveniently row together in competition. It is more than probable, if such a division were made, that the annual intercollegiate regatta would be confined to New England alone, inasmuch as the best courses lie within her territory. There being but one available course outside of her borders, and the other colleges being so wide apart geographically, annual competitions would be abandoned elsewhere.

NATIONAL SPORTSMEN'S ASSOCIATION.—The organization of this body was effected on Sept. 10th. It would hardly be expected that much could be accomplished within the two months that have since elapsed, except to get into working form; nevertheless, some interest is manifested to know what has been, or is being done, the more especially since the action of the New York City Society for the Protection of Game, taken last week, in relinquishing to the National Association the field of effort which it had occupied with some prominence, and certainly with precedence, looking to the general improvement of the game laws of the country. The precise status of this body at present is no doubt accurately defined in the *American Sportsman*, which says, with regard to the future action of the National Association:—

"To all enquirers we answer in a general way that the Executive Committee has the matter under advisement, and before long the course for the Association will be mapped out, and the work will be commenced. The Executive Committee are men of standing, not little-minded by any means, and have a sense of their duties. In due time sportsmen may be sure that the business of the Association will have their attention, and meanwhile we may urge sportsmen themselves not to cool off and become indifferent, but to do their part in making the National Association useful, powerful and respectable. The Executive Committee cannot do everything; the spirit of movement must really come from outside, and unless the Executive be supported by the whole body of sportsmen, they are in the position of a government that is not backed by the people.

Sportsmen must organize. All sections admit this necessity, but very few take any pains to buttress their faith by their works. To ensure protection for our game and continuance of our sport we must have united and uniform action. We have got beyond that first proposition. The National is for the very purpose of carrying it out. Now, gentlemen sportsmen, comes your part in the play. Call your neighbors together, form county clubs; two or three can form a club as well as two or three hundred. Clubs, form yourselves into State Associations. The more members, the better and more widely your executive men are known and trusted, the more value will your Association have; but a few can begin as well as many. In your clubs and constitutions remember that there is a National Sportsmen's Association, instituted for your benefit, and to which your affiliation is invited, and which without your support will be voiceless and of no effect. The National will require to be sustained by members' dues. Take order for your subscriptions; they need not be heavy; finally send in your application for membership.

Having thus put themselves in right shape, sportsmen will be in order when they enquire what is the National doing?"

This statement, we are loth to say, will hardly be satisfactory to those who have looked to a National Association as the grand lever to accomplish long hoped for results. The organization is effected, but it lacks body and mechanical force. It seems to be in the anomalous predicament of a general about to undertake a battle without having recruited his army.

FLY FISHING FOR SALMON IN CALIFORNIA.—If any of our readers doubt that the salmon of California will take the fly, let them read the lively sketch of our correspondent "Podgers," in another column. Podgers is an old-time correspondent, who is well known to the readers of our leading magazines and journals, and is reliable as clear grit. We are proud to introduce him to our patrons, for we shall now learn of things that we have never heard or dreamed of, philosophy or no philosophy.

CREEDMOOR.—The seventh competition for the Remington diamond badge took place at Creedmoor, Long Island, on Saturday. The match began at 11 A. M., at the 500 yards range. The number of entries was smaller than usual, but included nearly all of the crack shots. A strong, chopping wind blew during the early part of the day, which interfered very much with the calculations of the marksmen. Mr. Hepburn, one of the members of the American "team" during the late international match, lost his reckoning at the 1,000 yards range, and retired after scoring five misses at that distance. Lieut. Fulton was somewhat affected by the uncertainty of the wind, yet he made a very handsome score at 500 yards—twenty-seven out of a possible twenty-eight. At the 800 yards range, his score was twenty-six, and at 1,000 yards twenty, forming a total of seventy-three, upon which he was awarded the badge for the second time. Should he be so fortunate as to win at the next contest, he will become absolute possessor. As it is, he will be afforded the satisfaction of wearing it during the Winter. The following is a list of the best scores in detail:

Yards.	Score.	Total.
500.....	4 4 4 4 3 1	27

Good Shooting.—Election day was celebrated by some of our riflemen at Creedmoor by shooting a friendly match. This was an impromptu affair, but it was made remarkable by the good shooting done. Mr. Rigby, of the Irish team, made some splendid scores, having put ten bullets in the bulls-eye, at 500 yards, in ten shots. This is the highest kind of work, and proves what a thorough marksman Mr. Rigby is by nature. Mr. B. Burton, with a 7½ Ward-Burton gun, made 38 out of a possible forty, at the same distance, and Col. Gildersleeve, with a Rigby rifle, reached the same score. Mr. W. G. Burton, with the Ward-Burton magazine rifle, made 36 at the preceding distance. This score would prove that the magazine rifle is capable of excellent work. Colonel Wingate and several other gentlemen tried their rifles on the target also, but we have been unable to get their score, as the match was a purely private one, that is, so far as it was a pre-meditated affair.

—On the 28th instant the last regular match of the Creedmoor season will take place, being the day set down for the ninth *Turf, Field and Farm* badge competition. The Range Committee have resolved to keep a range officer during the winter, and riflemen may shoot at any time. Stoves are to be placed in the tents and shelters erected at the firing points.

GAME ASSOCIATION IN FLORIDA.—We are gratified to observe the alacrity with which our friends in Florida are combining to arrest the wholesale destruction of game in that State. The formation of the club indicated below, with several prominent citizens for its officers, is an earnest of much good to be accomplished at once, and we feel no doubt that the State Association herewith foreshadowed will soon be created. Its good offices are certainly much needed. For the very friendly compliment conveyed in the name selected for the newly formed club, we feel honored, though free to say that some other name would seem to have more pertinent significance. This club shall have what assistance we can give in aiding the good work which it has undertaken:

NEW SMYRNA, FLA., October 31, 1874.

EDITOR FOREST AND STREAM:

The "Hallock Sporting Association" was organized at this place on the evening of the 29th. Dr. French, of Melvilleville, was elected President; Capt. Thorpe, of Melvilleville, and George J. Allen, of New Smyrna, Vice Presidents; E. Marcile, of Port Orange, Secretary; and John Allan, Treasurer. A committee, consisting of Messrs. Alden, Allan and Marcile was chosen to draft a constitution and by-laws. Charles Hallock and Wm. Allan, of New York, were made honorary members. The object of

this Association is to urge the passage of suitable game laws, and see that they are enforced. Other similar organizations will be formed in different sections of the State, after which a State's Sportsman's Association will be organized. We have selected one of the most sightly places on the coast for a club house, and as soon as we can purchase the same shall commence building.

Yours, truly,

GEORGE J. ALDEN.

Honors multiply! We had scarcely seen the ink dry on the foregoing acknowledgement of ours, when the following note came to hand from Corinth, Mississippi, through our valued correspondent "Guyon":

CORINTH, MISS., November 13.

EDITOR FOREST AND STREAM:

We have organized a Shooting Club here named in honor of your paper, "The Forest and Stream Shooting Club." Capt. W. S. Reynolds, President; Rawlings Young, Secretary; Capt. J. V. Duncan, James E. Gift, Capt. W. R. Keen, Dr. S. L. Paine, Capt. R. V. Manston, and Colonel Tom Johnson, members. We intend to make a start toward getting a game law passed in our State, without which we will soon be entirely cut off from all field sports, as there will be nothing left to shoot.

The formation of Clubs in the South we regard as a most auspicious sign.—Ed.]

—Franklin W. Fish, Esq., a poet and humorist of some repute, will deliver a lecture on Nov. 24th, in Temperance Hall, Kent avenue, Brooklyn. Subject:—"The Oddities of Every Day Life, or the Funny Things We See."

YALE COLLEGE.—A summary of the students in Yale College by the last catalogue, is as follows:—Theological Department, 103; Law Department, 53; Medical Department, 50; Graduate Students, 55; Special Students, 7; Under Graduates, Academic, 537; Sheffield Scientific School, 263; School of Fine Arts, 21; Total, 1,074. The freshman class of the college proper has 164; sophomores, 142; juniors, 136; seniors, 95.

—Mean noon-day temperature at New Smyrna, Florida, for the month of October, 80 degrees, 14 minutes; at 7 A. M. 74 degrees; at 9 P. M., the same.

—Snow three feet in depth is reported in parts of Ontario, Canada.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, <i>Morone chrysops</i> .	Weakfish.
SOUTHERN WATERS.	
Pompano.	Trout (black bass).
Snapper (two species).	Drum (black drum).
Grouper.	Kingfish.
Rockfish.	Sea Bass.

FISH IN MARKET.—Owing to the exceedingly mild weather which has greeted us of late, the fish market cannot display as bounteous a variety of species as it usually does at this season of the year. There is a fair supply of blue fish, some specimens weighing from ten to sixteen pounds, which retails at 12½ cents per pound. These are caught on the coast of North Carolina at present. The live codfish sent to market at this season usually is most marked by its absence, for where it should be very profuse, scarcely any can be seen. The consequence is that the fishermen who usually reap their piscatorial harvest off Sanly Hook are getting discouraged, so some are laying up their vessels and returning home. There is a good supply of striped bass, but it is expected to be more abundant in a short time, as the late run is now due, but owing to the mild weather, no schools have approached our shores. The surf fishermen of Long Island are on the beach every day looking out for their visitors, but though they see them out to sea, yet none come within their reach. They are now praying for a hard gale and some cold weather, in order that the fish may be driven shoreward. Bass sell now at from fifteen to twenty cents, but as soon as the usual catch is made, it will come down to 12½ cents. The white perch is caught largely off Long Island, and some of them weigh two pounds, an unusual size for this little species. Price 15 cents per pound. White fish from the Great Lakes are plentiful at 20 cents per pound. Fresh mackerel are scarce at 20 cents per pound. Fishermen are looking for a large catch during the next ten days, as the finest specimens are put up from the late run. Halibut is comparatively abundant at 20 cents per pound.

—Blackford, of Fulton market, has received from a friend in Savannah a soft-shell turtle (*Trionyx ferox*), a species of its family which is quite a stranger in the Northern latitudes, although it has been found in the State of New York and some adjoining regions. It has a dark slate-colored shell, with ocellated spots, and is of a soiled white beneath. Its most marked peculiarity is its rather long and pointed snout, and its prominent marbling of the neck. The flesh is thought to be highly edible, and very nutritious. The specimen under consideration enjoys life in a fountain, and partakes of scollops and meat. It seems to be well content with its narrow home, and to take an exhibition of its peculiarities with stoical indifference.

—Myriads of small or young herrings are being caught by hook and line, shrimp baited, in the waters of Wareham, Mass. This acceptable little morning appetizer seems to be a stranger in our waters, he having several bright trout-like spots on the line of the back, shows conclusively that he must be a foreigner, as he is unlike any of the herring or alewife family who have previously visited these waters.—Wareham News.

portunity to show her powers to any extent. The champion for the season is undoubtedly the yacht Fannie, she having won every prize for which she sailed.

The new club house of the Boston Yacht Club is a model of elegance, and the admiration of all our yachtsmen.

Yours, &c., C. F. G.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other out-door Clubs will kindly mail their contributions not later than Monday in each week.

—Mark Twain essayed the role of pedestrian recently by walking from Hartford to Boston, a distance of 100 miles. After walking 28 miles, he concluded that it would be much more pleasant to finish the trip by rail ; so he did it in that way. He now asserts that he has not failed, but that an effort so great as that would require a week at least to do it comfortably.

—The following is the record of the play of the Boston Red Stockings in the championship contests for 1874:

[illegible]

—The Reliance club defeated a field nine on November 12 by a score of 25 to 8, the field side including Gordon, Britt, Duclarme, Fleet, Cassidy, Shervin, Gill, Shandley and Dodge, of the Amity, Nameless, Staten Island, Atlantic, Confidence, Flyaway and Chelsea clubs.

—Al Wright will not manage the St. Louis Base Ball Club next season, he preferring to stay with the old Athletic team. The St. Louis nine, he says, will be as follows: Catcher, Miller; first base, Easton; pitcher, Bradley; Easton; second base, Dehman; of Atlantic; second base, Baiton, of Atlantic; third base, Fleet of Atlantic; short-stop, Pearce of Atlantic; left field, Outhbert of Chicago; centre field, Pike, of Hartford; right field, Waitt, of Easton. All of the above have signed except Pearce and Fleet, Mullen having been paid \$100 bonus.

The Easton club closed a very successful season last week. Their record for 1874 shows that they won 29 and lost 3 games with amateur nines, their most noteworthy victories being the defeat of the Collins, of Philadelphia 14 to 0; the Playfaws, of New York, 4 to 0; the Chelsea, of Brooklyn, 18 to 3, and the Shibbes, of Philadelphia, 17 to 9; these three first named being the amateur champions of the country. They also won 10 games with professional clubs, defeating the Philadelphia Athletics 11 to 2, the Athletics 7 to 3, and the Atlantics 10 to 8. Three of their defeats with professional clubs were very close affairs; the Atlantics winning by one run, the Philadelphia by three runs, and the Mutuals by four runs only. Their record of games won and lost is as follows: Mutuals 3 to 2, the Atlantics 3 to 11. Hang and Watt took part in all of the games played, the former having the best average of base hits, and the latter of runs. Bradley put out 45 men and assisted no less than 120 times in his position of pitcher. Miller retiring 161 men, and assisting 62 times, their fielding percentage being 98.3. The club's success is mainly due to the full management of the club for the past three seasons and that he did his work thoroughly, the club's record above given proves. Mr. George M. Reeder, of the *Evening Daily Express*, the President, and Mr. William Hulick, the Vice President of the Eastons, have contributed largely to its success, and the great success is mainly due to the energetic management of Captain Jack Smith, the club's athletic manager.

The new professional club of Philadelphia is to be called the Centennial. It was formally organized last Saturday week, by the selection of the following well-known gentlemen as officers: President, Charles E. Rollins, Treasurer, W. D. Allen; Secretary, J. Bard Ward; Directors, A. E. Story, W. F. McAlly, E. E. Smyth, and J. E. Thompson. The corporation has been organized at \$10,000, divided into two hundred shares, at \$50 each. The following players have signed for the season of 1875: Craver, Bechtel, Abadie, McGinley, Sommersville, Trem with, Warner, Mason and Huston, with Quinlan and Timmons as substitutes. The club is now negotiating for suitable grounds, and will start in February next on an extended tour, playing in all of the principal cities of the South, returning home in time for the opening of the season of 1875.

—The following is the record of the Acushnet base ball club of New Bedford, Mass., for 1874:—

VICTORIES.

Acushnet vs. Harvard, of Boston.....11 to 7

vs. Boot & Shoe, of New Bedford.....	18 to 8
vs. Clipper, of New Bedford.....	16 to 10
vs. Clipper, of New Bedford.....	19 to 8
vs. Breston, of Taunton.....	26 to 21
vs. Troy, of Fall River.....	32 to 29
vs. Diamond, of New Bedford.....	36 to 24
vs. Breston, of New Bedford.....	67 to 13
Total.....	205 to 200

Total.....	525 to 129
DEFEATS.	
Acushnet vs. Hartford, Professional.....	1 to 55
vs. Troy, of Fall River.....	5 to 38
vs. Troy, of Fall River.....	50 to 31
vs. Resolute, of Fall River.....	18 to 37
vs. Resolute, of Fall River.....	14 to 17
Total.....	68 to 178

—On November 7th the Bostons defeated the Harvard nine by 15 to 5, and on the 10th played a picked nine, in which Manning was pitcher, and Sweasy second base, beating them 17 to 9.

—The Athletic club it appears has barely cleared expenses during 1874, their receipts—\$25,930—only exceeding expenses by \$875. They lost by their European trip, which cost \$3,396, the receipts in England not exceeding \$1,700.

bush. The villagers from the interior propose having a good time in the city on that day.

The highest score made by a winning nine last season was by the Mutuals, when they defeated the Chicagos 38 to 1. The only tie game of the season was the Atlantic and Boston match of October 7, 4 to 3. In one game twelve innings were played, and in eight others, ten innings.

—The following players have signed to play with the Philadelphia club next season, so far as can be heard from official sources: Fisher, pitcher; Meyerle, left field; Gould, first base; Snyder, catcher; Fulmer, third base; Hoids worth, short stop.

—We have in type a table giving a Professional Championship Base Ball Games for 1874, which we will publish in our next.

Chess

THE BROOKLYN CLUB TOURNEY.—The score of the tourney now in progress at the Brooklyn Club Rooms is as follows, up to November 17th :

Players.	Games Played.	Won.	Lost.
Dr. Rarick.....	5	5	0
Perk.....	4	3	1
Perrin.....	5	3	2
Spauce.....	2	2	0
Volstead.....	2	2	0
Phillips.....	3	2	1
Thayer.....	2	1	1
Horne.....	1	1	0
Turner.....	2	0	2
Stork.....	2	0	2
Seaver.....	2	0	2
Thompson.....	2	0	2

Most of the tourney games are played on Wednesday and Saturday nights, though some are attended sabbath

Most of the tourney games are played on Wednesday and Saturday nights, though the rooms are attended nightly.

THE NEW YORK CAFE INTERNATIONAL TOURNEY.—The score of games lost and won at the Cafe International up to Monday, is as follows. Several Brooklyn players have entered the lists, among them are Ur. Barnett, who thus far has the best average, and Messrs. Dill, Peck, Sanger, Elwell and Todd. The score of those who have won more games than they have lost is as follows :

Games and Runs Made by the Best of the League.				Games and Runs Made by the Best of the League.			
	Played.	Won.	Lost.		Played.	Won.	Lost.
Mason.....	33	23	5	Alberone.....	25	17	8
Pelmar.....	29	28	7	Townsend.....	30	17	13
Perrin.....	26	21	5	Limbeck.....	30	16	14
Dill.....	25	18	7	Barnett.....	16	14	2
Murray.....	27	18	9	Barnes.....	19	11	8
Peck.....	28	18	10	Sanger.....	20	10	10
McCutcheon.....	22	17	5	O'Neill.....	13	8	5

The record of those who have lost more than they have won is as follows:—

	Played.	Won.	Lost.		Played.	Won.	Lost.
Prior.....	2	2	0	Koch.....	23	3	22
Edwards.....	10	0	10	Nonor.....	37	15	22
Goldmark.....	15	3	12	Todd.....	41	18	23
Frankell.....	15	2	13	Ferguson.....	33	9	24
Becker.....	18	4	14	Whitaker.....	35	11	25
Griffin.....	20	4	16	Garrigan.....	44	18	26
Elwell.....	31	15	16				

A WELL CONTESTED MATCH.—Below we give the score of a very interesting and instructive game, which was recently played at the Brooklyn chess club rooms, between those veterans, Mr. Perrin and Dr. Burnett:—

WHITE.		WHITE.		BLACK.		BLACK.	
	Mr. P.		Mr. P.		Jr. B.		Jr. B.
1	P-K4	19	B-K5	1	P-K4	19	K1 x P
2	P-K-B4	20	P-K-B4	2	P-K4	20	P-K-B4
3	P-K-B4	21	P-Q-B3	3	Q-K-B5 ch	21	P-K-R4

NOTES.

(a) better 6 B-B 4. (b) the usual moves are

70 K-Kt	9 B-Kt 2
11 P x B	10 B x Kt
12 P x P	11 Kt-Q 2
	12 Q-P ch

(c) if 12, R x P, 12 B ch Kt. (d) 16 K Kt-K5 seems better. (e) make room for the R P. (f) if

(g) better thus:—

19 Q x Kt	19 Q R—K Kt with a strong att'
24 P x R	24 Q x P x
25 R—B 2	25 Q x Kt
26 O—K 6 ch forcing the exchange of Queens	

(h) This move and the following also give rise to a very curious position.

(i) A very ingenious answer to black's last move. Had white played anything else, black would have won at once by Q-Kt Sch. It is obvious that the Q cannot take the R.

(k)	33 Kt-Q B 4 33 Q x R	if 32 R-K 7 or Q 7 if 32 R-K 2
(l)	if 33 Kt-Q 3 if 33 B-K 6	33 R-K 2 and wins. 33 R-B 8 ch 24 Q x O Kt P x and wins

Billiards

THE FIRST GAME TOURNAMENT.—In the annals of billiards in the metropolis there has been no exhibition of entertainment even given by professional experts that will compare with the tournament which last week was a billiard sensation in the city at Tammany Hall. In every respect was it a success, both as regards the skill displayed and the number and character of the audiences which filled the hall nightly. But especially were the arrangements made for the comfort and convenience of the spectators. Features which have only too frequently marred the success of like entertainments. For this we think we are indebted to the large attendance of the fair sex, whose presence, of course, debared not only the annoyance of smoking, but also of that greater evil, open gambling. Betting on the result of the contests it was impossible to avoid, but what was done in this respect has been done outside the hall, and the order and cleanliness of the room were not prevailed throughout the tournament. As regards the playing, there has never before in this country been seen so masterly a display of skill as was exhibited in Tamman-

Hall during the ten days of the tournament. In the first place the game itself—the three-ball French carom game, called for the most scientific billiard playing in vogue; and then, again, the high reputation of the contestants, who included the most noted billiardists of France, the United States and Canada, warranted an exhibition of skill unequalled in the annals of the game; and when combined with these elements was added the exciting feature of a series of contests for the championship medals and valuable money prizes, it will be seen that everything was present in the arrangements calculated to lead to the successful issue attained.

In our last number the descriptive record of the games played during the games up to Monday, November 9th, only. We now give a brief notice of the contests which followed, two or three of which proved to be of such exceptional excellence as to call for more extended comment. On Tuesday the games were opened up by Messrs. Slosson and Daniels, and the result was the success of the Chicago expert and the defeat of the Bostonian, Slosson winning by a score of 300 to 161, his average being a trifle over eight, and his best runs 67. The next game brought together J. Dion and Ubassy, and the Canadian defeated the French veteran by 300 to 123, the victory giving Dion the lead in the tourney. His average was over 11 and his best run 80. The last game of the afternoon session was by Maurice Daly and Garrier, and to the surprise of his friends he allowed the American to defeat him, Daly winning by 300 to 175; Daly's average was a little over 11, and his best run 60, Garrier not exceeding 40.

In the evening the attendance was very large, as Rudolphe was to meet Maurice Vignau for the first time, and an exciting contest was expected. Rudolphe obtained the lead early in the game and he maintained his vintage ground to the close, and won by 300 to 253. His average was 12 and his best run 91.

On Wednesday afternoon two unimportant games were played. Rudolphe defeating Daniels by 300 to 227, the average not exceeding 7; and Garrier laid almost a "walk over" with Slosson, the score being 300 to 45 only. In the evening the hall was crowded as it never had been before at any billiard entertainment, the attraction being the first meeting between the Canadian champion, T. Dion, and the French expert, Vignau. Long before the hour for play in the evening all the places were occupied, and so numerous was the attendance of ladies that extra seats had to be prepared for them on the floor of the hall. The first call showed Vignau to be in the van by 78 to 17, and the lead thus secured was maintained to the close. At the call of the first hundred Vignau led by 106 to 43. It was not until his 20th innings that Dion scored his first hundred and then Vignau led him by 70 points. In his second hundred, as he was now but 40 points behind his opponent, Slosson's total, the contest became more interesting as a contest than before, the previous attraction consisting of Vignau's masterly exhibition of French billiard playing. In the 32d innings, however, Vignau added 35 to his score, and in his 34th, by a run of 23, closed the game, leaving the totals at 300 to 254.

The next contest to this was between Daly and C. Dion, and the former won without difficulty by 300 to 245, the winner's average being but 7. He made a fine run of 108, the fourth best run of the tourney.

On Thursday, Daly defeated Ubassy by 300 to 101, Maurice running 70 and averaging 9, after which Slosson defeated Cyrille Dion by 300 to 256, Cyrille playing poorly until the last, when he made a plucky rally. Slosson's average was 11 and best run 50.

On Friday the first contestants were Daly and Daniels, the former winning by 300 to 188, Daly's average being a little over 7 only, and his best run 55. This closed the score of both players in the tourney, their totals being as follows: Daly six victories and two defeats, and Daniels no victories and eight defeats. Rudolphe had closed his score the night previous with a record of four victories and four defeats. The next game brought together the veteran Ubassy and young Slosson, the former winning by 300 to 197. In the evening the contest was between Vignau and C. Dion. Vignau made his first count in the fifth inning. In the meantime Dion had scored double figures three times, and run his total up to 40. In Vignau's sixth inning he added 29 to his score, thereby securing the lead, after which both laid duck eggs until the ninth inning, when Vignau again ran 29, marked by two masse shots. This left him in the van by 75 to 41. Both now began to lower their average. Cyrille only adding 4 to his score from the fifth to the fifteenth inning. It was not until Dion's twentieth inning that he exceeded a run of 17, but then he got the balls close together, and he did not cease counting until he had made 79 and run his total up to 151, Vignau's score being 99. In the next inning Vignau ran 31, slipping up on a draw. Dion scored 7, when Vignau added 23 to his score, and left the table at 158 to 153, only five points behind him. In Vignau's twenty-sixth inning he made 24, which placed him 152 to 163. In Dion's twenty-seventh inning he slipped up after getting 17. In the thirty-second inning Dion again obtained the lead with a run of 26, leaving the totals at 208 to 201 in his favor. Vignau made 13 in the next inning. From this point up to the thirty-eighth inning the game fluctuated considerably. Finally, in Vignau's thirty-ninth inning, he made a run of forty-six. Dion then made 10, and in the fortieth inning Vignau won the game out, thereby winning the champion's gold medal.

The last game was opened by J. Dion with a run of 21, and he was the first to score a hundred, a run of 40 in his eleventh inning leaving the totals at 101 to 61 in his favor. This Garrier followed with a run of 93, he slipping up on an easy bank shot. Afterward came ran 54, but Garrier was the first to turn the second hundred, and in his twenty-fifth inning he ran his game out by the totals of 300 to 238. The full score is appended.

Players.	Vignau.	Daly.	Dion.	Ubassy.	Slosson.	Rudolphe.	Daniels.	Garrier.	Games Played.
Vignau.....	1	1	1	0	1	1	1	1	9

Daniels.....	0	0	0	1	1	1	1	1	9
Games lost.....	1	3	2	4	5	6	8	8	36

The decision of the money prizes at the billiard tourney resulted as follows: The second and third money prizes, \$800 and \$600, were equally divided between Maurice Daly and Albert Garrier; the third and fourth, \$500 and \$400, between Ubassy and Slosson. Vignau of course takes the emblem, and Dion and Garrier each a watch.

Vignau has accepted Dion's challenge to play for the championship. Chris. O'Connor, acting for Vignau, has deposited the forfeit, and the same is to be played within fifty days. Rudolphe and Garrier's match is to be played on the 11th of December.

It is anticipated that a Billiard Tournament like the one just concluded here will take place in Chicago about the 1st of December. The same professionals who played here will participate there. The games will be played at Peley's, in Madison street.

The Colleges.

YALE ATHLETIC ASSOCIATION.—We announced in last week's paper that the athletic games would be repeated in the Spring, with the object of encouraging men to enter the inter-collegiate games and of training men for them. This matter has now assumed shape, and by the kindness of those having it in charge, we are able to present to our readers a list of prizes, with the accompanying conditions, as follows:

1st, 2d, 3d, Total.	Conditions.
150 Yard Hurdle Race..... \$12 \$8 \$6 \$20	Winner's time shall be better than 19 sec., and 2d time 22 sec., and 3d time 25 sec.
100 Yard Dash..... 10 8 6 15	Winner's time better than 11 sec., and 2d 11 1/2 sec.
1 Mile Race..... 18 12 7 37	Winner's time better than 15 min. 15 sec., and 3d better than 16 min. 30 sec.
Three Mile Race..... 25 15 10 50	Winner's time better than 18 min. 15 sec., and 3d better than 19 min. 30 sec.
100 Yards Dash..... 10 8 6 15	Winner's time better than 11 sec., and 2d 11 1/2 sec.
One Mile Walk..... 16 12 8 36	1st better than 8 min. 10 sec.; 3d than 8 min. 30 sec.
Three Mile Walk..... 25 13 8 46	1st better than 25 min. 30 sec.; 3d than 26 min. 15 sec.
Half Mile Race..... 18 9 6 33	1st better than 2 min. 12 sec.; 3d than 2 min. 19 sec.
Quarter Mile Race..... 15 8 5 28	1st better than 56 sec.; 3d than 59 sec.
220 Yards Consultation..... 8 6 0 14	
Total.....	\$22

The meeting will take place between the 15th and 25th May, one month after the Spring vacation. Entrance fee, \$1, entitling to compete in all races.—*Yale Record.*

A match game of football of considerable interest took place on the Campus at Dartmouth College last week. There were eighty kickers, twenty men being selected from each of the four classes. The Seniors and Sophomores played against the Juniors and Freshmen, the trial being for the best three out of five games. Quite a large number of spectators witnessed the game, three of which were played. The first game was the most closely contested of the three and lasted ten minutes. The Seniors and Sophomores were victorious after several very narrow escapes from defeat. The remaining two games the Seniors and Sophomores won with less difficulty. Mr. C. H. Petter of the Thayer department acted as umpire.

PRINCETON COLLEGE, Nov. 11, 1874.

EDITOR FOREST AND STREAM.—The first game of a series for the championship of the colleges in foot ball was played here this afternoon between the Columbia College, of New York, and Princeton University. The game was witnessed by a large concourse of spectators, composed chiefly of students, though quite a number of the fair sex also were present. Columbia's representatives appeared in a very becoming uniform of white with blue stockings and handkerchiefs. The Princeton men were attired in a rather straggly dress. Some wore ball suits belonging to the University, while others had on other suits belonging to the various clubs of the city. The comparison, in appearance, at least, was not very favorable to Princeton.

The game was called shortly after one o'clock, and closed about an hour afterward. The first goal was won by Princeton in seven minutes. The second and third innings occupied the same length of time each as the first. The fourth inning was the longest, Princeton not being able to reach her goal until the sixth minute of the game. Three minutes and a half. But six innings were played, and Princeton won them all, beating Columbia by the score of 6 to 0. The last two innings occupied four and twelve minutes, respectively.

The Columbia twenty is composed of a fine-looking set of men, physically, and it is hard to discover the secret of their ill-success, unless it be that they were cutely "outplayed," which Yale so frankly confessed last Fall to have been the reason of the severe defeat she then experienced at the hands of Princeton.

Messrs. King and Root, of the Columbias, especially excelled in their playing to-day; each of whom did what he had to do well. The effective kicking of Moffat secured two goals for Princeton; and Scott, or the same twenty, did some of the most brilliant playing of the year. Though decidedly one-sided, the game was quite exciting at times, and by no means an uninteresting affair. It is to be hoped that the intercourse thus instituted between Columbia and Princeton, will serve to strengthen the bond of union which existed in a great measure during the past between these two Universities; and that the good feeling and friendly spirit evinced to-day, will continue throughout their future relations with each other.

The second game of the season, in foot ball, will be played here on Saturday, the 21st instant, between the Rutgers College and Princeton Universities. A close contest is expected, as the former has acquired the art of "battling" well, to which acquisition the latter attribute much of her previous success, as none of her other opponents have been found very skillful in this style of playing.

It is understood that Columbia and Yale, both under the conviction that "battling" alone enabled Princeton to be so victorious over them, will take strong measures to have all hitting the ball with the hand ruled out at the next intercollegiate foot ball convention. They also claim that their mode of playing is not foot ball. Technically speaking, they are correct in this, inasmuch as the liability of the player to be injured by certain ones to acquire skill in "battling" well, is to deprive the game of one of its most brilliant and attractive features, the next convention alone must and will decide.

In closing, I would like to make a slight correction of an evident mistake in the last issue of your valuable paper. In a notice of games, which took place at Yale's College, it is stated that Perry ran and jumped 47 feet 4 inches, which is a very large yardage of any of the Colleges. (The italics are my own.) In correction of the last clause of this sentence, I would simply state that Walker, of '78, ran and jumped 18 feet and 19 inches, at our Canadian games in June. The measurement was made by Prof. Goldie, the Champion Athlete of the United States and Canada, who was our referee in the last intercollegiate game. It is a fact, as stated by a prominent member of the New York Canadian Club, in addition to the above, I think it will be found that Maxwell, of Yale, has even exceeded the foregoing distance; in fact, I am certain that he has run and jumped more than 19 feet.

Canada.

SPORTING NOTES OF THE CURRENT WEEK.

At a meeting of the Ottawa Hunt Club, it was decided to hunt for the Governor General's cup in Matchmore Park. Two steepie-chases, in which His Excellency will join, follow.

Some friends of those who rode at the fox hunt at Quebec last week, feeling interested in the height and extent of many of the jumps, measured a number of the fences. They found that several of the horses went over a mile of country, where they averaged four feet six inches. One long jump across a gully measured eighteen feet four inches. There was also a former lead fence of four feet eight inches, and a stride of sixteen feet six inches.

At a meeting of the Ottawa Club, on the 23d inst., Mr. F. X. Lambert was elected President, Dr. Hurbert, Vice President, and Rev. Mr. Phillips, Secretary, for the ensuing year.

Lieut. Mends, 60th Royal Rifles, broke his leg on Saturday last in a match of football with the Garrison vs. the Navy.

Beaver's team of Six Nation Indians beat the Young Ontarios, of Caledonia, in three straight games at lacrosse on the 29th ult.

Mr. Robert Clark, of the London branch of the Bank of Montreal, walked forty miles in nine hours and twenty-four minutes, on the 29th ult.

The Caledonia Club of Toronto, will send four links to the grand bospital to be held under the auspices of the City Club, of Hamilton, on Burlington Bay, in January next. Messrs. H. Malcolm, Wm. Kennie, R. H. Ramsay and Jas. Pringle will be the skips.

On the 7th instant the Ottawa Hunt Steeplechases were held, when Pierce Arthur won His Excellency's Cup and the \$175 Local Handicap, beating in the first event First Flight, Bonnie Braces, and Jack-in-the-Green; in the second, the last named, Young Wagram and Clip. The Hunt Steeplechase for \$175 was won by Bonnie Braces.

On Tuesday last the Toronto fox hounds met at the kennels. The hounds were laid on to a drag and went as usual Mr. Hinchcliffe's house on Bloor street, thence North to the Davenport road, where they turned sharp to the left and went straight as the crow flies to Mr. Shedd's farm, where a slight check enabled some of those who had tailed off owing to the severe pace, to get on better terms with the rest of the field. The scent was soon found again and we went on to Carleton, where we finished. Altogether it was a splendid run, which was enjoyed by a field of about fifty, among whom we were pleased to notice a considerable sprinkling of ladies. Of course some of the hard-riding ones contrived to part company with their horses during the course of the run, but no one was hurt and they went on as merrily as ever, after accidents that only increased the general enjoyment. Ours is not quite a "cut 'em down and hang him up to dry" country, but it is quite as easy to come to grief on a horse and dog fence as a Leicestershire one. As in our case on the other—get up again and try and look pleased. That is what our friends did on Tuesday.—*Canadian Sportsman.*

Clip and Count Kilrush are matched to run a two and a half mile steeplechase at Redmor Park, Ottawa, and two hours afterwards to go two miles over eight hurdles. Clip is to carry 135 lbs. and Count Kilrush 144 lbs.

The Albert Association, of Galt, beat the Bruce Association, of Watertown, on the 6th instant, by thirteen points.

The Toronto Hunt had two capital runs on Saturday, one of twenty-five minutes, on Armstrong's Farm, Yonge street, and another of fifteen minutes after a fox, finishing with a kill "in the open."

Trinity College School played a return match with Port Hope town on the 4th inst., the school being again defeated by one goal.

McGill University, of Montreal, refuses to play Queen's College, of Kingston.

The University Club beat the Toronto Lacrosse Club by two goals to one on the 7th. The return match will be played on the 4th.

The Canadians are organizing their Curling Clubs for the Winter work.

New Publications.

ENCYCLOPEDIA OF RURAL SPORTS. By J. H. Walsh (Stonehouse). Porter & Coates, Philadelphia, Publishers.

This splendid volume is the most thorough work on the subject under consideration that has yet been written. The author has had a very varied and extensive experience in all the sports of the field, and being a great lover of such exercise, besides a literature by profession, he has performed his labor in the most satisfactory manner; hence, persons need go no further than this book to learn how to become experts in all the annually accomplished sports. The first portion of the book is devoted to the best mode of killing wild animals, and this subject treats of shooting, hunting, coursing, falconry, and fishing. The second portion embraces an account of racing in all its forms, yachting, boating, pedestrianism, and the third describes cricket, foot ball, tennis, golf, curling, horsemanship, driving, skating, swimming, and these are followed by sketches of the anatomy and physiology of the horse and dog, and the treatment of these animals in disease. The lover of such exercises and studies will find this work a *dear gem*, for besides the information it imparts, it is also pleasant reading.

EATING FOR STRENGTH. By M. L. Holbrook, M. D.:

Wood & Holbrook, New York, Publishers. This convenient volume is divided into four parts: the first being devoted to the science of eating, the second to receipts for wholesome cookery, the third to receipts for wholesome drinks, and the fourth to answers to recurring questions. These divisions render the work easy of reference, and prove a most desirable convenience. The subjects treated are analyzed most carefully, so that every deduction made is the logical sequence of the premises assumed, and that it is a correct one is proven by both arguments, comparison, and incidents in actual life. Whatever the writer of this volume may assert is apt to be based on the principles of right, for he is too conscientious to make false statements, or jump at conclusions, without a thorough analysis of the subjects. On this ground his work will be appreciated by all who may read it, hence its teaching will be adopted and studied by all who would learn to eat that they may live in such a manner as to avoid disease. Every housekeeper should be in possession of this excellent volume.

The Maritime Monthly, of New Brunswick, Canada, is filled with a good assortment of sketches. This publication is doing much to make the treasure and pleasures of the sea known to the uninitiated.

QUINTUS.

The Horse and Course.

The first day of the third Fall meeting at Fleetwood Park was characterized by a poor attendance. The first race for a purse of \$400, by horses that never beat three minutes was won by Mace's H. D. Walton; and the second race for a purse of \$500 for horses that had not beaten 2:31, was won by Murphy's Lady Dahlman. Best time, 2:33 1/2.

The second day of the Fall meeting of the Fleetwood Park Association passed off successfully, as there was an increased attendance of spectators, and three excellent contests furnished a good day's sport. The first race was a sweepstakes to wagon between Anna, Corra F., and Harry Gilbert, for which Gilbert was the favorite, but Lady Anna won in three straight heats. Best time, 2:40. The 2:38 race, for a purse of \$500, was won by Pauline in three straight heats. Best time, 2:35. The 2:24 trot, for a purse of \$600, closed with five entries, and the honors fell to Barney Kelly. Best time, 2:27 1/2.

Two trotting contests and a pacing match came off at the Fleetwood Park last Thursday. The track was in fine condition and the weather very suitable for the amusement. The first trot was between horses that had never beaten 2:38 before the closing of the entries. The starters were Ben Mace's bay gelding H. D. Walton, P. Fleming's gray gelding Willie, A. Donrith's gray gelding T. E. Gordon, Jacob Somerindyke's chestnut mare Melissa, John Murphy's roan mare Lady Collier, and L. DeVos bay gelding Tommy Moore. Walton was the favorite over the field before the start and afterwards at almost any odds required. He won the race in three straight heats very easily. Best time, 2:38 1/2. The second race was between four horses under the saddle—a novelty now-a-days. The horses were John Murphy's bay mare Lady Dahlman, W. E. Weeks' gray gelding Farmer Boy, E. K. Bradbury's brown horse Berkshire Boy, and H. Peterson's gray mare Cora F. Four heats were run, Lady Dahlman winning the first, third and fourth. The second heat was won by Farmer Boy. Cora F. was distanced the first heat. Best time, 2:27 1/2. The third race was a match between two pacers, one called King of the Forest, the other Cricket. The latter was distanced on the second heat.

The regular trotting season closed at Fleetwood Park last Saturday. The 2:34 purse was won by Ella Madden after seven heats had been run. Best time, 2:30. The team race for a purse of \$400 was won by May Bird and Fred. Best time, 2:37. The contest between American Girl and the pacer Copperbottom, for a purse of \$1,000, was won by the latter. Best time, 1:22 1/2. Must be Barney Kelly the same day. The best time made was 2:29 1/2.

The four-mile hand running race for a purse of \$25, 500, gold, took place at San Francisco last Saturday. The heat was won by Katie Peace, Joe Daniels second, Thad Stevens third. Time, 7:43 1/2. The second heat and the race were won by Katie Peace, Henry second, Harwood third, Thad Stevens fourth, Hock Hocking fifth. Joe Daniels broke down. Time, 7:30 1/2.

C. Boyce's Dick won the \$300 purse at the West Side Driving Park on the 16th. Best time, 2:47. Eva won the \$500 purse, and the \$300 purse for running horses, half mile heats, best three in five, fell to Dan O'Connor. Best time, 6:30.

[FROM OUR OWN CORRESPONDENT.]

MEMPHIS, TENN., Nov. 10, 1874.

The horse fever has subsided any as yet in this or adjoining States, as was shown in my last letter giving the result of the races at the Mississippi State Fair. Since then Helena, Ark., has had quite a display of horse flesh, which with the fair lasted three days, and to give our readers an idea of the average speed of a Southern "scrub," I will give the race there on the first day, in a dash of half a mile. McMahon's boy pony made the distance, under saddle, in 2:21, beating three competitors, and in a mile dash which followed she got around the track in 1:56, beating two other entries. On the second day, in the trot, mile heats, best three in five, "Tanglefoot" won three straight heats, his best time being 4:10. In a pacing race, one dash, same day, Senator Alec's Julia, from Mississippi, won in 2:20 1/2, beating two opponents. On the third day the trot to harness, best two in three, Farran's mare Kate won the two first heats in 3:03, 3:06 1/2 going to wagon, while her two competitors drew only two wheels each. In the running race, three in five, Brook's horse Johnson lost in 1:55 and 2:03. Here in Memphis the turf is being sadly neglected, although there are thirty or more roadsters owned in the city that can draw a top buggy around a mile track inside of 2:40, and there

are half a dozen matched teams that can make the circuit in 3, while some of the high-flyers, if put to the string for a big money, could make a record of from 2:27 to 2:35, but all we have to encourage the sport is a few young men who some time since organized a club and secured a very good track, but for some reason they cannot entice the people to a sufficient extent to collect over 100 or 200 at the horse matinees. General Forrest, who has resided here since the war, has a very fine stable (nearly all trotters) that he exercises personally about the streets and on the track, and recently has carried off several purses at the fairs, but did not get an opportunity to show his running stock, as the regular Fall meeting of the Chickasaw Jockey Club went by the board for want of support in the "purses" line.

RACE FOR LIFE.—The *Calais Times* says that Thursday's express train on the E. & N. A. R. R. had a race with a fox, on its way down, just below Eridon. The fox jumped on to the track after dark, and the only place where there was light enough to see to run being the centre of the track where the headlight of the locomotive threw its rays ahead of the train, he took it, and commenced "his race for life." For the first three or four miles, while the fox was fresh he held his own, keeping about the same distance ahead of the train, but after that gradually lost ground, until the pilot struck him, knocking him against a tree and killing him instantly. The train was late and was running along at the rate of sixty miles an hour.

BEAR HUGS.—A man residing in Colorado had an opportunity recently to test the hugging power of a bear, and after his experience he considers such affection rather disagreeable. It seems that he went into the mountains to look after cattle that had strayed away, and while pausing to listen and look about, suddenly a large cinnamon bear which had been concealed in the bushes near by sprang toward him, with the evident intention of giving him a hug. Not fancying such intimate friendship with strangers, the man declined to permit the affectionate embrace, and made for a tree which fortunately stood close by, and reached the lower branches near the ground just as bruin seized hold of his right leg and ankle. After a severe struggle he succeeded in freeing himself from the bear's hold, but before he could get out of reach the other leg was grasped with such a firm hold that he could not shake him off, and he began to feel that his time had come, and he was destined to become a meal for the voracious beast. But finally the bear let go, slid down the tree, and retreated from the field.

The number of canary birds in the United States is estimated at 900,000, of which number 300,000 were imported last year. Additions come only from importation, since the number raised in this country is yearly only about equals the number lost through various causes. Of other cage birds there are about 100,000, and the whole consume about 175,000 bushels of seed in a year. Of this amount more than two thirds is canary seed, millet, cracked wheat, etc., to the value of more than \$2,000,000 annually.

HAVING recently purchased, for the use of our Florida Commissioners, a very fine Beech Loading Gun, made by the celebrated firm of W. & C. Scott & Sons, England, and the outfit purchased in excess of their wants, we now offer the gun for sale. Description—Beech Loader, Side Sawn, Double Shot Gun, 10 bore; length, 32 inches; weight, about 11 1/2 lbs. Price, \$110. Address, FOREST AND STREAM, 17 Chatham Street.

Trout Business for Sale.

One of the largest Establishments in the country.

WELL STOCKED WITH TROUT,

Having a Dwelling for Superintendent, OFFICE and READING ROOM, SHOW and STOCK TANKS, WORK SHOP, ICE HOUSE, HATCHING HOUSE, Five Small Ponds and Three Large Ponds (of an area of over nine acres). The property consists of over fifty acres. The ponds are fed by about 100 Lively Springs, rising on the premises, some of which register 45 and 46°.

The volume of two cubic feet of water passed over the lower dam, with a fall of fourteen feet, continuously, and hardly varies, and never freezes, making a good water supply for the trout utilized.

On the farm is a

Favorite Pic Nic Grove,

with dancing platform, &c. The location is about 600 feet from depot, express and telegraph offices, and

ABOUT ELEVEN HOURS FROM NEW YORK.

In order to stimulate the development of

MANLY and ATHLETIC EXERCISES,

AS OF

FISHING, SHOOTING, ARCHERY, CRICKET, FOOTBALL, and CROQUET,

Offer the following prizes for clubs of three or more subscribers.

Single Subscription per Annum \$3

Starting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with full clubs to secure our prizes. They can send three or more at a time, and on forwarding the requisite number within 60 days will be entitled to same prize as if all were sent together.

CRICKET.

For \$20.00, four copies, one year, with one best spring bat, one College bat, one Dark cricket ball; price \$7.00.

For \$25.00, five copies, one year, with a complete cricket set; one College bat, one polished bat, Clapshaw, one Dark cricket ball; one set of 11 stumps; price \$12.00.

FOOTBALL.

For \$15.00, three copies, one year, with one Rugby football; price \$6.00.

FISHING BOYS.

For \$15.00, three copies, one year, with one enginet four joint light rod, suitable for all kinds of fishing; price \$7.00.

For \$20.00, twelve copies, one year, with one suitable for trout, black bass with fly, or for trolling bass or pickerel; as fine a rod as can be made; German silver tipped, with three tips; price \$25.00.

CROQUET.

For \$20.00, four copies, one year, with very handsome set of croquet; price \$7.00.

For \$25.00, five copies, one year, with superb set of croquet; price \$10.00.

For \$30.00, six copies, one year, with the finest set of croquet made; price \$14.00.

REMINGTON RIFLE AND SHOT GUN.

For \$75.00, fifteen copies, one year, with one Remington Deer rifle; price \$28.00.

For \$100.00, twenty copies, one year, with one Target rifle, 30-inch octagonal barrel, to be used for sporting, hunting, or target shooting; price \$36.00.

For \$125.00, twenty copies, one year, with one Remington double barreled, breech-loading shot-gun, one of the best guns ever offered to American sportsmen; price \$45.00.

SHARPE RIFLE.

For \$100.00, twenty copies, one year, with one Sharpe sporting or target rifle, best quality; price \$40.00.

WAIRD-BURTON RIFLE.

For \$80.00, forty copies, one year, with one Ward-Burton rifle magazine gun for large game, price \$20.00.

SINGLE AND DOUBLE BARREL MUZZLE LOADING SHOT GUNS.

For \$20.00, four copies, one year, with one American single barrel gun, perfectly safe, blue barrels, walnut; price \$10.00.

For \$35.00, seven copies, one year, with one American double gun; handy and reliable gun every way; price \$18.00.

For \$50.00, ten copies, one year, with one double gun; handy and reliable gun; a safe gun every way for boys; price \$26.00.

For \$75.00, fifteen copies, one year, with one double gun; handsome and reliable steel barrel, handsome finish; price \$35.00.

CASH PREMIUMS.

To those who prefer cash premiums a discount of 25 per cent. will be made on all clubs of three and upwards.

Every article is of the finest quality and will be sent free of expense.

Remitting Money.—Checks on New York City banks and bankers are best for large sums; make payable to the order of FOREST AND STREAM PUBLISHING COMPANY, 17 CHATHAM STREET, NEW YORK. Post Office Money Orders for \$5.00 or less are cheap and safe also. When these are not obtainable, register letters, express stamps for postage and registry; put in the money and seal the letter in the presence of the postmaster, and take his receipt for it.

Send the names with the money as fast as obtained, that subscribers may get the paper at once.

THURST'S STEREOSCOPIC SLIDES OF Natural History

For Object Teaching in Schools, AND PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature. One of the great moving elements in our modern education is the object teaching. The unerring fidelity of the stereoscopic transfers the animals and birds from their natural habitat to the parlor, and the first of the objects of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering the large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the locality of the specimen with the appropriate rocks, woods or water, and coloring from the originals.

1. Wild Cat, or Bay Lynx..... Lynx rufus.
2. Snowy Owl..... *Nyctaleus Nyctaleus*.
3. American Wolf..... *Lynx occidentalis*.
4. Wild Pigeon..... *Columba migratoria*.
5. Northern Flicker..... *Picus borealis*.
6. Black Crowned Night Heron..... *Ardea discolor*.
7. Woodcock..... *Colaptes monax*.
8. Red Sea Eagle..... *Falco ruber*.
9. Great Blue Heron..... *Ardea herodias*.
10. American Swan..... *Cygnus americanus*.
11. Red Shouldered Buzzard..... *Buteo lineatus*.
12. American Woodcock..... *Hypocypselus minor*.
13. White Fronted Goose..... *Anser albifrons*.
14. Long Eared Owl..... *Bubo longiears*.
15. Hooded Merganser..... *Mergus corymbus*.
16. Horned Grebe..... *Polygona cornuta*.
17. Golden Plover..... *Pluvialis dominica*.
18. Prairie Wolf..... *Canis prairie*.
19. Spotted Sand Lark..... *Tringoides macularius*.
20. Marsh Wren..... *Agelaius phoeniceus*.
21. Mallard Duck..... *Anas boschas*.
22. Great Horned Owl..... *Bubo virginianus*.
23. Great Loon..... *Diver virginianus*.
24. American Deer (Albino)..... *Cervus virginianus*.
25. The American Bittern..... *Ardea herodias*.
26. Old Wife, or Snipe Duck..... *Centrocercus urophasianus*.
27. The Wild Turkey..... *Meleagris gallopavo*.
28. The Weaver..... *Contopus cooperi*.
29. Common Yellowthroat..... *Geothlypis trichas*.
30. The Bull Breasted Sheldrake..... *Mergus mercator*.
31. The Canada Goose..... *Anser canadensis*.
32. The New York Crane..... *Grus americana*.
33. Red Breasted Sheldrake..... *Mergus serrator*.
34. Pinnated Grackle..... *Tyrano capito*.
35. The Sand Hill Crane..... *Grus americana*.
36. The American Black Bear..... *Ursus americanus*.
37. Red Tailed Buzzard..... *Ditro borealis*.
38. Bull Head, or Duck..... *Hydrophasianus*.
39. North American Porcupine..... *Hystrix Hudsonius*.
40. Virginia Partridge..... *Ortyx virginiana*.
41. Common American Gull..... *Larus argentatus*.
42. Grey Fox..... *Urocyon virginianus*.
43. Red Head..... *Fuligula erythrophthalma*.
44. Ruffed Grouse..... *Tetrao canadensis*.
45. The Raccoon..... *Procyon lotor*.
46. The Whistler..... *Fuligula clangula*.
47. Brown or Bittern..... *Centrocercus urophasianus*.
48. Red Fox..... *Vulpes fulvus*.
49. Wood Duck..... *Anas boschas*.
50. The American Owl..... *Nyctaleus nyctaleus*.
51. Spruce Grouse..... *Tetrao canadensis*.
52. Northern Lynx..... *Lynx borealis*.
53. American Eagle..... *Haliaeetus leucocephalus*.
54. Belted Kingfisher..... *Alcedo alcyon*.
55. Little Screech Owl..... *Bubo asio*.
56. American Osprey..... *Pandion haliaetus*.
57. American Crow..... *Corvus americanus*.
58. Pileated Woodpecker..... *Picus mitis*.
59. Shrike..... *Lanius ludovicianus*.
60. Musquash..... *Fiber zibethicus*.

TESTIMONIALS.

CORNELL UNIVERSITY, ITHACA, March 14th, 1875.
I must congratulate you upon your great success in this new educational enterprise. If we can arrange to use your slides in our classes, it will be a step in advance in education.
E. A. CORNELL.

WASHINGTON, D. C., March 15th, 1875.
I am much pleased with the success you have met with in giving to the stuffed specimens a very decided appearance of life.

I hope you may be able to continue the Series, and I have no doubt that the large amount of information and instruction in regard to the wild animals of North America.
SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1875.
I have examined carefully the "Stereoscopic Studies of North America," and judging by the number of subscribers, should say that they will prove of very great value, both as object lessons for students, and as a most interesting and instructive medium for the general public. The illustrations, position, and color of the different groups and the general treatment are most perfect. I cordially commend them to the public, and I think you may trust you will meet the encouragement which you have earned.
EDWARD A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

PEARSON ACADEMY OF SCIENCE, ITHACA, March 19th, 1875.
I have shown your Stereoscopic views to the Directors of the Academy and the editors of the *American Naturalist* and Mr. Merce.

They concur with me in praising their truthfulness and the fact which you have displayed in surrounding the specimens with natural objects and not of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

A. H. HYATT.
CORNELL UNIVERSITY, PRESIDENT, ITHACA, March 19th, 1875.

I have received the Stereoscopic Views of Objects in Natural History, and have enjoyed them greatly. They have surprised all who have seen them by their wonderful fidelity, both as regards the animals and their surroundings, and I think they can not fail to be of great service to the study of Natural History, first by attracting students to it, and next by perfecting them in it.
D. D. HARRIS.

These Stereoscopes are sold wholesale and retail by

BABYLON.

Selected.

MORE than several years have faded since my heart was first in-
yaded

By a brown-skinned gray-eyed siren on the merry old South Side,
Where the mill flume cataracts glisten, and the agile blue fish listen
To the fleets of fishing schooners floating on the weedy tide.

'Tis a land of ram and romance, for the old South Side is no man's.
But belongs, as all such places should belong, to "Uncle Sam."
There you'll see the dusky plover, and the woodcock in the cover.
And the silky front all over underneath the water dam.

There amid the sandy reaches, in among the pines and beeches
Oaks and various other kinds of old primeval forest trees,
Did we wander in the moonlight, or beneath the silvery moonlight,
While in ledges slid the sedges, to the salt salubrious breeze.

Oh! I loved her more than sister, often oftentimes I kissed her.
Holding pressed against my vest, her slender soft seductive hand,
Or held by midnight taper, filled at least a quire of paper,
With some graphic ode or Sapphic to the nymph of Babyland.

Of the saw the dim blue Highlands, Coney, Oak and other islands,
Moles that dot the dimpled bosom of the sunny Summer sea,
Or o'er polluted leaves of lotus, anywhere where our skiff might float us,
Anywhere where none might notice us, there sought we alone to be.

Thus till Summer was transient, and the woods were leafless,
Dolphin tints, and huckle blins, of what was shortly coming on,
Did I worship Amy Milton—fragile was the faith I built on,
And we parted—broken-hearted I, when she left Babylon.

As on the moonless water, lies some moonless frigate,
Flings her spars and spidery outlines lightly o'er the lucid plain,
But when the fresh breeze bloweth, to some distant region goes,
Never more the old haunts knoweth, never more returns again—

So is woman evanescent, shifting with the shifting present,
Changing like the changeful tide, and faithless as the fickle sea,
Faster than the fowler's whistle, lighter than the wind blown thistle,
Was that cooing piece of coaxing, Amy Milton's love for me;

Yes, then transitory bubble floating on a sea of trouble,
Though the skies were bright above us, soon those Summer days were
gone.

But till I'm by all forsaken, will my bankrupt heart awaken
To those golden days—those olden days in happy Babylon.

For Forest and Stream.

Salmon on the Amoor River.

"**C**ALL that a fine fish, sir?" said old Jack, our best
foremast hand, as he swung another cod over the
rail and deposited him in the deck bucket by his side.
"Wait till we get on the river, sir, if you want to see fish.
Why, the salmon are thicker there, sir, than mossbunkers
in the sound, and the Indians feed their sledge dogs on
them all the year round."

How Jack's assertions were verified will be seen. I had
gone on deck at early daybreak to get the first close look at
the new land, this wonderful Siberia, and found the old tar
engaged in the laudable occupation of providing a
breakfast of fresh fish for all hands. The distant views of
the rugged and heavily timbered coasts of Tartary and
Siberia we had obtained while sailing up the gulf, majestic
in their grandeur, were fully sustained by closer inspection.
The schooner lay motionless at her anchor on the placid
bosom of De Castries Bay. Off seaward, the little Oyster
Islands, between which we had sailed the previous even-
ing, almost hid the entrance to the land-locked harbor. At
the upper end a few rude log-houses indicated the settle-
ment dignified with the high-sounding title of Alexan-
drovsky, where a lieutenant of His Majesty's navy paid
penalty for his title of Governor by involuntary exile.
On each side the forest-covered hills rolled away from the
water in successive tiers until the tall pines, which crowned
the summits of the loftiest ranges, seemed to lose their
tops among the clouds. Truly, this was the "forest pri-
meval," nothing but trees to be seen in any direction save
on the little clearing where they had been felled to make
room for their own trunks in another position. Ordering
the boat, the Captain and myself pulled up the bay to pay
our respects to the Robinson Crusoe of Alexandrovsky,

and beg for a pilot to carry the schooner up the Amoor as
far as Nickolafsk. We found him and his man Friday,
who, in this instance, happened to be a charming little
blue-eyed German wife, anxiously awaiting our arrival, and
in a few moments we were surrounded by the whole garri-
son clamoring for news. The Governor was very polite,
placed everything in his possession at our disposal; but a
pilot! alas, "est impossible"—there were none there. A
chart upon which the buoys and beacons marking the
tortuous channel of the river were correctly designated,
was given us, and with this, alone, as a guide, we were to
find our way over the two hundred miles of the most diffi-
cult navigation in the world, which was still between us
and our destination.

After being shown the trees in which were still em-
bedded the bullets fired by the British storming party when
they captured the place during the so-called Crimean war,
we bid adieu to the kind Governor and his wife, and returned
to the "Alert." As the flood-tide was making, preparations
were immediately commenced for getting under way and
heaving up the anchor which had touched bottom but once
before—in the harbor of Haledadi in the Japanese island of
Yesso—during our voyage of eight thousand miles, the
little schooner was soon gliding past the mouth of the bay
with her bow pointing towards the almost unknown North-
ern waters. From De Castries, the Gulf of Amoor is
formed by the island of Saghalien on one side, and the main
Siberian coast, broken by the mouth of the mighty river,
on the other. It contains innumerable and constantly
shifting sand banks, the largest of which form two chan-
nels; one, following the Saghalien coast at varying dis-
tances, finds its way into the Ochotsk Sea. The other,
which we were to pursue, leads into the Amoor through
the *Lenan*, crossing myriads of "bars" and zig-zagging
from one side to the other until Nickolafsk is reached.
We had scarcely been under way an hour when long streaks
of muddy green began to mingle with the hitherto blue
water, gradually increasing in size and consistency until all
traces of the sea were lost, and we were sailing on the tur-
bid accumulation of mud and sand washed from the
thousands of miles of ever-varying banks, through which
the Amoor passes on its way to the ocean.

A description of the vicissitudes of that four days' trip
would be almost as tiresome as the voyage itself. Cape
Catherine, the first promontory, was passed in safety, and
then the thumping and bumping commenced; now an
anchor was carried out astern and all hands manned the
capstan to heave the vessel off. Now a boat was sent
ahead to find the channel or to tow the schooner into it.
Once, when in comparatively deep water, while we in the
cabin were eating dinner, the watch on deck cried out,
"breakers ahead!" and sure enough there was a long line
of foaming, muddy water churned into white caps. It was
impossible to account for it. There was no wind, and we
were not making more than three miles an hour, yet it
seemed to be rapidly approaching. Tidal waves do not
generally come down a river, or I should have ascribed it to
some such phenomena. While we were yet speculating we
suddenly found ourselves in the midst of an immense
school of grampus. Thousands of the ungainly creatures,
evidently bound on a Summer's jaunt to the Ochotsk, or
Arctic Ocean, were floundering in every direction, giving
the water the appearance of being covered with breaking
waves. Following the beacons and buoys, as laid down in
our chart, we managed to pass Capes Nevelskoi and Mura-
vieff—Lazareff and the dreaded Prongé—and crossed in
safety the principal bar where there is a beacon and code
of signals giving the depth of water. Only Providence
and a light draft carried us over, however, as the inebriated
Russian soldier in charge of the signal station displayed
the entire code in quick succession, giving us our choice of
any depth from a fathom to fifteen feet. Before reaching
this point my attention had been attracted by a number of
stakes driven in the channel, formed by the sand banks,
strongly suggesting the idea of fish nets, and my suspicions
were confirmed when a number of canoes were seen push-
ing off from the wooded banks and intercepting our course,

and soon we had the pleasure of welcoming alongside a
party of Gillak Indians, the aborigines of the country.
They were swarthy, Mongolian-featured fellows, of low
stature, and dressed in illy-cured skins of wild animals, all
possessing an ancient and fish-like smell, which rendered it
desirable for us that they should remain in their canoes.
What made their visit welcome, however, was the dis-
covery that their boats were loaded with salmon trout just
taken from the nets, magnificent speckled beauties, weigh-
ing four or five pounds each. By means of signs and a few
mutually intelligible words, a tariff was established and the
cargo of each boat purchased. It was the cheapest fishing
I had ever participated in. A cup full of rice, or a plug of
tobacco for each boat load! Think of that Messrs. Black-
ford & Co.! a plug of tobacco for fifty salmon trout!

The way in which we feasted, after a two months diet of
salt beef and pork, can be imagined. We had trout broiled,
fried and baked, and what we could not eat the provident
Captain consigned to the pickle barrels to fill the vacuum
caused by the consumption of salt horse.

Another day of hard work and a night passed in fighting
a voracious horde of mosquitoes, and we entered upon the
last stretch of the river below Nickolafsk. On the North
bank were frequent little clearings where the Cossacks,
under the fostering care of the Government, had abandoned
their lives of predatory warfare against Tartars and
Khirgis, to cultivate the soil. Rounding the last point the
glazed roof of the Greek church came in view, and our
anchor was dropped in front of the most important settle-
ment in Eastern Siberia.

The Amoor at this point is over a mile in width, and
comes rushing towards the sea with a current so fierce and
strong that the Russians, for the preservation of such of
their vessels as may be obliged to Winter there, have built
immense *corvets* to protect them from the ice during the
Spring freshets. Steamers of considerable size ascend for
fifteen hundred miles to Nertschinsk, and following its
windings to the junction of the Argoon and Schilka, the
distance is fully two thousand.

Nickolafsk has a population, almost entirely soldiers, of
between two and three thousand souls, all existing on a fish
diet. Fish in such profusion I never saw before. The
officers had champagne with their salmon, while the rank
and file were content with *vodka*, a vile spirit composed
of anything that could be distilled into alcohol. For about a
week we enjoyed it and then it palled. One morning the
men came aft and informed the Captain that they had
enough fish, and wanted their allowance of salt beef and
pork again, and even the aristocratic residents of the town
were glad enough to avail of the contents of our harness
cask.

The Amoor is open only five months in the year, and the
Russians are that during each month a different descrip-
tion or species of salmon ascend to their spawning beds in
the tributary streams above. The salmon trout, such as we
purchased of the Gillaks at the mouth of the river, they
say, are the first to appear, followed by the fish which we
found in such quantities upon our arrival at Nickolafsk.
Whether these are the *onchorhynchus orientalis* or not, my
ignorance of the ichthy science prevents me from deciding,
and our limited stay did not permit me to examine the
other descriptions which were said to follow them. They
were certainly noble fish, and in general appearance, in
their bright, silvery sides and thickness through the
shoulders, closely resembled the salmon of our own East-
ern coasts. I remember observing the difference between
them and the darker skinned fish of the Sacramento River.
The climatic positions of the Eastern coasts of America and
Asia, and the Western coasts of Europe and our continent,
are not dissimilar. The great *Kuro Suro*, or Japanese gulf
stream, which follows the coast of that Empire, and then,
diffusing itself over the North Pacific, gives to California
its temperate climate, produces the same geniality that the
Atlantic gulf stream does for the shores of Europe. The
mouth of the Amoor, which is in about the same latitude
as London, is a mass of snow and ice for six months in the
year; and Peking, which bears almost the same relation to

San Francisco, is deprived of any but land communication with the rest of the Empire, for a similar period. This climatic difference of course affects the fauna of each country, and opens an extended field for the investigations of the naturalist and scientist. I met no one at the Amoor who had given attention to these subjects, and such a thing as a "fly," or even a fisherman, was unknown. Our fishing was done entirely with nets. Every evening a barge, filled with Russian soldiers and an immense seine, would cross the river to the Southern bank, and manning our boat we would cut off from the schooner and join them. Now an encampment of small huts was in place of smooth sandy beach, where one of the ropes would be laid and the barge again pushed off to surround the necessary space of water. It seemed only necessary to drop the net and haul it in to make an almost miraculous draught of fishes. The aborigines would gather around for a share of the spoils, and their wolfish looking dogs fairly jumped into the water for the fish. The Gillkiss, Tongooes and Goldoes, who have quietly submitted to the Russian yoke, find in this bountiful supply their almost only means of subsistence. The Winter's supply is caught and cured in the sun during the Summer months, and the few furs of a saleable quality, which they trap, are traded for tobacco and vodka. A more degraded race do not exist in the scale of civilization, and they are in strong contrast to the Manchour Tartars, who have been ousted by the Russians. A few of these latter came into the ropes with their furs and skins for sale. They were tall, fine-looking fellows, neatly dressed, and with intelligent faces; but, alas! vodka was their enemy also, and the skins were all bartered for spirits.

The high expectations as to commercial results, which were to follow the opening of the Amoor, do not appear, as yet, to have been realized; but while it is true that the commercial development of the magnificent country the Russians have so recently acquired will be retarded by the extreme severity of the climate, they yet possess inexhaustible mines of wealth in the timber and fisheries. With the rapid settlement of California an impetus has been given to the latter industry, which is sending our hardy fisherman, not only to the shores of Alaska, but to the almost unexplored cruising grounds of the far Northwest, and the demand for whale oil and baleen is increasing. One of the former pursuers of the leviathan are turning their attention to a smaller but more profitable "fry," China affords an almost unlimited market for Lumber, and the Russians, if their Government will permit it, can compete successfully with the dealers of Puget Sound. The Summer that we were on the Amoor a German vessel sailed with a cargo of ice, a portion of which was destined for the season in consuming at Shanghai. But I fancy that in the eyes of the Czar whatever advantages, either commercial or agricultural, the Siberian country may possess, are but secondary considerations compared with its strategic importance in the event of a war between his own and either a European or the Chinese governments. With fine foundries, as there are now at Niekolofsk, and a base of supplies; with telegraphic communication, and the St. Petersburg, they offer advantages superior to any nation trading with the East. It is remarkable the facility with which all this country was acquired. As early as 1722 numerous settlements of Cossacks had been formed along the banks of the middle and upper Amoor, but were driven away by the Chinese. In 1834, one hundred and thirty-two years afterwards, the descendants of these same Cossacks finally took possession of the great river from its commencement to its mouth, and all in a space of six weeks, without molestation; adding nearly half of Manchuria to the Russian crown, and placing the Chinese Empire at their mercy should it ever become necessary or politic to pursue an aggressive course. As a place of residence, Niekolofsk did not strike me as being as desirable as more genial portions of our little world, but the little school, and in ballast trim, pointed down the river, drifted away from these wild shores. Reaching the sand bars, at the mouth, we found them covered with flocks of the great China goose. They had apparently come there for the purpose of moulting, and being unable to fly, the Gillkiss were chasing them about and catching them alive. Some of the canoes coming off to us, we bought a number of the geese, and, throwing them on the bank, where they had full run of the hold, and feeding them on *padley*, or unvalued rice, they were soon in fine condition for the table.

Our run down the Tartar Gulf was without incident of note, and entering the Straits of Sangar, between the islands of Niphon and Yesso, we once more anchored in the lovely harbor of Hakodadi.

A DAY'S DUCK SHOOTING.

I SEND you particulars of a day's shooting I had last week, which may, perhaps, interest some of your readers. I was shooting on Lake St. Francis, and had arrived at camp on afternoon of Tuesday, the 10th instant. On arrival I at once started a party of eight, and divided the group of a half-dozen of divers; after spending a couple of hours in a vain search, Baptiste, who has eyes like a hawk, declared he saw a large flock on the other side of the channel, about a mile and a half distant. I laughed at him and could see nothing; he was most positive that he saw the birds moving their wings in the sun. To make sure he climbed a tall tree, and as soon as he got down, he at once proposed to cross to the other side and build a raft for the "winging" birds. Of course I agreed, and we found on crossing that he had been right, and that a flock of from six to eight hundred ducks were feeding in a bay which, luckily, had a thick border of reeds. We at once put the decoys out and backed my canoe into the reeds, and went on then to borrow another canoe and cut branches to make a good blind. While he was at work making a blind, I managed to pick up a few ducks. As it was then later in the day, and we were far from camp, we stopped shooting and paddled back to the shanty, feeling pretty confident that we were in for a good day on the morrow.

At half past four on Wednesday morning the tea-pot was boiling, and after a hasty breakfast Baptiste and I started. It was a few minutes after six when we got down to our blind, and at seventeen minutes to seven I fired my first shot, two minutes to seven I had twenty-four blue bills picked up. They were coming in small flocks of four or five, sometimes two or three, and were lighting freely with the decoys. I had two breech loaders, one ten and one twelve bore, and as luck would have it I was shooting very steadily, getting almost all the birds that came in. For example, when a flock of five ducks came in, I got two with my first barrel on the water and three with my left as they went by. I had a rare sport up to nine o'clock, when it came on to rain and then heavy hail. I stood out to camp for some time, but at last thought discretion the better part of valor, and went ashore to get warmed and to dry my guns. While on shore the ducks literally piled into my decoys and I was chafing at the chances I was missing. At eleven I went out again, and now ill-luck commenced; eight times in succession did a single bird pass quickly over the decoys and get missed clean with both barrels. It was annoying, so I had to take a big dose of milk punch and smoke my pipe most philosophically till I got steady again. I soon got to work, and by three o'clock had bagged, in spite of the storm and spell of wretched shooting sixty-four ducks. The wind had now risen so much that it became a question whether my canoe could live crossing the lake, and Baptiste and I thought it better to stop shooting and cross by daylight, as the waves were too high to be risked in the dark. We got back to camp about six o'clock, pretty tired, very cold, and hungry enough to eat double rations. At camp we found that the storm had been so bad that none of our other three canoes had ventured out, and that ours were the only ducks brought in. I might, had I chosen to have remained till dark in my blind, have easily killed one hundred ducks to my own gun. Even the wretched day, I thought, ought to have had at least eight when we left at three o'clock. This is a genuine day's shooting, and I enclose my card as a guarantee of its veracity. I was paddled by the celebrated Baptiste Bibean, a lord whom I took up with me. He did not shoot, except at cripples, but picked up the dead as they were shot.

I should like to know if any of your readers have beaten the record of two birds in five minutes, not getting more than three to any one barrel, this season. My chin and self returned on the 16th with 280 ducks.

Yours truly,

ROYAL.

Montreal, November 18, 1874.

A DEER HUNT IN THE ADIRONDACKS.

AFTER dinner R. and I, with their guides, went fishing, leaving old John Plumby (yes, Murray's John), Jack, a hound, and yours truly to keep camp. Then fellow we'll get going to night, suppose we go and get a few more ducks. I had not then killed a duck, but my answer came quickly—"All right, wherever we go!" "Well, we'll go over to Betna ponds, and take a little 'bait,' and a couple of blankets with us, so that if we don't see one afore dark, we can stay at night and try the 'jack' on them."

We were quickly ready, and leaving poor Jack to keep camp, started for Betna, which we reached by going down the lake a couple of miles, and then striking across a mile "carry," which at best has a poor reputation with the guides.

Those of you who know what they call a first class "carry," and take into consideration that a short time before we had the heaviest wind storm known in that section for years, say, I think, sympathizing with me, I packed back containing the "bait" and blankets on my back, a rifle and double barrel shot gun, (which I never used) on one shoulder; the paddle and "jack" on the other; my pockets full of cartridges; no *car* on my face, (our stock was low, and we were trying to economize, and may the d— take such economy), I trudged along, beset at every step by several million insects, of various size and capital, all the while over my head, they will crawl up your breeches, down your back, and under your hat, tapping you where it sees fit; to the moose fly, who will bite through wherever he chances to light, whether it be on your flannel shirt, or buck skin moccasins.

I said a mile "carry." Well, that is all right, but we walked a very short distance indeed in that "carry."

You think us foolish, say, "Why, you are!"

We would have every 100 feet find a large tree blown down across the path. Now a tree that proposes to fall across a "carry" generally arranges things so that it will be just too high to climb over, and yet uncomfortably low to crawl under with a boat or pack basket on your back; at least so I concluded after a few trials, and went round the balance of them. Consequently the foregoing statement.

You perhaps have in your downward course, came in contact with a huge boulder and concluded to go round rather than over it. While crossing this "carry" I often thought of that little stream, and—admired it.

After a little short of an hour of this most exasperating pleasure, we reached Betna ponds, which are both small, say a half mile in length by a quarter in width, and connected by a stream or eight feet wide, long and scarcely navigable to our cockle shell of a boat.

John now took the aforesaid boat off his shoulders, and placed it in the water. We got in, and from five to seven floated noiselessly around in all the little bays and inlets, hoping that some deer would come in to drink. "Nary a deer." We had just landed, and were seated on a large rock at the water's edge parading of some flap jack about thirty-six inches in circumference, that, shortly after, I sprang, and on looking across the pond saw what caused an immediate suspension of hostilities towards the flap jacks. A big buck. He did not see us, and was quietly feeding on the lily pads. John and I got into our boat in a very short space of period, John in the stern armed with a paddle, I in the bow with a rifle. I think you could have heard a whole paper of pins, (not to mention my drop, while John steadily rowed toward the deer. When about twenty rods from him, our prize raised his head and saw us. For one instant he looked, and then I suppose would have bounded up the bank, but a crack from my rifle, and a case of "shuffling off this mortal coil" prevented.

I said a case of "shuffling off this mortal coil." Well, so it was, but John's remark—"I'll be glad if it didn't

peer pretty doubtful one spell there, who would "shuffle," you or that old buck"—gives to an imaginative mind a very correct idea of what followed; but for the benefit of those who, like, myself, are not imaginative worth one cent, I give it in detail.

1st. When I shot, the deer, who was standing in about three feet of water, dropped. Then he rose above the water probably five feet, and came down with a splash on his broad side. This operation he repeated again and again. I had fired at his head, and when he fell John hinted at such a thing as my not hitting him there, I should have been very indignant. This strange conduct on the part of the buck, however, made me very uneasy. I began to suspect he was not hit in the head, but merely wounded some where, and would perhaps get away.

2d. I was possessed of a large hunting knife which had never been stained with blood, and my friends at home had cruelly remarked to me before starting, possibly never would be.

3d. And lastly, but not leastly, it was my first deer. Now reader (gentle or otherwise) do you wonder, taking into consideration, 1, 2, and 3, that as soon as I was in the vicinity of the deer, I jumped aboard, nearly capsizing the boat, and made a blind attack on that buck?

The result of that attack again requires three subdivisions.

Round 1st. Was indisputably the deer's. I was kicked a considerable distance further than I cared to be.

Round 2d. I came to the scratch promptly, and left in like manner. The deer evidently began playing with me before. We (the buck and I) were in the water about eight feet from the bank, which was thickly lined with bushes. Mr. Buck now placed his hind feet against my chest (or a little lower) and I found myself sticking up head down in the bushes. I got out into the water as quickly as possible, and changed ends. I had not looked at John since leaving the boat. I could not find. There he sat in the bow with water over his head, and a paddle splashed with mud, yet apparently happy. He was laughing. At that moment there was not a doubt in my mind but that he would have laughed had it been a funeral. He did not open his mouth (save to emit peal after peal of hearty Adirondack laughter), so I again turned my attention to the buck.

Round 3d. After considerable sparring in which I did not come out first best, I managed to get a firm hold of one of the horns of my antagonist, and in a second I had disappointed my friends at home. My knife was bloody. I had killed a deer.

I then felt as I imagine a great conqueror must; in fact I thought myself one, yet I was aware that there was nothing in my personal appearance which would lead an unprejudiced person to any such belief. My hat was gone, in round number two the buck had put one of his hind feet in at the opening in my hunting shirt, and the principal visible part of that was gone. My clothing that had remained by me, was soaked with blood and water, and my whole person besmeared with mud.

Again I looked at John. This time he gave me an approving nod, and said, "I will give you for a youngster." I then examined the buck, and found that the bullet had entered one ear and passed out at the other. From the time he was shot (I put his throat, was eight or ten minutes, and during the whole of that time he kicked and splashed with a strength quite wonderful.

We got him into the boat, John pronouncing him to weigh from 220 to 250 pounds, and then the other pond, as it was the one into which the "carry" led. We had difficulty in getting through the shallow stream which connects the two ponds, when we had no freight; and now with 250 pounds of buck aboard, we just had to get out and wade, towing the boat after us.

On reaching the place of embarkation and "skinning out" our deer, I spent only a few minutes and ten minutes to get down to think of dressing that "carry." We built a fire, finished the flap jacks we were struggling with when the buck interrupted us, and turning our boat bottom side up, crawled under and slept.

"TO FLORIDA FOR ONE HUNDRED DOLLARS."

EDITOR FOREST AND STREAM:—

I have just been reading Mr. Beverly's paper of "Three Months in Florida for a Hundred Dollars." It is very interesting. I think a hundred dollars would hardly be enough to keep you, or any one else, in the most interesting hunting spot quite a number of winters South, and about half a dozen in Florida, living in tents, hotels, boarding houses, and steamboats, some of my experiences might interest some of the many readers of your interesting journal, the FOREST AND STREAM. The first consideration to the Winter visitor to Florida, is the climate, which is delightful. I do not think so agreeable a place can be found in the United States. I am not so good a judge of the Winter climate of California, having spent but one Winter there, and think the climate of Florida much more dry, five days out of six, bright and cloudless; three, four, and five weeks at a time, clear and bright, and of most agreeable temperature, and even as far North as Plankita there are generally but two or three nights in the whole Winter that ice is found. It is rarely so warm in California, and the Winter climate, and enables the sportsman to be comfortable in his tent, when in Georgia, Texas, or California, he would wish himself in the hotel. I can confirm what has been said in your journal of the great abundance of fish and game. The whole coast, East and West, swarms with fish, and of a very fine quality; pompano, sheepshead, grouper, red fish, king fish, Spanish mackerel, mullet, tarle, and all the oysters of various size you will find. The St. John River is also full of fish. Shad are plenty all Winter, and in the upper parts of the river black bass were so plenty as to often jump into our boats, and eight to ten pounders are very common. Game, except quail, is getting scarce about the larger places, but you have only to go into the country to find abundance of deer and turkey.

When I commenced I intended from my experience to tell of a more pleasant way to spend Winters in Florida than Mr. Beverly's (provided you have money enough), and without costing near as much as to live at the hotels, have a better table, and lots of fine sport, and withal the most comfortable and pleasant way a company of gentlemen can spend Winters in Florida. Let a half dozen good fellows get up a light draft, stern wheel steamer, to draw about

twenty inches of water—just such a boat as the little Clifton, so well known on the St. John River for several years. The writer was on board for her two Winters. She cost about \$4,000, built and fitted up at Philadelphia, was used four or five Winters as a pleasure boat, and then sold for a ferry boat without much loss. Three men made up the crew. The whole expense was about \$15 each day, which, divided among six, was not high for such fishing and hunting as we used to get; and such bird supplies as Reuben could get up I never expected to want. The boat was built by a party of gentlemen from the Clifton Springs, near York, and came down from Philadelphia. One could get up much cheaper now, in Jacksonville. Such a boat can go to the upper waters of the St. John above where hunters go, and where game is plenty. The St. John is a wonderful river, and one of great magnitude, and it has always been a wonder to me where so much fresh water comes from. It runs from South to North, is over 800 miles long, and empties into the Gulf of Mexico. It has many beautiful lakes, and very many lakes, for more than a hundred miles from its mouth, and will average nearly two miles wide, for that distance. The tide is felt as far up as Pilatka, and what appears singular, when it is high water at the mouth of the river, it is low tide at Jacksonville. Visitors should always go up as far as Enterprise, to see the beautiful lakes and wonderful springs. We could not get the Clifton much above Lake Winder. A floating island covered the water, and we could only get up in small boats to Lake Washington. We found Lake Winder a fine place for game; deer and turkeys were very abundant, and more sheep than we had seen in Florida. We also found many birds which we did not see about Lake Harney and Jessup. The caracoea eagle in full, light plumage, was common; also the purple gallinule, coast bittern, yellow crown night heron, and we found many other birds in the best places. The alligators were everywhere, and they used to trouble us by biting our birds as they fell into the water, before we could get to them. Sport can be had with alligators by baiting a shark hook with a coot, or some other bird. Fasten the end of the rope to the top of a small tree that bends well, and in the morning you are almost sure to find one hooked. If a large one, you can only pull him into the bank; if a small one, keep away from his tail, or teeth, and to get your hook out, throw him. In your stomachs you will most always find a roll of feathers, fish, and often large moccasin snakes, and they sometimes eat one another. I have seen one eight feet long, in a large one's mouth. A favorite bird for our party to shoot was the white plumed cranes, egrets, snowy herons, for their plumage, and we could make quite good collections of Florida bird skins. The steamer had two small boats, so we could go up to the rapids, and make an exploration of every lake and stream on the river. Although we were so far South we had no trouble with insects. All the windows had wire gauze, and we were careful to keep the doors shut. Our sleeping accommodations, and our dining room was very good. The boat would run about ten miles an hour, and we could change our location very easily. We found moccasin snakes very abundant in the upper country, but had no trouble with them. One day we lost our rowlocks, and were obliged to cut them out of the water, and pull them off our clothes and get it up with his feet. As he reached the bottom he stepped on a large snake, which coiled about his leg. He went ashore with a yell, and one of our party said he was the whitest man in the lot. He was sure he was bit, and kept hold of his pulse to see if he was not dying; but was not hurt. The snake appeared to be a moccasin snake, and we were careful to wear moccasin shoes. One of our party, Mr. Rice, at Lake Jessup, shot a white heron that fell into the water near the shore. He saw a large alligator start for the bird, and Rice thought he could get the bird before the alligator, which he did, and threw the bird over his shoulder. The alligator following, and as he reached the bank the alligator struck his legs, but did him no damage. I have made this paper too long, and will recommend for the comfort of our readers, that the steamer Clifton, on the St. John River could be taken around to St. Augustine and so down to Indian River, and the expense less than to live at the hotels. Yours truly,

Calais, Maine, Nov. 9th, 1874.

GAME IN TEXAS—A DEER HUNT

NUMBER THREE.

IN 1852 I was stationed at Fort Worth, Texas, then a frontier post, but now the thriving county seat of Tarrant county, and a more lovely spot is difficult to be found. It is situated on the south side of Trinity River, on a bold limestone bluff about 150 feet high, which overlooks the entire country for miles and miles away. The two forks of the river here uniting meander along its base, but first encircling in their arms one of the most soft, quiet, fertile, and rich valleys in the State.

Tradition has it that upon this commanding bluff old Nimrod himself, being on a hunt across the "big waters," once pitched his tent for a time, and that whilst here he often bathed his limbs for strength in the cool, limpid waters which gush out into a large pool at its western base. Be this as it may, let it be said in remembrance that Major Arnold, U. S. A., the founder of the Post, and a disciple of old Nimrod, caused to be sunk a large well directly upon the spot where the tent was pitched, and from the bottom of the tent, thus constituting a lasting fountain, that all who come here to drink may be reminded of our much-beloved patron saint, old Nimrod, the giver of health, strength, and pleasure. After this just tribute, I am sure another equally deserving will be met. I mean that some good disciple of this saint now living at Worth shall introduce at least once every day, for one year, of FOREST and STREAM into the brief history of this, that all may see and drink of its soil-inspiring waters freely.

To resume my description: to the East and West, equidistant a few miles, lie the "lower and upper cross timbers," two belts of open timber lands, reminding one of the path to East Point. They form the view in this direction. They extend to the North and South, for a long distance, are variously broad, and abound in game of many varieties, such as bear, deer, wolves, wildcats, foxes, turkeys, coons, possums, squirrels, minks, muskrats, geese, ducks, quail, prairie snipe, etc. To the North and South the rolling prairies stretch away till the view is lost in the dis-

scene. As a whole, the scenery is extended and highly picturesque. It combines the rolling prairies, winding streams, fringed with timber, hills, valleys, scattering farm houses, fields of grain, small herds of cattle and sheep, islands of timber, distant woodlands, etc. But last, though not least, as if to enliven and complete the picture, a few scattering herds of deer, antelope, and wild horses might be seen from the Pass. These animals, if alarmed by the presence of their bold intruders, were already gracefully bounding away over the open, soft-clad prairies to seek their cover in the forest. Some yet unalarmed were quietly grazing or cutting up their playful pranks, as if no one was near. Others still, with heads erect, stood gazing with wonder from the hill tops. These seemed to inquire: "Pale face, from whence comest thou, and what is thy mission here? Thy presence, I fancy, is good as evil. Thou art a messenger from the full moon to the red man. Both are mortal enemies to our race, and both 'twain relics of our barbarism. We are off for the forests; get us if you can." So hoisting their flaps, and giving a whistle or shout of defiance, they lightly bounded away to the cross timbers. Among this number of haughty defiants was one old buck larger than the rest, whom I particularly wanted. This was one November morning.

Instantly I turned to Billy, and said: "Heaven could make it. Said I to Billy, my Delaware guide and sport, 'what I have witnessed around me this morning is too much; I cannot stand it longer. We must be off to the "lower cross timbers" to have a hunt, and perhaps I will get that insulting old buck I saw in the herd this morning."

"May be so," said Billy, "now good time; me want to be hunt; plenty deer in de cross timbers. Now good time to be hunt, me want to be hunt. Little prairie, good grass for de bees, ant' in de creek, and acorns and pecans on de ground, deer like 'em, cat 'em, cheap, much fat now; may be so we kill plenty."

"Just sit. Billy; saddle up, and I will be ready in fifteen minutes. We will stay out one night only."

Half an hour afterwards I was rolling down the hillside, over the valley, across the Trinity, up her northern banks, east along her prairie lands four miles, enter the cross timbers five miles, stop on the road and pitch the tent. Billy is a good horseman, and a good rider. He is a good hunter. At two o'clock in the afternoon we sallied out, each separate, of course. As for myself, I saw at least a dozen deer in a couple of hours. They were constantly jumping up around me, but the grass was too high to see them when they stopped; besides, I had on globe sights to my rifle, and they troubled me. I could not get my game through the brush. I was so busy with some of them, much alarmed, forgot to stop at all after rising from their sunny couches, and to these I had only to say good bye as they slipped away with flags flying. Thus tormented, I took off my globe sights, and condemned them forever for anything but open shooting, and fell back on my old stand by, the crochit sight. I now saw the deer as they came, and I was not so much struck him too far in rear of the fore-shoulders, and he got away badly wounded. Other deer frequently jumping up and running away in the tall grass, I became disgusted at my luck and made for camp. Billy was already there, having his one deer only, and much troubled with the high grass: he had seen many.

"You are a good hunter, Billy," I said, "two miles further on the woods open there, grass low."

Agreed! and in half an hour by sun we were on our new grounds. While pitching our tent a medium sized doe came along, and I gave her a shot; but off she bounded, greatly to my ill humor, though I found her dead the next day a mile away. Fresh game, or none at all, said I, and left her for the wolves and turkey buzzards, which were already circling the air for their prey.

Dear signs were everywhere plenty. It looked like a sheep yard under the oak trees, so thick were their tracks. The water in the stream was yet turbid where they had come to drink, and the shore was all cut up with trails.

"May be so to-morrow we have good luck," said Billy; "plenty signs."

"It may be so, I dryly replied, for he had one deer and I none; had lost two and seen a dozen. My humor was not good. Very unpoeticallike, I may say; but who can help this sometimes? I did not care to talk; my hopes for better luck lay in the morrow. But I must pass rapidly on, and leave much unsaid. Tent pitched, camp fire glowing, supper eaten, cigar smoked, and plans for the morrow all agreed on. I threw myself down upon my woodland cot to think, to sleep, to dream, and to wake at morning's early dawn.

The morning and evening are always the best time for deer, and generally for most game. By sunrise I was off in one direction and Billy in another, the one for the woods and the other for the small prairie, and both adjoining camp. This was the commencement of rutting season, when the bucks begin to run. At these times they are often very bold, not to say foolish at times. If one happens to be in their way when trailing up the coveys they sometimes stop and stare at him, as if he were a stranger to them. He will then charge at him, and appear quite regardless of fear or danger. The dew yet on the ground, I had not got half a mile from camp when I saw about two hundred yards off a noble buck, apparently the same old giant I wanted to get, and coming nearly towards me, alternately on the walk and trot, frequently lowering his antlered head, and evidently sensing the trail of a doe he was pursuing. He had not seen me, and in the generous glow of love he was bent upon making his wild thrust. "You are surely mine, old fellow," said I. I dropped upon my knees, cocked my rifle quietly, and waited his near approach.

And now comes an incident in my long sporting life—one which I have never before or since experienced, and which I am almost ashamed to relate. Awaiting my game with but too intense anxiety, I was seized with the "buck fever," and no mistake. I began to tremble and shake like a leaf. My heart began to throb and beat, then even to thump. I mustered all my forces, and said coolly to myself: This is all nonsense, gammon, and boy's play, and I must not let it get the best of me. I must be brave. The old buck was coming slowly and unconcernedly along, and here I was, an old hunter, shaking like an aspen, and perfectly disgusted with myself. But what availed me? I could not restore my nerves to quietness. I had tried it, but signally failed. Soon the deer had arrived opposite to me, within fifty yards, when a low whistle stopped him, broad side to, and there he stood gazing at me, white, I, with raised gun, was trying to stink at him, but he only stared. No sign of alarm. No sign of respect about him, but everywhere else, the tree tops, perhaps, excepted, I finally pulled the trigger, and bang went my rifle. The

smoke cleared away, but there stood the old buck yet, staring me fully in the face. I rose up to load, and the old buck raised up his tail, but only to shake it once or twice in my face. Then he gave one good snort, blow or whistle, bounded high into the air, came down again, stamped his feet at me, dropped his tail, and then most gracefully turned round and trotted off. A dead end!

"What a proud, stately, bold old fellow!" I began to reload as quick as I could, the fever still higher, and my hands yet shaking. I split half my load of powder, replaced it, and dropped my patch in the grass, but dared not stoop down to find it. I dropped the first ball again, and the second I rammed down without a patch. I now raised my gun again, and fired. The old buck was now within twenty paces of me. He snorted, and then he whistled, and then he bawled. The smoke cleared away, when the old buck, now quite satisfied, raised his white waving flag, gave one or two heroic snorts, and then gracefully bounded away. My fever, or rather rage, went with him; but never was I so disgusted with myself. Fifty, yes, ten times, in peltry at that, would have bought me, right rappings, and a good deal more, the truth to tell, than the old buck would have cost me to admit I found blood; but whether this was from the tip of his nose, or ears, or the end of his tail, I know not.

up for the day, I said, "I will do penance for all this. So marching straight into camp I laid my empty rifle down upon the ground and resolved to do no more hunting that day. I sacredly kept my vow, though I could hear Billy's rifle cracking all around me. To be short, after five hours of penance alone in my tent, Billy came into camp at noon with two deer tied to his saddle. These he threw down by the tent, and Indian-like, without saying a word, mounted his horse and set off again. Soon he came in with two more, which he deposited with the others. I, again left, and brought in still another two, making six killed this forenoon and one yesterday, besides the wounded.

"No more deer," answered Billy; "but me kill plenty 'em wolf; leave him for de buzzards to eat; no good, me no want 'em."

"All right, Billy."
And now came his turn. A hard one to me, I confess.
"How many deer you kill, Major?"

"None; my rifle is crooked; you conjured it last night, Billy, with your 'medicine.'"

"No, said Billy, me no conjure rifle; me no medicine man; let me shoot 'em, see?"

So picking it up he saw a wolf a good distance off and fired at it, when over he rolled, dead.

"Well now, let me try it," for I knew I had a reputation to regain in Billie's eye, and this was my only chance. Just

to regain in Brody's eye, and this was my only chance. Just at this time another prowling coyote popped his head over the hill to survey our camp and venison. He was further off than the first one. I raised my rifle; a cue gone, and "right between the eyes," said I to Billy, I pulled the trigger and braided him completely, and so stood the "Leatherstocking" in Billy's estimation forever afterwards. Now let us pack up and be off. We have game enough. We packed the seven deer in the wagon, left the wolves for the buzzards and rolled into the Past in two hours.

Such is a specimen of a few hours' hunt in the "cross timbers," and I am credibly informed the game is yet about as plenty there as ever. Worth is a good place for headquarters, containing some 1,500 inhabitants, hotels, &c. The Texas Central Railroad from Denison skirts at an easy distance the lower edge of these timbers, and renders good sporting grounds of easy access to such as seek them. Ever yours, OLD SCOUT.

Texas, November 10th, 1874

THE BLACKWATER REGION

For Forest and Stream.

PRESUMING that you, like myself, dislike controversy, I think it best to quarrel with a huge boss on the principle of exchanging his native element for the frying pan. I have no desire for a debate with "Veritas," but wish to thank him for the courtesy with which he lavishes compliments on me. Even if the Blackwater Chronicle was written by Mr. Kennedy, it is a very entertaining work, and as such has long figured in a library, the books of which are valued more for their quality than their numbers. Being illustrated by Forte Crayon's inimitable pencil, its authorship is generally attributed to the breeder of the famous "Blackwater" race, the region of which it treats is class ground. As such I visited it, and gazed with due reverence on the ruin of the shanty once inhabited by Powell, the guide. Powell long since followed Horace Greeley's advice, and went West; but Conway, the other guide, has passed over Jordan's stormy flood, and is now probably catching trout in the streams that flow through the happy hunting grounds. He has, however, left many descendants worthy of their sire, and I have received from them a list of those whose adventures are recorded in the Blackwater Chronicle had not reached the stream, but had mistaken for it the North Fork. This information was confirmed by others, guides who know the country well. I visited the spot where they camped on the supposed Blackwater, camped near it for several days myself, and in divers expeditions from thence after the spotted beauties that inhabit its flashing waters, explored the stream thoroughly to its mouth. It was marked on the maps as the Blackwater. As for the geographical jungles of the Canaan there are many miles away and hard to reach, except by a long detour *via* the Dry Forks of Cheat.

If the party that Powell and Conway led into the wilderness were well supplied with the astonishing whisky that prevails on the Upper Potomac, it is no wonder they mistook one stream for another in the heart of a then almost unknown wilderness, especially when, as the book sets forth, the members of the expedition, including the guides, entertained seven different opinions at once as to which way was north.

D. S. GREEN.

—Our readers are requested to more carefully scrutinize our ADVERTISING COLUMNS for such articles as they require. Most everything in the sportsman's line will be found there; or if not, ought to be. Thoughtless persons send us letters every week, enclosing stamp, to inquire where dogs, dog-trainers, guns, decoy ducks, buckskin garments, gloves, and the like can be obtained, and wait patiently, sometimes a fortnight, for an answer through our columns; whereas if they would turn to our back pages they could generally ascertain in a few minutes.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

WHITEFISH BREEDING.

THE experiments of Mr. Nelson W. Clark, of Clarkston, Mich., have resulted in proving that this inhabitant of the deeper lakes and rivers can be successfully propagated artificially. In 1899, he attempted to hatch 50,000 eggs, which are spawned in the Fall, and as near as can be ascertained, remain in shallow water around the margins of lakes, under the ice all winter. Mr. Clark's experiment was tried with spring water, as usual in hatching trout's eggs. Out of the whole lot he hatched only 1,500, and these soon died. The temperature of the hatching house was from 40° to 48°. He became convinced that spring water would not do for whitefish. Their eggs naturally hatch out in April succeeding the deposition of the spawn. He therefore fixed a pond in which to place eggs, and which could be allowed to freeze over and remain so all Winter, thus keeping the water so cool that incubation would be more gradual. He succeeded in hatching the greater number of the eggs, but the young fish died when fed with any food (artificial) that he could procure. The next year he succeeded in hatching fifty per cent. of the spawn, about April 1st, four and a half months after taking the eggs. The young fry were immediately put into the Detroit River and into three small lakes in Oakland county. The next season he took 1,000,000 eggs, of which he hatched 66 per cent.; 216,000 eggs in a forward state of incubation were shipped successfully to California.

Mr. Clark is certain that he can succeed every time if he can keep the water, in which are the eggs, covered with ice until April 1st, and he is equally certain that the eggs of the salmon, salmon trout and brook trout should be hatched in running spring water. Their eggs hatch about February 1st, and the young have an umbilical sac attached to them, from which they derive all their substance for about fifty days. Until this sac is absorbed they require no artificial food, and after feeding them a few days they can be turned out in a pond. The care of the whitefish. But the whitefish which he hatched have no yolk sac left, and for some reason or other artificial food kills them every time. They must therefore be retarded from hatching until Spring so that they can be immediately turned out.

None of the fish put into the lakes in Oakland county in 1872, had been seen until Nov. 17th of last year, when they were found in apparently countless numbers in one of these lakes. A single brook trout fisherman took 250 in an hour with spears—400 or 500 being taken a few days afterwards in the same place. These were all whitefish of fair size for the lake.

The Detroit Tribune, from which we gather the above, says that Mr. Clark laid in December last over 1,800,000 eggs in his hatching boxes at Clarkston, expecting to get at least 1,500,000 young fish therefrom.

Mr. Clark is much to be commended for his perseverance in his attempts to re-stock our fresh water lakes with a fish which is so staple an article of commerce. The whitefish (*Coregonus albus*) is one of the salmon family, and is the principal fish caught for export in the waters of Lake Erie, Detroit River, and the straits at the lower ends of Lakes Michigan and Superior. Owing to the constant demand for this fish, it has been so relentlessly hunted that the average yearly catch has fallen off nearly one-half. It is to be hoped that Mr. Clark's success may induce the general artificial propagation of one of our great sources of animal food.

BLACK BASS.

New Hope, Penn., November 16th, 1874.

EDITOR FOREST AND STREAM.—The Delaware River is well stocked with black bass. A large number have been taken here this season, some weighing four pounds—two pounds quite plenty. There has been a great demand for them from New Jersey for stocking purposes, and I have known boys with hook and line catch as many as 10 in a day. As yet is kept in the river, where each boy deposits his day's work. They are quite plenty in the canal, having escaped through the feeder, and when the water is drawn off many could be taken for stocking ponds that would otherwise perish. As all the shad interest here is opposed to them they receive very little protection. I gave them a few trials, and found they readily took my large gaudy fly, but the boys laid with minnows and wasp grubs. J. H. T.

THE CALIFORNIA FISH CULTURE.

The following letter from Mr. Livingston Stone's headquarters on the McCloud River, California, has been handed to us by Mr. Conklin, the artist of the Commission. It records the close of the season's operations:

McCloud River, Cal., November 8th, 1874.

MY DEAR CONKLIN:—Mr. Stone went East night before last, or at least left the camp at that time. Mr. Williams, Dick, and Green have gone into camp on Soda Creek, to try their luck at mining. In about two weeks, as soon as I get through here, we have had very stormy weather ever since the eclipse of the moon. One night the water came down in sheets, and raised the river about two feet and carried away part of the dam. I am putting about 80,000 young salmon in the McCloud River for the State of California. I have already put in 500,000 and the rest in boxes in the river, and will dump them at the end of two weeks.

Those boxes last put up, that you helped plant, have worked finely. They have a cavity as smooth as glass, and have never leaked a drop. With my experience this year with asphaltum I am better pleased than ever. The trays—the deep ones—have given perfect satisfaction; they have worked to a charm. I have already taken up the troughs in the tent, and also the paddles from off the wheel, and will fold the tent as soon as the rain lets up so that it will get dry. Our camp is very quiet now; only Waldo, Anderson, Ben and myself left, and but very few Indians come around now. Yours, very truly, J. G. WOODBURY.

PENNSYLVANIA FISH CULTURE.

LANCASTER, November 18th, 1874.

EDITOR FOREST AND STREAM.—I had the honor to assist in organizing an association in Lancaster county for the protection of fish and game, which is now at work stocking the streams with black bass as fast as they can get the fish. We are overcoming local prejudice, and gradually educating our community up to the proper state of mind on the subject, and those who will not be thus educated by argument and moral suasion, we intend to punish, when-

ever caught violating the game laws. In this work the influence of your paper is rendering valuable assistance. The increase of its circulation is greatly to be desired.

Perhaps it may be of interest for you to know that we have had excellent black bass fishing this Fall in the Susquehanna between Columbia and Harrisburg, and from that place to the mouth of the Juniata, large numbers having been taken with the hook and line daily during the season; and all the increase of a small number of fish placed in the stream five years ago at Harrisburg, and near the Juniata, as I understand, with prohibition for several years. Respectfully yours,

SIMON P. EBY.

LIMING PONDS.

ROCHESTER, Nov. 30, 1874.

EDITOR FOREST AND STREAM.—

If you lime a pond to kill obnoxious fish you not only kill all the fish but you kill all the feed that is in the pond, and when you put the trout back in the pond there will not be any feed for them, and they will die. It takes a great many years for a pond to get stocked with insects so that it will support many trout. Fish thrive according to the feed they have, the same as any other animal. It is a mistaken idea that many people have, that fish can live on water; they can't, any more than man can live on air.

Yours,

SETH GREEN.

[Mr. Green has spoken in behalf of our correspondent who asked us last week about the proper mode of clearing a pond of pickerel, in order to substitute trout, and we advise that his advice be followed, by all means; nevertheless, we have seen trout ponds limed repeatedly, including that of W. H. Furman, Esq., at Maspeth. Perhaps, in the latter case, the absence of natural food was not felt, as the trout with which the pond was replenished, were fed by hand with liver, gentles, and the like.—Ed.]

A correspondent of an exchange says:—A year ago having more young trout than my pond would accommodate, I put a few thousand into a brook stream near by. They were then about one inch long. I took my rod and a couple of my little boys and went to the brook, and in less than an hour caught thirty—all we wanted—and might have caught hundreds, as we could see them in schools of fifty or a hundred in a place for a mile up and down the brook. They were about seven inches long, or what would be called a nice catch. As this same thing can be done with every brook of our kind, either north or south of the State, I submit if it would not pay the owners of brooks to stock them, if in nothing else, in furnishing one more attraction for the farm, if not for themselves, for the boys; for recreation is as necessary to them as meat and bread, and if they can't find it on the farm, they will hunt it in the village. Many of us can recollect how attractive the brook on our father's or neighbor's farm was, and how its wily denizens taught and developed our young skill and ingenuity in their capture.

The Canadian Sportsman says: At Port Daulhousie and other points along the shores of Lake Ontario, the shad fishery has become an established and lucrative business. Observe the record: A few years ago there was not a shad in Lake Ontario. But the State of New York has an intelligent and enterprising board of fish commissioners, liberally sustained by the State Government. This board or fish commissioners conceived the bold idea that the shad could live throughout the year in fresh water, and accordingly hatched and set free in Lake Ontario some hundred thousand of that species of the shad. The result is that millions of that delicious fish swarm in the waters of Lake Ontario, and have become the basis of a new system of fisheries.

Natural History.

NOTES ON THE ALEWIFE, (*Alosa tyrannus*).

IN the days of my boyhood I had a very good opportunity to study the habits of the alewife. Living near a large lake, into which the shad and alewife came at their appointed seasons for casting their spawn, I was induced almost habitually, as it were, to become a student of the habits of this fish. Little did I then think how great a space in the vacuum of humanity was this poor despised little alewife destined to fill.

In the course of my observations, I found the alewives were generally the companions of the shad, from the reason of its similarity of habits, and of breeding in brackish and waters of little depth. It is found far up in places where the shad cannot go. Many of the shad have discontinued visiting their old places of resort, and are not often seen in the places formerly frequented by them. Years ago it was not an uncommon spectacle to behold hundreds of shad on the Mystic and its tributaries. Now not a single shad is to be found, and very few of the alewives are caught outside of Mystic Lake, where once they were numerous. Alewives are much more abundant in the Middle and Southern States, for the reason that there are fewer obstructions and mill dams in their progress up the streams. You will now find alewives in what are called shad streams. But one fact I have learned, that when once the shad or alewives are stopped in their progress up stream they grow less in numbers every year, until they leave the stream altogether. In New England almost all streams are dammed, and as a consequence few fish are to be seen where once they were numerous.

Being very prolific, we hope this fish will remain in our rivers until some saving legislation shall be had for their protection. Something must be done, or farewell to the shad and alewife fisheries, of which old Massachusetts was once so proud. The early run of alewives are very fine, and generally quite fat, being often from one foot to sixteen inches in length, and weighing about six ounces. They make their appearance early in Spring, and remain with us only a sufficient time to spawn, when they return to the sea. In June they are all gone. The fry remain attached to twigs in the water, where they are hatched up to November, sometimes to December, and then they go to sea. I have seen thousands of these young fish around

the shores one day, and the next not one was to be seen.

The alewife will take bait, but the general method of taking them is by means of the net. In all narrow streams they are taken in seines. Many ways are resorted to to cure them, but smoking and pickling are the usual methods. Some of the streams near Boston yield upwards of 1,500 barrels of alewives per year, and such streams rent for from six to nine hundred dollars per annum.

OLLIPHANT QUILL.

THE "BLUE BACK" TROUT OF RANGELEY LAKE, MAINE.

NO. 10 WARREN STREET, NEW YORK.

EDITOR FOREST AND STREAM:—

I presume few of your many readers ever heard of this singular member of the salmon family, and a less number had the privilege of seeing a specimen. The receipt of two boxes of these fish from Hon. H. O. Stanley, one of the Commissioners of Fisheries of the State of Maine, is the main incentive to this communication.

On the 10th of October—or within three days of that date—the outlets of Gull Pond and Dodge Pond, both emptying into Rangeley Lake at points six miles apart, and the outlet of Rangeley Lake, six miles from Dodge Pond, are thronged by myriads of this exquisite fish. The waters of the stream are actually filled with this crowding, springing crowd, gathering, as do the smelts and alewives, to deposit their spawn. They do not make a "spawning bed," like the salmon and trout, but deposit their eggs in all parts of the stream, remaining about ten days, when they return to the lake, and are never seen until the 10th of October the following year. This is a literal fact. Notwithstanding the great number of anglers who have frequented the "Rangeley" during recent years, fishing all portions of the lake with all manner of bait, on the surface and down in the deep, no one has ever caught a blue back. They have never been seen at the surface. Among the settlers the "blue back mystery" has been an annual subject of discussion at the husking, quilting, and fishing parties, and in the country store, for over forty years. The variation between the blue back and the brook trout is plainly noticed, even by a novice. The former are more slender, have no bright vermilion spots; the ventral, anal, and pectoral fins are a bright scarlet, without the black and white lines so conspicuous in the other. The tail is more forked. As their popular name indicates, they are very dark. But the most singular fact of all is the minifinity of size. They are not more than one or two inches in length, weighing from three to four ounces. They never take fly or bait. I state this as a fact, notwithstanding the possibility of contradiction by as good an authority as our worthy President of the American Fish Culturists' Association, and my esteemed friend, that expert angler, Hon. Roubt B. Roosevelt. When last we met at Rangeley, some four years ago, he, it is recalled with deep interest, told me of the blue backs. They came at the appointed day in millions. Our friend had caught nearly every species of fish that swims in salt or fresh water, and he insisted that these beauties could be tempted by the gaudy fly. So day after day he stood on the apron of the old dam and fairly exhausted the treasures of his famous fly-book. I shall never forget his overflowing enthusiasm and boundless joy as he enraptured caught, bearing a single blue back attached to a diminutive hook. He loudly declared, "The beauty bit," but we who had watched the angler casting the trio of sharp-baited lures among the swimming thousands in the pool, wondered that such exquisite skill in casting had not resulted in hooking out three at a time.

In consequence of the peculiar habits of this singular fish, they have been exempted from the provisions of the law making trout a game fish, and also with reference to their mode of capture. I quote from the laws of Maine, now before me—chapter 29, of the laws of 1869, section 18: "There shall be a yearly close time for land-locked salmon, trout, and toad, during the months of October, November, December, January, and February, during which time none of the fish mentioned above shall be taken or killed in any manner, under a penalty of not more than thirty or less than ten dollars, and a further fine of one dollar for each fish so taken or killed—provided that this section shall not apply to the taking of 'blue back trout' in Franklin or Oxford counties."

This exemption is properly and wisely made, as it enables the anglers in this section to apply themselves with quantities of superior fish food, which, smoked and salted, adds very materially to the limited bill of fare for the season. They are captured in nets by the dangle and barrel. Few find their way to market. I am quite confident that the first lot of these fish that ever reached New York came to me from Mr. Stanley last month. I have distributed them very generously, and permitted the anglers who are in possession of additional facts concerning this comparatively new and valuable species of the salmon genus, may specially communicate the same to your columns. I have been informed that the naturalist Girard first made known to the scientific world that this was a distinct species, they thus having properly received his name, *salmo gairdneri*.

His theory succeeded in taking thirty thousand of their eggs, which are now being hatched at the establishment of the Rangeley Trout Hatching Association, on Bema Stream. When sufficiently developed they will be placed in suitable public waters in Maine. A few thousand can probably be purchased, if desired, for other States, or by private parties. The eggs are much larger than a brook trout's, the fish yielding from 50 to 150, instead of from 400 to 500, as in the brook trout of same size.

I take this opportunity to congratulate you upon the most interesting and valuable results experienced in the discussion and elucidation of the grayling question, and trust that this communication may inaugurate a similar investigation of the "Blue Back Mystery."

GEO. SHEPARD PAGE.

SOMETHING ABOUT GROUSE.

CONFUSION OF NAMES—VARIETIES IN THE WEST.

OF the eleven species of grouse known by a greater number of common names, only two are general in Illinois, while a third was at one time generally distributed over the northwestern counties of this State. Science has reduced the whole number of American grouse to six genera, and the authorities on ornithology have so plainly classified them that no further confusion need occur as to what should be considered grouse. What is known by some as the quail is called a partridge in some localities, and in others the partridge is called a pheasant, and the eleven different grouse are known by eighteen different common names, while the quail are only allied to the grouse genera, and are really the partridge family of seven American species, only one of which, the quail (*Tetrao columbianus*), or "bob white," is known in Illinois or in the Eastern United States.

The two Illinois grouse are: First, the prairie hen, or pinnaled grouse, known in New York as far back as 1691 as the "health hen," and now scientifically known as *Caprimulgus caprimulgus*. Second, the pheasant, or ruffed grouse, scientifically known as *Bonasa umbellus*. The third (no longer an Illinois game bird), the sharp-tailed grouse, known in late authorities as *Pedicularis phasianellus*. Strange as it may appear, yet it is nevertheless true, these three birds have been described by authors under fifteen different

OLLIPOD QUILT.

A setter must be plentifully supplied with water, if any dependence is to be placed upon his nose, and we learn from a great many of our friends that this necessity has been extremely difficult to find this Autumn. We are sure

It is a sheet which one does not feel it necessary to put back in the pocket after reading.

The W. J. G. P. A. now has men stationed at the ferries, to watch for persons violating their law. I have heard of no arrests, but have seen them examine the sportsmen's licenses at Market Street Ferry, Camden.

J. W. H.

LAKE KOSHKONONG.

CHICAGO, Ill., Nov. 17, 1874.

EDITOR FOREST AND STREAM:—

This lake, situated about fourteen miles from Janesville, Wis., on line of Chicago and Northwestern Railway, has of late years become quite a noted resort for sportsmen from all sections of the country, as during the Fall months it is the feeding ground of the celebrated canvas back ducks which annually congregate there in large numbers. To feed on the water celery with which the lake abounds. There is no spot in the West where they are found in such abundance, or where so many are secured by sportsmen. The lake is seven miles long by three wide, bordered by large marshes at intervals, where the wild rice grows in great profusion. On the lake and in the marshes may be found from September until the lake closes, every variety of duck known in the West. To give some idea of the numbers I will simply state that two sportsmen shot this season in one week 513, including all the early varieties. Snipe are found about the marshes, partridges in the woods, prairie chickens and quail in the immediate vicinity, and for the sportsman who enjoys the different kinds of field and lake shooting, no locality could suit him better. This season parties from New York, Connecticut, Cleveland, Chicago, etc., have made this their headquarters for Fall shooting, although, owing to the mild weather the sport has not been equal to that of former years. Still, canvas backs have been, since October, quite plenty. The largest bag made by any one party was 108 in two days. Two gens from New York shot eighty-seven ducks in one day, mostly red heads. These parties, as well as those who are posted, have invariably stayed at "Bingham," who owns a fine farm bordering the lake, and although not professing to keep a hotel, has accommodations for about twenty gentlemen, where they are sure of the best of country fare. There are other stopping places in the vicinity, but none equal to this. Ira Bingham, a son of the proprietor of this farm, is acknowledged the champion canvas back shooter of this lake. During the season he has secured from sixty to seventy-five a day, when the lake is smooth. This, to some who are aware that these ducks feed and live mostly in open water, not often feeding near the shore, may look large; so, how he does it will be explained. He has a light boat which sets very low in the water, having depth enough so that when lying flat on his back, he is not visible. Armed with two breach loaders, he often comes from sixty to eighty into the lake, until he spies a flock of canvas backs. He then lies flat on his back, propelling the boat with a scull oar, which he works over his shoulder. Being entirely hidden from view, the duck are not alarmed until, when within shooting distance, he suddenly rises and makes and havoc in their ranks, for he is a good shot. The second gun is used for crippled birds, so he never gets away from them. This is the best time to take another season it may be well to say they should leave Chicago by Chicago and Northwestern Railway, securing tickets to Koskoshong, from which station they can easily reach the lake, which is about two miles distant, by private conveyance, which can always be procured; or, if intending to stop at Bingham's, direct letter to Ira Bingham, Koskoshong, Wisconsin, stating what day they will be there and he will on the way to convey them.

SHAMOCK.

COOTING AT CAPE ANN.

SALEM, MASS., November 9th, 1874.

EDITOR FOREST AND STREAM:—

Seeing your notice of sea fowl shooting at Gloucester, Mass., I led me to some farther search for the same. I have secured from sixty to seventy-five a day, when the lake is smooth. This, to some who are aware that these ducks feed and live mostly in open water, not often feeding near the shore, may look large; so, how he does it will be explained. He has a light boat which sets very low in the water, having depth enough so that when lying flat on his back, he is not visible. Armed with two breach loaders, he often comes from sixty to eighty into the lake, until he spies a flock of canvas backs. He then lies flat on his back, propelling the boat with a scull oar, which he works over his shoulder. Being entirely hidden from view, the duck are not alarmed until, when within shooting distance, he suddenly rises and makes and havoc in their ranks, for he is a good shot. The second gun is used for crippled birds, so he never gets away from them. This is the best time to take another season it may be well to say they should leave Chicago by Chicago and Northwestern Railway, securing tickets to Koskoshong, from which station they can easily reach the lake, which is about two miles distant, by private conveyance, which can always be procured; or, if intending to stop at Bingham's, direct letter to Ira Bingham, Koskoshong, Wisconsin, stating what day they will be there and he will on the way to convey them.

SHAMOCK.

KILLING DOES.

PHILADELPHIA, November 17th, 1874.

EDITOR FOREST AND STREAM:—

Do you approve of killing does? I think it a most unsportsmanlike act to destroy the breeding animals of any kind of game, except beards of wolf. There seems to be a number of persons who can afford to spend money for the best outfit and time for their pleasure, and who think that they are entitled thereof to the name of sportsmen, if they camp in the woods and bring down so many deer, no matter how many of them are does. Men who cannot tell the male from the female, or who wantonly destroy the stock by purposely killing the latter, are nothing better than pot hunters, and ought to be severely punished by the protecting societies. The legislation for the protection of game should be made to be everywhere very ineffective and partial, and not at all calculated to make game an article of food for the people, but a luxury in the reach of the rich only.

A. V. L.

[Dear multiply so fast that, in localities where they abound, there is no objection to killing does in the Fall of the year, after they have discarded their fawns.—En.]

GUN TESTS.

AKRON, Ohio, November 1874.

EDITOR FOREST AND STREAM:—

In testing my gun yesterday I reached results that surprised me somewhat, and as they may be of interest to the readers of F. & S., I send you this.

The gun is 12 gauge, 30 inch barrel and is chambered for a 12 A shell. I fired metal shells the full length of counterbore. In previous tests I had found that the greatest amount of powder the gun would utilize, without excessive recoil and spoiling the pattern of shot, to be 24 drachms of powder and 1 oz. of shot; the powder finally adopted was very coarse, (1 falcen docking), one pasteboard and one pile-dogged wad over powder and one thin pasteboard wad over the shot. But wishing to use smaller shot than heretofore and to give them greater velocity, I concluded to test. I fired first trial with 12 drachms of powder and 1 oz. of shot, but the recoil was so unpleasant that I determined to try the effect of reducing the weight

of the shot, and in that way gain increased velocity, if I could, without losing pattern.

Using no standard paper testing penetration, I took some thin muskils for the pads, and to more readily detect any loss of pattern, I placed the target at thirty yards; the first test was with Nos. 7, 9 and 11 shot, using standard load of powder and shot, four loads for each number. The second test was with same Nos. of shot, 9 drachms of powder and 1 oz. shot, four loads of each number. I found an average gain of penetration of 25 per cent, the gain being the greatest with the finest shot. The pattern with No. 7 was same as with standard load, with No. 9 quite good and with the No. 11 was the best I have ever had. This result is entirely at variance with the prevailing theory, "i. e. to improve the pattern, increase the amount of shot," and this quite likely is due to some peculiarity in the bore of the gun.

Perhaps few sportsmen are aware how much a slight difference of bore in guns of same gauge will effect the guns in using shot of same numbers. Some time since I assisted a friend in testing a gun which he thought of buying, same gauge and length of barrel as mine, and gauging the barrels with a star gauge, I found that the barrels were three-one-thousandths of an inch (31,000 smaller at the muzzle than mine, but the increase of diameter towards the breech was the same proportion as mine. Yet the gun would not give any pattern with Nos. 7 and 9, and gave splendid patterns with Nos. 8 and 10; the same shells and weights of load were used as in mine. Yet this difference in size, (31,000), would hardly be noticed with a pair of ordinary callipers.

I was pleased to see in a late number of your paper a description of a gun owned by a Mr. H. of New York, with a 41 inch drop of stock. I have used for nearly three years one with 41 inch drop and 14 inch from butt to front trigger, and am so well pleased with its convenience and certainty of aim in shooting in thick cover, that I could not be persuaded to change back to the old style. Some some of your many correspondents give us their experience with coarse powder. The shot most used by the sportsmen in our club are from 1 to 3 Oriental, and No. 4 to Orange Lightning. The size I have been compelled to adopt, to secure good pattern with a fair penetration in my gun, is so coarse that I am frequently advised by my friends to use blasting powder on the score of cheapness.

METAL SHELLS.

NEWARK, November 13th, 1874.

EDITOR FOREST AND STREAM:—

I fully indorse "Side Lever's" opinions in regard to the length of shells and forms of shoulders in breach loaders; but he didn't tell how he loads either of the guns he mentioned. Judging from his remarks, I should say he had thoroughly studied the subject, and doubt not that many of your readers beside myself, who are familiar with his gun, would be glad to see a full explanation on the merits of metal shells, or if he only uses paper shells, would like to know how he crams or closes them, for I have been unable to get any good results from paper shells turned at the top, or crammed on the outside, and firmly believe that the only way to get good pattern is by leaving the shells in the form of metal shells, and crammed with at least three hand wads. I have bought shells loaded and crammed, which, when fired, lapped over and above the shoulder in the gun about one-quarter of an inch, thus contracting the wad in passing that point, so that it must have gone out of the gun without touching; the sides of the barrels. I should recommend India rubber wads in such cases. I have heard many opinions expressed on the supply of muskils in following the chambers, but I can not help feeling that they would not continue boring in what "Side Lever" calls the "opened plan," unless there was some well grounded reason for it. Will some expert enlighten me?

Perhaps I am wrong in thinking that by the "opened plan" "Side Lever" means tapering the chamber into the barrels so that no shoulder is necessary. I have been told that the "opened plan" is a false method until informed of the mistake in having a square shoulder for the shell to butt against.

TOOLEY.

JACKSON, Miss., November 11th, 1874.

EDITOR FOREST AND STREAM:—

If your columns are still open to the "shell question," after "Herbert's" article in the FOREST AND STREAM of November 5th, in favor of metal shells and condemnation of paper ones, I'll have my say. I own metal shells, and do not use them. One has the cap sticking in it that I cannot remove; another I threw away for a like reason, and I did not "load them one hundred times," nor let them get so dirty that I could "scrape off the dirt," like Capt. Bogardus, or "Herbert," and I affirm, as a practical sportsman, that brass shells need nearly the same cleaning as one barrel of a muzzle loader.

Metallic shells are cheaper in the long run, and shoot better than paper shells, (because they are more solid, and are not crimped as the latter usually have to be,) in the ratio of the former bringing one bird more to bag in twenty-five than the paper shell, provided the metallic shells are of the length of the chamber, else they will not; a great many metallic shells will have the requisite length. Metallic shells will fire after having been immersed in water for a long time. (Query: Does that constitute them bad bad Baptists?)

"Herbert" tells of a gentleman in whose gun the cartridge extractor was slipped past the shell because he was using paper shells. I don't think it slipped past the shell because of the construction of the extractor. I could name guns of American manufacture that do so frequently, often enough to make it quite a per centage in a day's shooting. I have fired my gun, say two thousand times, and the extractor has to slip by its first true try, and I have shot the poorest of Elly's shells—his xxx, say as brown, blue, and green. Perhaps the breach to keep the powder from being forced through and "wounding" or "beautifully tattooing my left wrist"—"side "Herbert's" quotation from London Field, though I have fired several xxx shells whose bases had parted on one side from the brass cylinder.

"Herbert" says in regard to Elly's shells: "As far as actual charge of powder goes, no doubt they are harmless." I do not know what he calls a *usual* charge. We have shot 4 drachms of powder and 14 oz. shot from a 12 bore gun, and 3 drachms of powder and 14 oz. of shot out of a 10 bore gun, or in other words, all we could get into the respective cases, and we are not "tattooed" either.

I have been out in a drenching rain, carrying my paper cartridges in a belt on my back, and not one of them refused to go off at the time or afterwards, and I contend that when it rains so that paper shells become useless, no one but a pot hunter would find it *sport* in staying. Yours truly,

Geo. C. EYRICH.

Answers to Correspondents.

P. W. T., Washington.—Will you please tell me the names of two of the best hotels in the White Mountains? Ans. Profile House and the Glen House.

D. C. D.—I have a muzzle loading shot gun that scatters too much. What had I better do about it? Ans. Go to a competent gunmaker and have it drawn bore.

P. H., City.—A good remedy to remove warts is a tincture of cantharides, with a few drops of iodine. Apply to the wart with a small brush, three or four times a day. Ought to be equally effective in man or beast. In a short time they will disappear.

READER.—Would you be kind enough to inform me, through your columns, the name of some one who was using paper shells. I don't think I've got a little bit about nine months' old, and wish to put her into good hands. Box 150, Scheuchstady.—Can you inform me where I can get some genuine Russian grain for hunting boots, and about the

cost of same? Ans. Go to Malford, Cary & Conklin, 54 Spruce street. The genuine is real, and costs \$7.50 to \$8.50 per skin.

J. M., East Liverpool, Ohio.—I purchased a gun, which can be found among your advertisements. It is a very fine gun, and I have taken upon birds, shooting too close. How can it be made to scatter sufficiently for game shooting? What is the most killing charge for quail? Ans. No. 8 shot. Use more powder.

P. W. H., Hartford.—I have a William & Powell gun; weight, 84 lbs., nearly; gauge, No. 10, and length of barrel 30 inches. Will you inform me if it will injure its shooting qualities by cutting the barrels off to 23 inches? Ans. So far as we have learned, alterations of this kind have proved altogether satisfactory.

E. B., Conn.—Can I buy a good gun (muzzle loading) for fifteen or twenty dollars? Would you advise me to get a single or double barrel at that price, and will you tell me the best place to send for it? Ans. A double gun (twice) will cost you \$12 to \$15, and the same of laminated steel from \$17.50 to \$20. Get double barrel, and apply to any good gun-maker.

SANBORN, California.—I can inform me whether Mr. Rigby, of the Irish Trust, uses a falcen muzzle in loading? Ans. He does. 2. What is the twist of the rifling in his guns? Ans. Both Rigby and Mottord use what is known as the increasing spiral, a term that defines itself. It is a system of rifling tried years ago and abandoned, but recently resumed with satisfactory results.

CONSPICUOUS.—Seventeen persons this week ask for information through our Correspondent's Column, which can be found among our advertisements. If some people would take as much trouble to examine our list of advertisements in search of the goods they require, as to write and mail their letters of inquiry, they would find it more profitable to themselves, as well as vastly more convenient to us.

LOCKWOOD.—Will you be kind enough to direct me to a place where I can get some good squirrel shooting, within from three to five hours of the city? Ans. You will be little too late for squirrel shooting, but you may find it in October, when the squirrels are putting in always the best time. Why not take the day with rabbits, with a weagle or two, in Morris or Orange county, N. J., where you might possibly run across a few squirrels early in the morning?

J. A. B., Newark.—Will you please inform me if I can find good partridge or quail shooting on any grounds adjacent to tributaries of Chesapeake Bay or Potomac River in December? Ans. Good quail shoot in the fall, and some choice partridge in the spring. For sport, adjacent to the tributaries of Chesapeake Bay or Potomac River, providing the country is cultivated for grain. We advise you to go to Aquia Creek, Stafford county, Va.

MOUNT FLORES.—Are there any farms on Indian River, in Florida? What is land worth on opposite Lake Harney? Is there any book on shooting on Indian River? If so, the name, the best route there, also the numbers of your paper containing the book, and how can it be obtained? Ans. We know of no modern book that contains so full and reliable information as is conveyed in the numbers of FOREST AND STREAM relating to Indian River. Can furnish most of the numbers.

SHEFFIELD.—A drachm is of a Troy ounce, or 60 Troy grains; and 1-16 of the avoirdupois ounce, or 27 11-16 Troy grains. The latter is the weight in use for gunpowder, and our powder falls are graduated to the "drachm" avoirdupois. Our pound of powder will make 95 grains of 3 drachms each. Thus a drachm Troy is more than twice the weight of a drachm in avoirdupois weight. These drachms are very perplexing to many sportsmen. There are three scruples in a drachm Troy, but there need not be any scruples about a liquid drachm, if the quality be good.

C. Q., Philadelphia.—How many shot of each of the following sizes should be in the short under these conditions? Gun, 8 gauge, central fire, breech loader, 33 inch barrel, 16 lbs. weight, 16 No. 4's, 16 No. 6's, 16 No. 7's, 16 No. 8's, 16 No. 9's, 16 No. 10's, 16 No. 11's, 16 No. 12's, 16 No. 13's, 16 No. 14's, 16 No. 15's, 16 No. 16's, 16 No. 17's, 16 No. 18's, 16 No. 19's, 16 No. 20's, 16 No. 21's, 16 No. 22's, 16 No. 23's, 16 No. 24's, 16 No. 25's, 16 No. 26's, 16 No. 27's, 16 No. 28's, 16 No. 29's, 16 No. 30's, 16 No. 31's, 16 No. 32's, 16 No. 33's, 16 No. 34's, 16 No. 35's, 16 No. 36's, 16 No. 37's, 16 No. 38's, 16 No. 39's, 16 No. 40's, 16 No. 41's, 16 No. 42's, 16 No. 43's, 16 No. 44's, 16 No. A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
133 SOUTH THIRD STREET, PHILADELPHIA.
COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. for five copies and upwards. Any person sending us two subscriptions and Ten Dollars will receive a copy of Hallock's "Fishing Tackle," postage free.

Advertising Rates.

In regular advertising columns, nonpareil type, 19 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, NOVEMBER 26, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and confidence of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved taste, nor pervert the legitimate sports of mind and water to those uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

SATURDAY, November 28.—Competition for Turf, Field and Farm badge at Croydonmoor.

TUESDAY, December 1.—Races at New Orleans.

WEDNESDAY, December 2.—Prof. Judd's attempt to walk 500 miles in six days, in New York.

THANKSGIVING.

THIS year the President, the Governor, and the Mayor have each and all respectively enjoined upon us the propriety of being thankful to day, and reminded us of the obligations we owe to the Great Provider for his goodness in showering peace, plenty, and abundance upon us; so that even if we were disposed to be ungrateful or querulous of bad fortune, it would still be incumbent upon us to obey this triumvirate of Chief Magistrates, attend morning church service, stuff ourselves with roast turkey and plum pudding, and be thankful that our capacity can hold no more!

What a luxury to the poor must be these annual proclamations of Thanksgiving! How grateful to the tattered and benumbed starveling these injunctions to eat and be filled! Surely, the odor of roast meats and savory stews that emanates from the kitchens of those that dwell in high places must fall with a grateful sense upon the pinched and shivering of the maid who drags her ragged bit of a shawl closely around her face as she wistfully looks and scurries by. Few in our land will go to bed supperless to-day. Stores of good things from the kitchen, largesses of food from the abundance of the overfed, donations of cold pieces from the waste basket, special gifts to the needy, will be showered for one day from the horn of plenty upon the deserving and undeserving. Upon the memory of this day's Thanksgiving Dinner many a poor vagrant must principally subsist for the balance of the year. We should fancy that the pleasures of hope in such a case would be almost swamped in the reprospect.

"Please, sir, give me a penny?" Certainly, my son; here, take 'em."

All men are more than generous to-day, and the street urchins and Arabs expect a benefit. "Out of the fullness of the heart the mouth speaketh." Even a man plundered by thieves, with his pockets inside out, wouldn't begrudge a poor lad a penny on Thanksgiving Day. Oh, Day of

Superabundance! of all days the best! How all the poor relations from far and near gather around the festive board of the *paterfamilias* who has the fine-t house, the largest heart, and the longest purse. One likes to have his family around him. Grandpa will give Bub an extra piece of pudding, out of pure gratitude to the Good Fortune that has blessed him with so much, and given all the rest so little. Human nature will assert itself, even when the stomach is full. We venerate this time-honored anniversary, bequeathed to us by New England, that affords us this exceptional opportunity to turn to our neighbors the best side of ourselves. Just as plants turn their petals toward the sun, so do we persistently set our faces toward the sources from whence all good things emanate, and emphasize the truism: "It is better to give than to receive." We make this remark advisedly—to our friends, not to ourselves.

Upon the whole, we regard Thanksgiving Day as a day to be thankful for. A little reflection compels the conclusion that it is as necessary for our happiness as that its observance has become an institution thoroughly engrafted upon the whole country. Its festivities are not conventional or arbitrary, but the spontaneous and irrepressible outcome of a desire to mark an era of good feeling that wells up like the waters of an artesian from our deeply-buried selves.

The FOREST AND STREAM has certainly much to be thankful for. It has at least trebled its subscription list since a year ago to-day, and has the promise of increased favor as soon as business improves and times get better. It has won the confidence of the community, and established itself as a necessity among the fraternity of sportsmen. Its readers look for its weekly coming as eagerly as they do for the recurrence of the festival which we celebrate to-day. And in this connection we may pointedly remark the coincidence that brings Thanksgiving and the day of our publication together. It was so last year—it is so now. There must be some significance in the event, for two such benefactions seldom come at once. They say it is the best time to solicit favors after the "gude man" has had his dinner. What more auspicious season, then, than to-day for FOREST AND STREAM to present its petition for increased consideration? The fire glows warm in the grate, drowsiness soothes the senses, and the heart wells up with the fulness of gratitude and good wine, as the master of the house contemplates the comfortable surroundings of his after-dinner quiet. Let us solicit a little memento of the occasion. Our readers and subscribers are lavish in their compliments and wishes for our success. Let each now jog his neighbor's elbow, so that between this day and the new year our subscription list may be doubled and the sphere of our usefulness proportionably increased.

May our friends all rejoice and be thankful in the day we celebrate; may their roast turkey, plum pudding, and pumpkin pie "go to the right spot;" and when next year the President, our Governor, and our Mayor issue their respective proclamations to observe the recurring festival, may they all be alive and ready to respond.

A PROPOSITION.

WE have been so often requested by many of our readers, interested in the improvement of our stock of setters and pointers in America, to propose to the Philadelphia Sportsmen's Association that a Bench Show of dogs of all classes shall take place under their management after the present shooting season has closed, and knowing that many of the members of this organization possess animals of superior blood, we advise, by all means, that a movement looking to such an exhibition may be made at one of their coming meetings. Not only should Philadelphia and Pennsylvania dogs be placed on the bench, but invitations should be extended to all sportsmen's societies of every State to enter their best for competition, through the medium of journals devoting a portion of their space to the subject, and we will cheerfully lend our aid in behalf of the success of the enterprise.

No more fitting time could be chosen for such a display than the month of February, when the sportsman has finished his autumn campaigns among the feathered tribe, and his dogs have fully recovered from the effects of the arduous work devolving upon them.

As an illustration of the success of exhibitions of this character, we are told by good authority that the annual show of the Poultry Breeder's Association, in Philadelphia, is self-supporting and fully paying the cost of hall, diplomas, &c., &c. Would it not be safe, then, to suppose that with all the interest taken in the improvement of field dogs within the past year, and the continued desire of the sportsman to possess well bred setters and pointers, that such a movement could not prove a failure?

The Mincoia Bench Show for dogs, in connection with the Queen's County Agricultural Exhibition at Long Island in October, proved a success beyond the expectations of the most sanguine; in fact, it is stated that the display of field dogs was the great feature of the fair and attracted many that would not have otherwise attended. The points for judging were the same as those adopted by the London Kennel Club, and on which we do not think any improvement can be made. All setter dogs contending for award were placed under three classes—the Gordon, the Irish and setters of any breed—the best, under each head, receiving a cup and the second a diploma; the best and second best bitches of the same classes likewise gaining similar prizes. For pointer dogs and bitches, first and second of each were

given cups and diplomas, but we should like to see the same system, or one resembling it, carried out in awarding all breeds of animals shown, foxhound, harrier, beagle, dachshund, greyhound, bloodhound, staghound, Newfoundland, spaniel and terriers included, and as an inducement for perfection in taxidermy a prize should be offered for the finest specimens of mounted birds.

The Tennessee State Sportsmen's Association lately gave a Bench Show of their dogs at Memphis, which proved successful, as well as the Field Trial following, being the first of its kind ever held in America, giving great satisfaction to the projectors. No dog should be allowed to enter for award at an exhibition unless his pedigree for at least two generations be reliably furnished, and each owner be charged an entrance fee, to be devoted towards defraying the expenses of the affair. It will be time enough five years hence to ask of our sportsmen wishing to contend for premiums and medals at bench shows for pedigrees of greater length than two generations back on the side of both sire and dam, for the reason that in the past but little attention has been paid to recording lines of descent, and we fear if longer pedigrees be asked to-day but few animals would be brought forward, notwithstanding they might be perfectly bred.

In conclusion, we will add that we promise our energies and attention in furthering any such movement on the part of the Philadelphia Sportsmen's Association, and would be happy to hear from them on the subject.

NEW GAME PRESERVE ON LONG ISLAND.

ONE of the finest trout streams on Long Island is the one whose lower half is owned by the South Side Club, and its headwaters by M. H. Keith and Son, of Babylon. The upper part especially is wonderfully pure, fed by bottom springs, and flowing over a continuous bed of whitest gravel for a distance of three miles or more. It rises back of Islip, and traverses a belt of uninhabited oak and pine timber land, sweeping in a semi-circle down to the salt meadows near its mouth, through which it flows into the Great South Bay. Its whole length is fully six miles, and its width is such, even near its source, as to permit the most unlimited play of rod for the fly-fisherman. It seems most surprising to find a river of such length and volume flowing through the sandy soil of Long Island, and still more surprising to find it stocked with trout that may be numbered by the hundred thousand! Three weeks ago we waded nearly the whole length of that portion owned by Mr. Keith, carefully avoiding the deep places, which could hardly be distinguished in water as clear that objects on the bottom seemed to be refracted against the surface. Generally speaking, we found the stream to flow uniformly and unbroken; but there are frequent intervals where it sweeps in rippling whirls around the bends, scoops out darksome holes under overhanging clods of roots, or tumbles through contracted channels. Occasionally it makes a little cascade where a log protrudes or spans the creek. Every foot of it seems available for the angler, and wherever we looked, whether in the shallow mid channel, in the deeper holes under the banks, or at the edges of the green patches of weeds that here and there clung to the bottom and swayed with the current, we saw the trout lying quietly, head up stream, or darting hither and yon, two, three, and a dozen together, whenever our approach disturbed them. Throughout its whole length, the stream was almost sacredly protected on both sides by a jungle of several rods in width, so thick as to be actually impenetrable. The only practicable mode, therefore, of fishing it at present is to wade it. What abundant returns our baskets would have realized had fishing been in order; it would be difficult to estimate. Certainly, the number of fish that might be taken would depend upon the angler's endurance, rather than upon the supply of fish. Very few were large, but they would average possibly four ounces apiece. By next Spring they will be larger and available to the angler.

In making our calculations, we have to take the chances against poachers, who are so persistent that neither the fear of the law or of blunderbusses will deter them, and whose gains are so lucrative as to make them speedily rich. So bold are they, and so tempting is the plunder, that on this very trout preserve of which we write, they not long ago erected a comfortable board shanty in the concealment of the thickest woods, and equipped it with stove, bunks, and provisions, to facilitate their depredations, keeping out of sight by day, and driving their nefarious vocation by night, when with silken nets so fine that one could fold them in the pocket, they would rob long reaches of the stream of its finny wealth. The plunder thus obtained is sold at this season to persons stocking their ponds; at other seasons to the market men. To five hundred of our readers who have been in the habit of fishing in Long Island waters, we are aware that our statements as to the quantity of fish in this creek will seem greatly exaggerated. For twenty years back we have tossed our own flies into many of these ponds and streams, and our returns have been meagre indeed. By the light of those other days, we should doubt any testimony now except our own eyesight. Nevertheless, the facts, as stated, can be substantiated by any who will take the trouble to investigate for themselves. Next Spring this rare preserve will be opened to the public, as it is on this account chiefly that we have undertaken to write this article. For nearly two years Mr. Amasa Keith has been improving this valuable property, and to better facilitate his work has erected and occupied a shanty in the midst of

GAME LAWS OF PENNSYLVANIA.

For the information of our readers who visit Pennsylvania, we print herewith a Digest of the Game Laws of Pennsylvania, as prepared by the "Lancaster County Fish and Game Society." Preserve it.

his territory, and upon the brink of this delectable stream where he could superintend his workmen in person. Al ready he has cleared and widened the stream opposite the shanty into a very considerable pond, which will reach a quarter of a mile in circumference when completed. He has turned loose large quantities of trout at sundry times, until with the aid of their natural increase he has made this one of the best stocked streams of its size in the States. Last Spring we tested its abundance by taking out forty in a few minutes. By next Spring Mr. Keith hopes to have a comfortable sporting house built close by, to accommodate not more than ten gentlemen at a time, to whom the privileges of fishing or shooting, according to the season, would be granted, at moderate prices, upon the presentation of suitable references. This will not be a club house in any sense of the word, nor yet a hotel; but applicants will be served, in turn, for a limited period, at a fixed price per diem, to include game and fish killed or taken away. There will be no tariff per pound, nor any special privileges to barter off at extortionate prices. It will be simply a sportsman's rendezvous, where good food and fair terms may be had, and a good bag of fish and game be guaranteed. This guaranty could not be given were the number of guests to be unlimited, or to exceed the fixed number of ten at any given time.

This stream, it should be said, runs through the choicest hunting ground of Long Island, and is the centre of the present deer country. It traverses the thickest cover, and is crossed by frequent runways. Partridges are more numerous here than elsewhere, and quail are found in considerable quantity. When ready for visitors, Mr. Keith will have some basswood, canoes placed upon the stream for the use of anglers. He has five men now employed in improving the pond and creek. We are glad that he has consented to devote his efforts to the entertainment of sportsmen in the manner proposed, for his scheme is founded on common sense, humanity, and honorable dealing. At present trout fishing and cover shooting on Long Island is almost a farce, by reason of the extortion of landlords, or the restrictions of landed proprietors.

We understand that the South Side Club has been negotiating for this property of Mr. Keith for a considerable time, appreciating as they do its value as an addition to their preserve, especially as it includes the head waters of their stream, to which the trout instinctively resort to spawn. Mr. Keith, however, has declined to sell, which is a fortunate decision for those persons not members of the club. The entire tract embraces about one thousand acres, and lies within two miles of the South Side Railroad.

DEER SLAUGHTER IN THE ADIRONDACKS.—All sportsmen left the Adirondack region early in November, but we learn from a resident at Keeseville that the guides are making fearful slaughter of deer. We believe that more deer are killed by the few score guides in that locality, whose occupation ends with the advent of snow storms, than by all the sportsmen put together. There is crying need for some restrictive measures and very heavy penalties to prevent speedy extermination of the deer in that section. But neither laws nor fear of penalties will of themselves stop the slaughter. We are in favor of the appointment of special officers or overseers, who shall visit different localities *incognito*, as detectives, during the Fall and Winter, especially after the snows get deep, report offenders, and procure their arrest. In no other way can violations of the law be stopped. We suggest that a petition to this effect be presented to our State Legislature this Winter. It will be one step at least toward the conservation of those important interests which it is hoped the creation of the State Park will accomplish. The Adirondack region ought to be placed under the immediate supervision of the State authorities, just as portions of Canada are under those of the Dominion, with efficient men to act as wardens. It is all nonsense to inveigh against sportsmen for killing deer in July and August by jacking or hounding, when the strapping backwoodsman, whose occupation as guides makes them perfectly familiar with all the haunts of deer, slaughter them by the dozen in the deep snows of mid-winter. Slaughter by sportsmen! Faugh! there's not one in a hundred who could catch a deer without the aid of his guide, even if he were at the point of starvation. Let wise men stop the leak at the bung, and not at the spigot.

LA VIE SPORTIVE.—We have received a new journal published in Paris bearing the above name. As its title indicates, it is devoted to field sports and all those exercises which develop a vigorous manhood. We notice among its contributors several names well known among the oldest nobility of the realm, a fact which indicates that the aristocracy of Europe are yet the supporters and keenest lovers of all that is ennobling and exhilarating. This journal is also replete with short and varied essays on various subjects, and while none of them displays much originality yet they are quite readable. We wish our contemporary success.

—Our friends and readers are requested to scan our Prize List column in another page. The premiums offered for subscribers are unusually liberal, and embrace articles adapted to the wants of every gentleman sportsman in the country—be he tyro or veteran. The subscription list of **FOREST AND STREAM** is flatteringly full, but our ambition and hopes, and we think its own deservings, place our mark still higher.

—Earl Dunraven has returned from his hunting expedition to the West.

NAME OF GAME.	WHEN LAWFUL.		Penalty for taking out of season.	REMARKS.
	From	To		
"Bait fish".....	Any time.....	Any time.....	May be taken with hand nets for angling or scientific purposes.
Bass (black).....	June 1.....	March 1.....	\$ 35	Hook and line, or scroll, only to be used. (See Nets.)
Birds*.....	5	Not to be trapped or snared; \$10 for destroying.
Dirt, coal or culm.....	50	Not allowed to be thrown in creeks or ponds.
"Drawing off Water".....	25	Fishing not allowed where water is drawn off, except for scientific or propagating purposes.
Drugs or poisons.....	50	Not allowed in fishing, hunting, or to be thrown into streams.
Ducks (wild).....	Any time.....	Any time.....	50	No "punt guns," or "swivels" allowed.
Eggs (bird's).....	Not to be de.....	destroyed.....	10	Except those of "birds of prey," or for scientific purposes.
Fish baskets.....	5	Not to be taken during spawning season.
Fish ponds (private).....	100	To be removed on ten days notice, or by sheri if.
Goose (wild).....	Any time.....	Any time.....	50	After due notice given by owner no one allowed to fish therein. Applies only to ponds or streams used or improved for propagation of fish.
Hares, or Haresant.....	Sept. 1.....	Jan. 1.....	10	No "punt guns," or "swivels" allowed.—See Ducks.
Horn, or Rabbit.....	Oct. 1.....	Feb. 15.....	5	No feed, bait, blind, or traps allowed.
Informant.....	See Rabbit—\$10 fine for hunting "ferrets."
Insectivorous birds*.....	5	Any person may inform within six months and receive one-half of the fine.
Limitations of actions.....	Not to be trapped or snared; Ten dollars penalty for destroying nests.
Nets (fish).....	100	All information must be made within six months before a Justice of the Peace.
Nets (fish sett).....	25	Not to be placed within one-half mile of dams with sluices, unless mesh—see three inches where there are trout or bass.
Nests of any wild bird.....	10	Not to be destroyed.—See Insectivorous Birds.
Partridge.....	Nov. 1.....	Jan. 1.....	10	No feed, bait, blind, or traps allowed.
Partridge.....	Dec. 30.....	Feb. 1.....	10	May be trapped alive for preservation only.
Phasant, Prairie Chicken, or Grouse.....	Sept. 1.....	Jan. 1.....	10	No feed, bait, blind, or trap allowed.
Plover, or Perch.....	June 1.....	March 1.....	25	Hook and line and scroll only, except for propagation.
Pigeons (wild).....	Aug. 1.....	Jan. 1.....	10	Not to be killed or molested on nesting or roosting ground.
Pike.....	Aug. 1.....	Jan. 1.....	10	No feed, bait, or blinds, or traps, or for preservation.
Quail—See Partridge.....	Nov. 1.....	Jan. 1.....	10	No feed, bait, or blind traps allowed.
Rabbit, or Hare.....	Oct. 1.....	Feb. 1.....	5	Ten dollars penalty for hunting with "ferrets."
Rail, or Reed Bird.....	Sept. 1.....	Dec. 1.....	5	Not to be killed on nesting or roosting ground.
Salmon.....	April 1.....	Aug. 15.....	10	Owner of private pond may catch in his own pond to stock other waters.
Shad (Delaware and tribut).....	Aug. 10.....	June 16.....	5	May be taken alive with nets any time for propagation.
Shad (Susquehanna and tribut).....	Aug. 10.....	June 16.....	5	Not to be taken alive with nets any time for propagation.
Snipe (Wilson or Grey).....	Any time.....	Any time.....	10	Not to be killed or molested on nesting or roosting grounds.—See Nets.
Squirrel.....	Sept. 1.....	Jan. 1.....	5	This applies to Grey, Black, and Fox Squirrels.
Sunday.....	25	No hunting, shooting, or fishing allowed.
Trout (speckled).....	Aug. 15.....	Sept. 30.....	10	Hook and line only, except for propagation.—See Nets.
Trout, salmon or steelhead.....	March 1.....	Sept. 30.....	10	Hook and line only, except for propagation.—See Nets.
Trapping—See Wild Duck and Goose.....	Hook and line only, except for propagation.—See Nets.
Wild Turkey.....	Dec. 30.....	Feb. 1.....	10	May be used to preserve birds during the Winter only.
Woodcock.....	July 1.....	Jan. 1.....	25	No feed, bait, blind, or trap.—See Nets.
.....	10	No feed, bait, blind, or trap.—See Nets.

CREEDMOOR—RIFLEMEN'S COURTESIES.

PREVIOUS to the departure of the chivalric Captain of the Irish team for his home, he was made the recipient of a handsome badge by the members of the Amateur Rifle Club, as a slight token of their esteem for him. During the ceremony of presentation, Colonel Church, editor of the *Army and Navy Journal*, made the following remarks, and they express the feelings entertained for Major Leech and his men by their American friends and friendly rivals.

MAJOR LEECH.—The Directors of the National Rifle Association have requested me to present to you, on their behalf, and on behalf of the Association which they represent, this badge, which they ask you to accept as an expression of the esteem in which they hold you and your compatriots of the Irish International team. It is only at the moment that I have learned that the pleasant duty of this presentation was to devolve upon me, and I am sure you and the gentlemen of the board will pardon me if I should fail, as I most certainly should fail, even under more favorable circumstances, to give adequate expression to the sentiments which they entertain toward you. They ask you to accept this badge, not only as a token of personal regard, but as proof of their high appreciation of the service you have rendered them in stimulating the growing interest in rifle practice in this country. In the familiarity with which you aided our efforts in this respect, you have shown a great and, as we are glad to know, a well-founded confidence in the traditional friendship between Ireland and America, and whatever the result of our efforts in reviving and perpetuating the traditions of American skill in the use of the rifle, we are sure that you can cordially second those efforts; joining with us in the hope and assurance that the green and the blue will never be found opposed to each other, except upon fields of friendly competition. When we recall all the circumstances of the contest to which you invited us, and remember how many possibilities there are of unpleasantness and difficulty in such contests, we shall remember with no small satisfaction that there is no single circumstance connected with the International competition at Creedmoor, which any of us can refer to otherwise than with pleasant recollections of our acquaintance. This fact is in itself testimony sufficient as to the character of the contestants; and accepting you and your friends as representative Irishmen, I can assure you that we look forward with no small pleasure to the acquaintance we shall form during our anticipated visit to Ireland in the Summer of 1875. And now, in taking leave of you for a season, we wish you my dear sir, God speed and a pleasant voyage.

To this the recipient responded in his usual manly and feeling manner, and his reciprocation of the sentiments of good will and warm friendship proved how close are the bonds that unite the distinguished riflemen of the Green Isle and those of our own country. Now that the greater portion of the Celts have returned home, we wish them unbounded happiness through life, and hope that when next they visit us, they may know nothing worse than the hospitality with which they have been received on their first visit.

They are worthy foemen, and as genial as they are skillful and unpretentious, so we hope that the bond of friendship created by this visit will always remain as strong as it is at present. To Major Leech and his "team" we will say "slánu lath," and promise to give them another "cead míle fáilte" whenever they return to our shores.

POSTPONED.—It was supposed that the Leech cup would be shot for this month, but owing to the lateness of the season, the event has been postponed until next year.

LIEUT. COL. JOSEPH LAING, of the Seventy-ninth Regiment, N. G., in placing at the disposal of the National Rifle Association the Gatling gun, of which a majority of the Executive Committee have deprived the Regiment, says; "I had considered the propriety of holding the gun, notwithstanding the decision, and leaving the matter to a jury, especially after learning that three of your Board, Gen. Shaler, Gen. McMahon, and Major Smith of the Seventh Regiment (who aside from their well-known qualities as soldiers are men of upright characters), had seen the injustice of throwing out Private Irwin's score and voted in our favor upon that point. Subsequent reflection convinces me, however, that such a proceeding would be unseemly. I have, therefore, concluded to surrender the property in question. During our existence as a regiment we have taken whole batteries of guns in the cause of our National Union, and we certainly can afford to lose one now for the sake of preserving union and good feeling in the National Guard."

—The competition for the *Turf, Field and Farm* badge comes off at Creedmoor next Saturday. This will be the last regular match of the Creedmoor season, so our best marksmen are expected to be present.

NATIONAL SPORTSMEN'S ASSOCIATION

The subjoined letter has been addressed to us by an officer of the National Sportsmen's Association:—

EDITOR FOREST AND STREAM.—It is proposed to make the Convention of the National Sportsmen's Association, which is to be held at Cleveland on the second Tuesday in June next, an interesting one to all true sportsmen. The attendance will undoubtedly be large, as efforts are being made to have State Sportsmen's Associations organized in all of the principal States. Papers will be read and addresses made upon interesting topics, and the sportsmen of Cleveland will do all in their power to make the occasion pleasant and one to be remembered. The Ohio State Sportsmen's Association will meet at the same time and place, but the time of meeting will be so arranged as not to conflict in any manner with the National Association.

Speaking of the Ohio State Sportsmen's Association, we will in this connection state the manner of its formation and the beneficial results already secured. In the early part of the present year, the Cleveland Sportsmen's Club, deeming it advisable that a State Association should be formed, addressed a circular letter to sportsmen throughout the State, setting forth the advantages to be derived by the organization of such an association, and asking suggestions in regard to the same. The responses were numerous and favorable; consequently a call was made for a convention of sportsmen to meet at Cleveland at a certain date. The result was a large attendance, and a State Association was organized, and by-laws adopted, officers elected, and the Ohio Sportsmen's Association a fixed fact. Since its organization local clubs have been formed in many of the cities, villages and townships, auxiliary to the State Association. The game laws have been more vigorously enforced, and much attention given to the preservation of game. Although the association is only in its infancy, the good results it can hardly be estimated.

Now here is a chance for other States to go and do likewise; then join the National Association, and then all heartily unite in one common object, the preservation and propagation of game and fish, and uniformity in game laws. We might here add that any one wishing information relative to the next meeting of the National Association, or desiring copies of Constitutions for State Associations, or local clubs, can write to A. T. Brismead, Esq., President of the National Sportsmen's Association, at Cleveland, Ohio, whom we know will be always ready to respond.

HOLIDAY PRESENTS.—As Winter and the Holidays approach, dealers should see to it that they lose no opportunity to call the attention of the public to their wares through the best advertising medium. THE FOREST AND STREAM has been found to be, by long odds, the very best medium for communicating with the sportsmen of the country, and money invested in its advertising columns always brings the most profitable returns. Of this we have been assured repeatedly by the heaviest dealers in the country, whose written testimony we have already printed and have now on file. Between this and 1st January is the best time to advertise. Not only does a change of sports and everyday necessities bring a demand for new descriptions of wares, but people are constantly in quest of articles, with money in their pockets especially appropriated for purchasing Holiday Presents. It would greatly facilitate their purchases if shopkeepers would freely advertise their goods and thus inform intending purchasers where they can be obtained.

AMARANTH DRAMATIC SOCIETY.—This society, which is Brooklyn's special favorite, and successful beyond all precedent, introduced its fourth season at the Academy of Music on Wednesday evening of last week with Massinger's popular comedy of "A New Way to Pay Old Debts." The play was well presented, although not fully up to the standard of merit which has so long characterized the entertainments of the Amaranth. Nevertheless, for the first night, it was sufficiently acceptable and fully appreciated by the throngs of attending friends who are always pleased because they go with the purpose to be pleased. Criticism is hardly within our province, and we could hardly criticise severely if we would. That the Society possesses dramatic material superlatively good, and that its personnel is held deservedly high is evidenced not only by the crowds that fill the Academy to repletion at each monthly representation, but by the craving demand there is for entrance tickets. These are wholly complimentary, and wherever bestowed are received as tokens of especial favor by their fortunate possessors. Certainly in no audiences that gather in Brooklyn, no matter on what occasion, is there a greater display of gentility, refinement and good taste, or more substantial evidence of pleasure derived from social communion. The receptions that take place after the dramatic performances are most enjoyable, and admission thereto is eagerly sought by the most aristocratic circles of Brooklyn. We trust that the organization may have a long continuance. Its success is an earnest of its vitality and vigor.

The officers of the Amaranth this year are: Jas. B. Vail, Jr., President; Milo A. Parsons, Vice President; A. Rosevelt Thompson, Secretary; M. F. James, Treasurer. Trustees, Geo. P. Gregory, Chas. A. Hoyt, G. W. Lane, Jr., Alex. Isaacs, and John M. Burt. Dramatic Committee, John Oakley, Xenophon Stoutenborough, and L. D. St. George. The next reception will take place Dec. 16th, when Robertson's comedy of "Ours" will be presented, with Messrs. Walker, Williams, Farley, Luske, Jones, the Misses Clark and Percy, and Mrs. Ferguson in the cast.

HOWARD MISSION.—We are pleased to print the following card in aid of the praiseworthy object indicated:—

Howard Mission and Home for Little Wanderers, 40 New Bowery.—Thanksgiving Day is looked forward to by the hundreds of poor children and needy parents connected with our mission as the greatest feast day of the year. Will not our friends help us make it a "feast of fat things," a day of good cheer? We are confidently depending on the generous public which has never failed us to furnish us the means of providing for them the solitary good, substantial, square meal of the whole year. Supplies of all kinds of food and clothing will be gratefully received at the office, 40 New Bowery, and donations of money by our Treasurer, Wm. Phelps, P. O. Box, 4,512. Visitors—always welcome—are cordially invited to come and see the children eat and hear them sing on Thanksgiving Day. Dinner, 11 to 1; singing and addresses, 1 to 3 o'clock.

WM. D. CLEGG, Supt.

READINGS.—Miss Margaretta B. Moore, a young lady accredited with the possession of beauty, culture, and talent, will give dramatic readings at Association Hall on the first of December.

—If ADVERTISERS would but take the trouble every week to examine our correspondents' column, they could readily ascertain very nearly what our readers require, and thus obtain material aid in determining how to cater for them to the mutual advantage. The object of the advertiser is to first ascertain what the public wants, and then offer his goods. The purchaser desires to know what can be bought and just where to buy it. He is constantly applying to our reading columns for information that should be found among the advertisements.

—Advice from the Red Cloud Agency of the 12th and 15th instant, confirm the reports that Prof. Marsh, of Yale College, was detained there because the Indians objected to his visiting the newly discovered fossil region near the Black Hills.

—THANKS are hereby tendered to numerous readers of FOREST AND STREAM for copies of the date of February 12, 1874. We are still short of that issue, and shall be glad to receive copies for binding.

—The best shot ever heard of has been made in Calais, Maine, where a gentleman fired, in midnight darkness, at the bark of a dog, and the next morning found the animal dead, the bullet having hit him in the throat.

Sea and River Fishing.

FISH IN SEASON IN NOVEMBER.

Striped Bass, *Morone chrysops*. — Weakfish.

Southern Waters.
Pompano.
Snapper.
Grouper.
Rockfish.

Trout (black bass).
Drum (two species).
Kingsfish.
Striped Bass.

Sheepshead.
Tallpoorfish.
Sea Bass.

FISH IN MARKET.—Bluefish from the South coming in rather slowly—15 cents per pound. Very little codfish at high figures. Whitefish from the Lakes quite abundant at 20 cents. Bass rather scarce, 15 to 20 cents. As soon as the Fall catch comes in it will fall to 124 cents. Fresh mackerel in much demand, but owing to the mildness of the weather but little can be procured, 20 cents per pound. Eels quite abundant at 18 cents; snails, 25 cents. Salmon trout very scarce. The trout fish of Maine are now very profuse, and sell at 10 cents per pound.

Of marine fish there are exposed for sale in the New York markets during the year some sixty-seven kinds, and of fresh water fish some forty-one, making a total of 108, to which are to be added sixteen varieties of shell fish and crustaceans, presenting a handsome total of 124 different varieties of food. That this list may be expanded is quite probable, as fish other than the California salmon may be expected before long, and in time the grayling will come from Michigan waters, or from private fish-ponds. Comparing our own list, extensive though it may be, with the catalogue of fish eaten in England, we find that it only exceeds it by some twenty-four. The comparison is, however, not made between London and New York, but between New York and all England.

—The red snapper, a very fine fish from Southern waters which within a few years used to be a rarity here, is now brought regularly to the markets.

—Last Spring we received a bass rod from Dr. T. J. Curle, M. D., of Lexington, Kentucky, which he wished us to examine, as its material was a new kind of wood, and it had some improvements of his own as respects ferules and joints. Looking at it from the standpoint of a trout and salmon angler, and with less experience in Western fishing than we can boast at present, we passed an adverse criticism upon the implement, much to the doctor's disgust, we dare say; but we have since made the honorable amend for our too hasty judgment, and given our unreserved assurance that in its essential qualities it meets all requirements. There is something in knowing just what a good bass rod is—just as there is in knowing "beans;" and having recently had opportunities to examine the tackle of some of the leading experts of the West, we are prepared to assert that a bass rod and trout fly rod are altogether different implements—just as different as are the two kinds of fish and their modes of fighting. A bass rod such as we would select for our private use should be about ten feet long, with just enough elasticity to yield gracefully when the fish makes its mightiest rushes, thereby holding him without tearing the hook from its precarious fastening. It is what trout anglers would call a *stiff* rod, yet somewhat stiffer and shorter in proportion than a "bait rod" for trout. A very pliable or flexible rod, such as we use for fly fishing for trout, cannot withstand the wear and strain that is demanded from a bass rod. The best bass rods that we have seen are owned by W. C. Egan, Esq., of Chicago, whose experience with *M. nigricans* in all waters is large. They are made of Japanese bamboo (natural), with metal ferules and fixed rings. One has a lancewood tip, and another a bamboo tip. The tips are short, and appear stubby, yet are in good taper and fair proportion to the entire rod.

We of the East need some coaching in bass fishing as practiced at the West. We might even receive some instruction with profit from the fishers on the Potomac and Susquehanna. The speckled trout is *in place de resistance*; the black bass theirs. Each section unquestionably understands its own game. Anglers for bass here chiefly use the trolling spoon or spinner, with short, stout, stiff rod; and having hooked their fish, they drop the rod and haul in on the line hand over hand, the sole apparent utility of the rod being, by its yielding resistance, to fix the hook more securely in the fish than a hand line could do. We are speaking more particularly of lake and smooth water fishing from boat or raft. In swift water a rod is indispensable, and the "correct mode" of landing a fish is to walk him ashore, provided it be not too rocky, or there be clear elbow room. But in this latter and best approved mode of fishing, we find that the rods in vogue in this section are so stiff as to prevent that sport which arises from testing the game qualities of a fish through a long sustained struggle; or else, they are too limber and fragile as to become inefficient by their weakness, while at the same time their expense renders their use extravagant by reason of the strain which soon knocks them up. We need a happy medium, such as those who fish the rapid Western rivers seem to have discovered and employed. With just such a rod, an improved Meek reel (to be obtained in Louisville, Chicago, etc.), and a fine grass or oiled silk line, we have no doubt our anglers here would find their sport very much enhanced, while the game qualities of the bass would rise very much in their estimation.

In fishing for bass out West, either with natural or artificial bait, the cast is made by giving the end of the line a *slang* over the shoulder and letting it run out from a freely rendering reel, just as our own experts cast for striped bass

or weakfish. The fly is but little used, and the use of it involves an entirely different mode of casting—the same that is employed when fishing for speckled trout, namely, the reeling off a few feet of slack, the taking it up and the succeeding trajectory, with the frequent repetition thereof, until sufficient line is out. No doubt that bass will take the fly freely in many localities, both in still and running water. There is testimony enough to this effect. And where this device is employed the nicest discrimination is required in selecting a rod of requisite stiffness, and yet with sufficient length and elasticity to cast the fly properly and satisfactorily. If black bass grew to the size of salmon, a salmon rod would be just what is wanted; as they do not, we must be content to find some other substitute.

—The biggest smelt catch yet in the vicinity of Marblehead, Mass., is 38 dozen in two hours and a half. This feat was performed by two Salem gentlemen at Spike bridge last week. Most of the smelters at City Point, South Boston, seem to have laid aside their poles and lures for the season, or until the ice makes, through which they can have an opportunity to fish. Some of them have taken to eel spearing, as an excellent mess received from the "Commodore" recently testifies.

—The mud, left bare by the retreating tide about Wellfleet, Mass., has been literally covered with dead bill fish during last week. This is a small fish, eight or ten inches long, excellent eating when fresh taken; and is driven ashore in much the same manner as the blackfish. It takes its name from the projecting head, shaped like the beak of a bird. Many barrels were sent to New York last week from this place.

—Nine million whitefish have been received this season at one fish factory in Guilford, Conn.

Yachting and Boating.

All communications from Secretaries and Friends should be mailed no later than Monday in each week.

CANOE VOYAGE.

MR. BISHOP'S trip from Albany to the Gulf of Mexico, in a paper canoe, is now in progress of accomplishment, and the inferences are that it will be a success. A correspondent writing about his efforts, says that the object of the undertaking is not to gain notoriety or win the applause of sporting circles, but to afford an opportunity for a careful scientific observation of the system of currents, rivers, and bays that along the Atlantic coast, and form almost a continuous land-locked water course from Sandy Hook to the southern part of Florida, broken in some places by long reaches of the sea inland, like the Chesapeake, and in others by jutting headlands. Mr. Bishop seasoned himself for his fatiguing task by a pull in an open boat last Summer from Quebec to Philadelphia. He left Quebec in June in a cedar boat large enough to hold two men. He had with him a Barnegat boatman as assistant. The two rowed up the St. Lawrence 145 miles to the mouth of the Richelieu or Lord River, up that stream to Lake Champlain, and from the lake reached Albany by way of the canal, traveling in all 421 miles. Mr. Bishop concluded that the help of his assistant did not compensate for his weight and that of his blankets and provisions, and that more rapid progress could be made if he went alone. It was then decided, and he decided not to continue the voyage until the frost had killed the malaria along the coast. In the mean time he had a paper canoe constructed by E. Waters & Son of Troy, N. Y., in which to prosecute the more adventurous part of his novel undertaking. This canoe is of what is known as the Nautilus model, designed by the Rev. Baden Powell, of England, and was built by the well known Boston Boy's type. The body is made of linen paper about one-sixth of an inch thick, molded while soft upon a solid wood form, and afterward highly polished and varnished. This material is light, tough, and water-tight. Inside of the shell is a light framework to which the seat is attached. The dimensions of the canoe are: length, 14 feet, width, 28 inches; depth amidships, 8 inches; height at stern from a horizontal line, 20 inches; at bow, 23 inches. It is not decked over like an ordinary canoe, but is fitted with a canvas cover buttoned to the sides, which keeps the water out when a rough sea is running and serves as a shelter to the sleeping occupant at night. The weight of the craft and its equipments is as follows: canoe, 56 pounds; one pair of oars for use in still water, seven feet eight inches long, 8½ pounds; one paddle with dovetail blade, 14 pounds; mast, sprit and boom, six pounds; total, 73 pounds. For cooking, Mr. Bishop carries a stove that can be packed in about the space occupied by a pack of cards, a small coffee pot and a tin pan. Hisarder consists of condensed provisions; his bed is his boat, and his bedding a pair of blankets.

Mr. Bishop's plan for his long voyage is carefully made, and he has studied his route in advance by the aid of the Coast Survey maps. He will first go down the Delaware River and Bay to Lewes, where he will haul his canoe five miles over land to Rehoboth Sound. At the end of this Sound he will haul over four miles to the Indian River, which will take him into the Chincoteague system of water courses, which he will follow to Cape Charles. Crossing the mouth of the Chesapeake he will enter Hampton Roads, and will up to Norfolk, and by way of the Albemarle and Currituck Canal, reach in succession Currituck, Albemarle, Pamlico, Core, Stump, and Bogue Sounds, which will bring him to Topsail Inlet, near Cape Fear, N. C. Here according to the Coast Survey maps, he must take to the open sea for forty miles to reach Smithville, at the mouth of the Cape Fear River. He hopes, however, to be able to work his canoe through ditches part of the way

The Colleges.

From Smithville to Georgetown, S. C., eighty miles, he will certainly have to trust his paper boat to the ocean. He expects to creep along the coast when the wind is off shore, and take to the land whenever it blows from seaward. All the way from Georgetown to the St. Johns River in Florida he will find landlocked waters behind the Sea Islands. Rowing up the St. John 240 miles to Salt Lake, near the Everglades, he will make a portage of seven miles to reach the Indian River, a salt water bayou extending along the Eastern coast of Florida, and separated from the ocean by a narrow strip of beach. The river will take him to Jupiter Inlet, from whence he will row as far as Key Biscayne certainly, and if possible will go from key to key until he reaches Key West, where he expects to arrive in March.

The following is the new rule of measurement for yachts proposed by the Royal Thames Yacht Club, of London, England:—"The length shall be the distance from the fore part of the main stem to the after part of the stern post, measured in a straight line along the deck. The breadth shall be the distance between the outside of the outside planks or wales, measured in a direction perpendicular to the length, and where that distance is longest. The depth shall be the distance between the top of the covering board and the bottom of the keel at the middle point of the length, and in a vertical direction when the yacht is fairly floating. The product of the length, the breadth, and the depth, divided by 200, shall be taken to be the tonnage of the yacht, any fraction of a ton being taken as a ton."

On Sunday week, the yacht Cyrenet, of Port Rowan, Canada, made the trip from the Port to the "Cottages," Long Point (nine miles), in thirty-eight minutes; the return trip against a high head wind, and in a dense haze, being in one hour and ten minutes.

A special from Ottawa to the St. John Telegraph reports that the Dominion Government are about to provide five life boat canoes for the St. Lawrence. They will be conveyed by the steamer Druid when that vessel goes down to place the buoys, and will be placed in charge of responsible parties at proper points. The canoes can be loaned or chartered at a moderate rate, and valuable assistance rendered to parties whose lives may be in danger from accidents or wrecks. The following points have been selected: L'Islet, Point Jolly, St. Roches, St. Anne, and Kamouraska.

Capt. Barkeley, the old commander of the famous yacht Maria; who went to France several weeks ago to bring back the long lost vessel from Marseilles, has returned from Europe after a fruitless search for her. Before her arrival the craft had been left quietly slip out of port with bogus clearing papers. The Captain believes that she is furnished with arms and provisions to the Carlists in Spain. He therefore traveled along the Spanish coast, but nowhere could he find the least tidings of the Maria. Her owners lay heavy blame on the American Consul at Marseilles for not exerting sufficient vigilance to prevent her escape after having received timely warning from this side of the Atlantic.

The Rev. Dr. Henry M. Scudder, of Brooklyn, has purchased a fine speed yacht, named the Hora, from Mr. Salem H. Davis, of Greenport, on private terms. Dr. Scudder proposes to make use of her for pleasure excursions in the waters at the East end during his Summer vacation.

The Naumkeag Boat Club, of Salem, Mass., hold their semi-annual election last week, when the following gentlemen were elected officers:—President, Timothy Collins; Vice President, Thos. A. Devine; Secretary, D. J. Donovan; Treasurer, John B. Harding; Collector, John Flynn; Directors, Wm. McGraue, M. J. Donovan, Philip McDonald, M. Hogan, and M. McDonald.

—Absalom and Nehemiah Long, Alex. Brayley and John Lyons, of St. John, are waiting for an answer to their challenge to the Mosses' crew. On Monday, the Columbia Logan, Straight Shore, Portland, will start for Halifax with the new lapstick boat built by him for the Kennedy crew; of the latter place. The craft is the finest of the class ever built in the Dominion, and it is thought that she can cover four miles a minute faster than the boat Crown Prince, in which the Logan crew was defeated by the Ross-Foley's. Her weight is only 135 pounds.—St. John News.

YACHT PRIZE LIST.

BOSTON, November 12th, 1871.

EDITOR FOREST AND STREAM:—

Allow me to correct some inaccuracies in the tables I sent you, and which you published in your issues of November 12th and 19th.

List 1.—May 18, St. A. Stanchard should be S. A. Stanchard; July 4, J. C. Wells should be L. C. Wells; July 27, Annie Lane should be Annie Leake; Sept. 1, Centre Moriches should be Centre Morishes; Sept. 23, Madge should be Aldige; Oct. 10, Bayles should be F. Bayles. And the following regatta should be added: Oct. 21, Baltimore—match—J. E. Cornwall beats Annie Lane.

List 2.—The following races were omitted: Peerless, Southport; two races; one with allowance; one without allowance; one first prize, Minnie, Waretown; one race; one first prize.

The Albatross belongs to the Neenah Y. C. The F. Bayles took a second, not a third prize. The Gleaner took a third prize, and the Glide did not. The Lady Standley took one second prize, and the Lark took one first, no second or third. The Oscar Robinson took a first and a third prize. The Ruby took two first and no second prizes.

BLUE WITH A GOLD CASTLE.

PHILADELPHIA, Nov. 23, 1871.

EDITOR FOREST AND STREAM:—

An interesting race was pulled on the national course on Saturday afternoon between two four-oared crews of the Union Club. The Whisper—J. N. Dellavane, stroke; W. C. Madeira, 3; J. B. Colahan, 2; J. Gillingham, bow. The Atlanta—B. M. Ewing, stroke; C. Barnes, 3; John Baker, 2; Geo. Beight, bow. The race was one and a half miles straightaway. The Atlanta crew was composed of new members, all in their first rowing year. The Whisper, of old members of the club. The race was followed by the empire, Mr. B. L. Keys, in the club eight-oared shell Albion. The two boats got off well together, but before Laurel Hill was reached the youngsters had a lead clear, and rowing in good form, increased their lead to five lengths at the finish, winning in 10m. 38s. Judge at finish, Ed. Twiss. It was expected that there would be an eight-oared shell race with the Crescent on Thanksgiving Day, but the Crescent was unable to get a crew. However, they offered the use of their eight and the Undine has got together two crews, who will pull another club race on that date, an account of which I hope to send you.

Yours truly,

SCULLS.

—Kingston is to have a new rink at the cost of \$1,000.

—The first exhibition of Athletic exercises that has ever taken place at Wesleyan University, Middletown, Ct., occurred last Saturday at Griffin's Park. 1st. Dash of 100 yards, two heats, five entries. Ric's of '78 winner in 11 seconds and 11 seconds. 2d. Bull throwing, six entries. Andrews won in the second throw. Four of the best throws were as follows: Andrews, 315 feet, 6 inches; Robertson, 315 feet, 3 inches; Guss, 300 feet, 8 inches; Robinson, 298 feet. Downs '75, though not having entered for the prize was permitted to throw against the record of other colleges, and did the best throwing of the day: 1st throw, 300 feet; 2d throw, 323 feet, 7 inches. 3d. Half mile running race, seven entries. Beach 2m. 35s.; Robertson 2m. 35s. 4th. One and a half mile running race, three entries; Whitney won in 8m. 47s. 5th. Three mile walking race, six entries; Wharf 25m. 41s.; Sewell, 28m. 45s. 6th. Sack race, three entries; Tapp, 45s.; Cooke, 50s.; Bailey, 53s.

—The following are the members of the Dartmouth College football club: C. O. DeLoach, G. Burbeck and A. P. Sears, Class of '75; F. W. Mitchell and E. H. Gilman, Class of '76; E. L. Emery, B. F. Robinson, W. F. Temple and W. J. Willard, Class of '77; L. Parkhurst and H. S. Dewey, Class of '78.

YALE COLLEGE, NEW HAVEN, NOV. 23, 1871.

EDITOR FOREST AND STREAM:—

The past week has been one of unusual activity with the Yale boys. Two foot ball matches have been played, one with Stevens' Institute, the other with Columbia. The former was played on Wednesday last, the latter on Saturday, and both were won by Yale, the former by a score of 7-0, the latter score was 5-1. With such results we feel, very naturally, much gratified, and our contacts with Princeton College, the champions last year, are looked forward to with much eagerness, as they are sure to be highly contested and very exciting. In all probability the first contest between Princeton and Yale will be played in New York on Saturday next, when a game will be played which should attract attention and which should draw a large attendance.

The Stevens' twenty comprised—Poinier, P. G., Fezandie and Graydon, of '78; Bickel, C. O., DeLoach, G. Burbeck, W. H. Viles, and Timmerman, of '76; Roberts and Leitch, of '77; Delano, R. K. Kosh, Krenner, Rosenberg, W. Smith, Vail, and Weeks, of '78; with Denton, '75, as Captain.

Yale was represented by DeLoach and Bristol, P. G.; Peters, Theological, Avery, Cochran, Fulton, Grinnell, Maxwell, and McClenock, of '75; Hall, '75. S. S. Arnold, J. F. Phelps, Trumbull, Vail, Wakeman, and Wright, of '76; Baker, of '77; W. Werts, of '78; with McBride, of '75, who captained the twenty.

It was generally anticipated that Yale would have an easy task of it, as our opponents seemed younger and of lighter build than our men. However, the two first goals proved to be closely contested, while the remaining four were won with consummate skill by Yale, as well as the last goal which was played merely for fun. The time of each goal was—First, 2m. 35s.; Second, 5m. 30s.; Third, 4m. 55s.; Fourth, 4m. 54s.; Fifth, 5m. 30s.; Sixth, 2m.; Seventh, 9m. 15s. This was a very good record. The best playing was done by Kingsland, Bink, Rissenhann, Denton, and Potiner, while by Yale, Peters, Grinnell, Avery, Hall and Baker distinguished themselves.

The referee was E. J. McKnight, Yale, '76; the judges were Mr. Sarge, '75, of Stevens, and Mr. Betts, '75, of Yale. These officers performed their duties with equity, and merit our compliments for the satisfactory manner in which they performed their very thankless task. The day was all that could have been desired, and in this respect the day of the second game, that between Columbia and Yale, a strong and unfavorable one, was noticeable. Friday had been very disagreeable. It had rained and snowed, and it was thought highly probable that no game would occur on the following day. However, Saturday was clear, but towards noon the sky became overcast, and it remained cloudy and comparatively windy all day. Coupled with these little unpleasantnesses, we must add a very great degree of cold, and one can readily imagine what the spectators endured to behold the game. In spite of all these contracting influences, the crowd which assembled at the park far outnumbered that of Wednesday, although the admission fee was twice as large, as a close and more exciting contest was anticipated, and also because the fact became known that the Yale twenty were to appear in their new suits, blue pants and white shirts, with blue caps. The game began at 2 P. M., when the following contestants appeared for Columbia:—Simonds Law, '75, Captain, School of Mines; Cornwall, Morewood, Rhodes and Timson, of '76; Lindley, Radford and Rounds, of '77; Law School, McMahon, Moore, Sprague and Webb, of '78; Cornell and Vandewater, of '76; Coze, Bach, George, Hurry, Price, Root, and Weeks, of '75.

The Yale twenty was materially the same except that the Basknell and Tillingham, the former a theological student, the latter a '75 man, played in the places of Ely and Vail. The Columbia men presented a very neat appearance in their suits, consisting of white knee-breeches, blue stockings, white shirts and blue handkerchiefs, and many favorable comments were bestowed upon them. Yale also looked finely in her new reg. Columbia wore the rose and carnation, and the blue set with yellow 'Moss' wool, who bestowed upon it an excellent kick. The two twenties at first seemed to be very evenly matched, and this goal was hotly contested, Yale winning, owing to a good hit by Cochran, in 10m. 31s. After this the ball was almost all of the time kept on the Columbia side, and her men were generally outplayed at every point. Owing to numerous fouls this goal was not completed until 15m. 52s. 1/2. The third goal, which lasted only 40s., and was rushed through splendidly by Yale. We do not think that a goal has ever been kicked before in a regular game in so short a time, and would like to know if we are correct. Yale won the fourth in 22m. 47s., and the sixth in 19m. 37s., while, through some carelessness, Columbia managed to tie the fifth in 2m. 51s. This contest only serves to bring out the anxiety which we all felt in regard to our meeting with Princeton, as the latter, just the other day, defeated Columbia, scoring six goals to none. The only accident of the day happened to Cornell, whose ankle was sprained, but Ward, '77, S. of M., filled his place very satisfactorily. The referee was J. M. Griswold, Jr., of Columbia, while Mr. Spicer, of Columbia, and Mr. Betts, of Yale, acted as judges. These gentlemen suited all parties by their decisions, and the game Yale gave a supper to Columbia, at which the best of feeling prevailed, and it is to be hoped that the good feeling there established may be of long duration. More anon. K.

PRINCETON COLLEGE, November 21, 1871.

EDITOR FOREST AND STREAM:—The expected match between the Rutgers and Princeton College twenties in foot ball, took place this afternoon. The game began at half-past one o'clock and lasted until half-past three. The first inning occupied over half an hour, and was won by Princeton, who was compelled to face a strong wind, in addition to her formidable antagonists. The remaining five innings were close, and to twenty minutes of duration. The whole six were secured by Princeton, though not without great exertion on her part. (It is a remarkable fact that neither Yale, Columbia, nor Rutgers have yet been able to win a single goal from Princeton in foot ball.) Both twenties succeeded in distinguishing themselves in the game to-day. Hendrickson and Ross, Rutgers men, did some very effective playing, while Little, Fry, and White, Princeton, were excellent on the Princeton side. Foot ball is the only out-door sport indulged in here now. The cold weather has put a stop to base ball, and our oarsmen have been compelled by the same cause to retire from their labors on the placid bosom of the canal to the congenial shelter of the gymnasium.

sium. '76 are thus far champions of the college in foot ball. In a very commendable manner, though unexpectedly, they won the championship hours from '75. In a game with the "Seniories" (theological students) they '76 came out victors in several successive innings, whitewashing the former. The nearest feature in the way of contests of late was a brilliant tournament for the college championship, open to all under graduates. Three prizes were given. The last game was played Tuesday evening. The first and second prizes were won by the members of the senior class, and the third was obtained by a junior. Nine entries were made, all but the lowest class being represented.

QUIDDITY. I

Chess.

THE CAFE INTERNATIONAL TOURNAMENT.—The record of the games played in the tourney in progress at the Cafe International up to Thursday, is as follows:—

Players.	Games Played.	Won.	Lost.
Maxwell.....	38	32	6
Delmar.....	32	28	4
Perrin.....	31	26	5
Bell.....	31	26	5
Alberoni.....	31	23	9
McCulloch.....	29	20	9
St. Barnett.....	29	20	9
Hubek.....	37	22	15
Teck.....	34	22	12
Nielsen.....	31	22	9
O'Neil.....	29	12	8

The others in the lists have lost more games than they have won. The rooms are crowded afternoon and evening with interested lookers on.

THE BROOKLYN CLUB TOURNAMENT.—This series of contests progresses rather slowly. Thus far St. Barnett and Mr. Horu take the lead. The Wednesday and Saturday evening gatherings are the most interesting, though games are played every evening.

THE DOWN-TOWN CHESS CLUB.—This misnamed club—for it is located up-town, rather than down—has had its chess facilities increased by the addition of a room up stairs, over the cafe in Second Avenue. The tourney record shows the following players to be in the van:

Players.	Games Played.	Won.	Lost.	Drawn.
Larabee.....	9	6	2	1
Belmont.....	8	6	2	0
Spencer.....	8	5	2	1
Greenberger.....	9	4	1	0
Smallback.....	9	3	0	0
Andrus.....	9	3	0	0
Leyman.....	7	3	4	0
Black.....	7	3	4	0
Slackard.....	2	2	0	0
Livingston.....	4	2	2	0
Ferrie.....	1	0	0	0

The others have lost more than they have won.

Billiards.

THE AMATEUR TOURNAMENT.—The close of the amateur tourney on Thursday night, last left Messrs. Knight and Pickett at the head of the list of contestants, with a tie, with Mr. P. Paunkcoeken as third on the list. On Monday last the first two named played for the first prize, Mr. Knight winning by 200 to 137, the best runs being 20 and 19, and the average 2.32. This game was the champion cue, Mr. Pickett taking the second prize. The full score of the tourney is as follows:—

Players.	Games Played.	Won.	Lost.
Knight.....	10	9	1
Pickett.....	9	8	1
Paunkcoeken.....	9	4	5
Dorian.....	8	4	4
La Torre.....	7	4	3
Griffith.....	6	5	1
Clarke.....	5	4	1
Reiss.....	4	4	0
Beckhart.....	4	3	1
Vanderveker.....	3	3	0
Kavanaugh.....	2	2	0
Ferrie.....	1	0	0

—Garnier and Rudolph play their match for the championship at Tammany Hall, Dec. 10.

—Vignin plays C. Dion a match of 800 points up, French game, at Tammany Hall, Dec. 8.

TORONTO HUNT CLUB.—The hounds had a first rate run on Saturday last, starting from the Armstrong farm on Yonge street, and making thirty minutes lively work across country. At the conclusion of the drive a fox was let go, and a spin lasting fifteen minutes followed, before reynard gave up his brush, which gurdon was awarded to Mr. Ramsay. Miss Elw's displayed rare horsemanship over a somewhat hard country, and ere the season closes we expect to hear of this lady being a fixture among the first flight. On Thursday the scarlet coats showed in force at the Humber bridge on the Lake Shore road, and had a merry spin across the plains. The weather this season has been remarkable, and the members of the T. H. C. rejoice accordingly.—Toronto Sporting Gazette, Nov. 14th.

—The Stadacona hunt steeplechase took place over the St. Charles' course, on the 15th instant, and resulted in several accidents. Barbone, ridden by Mr. Bedard, won the race. Mr. Lee, the rider of Kaiser, came to grief in taking a leap, his horse throwing him and dislocating his shoulder blade. Bonny Kate, ridden by Mr. McCormack, in taking the last jump, stumbled and broke the fetlock of her off fore leg.

—A foot ball match (old Canadian rules) was played last night between the Toronto Lacrosse Club and the University College team, on the ground of the drug and hardware store. The game was won by the Lacrosse Club team after a short but sharp struggle. Play was immediately resumed, and two games won in fine style by the University team. The match excited considerable interest, the game won by the Toronto men being the only one lost by the University team since 1869.

—The Brown-Sadler race will likely come off in July next. The English champion has been offered \$600 as expense to row in Halifax Harbor or Bedford Basin; in the event of his refusing that offer, he is to be allowed to choose any water in Ireland, and Brown will go there at his own expense.

—A football match was played at Toronto last week between Queen's College, Kingston, and University College, and was won by the latter in two straight games. The play on both sides was good, the attack on the University College team being very strong. The games, though short, were well contested. The match was won in 145 mins.

Record of the Professional Championship Contests for 1874.

Rational Pastimes.

Secretaries and friends of Athletic, Base-Ball, Cricket and other out-door Clubs will kindly mail their contributions not later than Monday in each week.

A new athletic club was organized at Wood's Museum last Tuesday.

Professor J. R. Judd is now in training for his great feat of walking 500 miles in six days.

The T. B. F. U. S. club, of Bridgeport, Connecticut—"What's in a name?"—played in twenty-two first-class matches during 1874, of which they won sixteen games, with a total of 343 runs to 50, and lost six, with a total of 32 to 87. Their best games were their victory over the Athletics, by 9 to 1, and their 3 to 5 defeat by the Baltimore. They "Chicagoed" four clubs, including a nine from Yale College.

The Live Oak Club, of Lynn, played 41 games during 1874, of which they won 39 and lost 11. Their total scores were 532 to 801. Their best victories were their 7 to 4 games with the Chelsea's, their 8 to 2 match with the King Phillies, and their 9 to 3 contest with the Beacons. They played the Mutual—professional—with a score of 4 to 9.

An excellent sparring and fencing exhibition was held at Wood's Gymnasium, No. 6 East Twenty-eighth street, last Saturday. The first event was a contest with gloves between Master Leavitt, aged 14, and Professor O'Neil. The former showed that his training was fully up to the standard. Professor Woods and Dr. Meigs followed, and these were superseded by Professor Delwick and Mr. P. J. Englehardt, who displayed their proficiency with the foils. Fencing and sparring exhibitions, lifting heavy weights, and single stick exercises followed. The programme throughout was loudly applauded, as everything was done in a quiet, gentlemanly manner. Such exercises we are glad to note are becoming more general, so our young men are learning to preserve their bodies instead of exhausting them with dissipation.

Bicycling is now one of the most favored amusements in England, and is participated in by many persons who would not look at the apparently silly exercise a few years ago. The cause for the new attachment is attributed to the improvements made in the velocipede, and the greater amount of skill required to manage the latest sort, with its light body and large wheels. A race came off recently in

England between the champions, and they made some remarkable time. Stanton, in the contest, rode 106 miles in 7 hours 55 minutes and 54 seconds. There could be no doubt as to the reality of this feat, for it was achieved in the presence of some 3,000 people. His antagonist in this match was Keen, the champion bicyclist, the most elegant and accomplished rider in the country. The critics remarked that he rode "like a bit of machinery," with a swift, steady, easy motion, which scarcely varied. Stanton, on the other hand, is in every sense a rough rider, and owes his success to his remaining energy and pluck force. Keen was borne down by the physical superiority of his competitor, and gave up the race at the end of the ninety-first mile, having traversed the distance in seven hours and eighteen minutes. It may be mentioned that Stanton's bicycle has a driving-wheel fifty-eight inches in diameter, and is under fifty pounds in weight. Keen rode with a fifty-four-inch wheel, the weight of his machine being less than thirty-six pounds.

New Publications.

Albert Mason, of New York, who has published three editions of Macaulay's essays, will issue them in one volume. Price will be \$2.50.

Popular Science Monthly for November. New York: D. Appleton & Co. This number contains a very interesting dissertation upon a subject of deep interest to every student of plant life, every botanist, and in short to every general reader; all who would learn the great contrast between the two organic worlds of plants and animals, until quite recently the ground work of all scientific speculation. We have pleased to analyze and expatiate at some length upon this very pleasing article, as well as notice at length all the valuable papers in this number; but we can do our readers a true favor by recommending to their perusal this article in particular, and the entire number as a whole.

THE MAGAZINES.

The American Naturalist is filled with its usual assortment of matter pertaining to the natural sciences. The metamorphosis of flies is quite interesting, and its review of the English sparrows is terse, and to us very appropriate. The department devoted to botany seems to be unusually interesting, especially the portion devoted to a review of the American woodlands.

The Galaxy has several readable articles, and some of them are decidedly strong in argument. In its scientific miscellany it has this to say of the grasshopper—

"Professor Humiston, of Worthington, Minn., described to the Tribune

correspondent the grasshopper's mode of depositing her eggs in the soil, a subject which he has had excellent opportunity for studying this year. The tail of the female locust consists of a hard, bony, cone-shaped substance, capable of being thrust into the ground from one-half of an inch farther in depth. The female locust uses the body of the insect, and attached to it, is the egg cell. The grasshopper is able to push its conical tail down into the ground and leave it there, with the cell containing the eggs. The work was in the spring caused the eggs to hatch, and the field is covered with millions of young grasshoppers, not as large as a kernel of wheat, just when the tender shoots of grain begin to show themselves above the ground. The damage they do is immense, for they remain a long time in one spot, and work upon the young shoots. Perhaps the best mode of treatment is "back setting," or plowing the field, and thus turning the surface soil, with its store of eggs several inches under. This prevents hatching, and though not a complete remedy, is very useful."

The treasures paraded in Scribner's Magazine for the month of December are exceedingly varied, and, on the whole, interesting, as some of the best minds of America are represented therein, and their thoughts are illustrated by some fine engravings, for which Scribner's is so famous. Among its articles is one on Madeira as a resort for invalids, from which we make the following extracts—

"It is evident that Madeira presents to an American in search of something new, a resort abounding in novel and valuable attractions. For the invalid afflicted with nervous or pulmonary complaints, its climate is probably unsurpassed; the air has the rare and exquisite quality of mountain air, but without the chill of the highlands, thus keeping the enjoyment an oblivious that there is such a thing, suggesting neither too much moisture, nor over dryness, neither malaria or miasmas. The mean Summer heat is 70°, while light clouds and long intervals of mist, and moderate the fervor of the direct rays of the sun. The foliage is always green, every month has a profusion of flowers peculiar to itself, the bees gather honey all the year round. The number of steamers, including the Lisbon packet, which touch at Funchal, on the passage between Europe, Africa, and Brazil, averages one a day, and, in addition, the cable has just been laid between Portugal and Funchal, thus keeping the enjoyment in Madeira sufficiently within the tide of events to prevent mental stagnation, besides rendering a stay on the island anything but a captivity dependent on winds or long intervals of waiting, while the number of strangers spending the winter there, and the excellence of the boarding houses, furnish social advantages and domestic comforts at a moderate rate. Those who seek Madeira for health should go there in October, and remain well into the spring, but hunters after scenery and novelty will find it agreeable to arrive at Funchal without regard to time and seasons. No one who has preference would be from March to September, or, better still, from January to December, thus avoiding the scorching heats alternating with cold storms which make a purgatory of our Summers, and the still more injurious furnace air and January thaws of our Winters. In climate, Madeira may be well reckoned among the Isles of the West."

GAME OF NATURAL HISTORY. By Abby A. Denny. Philadelphia: Claxton, Remsen & Haffelfinger.

In this highly interesting game are to be found ten sets, and full instructions for playing. We became once aware of its value as a source of Christmas amusement and New Year's fun before we had played four games. The "Natural History" series alone will convey to the mind of young children many important facts, not to be found in any other game. This is an improvement upon the Kindergarten plan, as the lad or lass will learn the history of the animal drawn and see what he looks like. A valuable addition to our Christmas and New Year games.

The Horse and Counce.

—Last week a sweepstake and match were trotted on the Prospect Park Fair Grounds Course, L. I. The first was for a purse and stake of \$1,000, mile heats, best three in five, in harness, and three fast and promising horses were entered—G. Walker's br. m. Maybird, Mead & Page's b. g. Rarius, and Mr. Smith's blk. m. Catskill Girl. After Maybird had won the first heat, she became the favorite at \$100 to \$25 against the field. She won the second heat, and the crowd, in attendance being dissatisfied with the result, after Rarius took possession of the track, and, after the usual fee of \$50 was collected to pay another driver, the judges named Hiram Howe. This was not satisfactory to the mob, who wanted Phillips to drive, and efforts were made to throw Hiram Howe out of the sulky. Finally the judges declared a draw, and both the driver and the horse were trotted the third heat, which Maybird won after a well-contested struggle with Catskill Girl, who was second in every heat. A match for \$200, between G. Walker's b. m. Lady Anna and W. Thom's br. g. Phil. O'Neil, was won by the latter in four heats, the mare taking the first heat.

—Three trotting matches came off at Fleetwood Park last Wednesday. The first race was won by Bricks, the second by Ned and the third Murphy's sorrel Jake. No good time was made in either contest.

—At the Woodside Park, the same day, New Dory won the purse for three mile horses, his best time being 2:45. And Flora Temple, belonging to Otis Hart, won the 2:50 race, the best time being 2:47. Brown Kitty won third race, her best time being 2:40.

—At Deerfoot Park a purse of \$300, brought but three competitors, and Charley Young proved the victor, his best time being 2:52.

—At San Francisco, Cal., the trot for a purse of \$6,000, mile heats, best three in five, to wagon, postponed from November 7, took place November 21st at Golden Gate Driving Park, the contestants being Occident, Judge Fullerton and Sam Purdy. The weather was fair. The attendance was immense, and included quite a number of Eastern turfmen, who strongly backed Fullerton. The adjoining elevated ground of Laue Mountain was also crowded with people anxious to get a view of the race. Sam Purdy drew the pole and Judge Fullerton got outside. Just before the horses were called, Occident was selling at \$360, Judge Fullerton \$250, and Sam Purdy at \$45. The horses called up at 2:30, but owing to the nervous restlessness of Occident, it was 2:45 before they finally started, after scoring three times. Judge Fullerton led the race in 2:20, Sam Purdy second, and Occident last, four lengths behind the distance flag. The bad behavior of Occident caused his friends to lose faith in him, and he began to sell low in the pools. The judges refused to rule him out as distanced, which caused much dissatisfaction among the friends of the other two contestants.

There were a great many ineffectual attempts made at a start in the second heat, Occident being still restless and breaking badly. After scoring no less than twelve times, the horses finally got started at 4:05. Judge Fullerton again came in first, in 2:30, Sam Purdy second, and Occident seventy-five yards behind.

Before the start in the third heat, Judge Fullerton was a great favorite in the pools, selling at \$600 against \$250 on the field. The horses were called at 4:30, and easily effected a start. Judge Fullerton again came in ahead, in 2:24, winning the race.

—Great preparations are being made for the winter meeting by the Louisiana Jockey Club, and stables of horses are beginning to congregate at the course. In addition to Mr. Howard's stable, already on the ground, W. Jennings's stable, comprising Ballenack, Larry Hart, a four-year-old filly by Brown Dick, and Cape Race, reached the place. Mr. Van Liew, with Bonnahel, Astrapace and a two-year-old by Little Mac will also be there, together with Mr. Weldon's Midway, Kad, Bengamon, Warlike, and Warfare. Besides, A. B. Lewis & Co. will be there soon with Vandalia, Bessie Lee, Fanny Johnson and five others; and Hitchcock with Limestone, Galway, Paris, Mutual and Century. The meeting will be held early in December.

[FROM OUR OWN CORRESPONDENT.]
MEMPHIS, TENN., NOV. 18.

EDITOR FOREST AND STREAM:—
The racing season is about over, both in the country adjoining and in this immediate vicinity, and nearly all the stock that for two months has been attending fairs, has been housed for the winter. The Brownie wire (Tenn.) Fair was the last attended by any of our local horses, and there on Saturday last, General Forrest's Kate, Hall's Wild Belle, and Murphy's Keno trotting a mile in three for \$250, over a half mile track. Kate winning the first and third heats in 2:30 and 2:40, and the second in 2:38. The track, however, is eighty yards short, which would make the actual time not less than 2:36.

A SPIDER ON HER DRESS.—A certain lady in this village, whom we shall call Mrs. Jones, because that is not her name, has some goods stored in the cellar of one of our stores. A few days since she visited the cellar, with the evident intention of obtaining some articles, and while there one of the clerks had occasion to visit it also for the purpose of getting a few pounds of butter for a customer. He noticed that the lady in question stood close to a quantity of eggs, and that her crinoline had assumed undue proportions. He apparently paid no attention to her, however, but hastened back to the store and informed one of his fellow-clerks of what he had accidentally discovered. A consultation was immediately held, when one of the clerks resolved to ascertain the correctness of their supposition, viz., that Mrs. Jones had a number of eggs concealed in her dress. In order to do this, the clerk seized an axe-handle and commenced flourishing it near the entrance to the cellar. As soon as Mrs. Jones made her appearance in the store, the clerk said to her:—

"O, Mrs. Jones, there is a spider on your dress!"

He instantly struck it in several places with his shillelagh, causing the eggs to break and stream from her crinoline in all directions. The effect was the better imagined than described. Mrs. Jones did not stop to offer any explanation, but left the store as fast as the propelling power furnished by Dame Nature could carry her.

—An Irishman found a Government blanket recently, and rolling it up put it under his arm and walked off, saying:—"Yis, that's moin—U for Patrick, and S for McCarthy; be me sowl, but this larrius's a foine thing, as me fayther would say; for if I hadn't any edication I wouldn't have been after findin' me blanket."—*Dunbury News.*

HAVING recently purchased, for the use of our Fish Commissioners, a very fine Breech Loading Gun made by the celebrated firm of W. & C. Scott & Sons, England, and the outfit purchased being in excess of their wants, we now offer the gun for sale. Description—Breech Loader, Single Shot, Double Shot Gun, 10 bore; length, 32 inches; weight, about 11 lbs. Price, \$110. Address, FOREST AND STREAM, 37 Chatham Street.

FISHING, SHOOTING, ARCHERY, CRICKET,

FOOTBALL, and CROQUET.

Offer the following prizes for clubs of three or more subscribers.

Single Subscription per Annum \$5

Starting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with full clubs to secure our rates. They can send three or more at a time, and on forwarding the requisite number within 60 days will be entitled to same premiums as if all were sent together.

CRICKET.

For \$30 00, four copies, one year, with one best cricket bat, one College bat, one Dark cricket ball, price \$7 50.

For \$25 00, five copies, one year, with a complete cricket set; one College bat, one polished leather Clubshaw; one Dark cricket ball; one set of stumps; price \$12 00.

FOOTBALL.

For \$15 00, three copies, one year, with one Rugby football; price \$5 00.

FISHING RODS.

For \$15 00, three copies, one year, with one superior four joint light rod, suitable for all kinds of fishing; price \$7 00.

For \$60 00, twelve copies, one elegant rod; suitable for trout, black bass with fly, or for trolling bass; or pike and blue, or rod as can be made; German silver tipped, with three tips; price \$25 00.

CROQUET.

For \$20 00, four copies, one year, with very handsome set of croquet; price \$7 00.

For \$25 00, five copies, one year, with superb set of croquet; price \$10 00.

For \$20 00, six copies, one year, with the finest set of croquet made; price \$14 00.

REMINGTON RIFLE AND SHOT GUN.

For \$75 00, fifteen copies, one year, with one Remington Deer rifle; price \$38 00.

For \$100, twenty copies, one year, with one Target rifle, 30-inch octagonal barrel, to be used for sporting, hunting, or target shooting; price \$50 00.

For \$100, twenty copies, one year, with one Remington double barreled, breech-loading, .45-cal. gun, one of the best guns ever imported to American sportsmen; price \$45 00.

SHARPE RIFLE.

For \$100, twenty copies, one year, with one Sharpe sporting or target rifle, best quality; price \$40 00.

WARD-BURTON RIFLE.

For \$300, forty copies, one year, with one Ward-Burton rifle magazine gun for large game, price \$90 00.

SINGLE AND DOUBLE BARREL MUZZLE

LOADING SHOT GUNS.

For \$30 00, four copies, one year, with one American single barrel gun, perfectly safe, blue barrels, weight; price \$10 00.

For \$20 00, seven copies, one year, with one American double gun; handy and reliable gun every way; price \$18 00.

For \$20 00, ten copies, one year, with one double boys' gun (twist barrel gun); safe gun every way for boys; price \$10 00.

For \$20 00, fifteen copies, one year, with one double gun, English laminated steel barrels, handsome finish; price \$15 00.

CASH PREMIUMS.

To those who prefer cash premiums a discount of

25 per cent. will be made on all clubs of three and upwards.

Every article is of the finest quality and will be sent free of expense.

Remitting Money.—Checks on New York City

are best for large sums; make payable to the order of Forest and Stream Publishing Co., 37 CHATHAM STREET, NEW YORK. Post

Office hours, 9 a.m. to 5 p.m. Orders for postage and safe in advance. When there are no orders for postage and safe in advance, the letter in the presence of the postmaster, and take his receipt for it.

Send the names with the money as fast as obtained, that subscribers may get the paper at once.

HURST'S Stereoscopic Views

Natural History

For Object Teaching in Schools,

AND

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens and various Animals and Birds in groups of attitudes, never however violating their natural instincts.

We offer these views not as pictures only, but as studies from nature, and as the most growing elements in our modern system of education is object teaching.

The unerring fidelity of the stereoscopic transfers the animals and birds from their natural habitat to the rooms of the student, and the friends of our homes, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as

Taciturnity of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Mr. Hurst to combine in every view the most growing elements with its appropriate rocks, woods or water, and coloring from the originals.

1. Spotted Sandpiper.....*Lepus Typhus.*
2. Snowy Owl.....*Sterna Aspera.*
3. American Wolf.....*Lynx Canadensis.*

TESTIMONIALS.

CORNELL UNIVERSITY,
ITHACA, March 14th, 1870.

I must congratulate you upon your great success in this new educational enterprise. If we can arrange our amusements so as to make them impart instruction to the mind, it will be a step in advance in education.

WASHINGTON, D. C., March 15th, 1870.

I am much pleased with the success you have met with in giving to the student specimens a very decided appearance of life.

I hope you will be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the wild animals of New York.

EDWARD A. SAMUEL,

Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE,

Salem, Mass., March 14th, 1870.

I have shown your Stereoscopic Views to the Directors of the Academy and the editors of the *American Naturalist*, Dr. Parkard and Mr. Morse.

The interest shown in this series is certainly both a credit to the Academy and to the Academy's efforts, but not only as a series of natural history illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

CORNELL UNIVERSITY, PRESIDENT'S ROOMS,

ITHACA, N. Y., March 14th, 1870.

I have received the Stereoscopic Views of objects in Natural History, and have enjoyed them greatly. They are of great interest to students and to me, and by attracting students to it, and next by perfecting them in it.

ANDREW D. WHITE.

These Stereoscopic Views are sold wholesale and retail by

FIRST SALMON OF THE SEASON.

DATHY'S BRIDGE—JACQUEM CARTIER RIVER.

THE rain cloud has passed and the sun rises high,
The mist from the river floats up to the sky;
The shade of the maple still rests on the stream,
With the dailings of cold from each quivering beam.
The flood has subsided—the water is clear—
Hurrah for a salmon! the prime of the year.

Our tackle is ready, and first in our way
The glittering dories launch o'er the "Grand Rets;"
It lights in the eddy—by Jupiter Ammon!
Already darts at it a silvery salmon,
I have missed him, and back with a dash and a gleam
The fish reeks indignant the depth of the stream.

Once more he has risen and amply displayed
His beautiful form on the billows he made;
I have him! he's fast! hark the musical steel
Sings sweetly as rushes the silk from the reel.
He makes for the eddy—a harlequin spring
Another! again! he's a fish for a king!

He has gained the mid-torrent, fast spins out the line;
We must run down the bank or the bacula resign;
The margin is rock, and such reeling I ween
'Tis a man and a fish but seldom been seen.
Now a plunge—now a leap—and in air when he spins
He dashes the foam in white showers from his fins.

They are dangerous crags, but my path is well known,
And the hosen, like wax, catch the slippery stone;
Whilst the reel's sounding treble enlivens the chase,
And the roar of the river booms deep as a bass,
Down, down the swift current now dashes the fish,
As gallant a salmon as angler could wish.

We have gained *L'Hopital* and the rapid is past,
There's leisure to breathe and to wind up at last;
Now lie thee, good Burnett, no more can he fly—
Gaff slowly and sure, our triumph is nigh;
'Tis done, bravely done, the struggle is o'er,
And a bright twenty pounder gasps high from the shore.

EDITOR FOREST AND STREAM:—

The above was written about forty years ago by a surgeon in one of the British regiments. If worth publishing in *FOREST AND STREAM*, you are heartily welcome to it. Yours very truly,
G. M. FAIRCHILD, JR.

For Forest and Stream.

Sports in California.

HUNTING THE CALIFORNIA LION.

NUMBER SIX.

LION hunting is not a favorite pursuit of Californians, any more than that the wise are fond of hunting the grizzly bear. The animal in question is, next to the said grizzly, and, possibly, excepting his cousin the jaguar, or "tiger," as the Mexicans call him, the most formidable antagonist one can meet in the mountains and forests of America. I believe there is some difference of opinion as to whether he is a true panther, or puma (Spanish), or not. I am not enough of a naturalist to decide, but a slight semblance of "mane," together with his Spanish appellation of "Leon," and his habit, have given him the name of California lion. He is certainly a most formidable beast, and the very perfection of strength and agility. He never attacks man unless wounded or hard pressed by hunger. His weight, when full grown, is about one hundred and fifty pounds. The female is somewhat smaller, and, I believe, has no mane. They are not plentiful, though I have heard that quite a number—as many as eight or nine—have been seen together. Usually they are found in pairs, and their home is always amidst the fastnesses of the rocks or the impenetrable thickets of the swamp. From this point they raid on the surrounding country. The devastation a pair of California lions will commit upon the calves and pigs (they are very fond of pork) of the ranches within reach of their den is beyond count. They are never hunted save when their depredations are so great as to make it a matter of necessity, and then the ranchmen turn out in force to rid the neighborhood of their pestilent foe. I said they are not "hunted." Nobody has lost any lions; nobody has loaned any, and is

looking for his property. But occasionally the wandering hunter meets one, and if he comes upon him suddenly it is a question of life or death. Except when cornered, wounded, or famished, they flee the face of man; but when a fight is once inaugurated one meets a foe worthy of his steel.

Among the Indians of the mountains or plains, to kill a lion in single combat is a feat that places the successful hunter at the head of the list of braves. He ranks with the conqueror of the grizzly bear, and it is hard to tell who is the most honored, the warrior who sports a necklace of the claws of the grizzly, or the one who carelessly and ostentatiously draws around his shoulders a robe of the skin of the California lion. Neither dare wear such a trophy unless he has killed the beast unassisted, and much as our brother "Lo" loves the hair of his white friends, a necklace of bears' claws or a lion robe ranks far above leggings or horse trappings trimmed with human scalps.

Fortunately, the animal is too scarce to make its pursuit a business. None but those who have "a heart of iron and nerves of steel" dare hunt the lion in his lair, and then he will want the best of weapons and plenty of them. A good rifle, a good revolver (army size), and a good knife are indispensable. A well armed party, with plenty of dogs, will track the lion to his den and slay him, but I never heard of a man singly attempting the feat. Usually they are treed by dogs and then shot.

Among the Mexicans, or, rather, in Mexico, there is a class of men known as "tigeros," or tiger hunters, whose business it is, and which calling they alone follow, to rid ranches of any tigers (jaguars) which may infest that section of the country. They are usually Indians, few Mexicans possessing the necessary pluck, and receive from the proprietors of the haciendas and ranches a large "gratification" for each and every animal of this kind killed on their estates or in their vicinity. But the race has almost died out. I have heard in late years of a few, a very few, being left; but it is more of a rumor than anything else. I imagine, for although the locations were mentioned, the names were unknown. In the palmy Spanish days of California, when the "missions" counted their horses and horned cattle by the hundreds of thousands, these men may have existed. No doubt the wise padres kept so keen an eye to their possessions as not to neglect this point, and I have been informed that one or two of these bold and brave men were always kept in the pay of the good fathers. But they have long since died out, the sturdy Anglo Saxons kill their own lions, and, like the missions to which they belonged, the race of "tigeros" is but a memory.

The only occasion when I was in at the death of a California lion was whilst returning with the General and escort from a tour of inspection among the outlying posts amid the hills. We camped one evening near the cabin of a ranchman some thirty miles from the bay, and, fatigued by a long day's march over the hills, after posting our sentries and getting our suppers, turned in early. We slept "the sleep of the just," but just before daybreak a tremendous hullahaloo in the settler's pig pen, the barking of the dogs, and a shot from the sentry, brought us to our feet. The sentry stated he had seen some large animal leap on the pen, and had fired at it. Pistols in hand, we hastened at once to the place, the ranchman, armed with rifle, pistol, and knife coming out of his door and joining us as we passed. Going to the pen whose inhabitants were still nervous, the ranchman missed a pig, and said at once "it's one of them cussed lions." The dogs, which ran around snuffing eagerly, kept near us. They well knew the nature of the foe. A short search revealed the trail, for by this time it began to be light. Taking it up we followed it as rapidly as possible, the dogs leading a very short distance in advance, and soon came to the pig, which was past squeaking, and showed unmistakably the marks of the lion's teeth. He had been so hard pressed as to drop his prey. Knowing he was not far off, we hastened on, and presently the barking of the dogs announced that he was treed. When we came up, which we did very cautiously,

for it was still barely light, we found the animal crouched in the forks of a stout madrone, some twenty feet from the ground, slowly waving his tail with that peculiar snap of the end (which means so much) each time it came round, and quietly watching the dogs, which were frantically barking at the foot of the tree. Spreading ourselves around the tree so as to command the spot, and all on the *qui vive*, the settler, rifle at shoulder, advanced into the open. A subdued, angry growl, and a quicker and more snappy movement of the tail, indicated the disposition of our foe, and his appreciation of the movement. In the gray morning light the face of the ranchman, as he slowly and carefully advanced step by step, was a picture I shall never forget. The set mouth, the rigidly drawn muscles, and the determined expression of that face told their own story. It was no trifling matter their owner was engaged in. Cautiously advancing, ever on the alert, until he was at the proper point, slowly the muzzle of the rifle was raised until the sights covered the heart of the animal. A moment's pause, a sheet of flame, a fierce howl of agony, and, wildly clinging to the tree in his death struggles, the ferocious beast presently dropped to the ground, and tore up the leaves and earth in his dying throes. The dogs vamoosed, the ranchman sprang back and snatched out his revolver (ours were already drawn), and a half dozen shots were fired at the expiring animal. But it was unnecessary. The settler's ball had found his heart and done the work. The frantic struggles were but the agony of his death throes. In a few moments he lay lifeless, and the hounds rushed in, afraid even then to touch their dreaded enemy. We carried him back to the rancho, where he was duly admired and discussed. He measured nearly ten feet from the tip of his nose to the end of his tail. The fangs (canine teeth) measured an inch and a half in length *above* the gums. I got his skull, perfect, and afterwards prepared it to send to the museum of the State Zoological Society at San Francisco (Prof. Whitney's); but during a short absence my steward, who had been reading something about the preservation of crania, took the notion of varnishing it (for which he was duly blessed), and so spoiled it as a specimen. I regretted it the more as the animal was unusually large and thick set—weight, one hundred and fifty pounds, or very nearly so, if I recollect aright. The teeth were perfect—not a sign of decay or wear. The animal was evidently full grown, and in the prime and vigor of life. I tried to get the skin, the property of the ranchman by hunter's law, but he would not part with the trophy, and it doubtless graces his cabin to this day, the pride of his numerous tow headed children, who emulate the prowess of their paternal ancestor.

Lions are but seldom met, and, as in the case mentioned, only by accident. There are, however, numberless tales of such "accidents" on the frontier, and as some of them may prove not uninteresting, I will give a few samples.

A young officer of the Eighteenth United States Infantry, while stationed at Fort Reno, one day saw an Arrapahoe brave promenading with a lion robe thrown gracefully about his shoulders. Being blessed with a fair portion of this world's goods, and desiring to send his friends a sample of the fauna of the country in which he then dwelt, he tried to purchase the article. But our friend Lo was obdurate. Nothing could induce the Indian to part with his treasure. He was a brave, and a chief of braves, for he had killed the beast single handed, without help from mortal man, and as he strutted about the admiring eyes of all the maidens of his tribe followed his steps, and the old men of his nation spoke well of him, and gave him a seat in their council, for though not old in years, nor a chief by birth, was he not the acknowledged leader of the young men of his tribe, and had he not met and slain, with his single hand, the monarch of the forest, the dreaded lion of the mountains? No, no; money could not buy that trophy. The "Lion Killer of the Arrapahoes" could not part with his credentials, and my friend had to submit. But to his inquiries, for the animal is not an inhabitant of the prairies, he condescended to let him know that "once upon

known fact that a pound of trout will live in a bucket of water in Winter, out of doors, for a half day or more, while they would not live a half hour in the same quantity of water in Summer.

It is not very hard to tell when the fish are suffering from air. It is only during warm weather that the breeder need watch for this mischance if he has only been moderately prudent in stocking his ponds. If the water is getting too warm, or, in other words, if the air in it is getting too small in quantity for the number of fish, a few will be found dead, perhaps, without any mark upon them, being to all appearance plump and healthy. Brains will show itself upon some, and some will turn dark in color. A few may be found upon the grass, near the entrance of the water, if the banks are low. Their appetites may not be visibly affected at once, but will soon begin to disappear, and the fish die "by hundreds." The only remedy is to give them more water, or take out a quantity of fish, and even this is not a remedy unless done at the very start, for even with increased volume of water the fish will keep dying for a long time. I believe that more brook trout have been lost in ponds by overcrowding than from all other causes put together. It must be borne in mind that overcrowding has reference to the flow of water, and not to the size of the pond. A tank ten feet by twenty may be overcrowded, or rather overstocked with fifty pounds of fish, and again it may comfortably support two hundred pounds or more. Cold water, and plenty of it, is the motto of the brook trout.

A. S. COLLINS.

SALMON SPAWN.

ROCHESTER, N. Y., November 30, 1874.

EDITOR FOREST AND STREAM:—I received from Prof. Baird, United States Commissioner of Fisheries, 500,000 California salmon spawn, of which I hatched 250,000, and have them on hand at the New York State Hatching House at Conelona. They are now ready for distribution to stock any of the public waters in New York State. Any parties can have from 5,000 to 50,000, on terms given for them.

SETH GREEN.

Natural History.

THE BLACK-FOOTED FERRET IS WANTED.—We have received from Dr. Coues a letter, from which we should judge that he was in great trouble about an animal he needs to see to complete his knowledge of a particular group of mammals he is now investigating, and we take pleasure in calling the attention of our readers to this, in hopes that some of them may be able to help him out of his difficulty. It seems that the North American animals of the weasel and ferret kind are pretty well known, only the black-footed ferret, *Mustela nigripes*, of Audubon and Backman, being required to complete the series now in the hands of naturalists. This animal was discovered many years ago along the Platte River, but no additional specimens in good order have since been forthcoming. It is known to inhabit Colorado, near the town of Greeley, where a headless skin was lately obtained, and may be expected to occur also in portions of Kansas, Dakota and Wyoming. The animal is most like a mink in size and shape, but almost entirely whitish, with black paws, a black streak on the face, and black tip to the tail. This description will suffice, as there is no other animal in the country at all like it. The fortunate possessor of a black-footed ferret will undoubtedly find it to his advantage to send it to Dr. Coues, at the Smithsonian Institution, Washington, D. C. Will Western papers please copy?

A FROGGERY.—Salt Lake City scientists are very much agitated over a frog which has been found in a growing turnip. Now the query to speculators in natural history must be this—Did the turnip produce the frog by spontaneous combustion, or did the frog enter it while a mere *meucus molecule* and grow up with it? In either case the solution of the problem must be rather odd to those not acquainted with such peculiar conditions as are said to envelop this amphibious creature who lives for hundreds of years, according to chroniclers, embedded in rocky walls, and without a morsel of food or a breath of air. The answer to the query will fulfill Shakespeare's words in the mouth of Hamlet when he said that there was more in the earth and air than Horatio's philosophy ever dreamed of.

For Forest and Stream.

THE MYCARCHUS CRINITUS.

BY F. W. HALL.

THIS species of the fly-catcher is not very common in any of the New England States, and consequently very little definite knowledge has been obtained concerning its habits.

For the past two years I have had limited facilities for observing its movements, and I therefore give a brief record of such of its habits as I have been permitted to notice, and which may not be uninteresting to the scientific ornithologist.

The species prefers for its abode a dry, rocky and wooded hill slope, and here, at intervals through the day, it shrieks forth its harsh discordant notes, which, alone, is capable of distinguishing the bird, so that it cannot be mistaken for any other. It usually, if not almost invariably, nests in a hollow tree. Samuels says that "it is a distinguishing characteristic of the nests of this species, to have the skins of one or more snakes woven into the other materials."

A nest found in the hollow stump of an old apple tree in North Haven, Ct., was composed of withered grass and chips—chiefly the latter. I judge from this that the species may occupy the deserted nest of the woodpeckers, as no snake skins were found in the nest, as Samuels asserts. I am inclined to think that the young leave the nest when quite young, even soon after they have got their eyes open, and before they have a single well-developed feather on their bodies, or at least before they are fully fledged, as I shot one in Killingworth, Ct., in a high tree, having only a very few undeveloped and rudimentary feathers, and with its neck and head entirely bare.

As soon as the bird was shot, the old ones came around and appeared to be in great distress for the safety of their young. This species appears to be more shy than any of the other fly-catchers. It occasionally utters a wild, careless shriek, but, to my knowledge, only when sitting, as I

have never heard it emit any sound while on the wing. It sits perfectly still when perched, and does not seem to be at all restless or as vigilant in its lookout for insects as most other fly-catchers; but its keen eye soon detects a passing bug, and it instantly darts upon it in a manner not unlike the remainder of its group. It does not remain long in one place, but is constantly on the move, although it seems to adhere to one neighborhood, and usually among large trees and will almost invariably return to the same spot, if not to the same tree, within half an hour.

I encountered quite a family of these birds in Killingworth, Ct., in the Summers of 1873-4, and shot several which were in full plumage, but the markings of which were not unlike those of the adult bird. I judge, therefore, from these facts that the species breeds abundantly in this locality, or about six miles from the sea shore, as I have noticed the old and young together for two consecutive years.

As is usually the case among the fly-catchers, after darting upon an insect, they will often return to the same perch, particularly if the tree or object upon which they alight is standing alone. The bird will often sit upon a limb and keep perfectly still for the space of twenty minutes, apparently very watchful, and at intervals of perhaps a minute it will utter its fierce cry, as if in great agony; but rather because it becomes impatient in waiting so long a time for its favorite insect. While these birds appear to be rather shy, they are not at all affected by the report of a gun, and even the report seems to have a tendency to bring an additional number together. The habits of this species, owing to its comparative rarity, have been only little studied; so many of its more important and peculiar characteristics are yet to be discovered.

—The Chicago Academy of Sciences was the other day told by a member that there are over 700 species of clam in North America, and 1,500 species in all have been described, more than one thousand books and papers having been written on the subject.

ALEWIFE AND ALOSA

EDITOR FOREST AND STREAM:—

A communication by "Ollipod" in your last on "Alewife" set me to thinking how a fish got such a name—"which" the following is the result of my cogitations. Alewife (the name) came to us from England—and I think, came in England from France, as thus the shad by the Romans was called *Alosa*, then by the French *Alois*—pronounced correctly at *ale*—but the French peasant, like all other peasantry, do not often pronounce in the definite manner. The tendency of the F. P. as any one who has been among the *habitués* of Canada may remember is to pronounce words ending in *is* as *ay* instead of *wave*. *Alois* then would degenerate in the mouths of the Channel fishermen from "alewife" to "to alway," "al" being aspirated as in alley in both cases. The English Channel fisherman would hear the *parley vous* say *alway*, and, how easy, then, the transition from *alway* to *alewife*. Remembering the tendency of the joint. Bulls always to give some sort of substantive meaning to a word in use, I think it is a very fair deduction to find the word *alewife* to be a corruption of *alway*. Have I a right to say "Q. E. D.?" Belosphen was changed by the British sailors to *Bolly ruffian*, and that is a harsher mutation than the one which I have supposed. Recollect *alewife* is *alosa tyrannus*. Yours, VET.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS.

NEW YORK, NOV. 29, 1874.

Animals received at Central Park Menagerie for the week ending November 28th, 1874.

One Mottled Owl, *Scops asio*. Presented by Dr. E. Sterling.
One Monkey, *Macacus cynomolgus*.
One Monkey, *Macacus thersus*.
One Leopard, *Felis leopardus*. Born in Menagerie.

W. A. CONKLIN.

Woodland, Lawn and Garden.

CARNIVOROUS PLANTS.—Dr. J. D. Hooker's recent address to the Department of Zoology and Botany of the British Association, gives the result of his study of the carnivorous habits of the *Nepenthes*, the pitcher plants of the East Indies, and supplements what was already known of like habits in *Dionaea*, *Sarracenia*, *Drosera*, *Darlingtonia*, and *Pinguicula*. He states that the rim of the pitcher and the under side of the lid, always more highly colored than the rest of the plant, are provided with numerous honey-secreting glands, while the surface immediately below is covered with a glass-like cuticle which attracts the foot of insects. The entire lower portion of the cavity is occupied by innumerable spherical glands which secrete a fluid that is always acid and is found in the pitcher before the opening of the lid. The digestive powers of this fluid were tested in various ways, often with surprising results. Fragments of meat were rapidly reduced, and pieces of fibrin weighing several grains dissolved, and finally disappeared in two or three hours; lumps of cartilage weighing eight to ten grains were half gelatinized in 24 hours, and in three days were greatly diminished and reduced to a clear transparent jelly. The experiments make it probable that these results are not wholly due to the original fluid, but that after the addition of the animal matter a substance acting as pepsine is produced by a change in the process of secretion. Dr. Hooker shows that the vegetable world is between this mode of plant-nutrition and the more ordinary one of the embryo in the act of germination, and of some colorless plants which live by the absorption of the elaborated juices of others. He also very briefly indicates how the highly specialized organs and strange habits of these plants may be conceived to have arisen by the process of natural selection from ordinary leaf-structures and from processes which are common to the vegetable world. The fact may at least be accepted as proving that the protoplasm of plants can avail itself of the same food with that of animals—thus serving as one more link in the continuity of nature.

DEDUING A COUNTRY OF ITS TREES.—The Khanate of Bokhara affords a signal illustration of the damage done by denuding a country of its forests. Thirty years ago, the Khanate was one of the most fertile provinces of Central Asia, and was considered by the world to be regarded as an earthly paradise. Five years thereafter, a mania for forest-clearing broke out among the inhabitants, and continued to rage as long as there remained timber on which to vent itself. What trees were spared by rulers and peo-

ple were afterwards utterly consumed during a civil war. The consequence of this ruthless destruction of the forest-growth is now painfully manifest in immense dry and arid wastes. The water courses have become empty channels, and the system of canal-irrigation for artificial fertilization, and supplied from the living streams, has been rendered useless. The moving sands of the desert, no longer restrained by forest-barriers, are gradually advancing and drifting over the land. They will continue their noiseless invasion until the whole Khanate will become a dreary desert, as barren as the wilderness separating it from Khiva. It is not supposed that the Khan has sufficient energy or the means at his command to arrest the desolation which threatens to spread over his territories. The example is one to stimulate enlightened governments to avoid a similar catastrophe, by preserving a due proportion of forest-lands in their domains, and by restoring those which have been improvidently laid bare.

BURYING CELERY FOR WINTER.—Select the driest, best drained spot you have. Dig a trench eighteen or twenty inches wide and ten or twelve inches deep, according to the length of the celery, or just so that five or six inches will be above the surface, throwing out the earth on each side. Before hard freezing weather comes, (fifteen degrees Fahrenheit will blacken celery,) dig the plants, allowing as much earth to adhere to the roots as will naturally do so. Place the plants upright in the trenches, on their roots and as closely together as possible, filling all interstices with earth except the tops of the plants; hold them together so that the earth may not enter the crevices. When all has been finished, bank up the remaining earth about the sides, place a roof of some rough material over all, so as to exclude air, and cover surely from frost, adding to the covering as cold weather increases, taking care not to smother the plants. A little care will prevent smothering.

USES OF THE DEAD LEAVES.—The leaves of deciduous trees and shrubs, grapevines, etc., are now falling, and will soon be scattered by the high winds of the Fall, if not collected and stowed away for future use. They are too valuable for many purposes to be allowed to go to waste. They form a good protection for strawberries during the Winter, as a covering of them prevents that alternate freezing and thawing which is so injurious to the plants. A covering two inches in depth will be necessary, and this should be kept from blowing away by the pressure of twiggy branches spread over it. Decayed leaves produce that valuable manure known as leaf-mold, which is so highly prized by the florist. In the construction of hot-beds, dead leaves are very useful, as layers of them, between layers of manure, moderate the heat and retain it for a long time. For littering stock and absorbing liquid manure, dead leaves are of great value. Large quantities should now be collected and kept in sheds for future use.

EDWARD MASON.

The Kennel.

THE POINTER IN THE UNITED STATES.

IT is noticeable that at present we have in America far more well bred setters than pointers, and greater attention seems to have been paid in the past two years in procuring the former blood than the latter. This arises from the fact that the setter is the greater favorite of the two, and justly the choice of the sportsman when he desires a dog that will unflinchingly stand the rough and tumble nature of our shooting. Still, we are sorry to see the balance so much weighed down by the setter, for fear the staunch pointer may be finally crowded out entirely. Of the two, the point of the shorter haired animal is far the most marked when on game, and the training once received by him is always retained, and on each returning shooting season he enters the field to be depended upon, while the setter often has to be partially rebroken each year; and if not owned by a sportsman who shoots continually, becomes headstrong and unreliable.

For the person whose business will not allow him to take his gun in hand but two or three times in the Autumn, we advise by all means that his dog should be the pointer; but for the one who takes advantage of the open season for different game from its beginning to its close, we recommend the setter as best able to bear continued work in all descriptions of cover.

The short hair of the pointer enables him to do work on the prairies, where water is seldom to be found while "chicken" shooting, and he can do without the necessity for a much longer time than the setter; but the latter is frequently used with advantage for the same purpose when a supply for his benefit is taken to the field. In New Jersey, Delaware and Maryland, and in countries where the game invariably takes to briary thickets on being started, the pointer is at a disadvantage, for we have seen but few that were not intimidated by these thorny coverts refusing entirely to enter.

Far more birds are accidentally flushed by the setter than the pointer, who is generally more cautious, notwithstanding he may be fully as fast. Certainly we cannot condemn those that write in favor of the pointer as having the best nose, for they are given strong proofs of this truth.

In cool and rainy weather the pointer, on account of his slight coat, suffers greatly, and therefore is far inferior to the heavy haired setter in wet localities. Nevertheless, we have seen them so highstrung and ambitious as to work wherever desired by their masters at a risk of injury to themselves.

We advise our readers who are taking an interest in the breeding of field dogs in the United States, to pay just as much attention to the rearing and improvement of the pointer as the setter, for when we compare the market value of the two, the well bred pointer is worth the most present on account of its scarcity.

POINTS FOR JUDGING SETTERS AT AMERICAN BENCH SHOWS.—There are no doubt at this time in the United States quite a number of purely bred setters of both the Irish and Gordon breeds, either imported directly from Europe or the progeny of animals brought to this country, whose pedigrees can be given for at least two or three generations, many of which will be entered for award on this side of the water. For the reason that these breeds have distinctive characteristics, we advise that the English points of judging for both be taken at exhibitions of our own, which will be found to differ from those followed at the display of the Tennessee State Sportsmen's Association at Memphis, October 7th, where both the best setter and pointer, it appears, were judged by the one scale of points. A setter is not necessarily a Gordon, because he is of black and tan color; nor an Irish, because he is red, although we should pronounce them as having decidedly such blood if this was the case; both might have had dams of far different shade of coat than themselves, being Gordon and Irish alone in color; in shape and other points, just the reverse. At Mincola the great dog that took the prize, under the class of setters of any other breed, was a perfect black and tan. Colburn's Dash, entered by Mr. A. C. Waddell, of Newton, N. J., in very many characteristics a perfect Gordon in appearance, is still a cross, if we are informed correctly, of last mentioned breed; and the red Irish, and a truly fine stock and field dog.

We have but three classes of setters displayed at any Bench Show—the Gordon, the Irish and the setter of any other breed, (we might have said four, if any pure Russians do exist even in their own country,) for not at the Blue Belton's, the Macdonald's, the Lovell's, and the Lavarack's made up by judicious crossings of the first two? Therefore, all of these latter mentioned must come under the head of setters of any breed.

The London Kennel Club adopt this system of classification, and we must say it is the only method that we can go by in our shows, as far as we can see.

MANOEUVRE IN DOGS.—The surest preventative of mange in dogs is a clean and comfortable kennel, where the bed is changed at least once a week during the season which straw is needed for warmth, and in milder weather where pine shavings are used and removed as often.

We have noticed that when growing puppies are compelled to sleep in damp and dark places mange frequently appears on them before they attain twelve months of age, and we advise those having setters and pointers to raise to allow them plenty of pure air and sun light, for this malady once established is difficult to cure.

The following formula we have taken from Mayhew's management of dogs, as being an admirable remedy for this skin disease, having known of its being used with great success:

Ung. resin.—As much as you please to take.
Saltp. Sub.—Enough to make the ointment very thick.
Oil of Juniper.—Enough to make the unguent of a proper consistency, but not too thin.

Apply this once a day, thoroughly rubbing it in, and wash it off the day following, repeating the dressing until the dog has been dressed three times and washed three, when the ointment can be discontinued, again using it only when the dog shows a return of the disease.

This receipt is by no means a cleanly one, and necessarily keeps dog and master some distance apart; a simpler remedy, however, when the case is a mild one, will be found by rubbing into the dog's skin a decoction of white oak bark and alum and letting it dry in.

IRISH SETTERS.—A dog show was held recently in Dublin which was very successful in every way, but especially in its display of that magnificent type of the hunting dog, the red Irish setter. A correspondent, who notes keenly, writes that the best dog was a splendid animal. Describing him he says that "he has a grand long face, nearly, if not quite, an inch longer than anything else in the class; his ears are good and hang well, his nose is mahogany-colored, his red is as good as can be bred, his legs are good, and so are his feet; he has a grand loin, his hair is straight, and his stern is grand, being beautifully carried, and with the nice comb fringe so much admired. Had he a darker eye he would be perfect. The second prize dog is a fine fellow, beautifully feathered on legs and body, but his tail has not so good a style of feathering as the first, being rather more like a sheep-dog's brush than a setter's flag; moreover, he has a vile temper. The third prize is a brother of the former, but younger. He is in the same style, but is shorter in head, and has a black nose, which Dr. Stone would have us to believe is the correct color; but it is the first time I have ever heard it mooted as a good point. The same gentleman tried very hard to make me believe that red and white is the correct color for an Irish setter, but I am not quite convinced on that point yet."

A CANINE MILKER.—A gentleman residing in Dorchester, Mass., Barzillai Paine, Esq., owns a large dog of the St. Bernard species, also a cow, from which to obtain milk for family use. Until subsequent to a period some three or four weeks ago the cow gave four or five quarts daily, she having begun to dry up, when suddenly the quantity was reduced to about two quarts without any apparent cause. The reason was not discovered until Thursday last, (Thanksgiving Day,) when the cow was found in the afternoon, quietly lying at rest, chewing her cud, in the field, where she had been turned to graze, and beside her lay the dog, stretched out in a most comfortable position, busily engaged in sucking the milk from her teats. It was then noticed that

the dog had displayed considerable tact in taking advantage of like daily opportunities, he being always at home at morning, noon and night, when his master was there, but had not made allowance for a holiday, and was therefore discovered, which will in future cut off his rations in that quarter. Are not like instances of a dog turning milk maid rare?

—The kennel at the Jardin d'Acclimatation of Paris has been enriched by the addition of some of the finest strains of English staghounds, foxhounds, harriers, beagles and retrievers, and these close the magnificent collection of hunting dogs kept in the Garden. All members of the canine race useful to man are now represented there, and as the best blood only is selected the people have an opportunity of becoming acquainted with the higher class of dogs, and from these they learn what the best types should be; and of course this must have a most salutary effect on the improvement of the race.

—One of the most interesting exhibitions of dog, held in the British Kingdom for many a day, was the great national trial of sheep dogs, which came off at Garth Gooch, Bala, recently. The intelligence displayed by the animals was most extraordinary, and so effective as to receive the loud applause of the numerous spectators in attendance.

—The Providence Journal relates the following stories:—A dog belonging to Mr. P. Riley, of Knightville, R. I., having discovered his master's house on fire the other morning, ran up to where the children slept, and tried to awake them by barking and jumping on their bed. Failing in this he ran to the room of the elder son and seizing him by the ear aroused him so that he screamed loudly. His cry awake the father, and the dog led him to the fire, which he succeeded in extinguishing ere it had made much headway.

Michael Conley, of Providence, has four greyhounds which saved his life last week. This person was engaged in making an excavation when the earth fell on him, and covered him up. The dogs being near when the accident occurred, commenced scratching and yelping, and this being noticed, assistance was soon at hand to take the man from his tomb ere death had visited him.

A FAITHFUL DOG.—Wednesday afternoon a half-drunken man named Cropp, living in Canada, was wandering around the Potomac, accompanied by a big dog, and having lots of money. Yesterday morning he was found in an alley, sleeping a drunken sleep, and his dog was keeping watch over him and would allow no one to come near until the man shook off his sleep. The dog had been snatched twice with a knife, and there were two extra hats in the alley, showing that thieves had come to rob the man and that the dog had fought them off.—*Detroit Free Press.*

THE WEBSTER SETTERS.

POMFREY CENTRE, Conn., November 23, 1874.

EDITOR FOREST AND STREAM:—

I read with much interest the account given in your issue of the 24th of last March, by "Veritas," about the Webster dogs Jake and Rachel, and though I have never claimed to see Jake, I think I can enlighten "Veritas" somewhat as to what became of Rachel; at least that she did not die, as he says, without further issue. I know very little of the circumstances attending their importation. The story circulated at the time was, that they were present from the Duke of Devonshire to Mr. Webster. I find by my record (for it has long been my practice to keep a record of the births and pedigrees of all the dogs I breed, and I know by no means few) that in the Fall of 1867, my friend Burlington Anthony of Providence, R. I., (who was also an intimate sporting friend of Mr. Webster's) sent me Rachel to keep and breed a litter of puppies from. I kept her through one Fall and Winter, and returned her to Mr. Anthony the following Spring, and what became of her afterwards I am unable to say. She dropped a litter of pups at my place in January, 1869, by a fine, brown setter dog, called Phil, owned by Stephen A. Packard of Packerville, Conn. Of this litter only two dogs were saved. I kept one and Packard had the other. Mine died before he was old enough to break. Friend Packard broke his, and I afterwards sold him to the late Wm. S. Green, of Worcester, Mass. Previous to Rachel's coming into my possession, she was bred to a fine liver and white setter owned by Mr. Edward Harvey, of Providence, R. I., and I broke a bitch of this litter for Mr. Henry Taubert, formerly of Providence, R. I., and late of Putnam, Conn. This bitch was the very image of old Rachel. Mr. Taubert afterwards sold her to Eden Perrin, then of West Killingly, Conn., but now of Olneyville, N. H., purchased her of Mr. Perrin for \$100. Robert B. Roosevelt, of New York, and while with me I bred this bitch, named Bess, to Stephen A. Packard's dog Phil; the result was two dogs and a bitch pup, all liver and white. One dog, called Stow, I broke for Mr. Roosevelt, the other dog, called Dash, I sold to Freeman James, Esq., then of West Killingly, Conn., but now of St. Paul, Minn. The bitch called Zip, kept her myself, and from her nearly all my present dogs have descended, and they carry her blood in a greater or less degree, many of them still retaining one-eighth to one-fourth of old Rachel's blood. I do not mention this because I think so highly of the blood of Rachel, or of her stock. I regret to say that my experience with old Rachel in the field does not correspond at all with that of "Veritas" or Mr. Bunt. I have hunted her and had her repeatedly in the field on quail, quail and woodcock, and have seen her flush a bird after bird without even attempting to make a point, and I never saw her make but one point, and that was on a bevy of quail, and she did that in a very indifferent manner. I have seen her repeatedly, day after day, flush every bird she found. She hunted fast, with nose seeking the ground, making a rattling noise with her nose like a horn on an old trail. I never saw a pun from the first cross, and I have made the first-class dog, and I will not wish her blood reduced by a second cross did the stock prove with me of any value.

I have always heard that Jake was a fine animal, and I once saw a splendid dog, owned by Moses Taylor, Esq., of New York, said to have been a daughter of Jake, and a dog owned by J. P. Moore, Esq., of New York. This dog was black run, and black in color, without the tan belonging to the Webster stock. I have had considerable experience with different breeds of both pointers and setters, and my own kennel seldom numbers less than a dozen, and I believe I understand what is requisite to constitute a first-class setter or pointer in the field. I make here no expressions that I cannot prove by competent witnesses.

Respectfully yours,

ETIEN ALLIN.

PEDIGREES.—We have some English and American pedigrees of great interest to sportsmen, which we shall publish next week.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

Striped Bass, <i>Morone chrysops</i> .	Weakfish.	Sheepshead.
Pompano.	SOUTHERN WATERS.	Tailorfish.
Shapper.	Trout (black bass).	Sea Bass.
Grouper.	Drum (two species).	
Rockfish.	Kingfish.	
	Striped Bass.	

FISH IN MARKET.—Fresh mackerel and codfish are now for sale; the former at 18 cents, one of which, the largest we ever saw weighed four pounds. Smelts from the Penobscot River in Maine are abundant. Price 25 cents per pound. Live codfish brings from 8 to 10 cents per pound; halibut very scarce, 25 cents; white fish abundant at 18 cents; scollops are becoming scarce, \$1 50 per gallon; green turtle is also very rare at 20 cents per pound; a fair supply of terrapin is on hand, but these creatures bring \$12 per dozen "counts." Lobsters from Massachusetts are comparatively abundant at 10 cents per pound; and hard shell crabs are numerous enough to supply all demand at \$3 50 per 100.

—Most of the fishing fleets have returned home, so the ports at which they belong are crowded with masts.

—The oyster trade in Baltimore has had a very remarkable increase within a few days, the sales having doubled those of any previous time.

The herring fishery has been very successfully prosecuted from Ipswich the past month.

The Portsmouth Chronicle says that Mr. Charles H. Wallace recently caught off the Shoals, while alone in his whaleboat, 2,180 pounds of cod—the largest single catch of the season. The crew of schooner "Light of Home" caught 230 cwt. of fish during one night recently, not far from the same locality. Squid fishing has become a lucrative employment at Provincetown. Owners of bankers are buying them for from 40 cents to 50 cents a hundred. Two men can easily catch on a hook made for the purpose 1,300 or 1,400 a day.

Schooner Willie B. Wilbur took with the hook 20 barrels of fine mackerel off Race Point on Monday last week.—*Cape Ann Advertiser*, Nov. 28th.

—An attentive correspondent, Mr. C. W. Stevens, of Boston, who was recently in Milwaukee, has sent us a large pebble and the accompanying note which follows. The pebble is creased so as to receive the bight of a cord around its centre:

MILWAUKEE, November 19, 1874.
The stone presented you to-day, weighing three-quarters of a pound, is an anchor stone from a gill net which I set in the bottom of Lake Michigan, in 300 to 500 feet of water. It was taken from the stomach of the trout (Mackinaw) you saw to-day in our fish room. There was also taken from the same trout a herring about eight inches long, and a dog fish about twelve inches long. They are a very voracious fish, and beef bones, corn cobs, and other refuse, thrown them from vessels are often found in them. The trout above mentioned weighed, when dressed, 29 pounds. Very respectfully yours,
GREEN J. LANSFORTH.

Commenting upon the foregoing, our correspondent informs us that these anchor stones have not been in use for several years, and that if Mr. Lansworthy's supposition is correct—that, in lowering the net the stone became detached, and Sir Trout, thinking it a nutritious morsel, gobbled it—then he must have carried it around for quite a lengthy period.

A WHALE FEAST.—The Washington Sunday Herald contains the following natty description of a whale feast, in which many friends of the FOREST AND STREAM participated:

Among those present were Professors S. F. Baird, United States Fish Commissioner, and his assistant, Professor J. A. Milner, Dr. Emil Bessels, of Poland, and Dr. Gill, the eminent ichthyologist; Professor G. B. Goode, Dr. W. H. Holmes, W. H. Jackson, the well known scenic photographer; Professor Henry W. Elliott, the naturalist, who has become an authority in the habits of the seal and walrus; G. Behler, the engineer; J. T. Gardiner, the well known geographer; Professor Bean, of Pennsylvania; Dr. A. M. Cooke, U. S. A.; Dr. J. A. De Kay, the geologist, and a number of others were present in the scene. Dr. Baird presided, and dispensed the broiled meats, while Dr. Endlich and Professor Miller, respectively, served the roast and broiled dishes of whale. The fish was a young whale of the species known as "black fish," and was caught off Block Island a short time since, and sent to Professor Baird, carefully packed in ice, and arrived in a fine condition. Dr. Baird, of Poland, and Dr. Gill, the well known taxidermist and artist attached to the Smithsonian, was engaged in making a plaster cast of the specimen, a discussion rose among several of the scientists as to the value of the whale as a food fish, and on the spur of the moment it was decided to prepare a feast and send forth among the highways to find adventurous, inquiring men to meet and eat a portion. A little delay was occasioned in the vain endeavor to find such one who knew how to say "grace before meat," and the guests were asked for a preference. All being helped, the first few mouthfuls were taken in silence and meditatively, and then opinions as to the taste of the flesh were in order. This developed the remarkable fact that the little party comprised men who had visited not only every portion of our own country, but nearly every portion of the globe. Professor Baird thought his broiled whale tasted like beef liver. Dr. Cones thought it tasted strongly like seal meat, but this brought out three of the party who knew all about that oily dainty. Professor Elliott knew better than that, but inclined to think that it resembled walrus meat in the Fall, when that mammal had been living on roots and sea weed, and explained that the same meat, killed in the Spring when the animal had been living on fish and seals, tasted strongly oily. Dr. Bessels agreed with Elliott and the other seal eaters, and thought it tasted like plain beef. Dr. Endlich thought it similar to panther meat; Dr. Gill had eaten grizzly bear meat, and thought the dish before him was like it; he seemed to like it, and took three pieces. Prof. Milner volunteered the remark that it tasted good anyhow, but Professor Goode thought the remark was a personal

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INCLUSION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

—AT—

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
 (POST OFFICE BOX 22)
 125 SOUTH THIRD STREET, PHILADELPHIA,
 COBB'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty per cent. allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 22 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent. will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, DECEMBER 3, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to be a medium of useful and reliable information between gentleman sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will tender to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

CALENDAR OF EVENTS FOR THE CURRENT WEEK.

SATURDAY, December 5.—Racing at New Orleans, La.

MONDAY, December 7.—Racing at New Orleans, La.

TUESDAY, December 8.—Billiard match between Vignier and Dion for the championship of the French game, at Tammany Hall.

THURSDAY, December 10.—Billiard match between Radolphe and Gardner, at Tammany Hall.

OUR SECOND FLORIDA EXPEDITION.

THE publishers of the FOREST AND STREAM have inaugurated and successfully carried out a number of expeditions for research in the geography and natural history of this Continent, from which, no doubt, much valuable information has been gathered. We have now on hand no less than two additional expeditions. One of these is noticed at length in another article, and is no doubt the greatest effort of the kind attempted anywhere, rivaling the African and Indian hunting expeditions of Cumming, Grant, Speke, and other famed hunters, and even vying with the gigantic efforts of the great Barnum himself in the originality of its design, the composition of its personnel and material, the completeness of its outfit, and the extent of its scene of operations.

The other expedition to which we have not referred heretofore, is in some measure supplementary to our Florida expedition of last Winter, which resulted in a very satisfactory survey of Lake Okechobee, of which scarcely anything was previously known, the discovery of a practicable water route thereto, and the procuring of additional information of special value to sportsmen and naturalists. Of many portions of the west coast of Florida, bordering the Gulf of Mexico, just as little is known, that region being a *terra incognita* even to the residents themselves. Steamers at certain intervals of time touch only at the few chief points along their routes, so that long reaches of intermediate swamp, hammock, bay and inlet remain unvisited and entirely unknown, save to a few cow-herders and the roaming Indians who visit them occasionally to hunt and fish. It is our purpose to explore the whole of this coast most thoroughly with a sail boat, and instruments of our own, in charge of competent persons of high scientific ability, and already familiar with much of the coast. To do this will require the whole Winter and carry us far into the Spring. The expedition will start December 7th, and the route thereof will be via Charleston to Cedar

Keys, Clearwater Harbor, Tampa, Manatee, Sarasota, and Charlotte Harbor, with its numerous Keys, including a thorough examination of the Caloosahatchee River to the farthest point that can be reached by boat; and if possible a visit to lakes Flatt, Hickpochee, and Okechobee. It was a part of the original plan to include an exploration of the Suwanee River from Ellaville to its mouth, a distance of some two hundred miles, but the time allotted to the expedition will be too limited. To indicate the great importance in which this enterprise of ours is held by the intelligent citizens of Florida, as well as by the superintendents of the various lines of communication, it is most gratifying to us to state that free passes and transportation for boat and outfit have been furnished without hesitation over all sea and inland routes that cover the field of our explorations, and that our representatives have been promised all the assistance that can be rendered them.

While we are guided only by the desire to bring the hidden secrets of that country to light, to reveal its beauties and make known its treasures of natural history, we feel that we are at the same time aiding in developing not only that region, but the whole of Florida, as we attract attention to the excellence of the country for invalids, sportsmen, and even those interested in fruit culture.

For the prompt alacrity which the citizens of Florida have seconded our efforts to make their country known, and for the courtesies so freely presented to us by the officers of railroad and steamer companies, we beg to return our thanks, and to hope that our expeditions will prove of even greater advantage to them than they anticipate.

CHANGES IN ANIMAL LIFE.

THE success which has attended the researches of the Government scientific surveys amidst the fossil cemeteries of our distant territories, proves how abundant animal life was on this continent in the misty past; long ere the immense fields of ice planed the earth and rendered it fit for man. The variety of the species is also something startling, for where one or two now exist, there were hundreds then, and each was apparently more distinct from its kindred than those known to the world of science at present.

The abundance of fossil life, and the numbers of species, proves that this continent is really the oldest portion of the globe; that it is above all others the land most adapted to variety and profusion of life, owing to its luxuriance of vegetation and different types of climate, and that it is the largest burial ground of animals in the world.

From the profusion of animal life in the past it would seem that Nature is now working towards a smaller range of species, and that these are the most useful to man; in fact that such only will live as are best adapted to his purposes. Those which were of no comparative utility to him have passed away since his advent, and now that he is monarch of creation, he is aiding Nature in the work of extermination and leaving only those creatures that please his fancy, aid him in subduing the earth, or possess economic value. The preservation of the latter classes is now a duty the civilized man has to perform if he would leave those that follow him some representatives of those that furnished him pleasure. Another general deduction one might make from the lessening of the numbers of species is that Nature is working for conciseness and unity, and that her aim is to make families as compact as possible, that harmony might reign throughout all her works, and that order might assume the place of apparently erratic fancies. If this deduction is correct we may expect a decrease in our present number of species as soon as they have performed the duty allotted them in life, and their total extinction, or else a transformation, or rather a superseding by other types of creation better adapted to the changes and progress of the globe. We have learnt from the researches and investigations of scientists that one form of life dies and is superseded by another, and that this also becomes extinct for good, or else merges into another, according to the exigencies of the occasion. As this new type increases it holds sway over all others of its class for a time, until that is also deposed by another species; and thus the changes of life occur, first one species and then another occupying the throne of power, until each has accomplished its mission, when it disappears.

Now if this rule holds good in the lower forms of life, why should it not in the higher; and why should it not continue until the various races of mankind at present in existence disappear, and are superseded by those possessing more homogeneity, and more intimate relation in physique and mental characteristics? If this idea is followed out we will find the Caucasian race the dominant power of the world; the others being only its servants. We find that in most countries where the pale face plants his standard that the aborigines disappear before him, and that he becomes monarch of the new lands. This would prove the correctness of the assumption "that the fittest lives," and that it is only those persons and races who are able to conquer by mental and physical prowess the difficulties which surround them, that are of use to Nature, and, like certain species of animals, that it is these she retains to carry out her work and bring to light her concealed laws. If so, it behooves every one who would desire to be considered among those fit to live, to so improve their mind and body that they may be able to meet all exigencies, and thus occupy a place in the onward march of progress and be among those who are crowned by Nature with the chaplets of victory.

As the law of life seems to be to struggle and grow strong, it behooves us to obey it, if we would not sink

early in the contest for future supremacy, and be reckoned among those unworthy to live.

The decrees of Nature seem to point to a condensation of creation into closely-allied and powerful families or orders, so that in all future contests between these it will be a war of giants and only the fittest will survive. If the changes of the past continue, we may expect the future to be entirely different from the present, not only in its fauna but in its mode of thought, and that these transformations will continue until we have reached that acme of perfection when Tyndall's ideal man will rule the world, and there can be no quarrel, because it would be a war between kindred people or races.

A GREAT HUNTING PARTY.

THIS great land of ours has witnessed more gigantic schemes than any other of modern times; but it seems that we are not content with past efforts, and the glory they have brought to us, but desire to keep enlarging upon their magnitude, besides making them as novel as possible. The most towering schemes are entered upon here with as much assurance of success as if they were trifles. Hesitation is looked upon as cowardice, and caution as a want of pluck and determination. This faculty of deciding every scheme undertaken a *fait accompli*, is a marked characteristic of our people, and comes from their enormous energy and self reliance; and these combined are apt to lead to success, even when the probabilities point the other way. Every great economic enterprise undertaken so far throughout the country has been carried to a prosperous issue, and we have no reason to suppose that any scheme combining the aesthetic qualities in one grand whole, should not also prove successful.

These remarks are preliminary to our announcement of a grand hunting expedition that is now in process of organization in the West, that land of limitless prairies, and the birth place of schemes as broad as its rolling plains. The projector and organizer of this expedition is Col. W. C. McCarty, a gentleman whose experience as a soldier and huntsman extends over three continents; for we learn that he commanded a regiment of Texas cavalry during the late rebellion, and at its close joined Maximilian's forces in Mexico. When that ill-fated prince met his death, Col. McCarty went to Europe and followed the standards of France in the Franco-Prussian war, until they were lowered at Sedan. After that contest he went to Egypt and entered the Khedive's service as Adjutant General, but desiring to return to his own land, he resigned his position, and on reaching home was appointed to a position in the western department of the Bureau of Mines and Mining by the Government. This he retained until recently, when he was compelled to resign in order to complete the organization of his great hunting expedition.

According to what we can learn he has been importuned at various times during the last three years by some English gentlemen to undertake an expedition that should be complete in all its appointments, for the purpose of chasing the wild animals so numerous in the West and Southwest, and dallying among the game fishes so abundant in many portions of the country. These importunities at length prevailed; so he went abroad to finish the necessary arrangements. The programme as now prepared is, that a hunting party consisting of one hundred gentlemen, and their servants, horses and dogs, is to leave England the first week in May, and after visiting New York and vicinity go to Chicago, the headquarters of the organization, where they will be joined by several American sportsmen. From this place they will go to Dallas, Texas, the general rendezvous, and here they will be reinforced by one hundred Texas Rangers, who have been engaged for the entire trip, and by sixty Tonkawa Comanche Indians, whose duty will be to herd the large game while the others pursue it, and to give exhibitions of the dances and customs prevalent among the children of the boundless prairies.

When the organization is completed the expedition will move to Northern Texas, and there engage in the pursuit of the deer and antelope with hounds, so that it may revive memories of the stag hunts so popular in England and Ireland, and give all an opportunity of testing the difference between a "cross country" canter and a wild gallop on the prairies. The visitors will also be taught the different styles of hunting employed by our Western Nimrods, especially that known as "corraling." When this species of hunting is exhausted the *chasseurs* will take dashes after the shaggy buffalo for a certain time, and after that they will either engage bruin, beard the cougar in his leafy retreat, pursue the gaunt wolf over hill and dale, or take a run after reynard to the wild music of a pack of hounds. The jack rabbit (*Lepus californicus*), will also afford them sport, as it will be chased with greyhounds, and this must certainly prove interesting to those who are attached to coursing. In order to give them an opportunity of using the shot gun as well as the rifle, all the game birds of the region, which include the wild turkey, the quail, the prairie chicken, pinnated and ruffed grouse, and other species, will be sought in their covers. This will afford them an opportunity to enjoy every variety of wing shooting, and should therefore please the most fastidious follower of Diana. Those who desire to show their horsemanship, or learn to handle a lariat with dexterity, can engage in the inspiring exercise of catching the wild mustangs of Texas, and if necessary breaking them, so that they can have circus exhibitions of their own.

The party will next engage in angling, and as they have many species to select from in the waters of that region, they will have sport indeed,

Texas being done, the party will cross into Colorado, and emerging at Denver, will take the transcontinental railroad to California, thence proceed to Oregon and Washington Territory. All the game animals of the Pacific Coast will be assailed in succession, but special attention will be given to the grizzly bear and the ponderous elk. Every place having any scenic attractions will be visited, so that the trip may be as complete as possible. As soon as the Summer wanes, the party will return to Kansas to enjoy Fall hunting among the buffaloes, prairie chickens and other game; and after this exercise all will go to the Great Lakes and enjoy what fishing and hunting they and their vicinity can afford. On their return from this classical region they will visit Washington, thence return to New York and England, arriving home about the middle of December.

This will give six months of hunting, enough to satisfy the appetite of the most insatiable Nimrod.

For fear of any mishap, the expedition will be complete in every detail, so that it will be its own commissary and protector in case of an attack from the Indians. The commissariat will contain the choicest viands of the country; the quartermaster's department will be able to supply any number of horses and carriages that may be needed, and, finally, the *cuisinier* will be presided over by one of the best cooks in the West. To drive care away, a full brass and string band will accompany the expedition, so that when the weary hunters return from the chase, their fatigue may be banished by the dulcet notes of sensuous music. In order to meet all emergencies, a surgeon and assistant will form a portion of the organization, and no small one either, if the programme is fully carried out. By this combination of elements the party will be complete in all its appointments, so that it might be termed a sylvan excursion were it not for the virility of the chase, and the fact that the hunters must sleep in tents, and without any mattresses.

This scheme is a large one, and is certainly capable of being carried to a successful issue provided gentlemen enough can be secured to pay the necessarily heavy expenses. No other country but this could originate such a gigantic hunting scheme, and few, except the originator would dare to carry it out. The expedition when on the march would number about thirty wagons, ten ambulances, one hundred and sixty horses, and two hundred and fifty men.

We understand that some American gentlemen have already given in their names as subscribers and that a few more will be taken, but the great bulk of the hunters are expected to hail from England. The toils, dangers and amusements of the party, and the salient points of the country they may visit will be perpetuated by an artist, and a photographer and a reporter to be designated by the editor of *FOREST AND STREAM*, and their joint work will be issued in book form under the same auspices after the return of the expedition.

As the main object of this excursion is to initiate European sportsmen into our mode of hunting, and to make them acquainted with the grand scenery of the country, the expense must be a mere trifle compared with the result obtained. He who desires to enjoy such pleasures of the chase as he cannot procure elsewhere, and he who delights in the beauties of Nature, should be enamored of this varied programme. The originator is endorsed by the leading gentlemen of Chicago, and the Governor and other prominent citizens of Texas, and this should be sufficient guarantee for the fulfillment of any promise he might make. He has also been promised the co-operation of the C. B. and Q., and M. K. and T. railways. So far as we have been advised of the details of this enterprise and the countenance given it by prominent citizens of the West, it has our fullest sanction, and we shall do all in our power to expedite it.

SHOOTING BOX.—We designed last week to call attention to the advertisement now in our paper of a fine shooting property near Philadelphia. It is situated on the North East River, about five miles above Turkey Point, and the same distance above the mouth of the Susquehanna River, contiguous to the Grand Flats which abound with canvas back and red head ducks, in season. There is plenty of upland game, quail, woodcock, and pheasant; and there is no better place for fishing in this part of the country. The present owners have purchased the Seneca Point Farm in the immediate vicinity and have no use for this property; consequently it will be sold at a bargain. The property is two hours ride from Philadelphia, ten miles below Elkton, and is very retired, yet easy of access.

—We are indebted to Prof. Baird for his very valuable report on the fishes of the Atlantic waters. The pamphlet is a most valuable one, as it is prepared in the most painstaking manner. Our summary is crowded out of this week's issue.

—On the 15th November, the Esquimaux Indians of Labrador murdered two families consisting of eight persons, one of them a woman, at Indian Tickle, a fishing station on the coast. The Indians retaliated for having been publicly whipped for stealing. This is the first instance of criminal or troublesome conduct among the Esquimaux in Labrador in the memory of the oldest fishermen, and the effect of the unfortunate circumstance will probably be disadvantageously felt for years to come.

—The ball of the Royal Canadian Yacht Club was one of the most agreeable affairs ever held in Canada.

CREEDMOOR.—The last regular contest of the season came off last Saturday at Creedmoor for the *Turf, Field and Farm* challenge badge. The competitors embraced the best contestants in the Amateur and National Rifle Associations, but Mr. O'Kelly has again been the fortunate victor. According to the terms on which it is offered it is necessary to win it three times in order to retain it permanently. It is shot for at the 200 yards range, with any rifle; position standing. Among the competitors was J. K. Milner, the celebrated shot of the Irish team. The contest was a very close one, and resulted in a tie between Lieutenant F. W. Hoelle and Mr. J. J. O'Kelly. Both gentlemen scored sixteen points. Lieutenant Hoelle, in shooting off the tie, made an outer, and Mr. O'Kelly making a centre, was declared the winner. Mr. J. T. B. Collins and Mr. E. H. Madison tied for the third prize. Having shot off, Mr. Collins was declared the winner. Colonel Gildersleeve, in presenting the badge to Mr. O'Kelly, complimented him on being the only marksman who had succeeded in carrying off the badge in two successive matches. The following are the scores made by the two contestants:

Name.	Score.	Total.
J. J. O'Kelly	1 2 3 4 4	16
F. W. Hoelle	1 2 3 4 4	16
J. T. B. Collins	3 3 3 3 2	15
E. H. Madison	3 3 3 3 2	15
J. K. Milner	4 3 2 3 2	15
Lieutenant H. Fulton	3 2 3 3 1	15
A. L. Gildersleeve	3 2 3 3 3	15
J. Holland	3 2 3 3 2	15
Captain Barker	2 1 2 3 3	15
Sergeant Lee	3 3 3 2 4	15
Colonel G. W. Wingate	3 2 3 3 2	15
H. S. Jewell	2 2 3 3 4	11
George Crouch	1 4 3 3 2	11
L. J. Price	3 2 3 3 3	13
Captain H. B. Smith	3 2 3 3 3	13
B. E. Valentine	3 2 3 3 3	13
P. Lark	3 2 3 3 3	13

N. C. Forester	2 2 3 3 3	7
J. P. Barrrell	0 2 3 3 3	7
J. E. Farlow	2 2 3 3 3	7
J. B. Holland	0 2 3 3 3	4

PROMPT ACTION.—The Amateur Rifle Club held a special meeting at the First Division Headquarters, in West Thirtieth street, last week, Col. Wingate, the President, in the chair. An amendment was made to the by-laws, fixing the initiation fee at \$10 on and after December 1. The committee recently appointed to decide upon the disposition of the silver cup presented to the club by Major Leach, recommended that it be designated hereafter as the "Leach Cup," and subjected to annual competition by the members of the Amateur Rifle Club, the winner to retain it in his possession for one year. On motion of Lieut. Fulton, it was resolved to request the National Rifle Association to appoint a committee to co-operate with the Executive Committee of the Amateur Rifle Club in making the necessary arrangements for the international match, to be contested at Dublin in 1875. A committee of three was appointed to raise a subscription among the members for the purpose of providing a testimonial to be presented to Lieut. Fulton, as a memento of the remarkable score made by him at the late international match. After some further routine business the meeting adjourned.

THE GATLING GUN CONTROVERSY.—The recent controversy between Colonel Laing, of the Seventy-ninth Regiment, and the officers of the National Rifle Association, relative to the proprietorship of the Gatling gun offered at the annual contest at Creedmoor, has brought the following reply in response to the letter of Colonel Laing, published in our last issue:

OFFICE NATIONAL RIFLE ASSOCIATION, }
NEW YORK, Nov. 23, 1874. }
Lieutenant Colonel Joseph Laing, Commanding Seventy-ninth Regiment, N. G. S. N. Y.:

SIR: We are in receipt of your lithographed letter of the 19th inst., informing us that you have reconsidered the purpose you at one time entertained of resisting by legal process the transfer to other hands of the Gatling gun which was last year entrusted to the keeping of your regiment.

The officers of our Association have given no heed to the report that you contemplated the action you have reconsidered, believing that you could not fail to reach the conclusion you have when you remembered that the Gatling gun was entrusted to your regiment in full reliance upon your responsibility as soldiers and you honor as gentlemen. The authorities whose full control of that prize you acknowledged by accepting it at their hands, have this year awarded it to others; in accordance with the terms of the match in which it was offered and the rules of the Association, by which they were bound equally with you, and to which you as well as they have given voluntary adhesion.

As to the control of that or of any other prize, we should not, under any circumstances, enter into a contest, legal or otherwise. Our duty was done when we decided who was entitled to the prize, under our rules and the conditions governing the Gatling match. This decision was reached by the unanimous vote of our Board, not that of a majority, as you incorrectly state, upon each and all of the scores disallowed under our rules, a majority of which scores belonged to other regiments than the Seventy-ninth.

To answer your various objections to this decision in detail is to continue a controversy which has already been too protracted. We will only say that this unanimous conclusion of our Board does not sustain your *ex parte* statement in regard to the circumstances which compelled the exclusion of the scores of Privates Keller and Irwin. This match is the first case that has arisen where the score

made by the representatives of any regiment has been disputed, and imposes a most unpleasant duty upon the Board which they gladly would have avoided. As it is, a reference to our rules will show you the necessity we were under, of either accepting a score which you yourself admit Mr. Keller did not make, or of rejecting his score altogether. If his score was correct it should have been allowed to stand; if incorrect, it was because his ticket had been altered—as you agree with us it had been—and such alteration under our rules compelled the rejection of the ticket altogether.

Mr. Irwin's score was disallowed by the statistical officer, General Woodward, with four other scores in other regiments, because of shooting at the wrong target, and the Board, after a most thorough investigation, voted unanimously to sustain that officer's action. Your suggestion that the tickets of all the competitors should be examined to see who shot at the wrong target, is a good one, and was followed in this case, all the scores made at the wrong targets being disallowed.

Having reached our conclusions, in regard to the score to be allowed in the Gatling match, by a unanimous vote, after a most thorough and patient investigation, we see no reason to alter those conclusions, however we may regret that they should be displeasing to so gallant a regiment as the Seventy-ninth. We are anxious that the matches at Creedmoor shall not be made the occasion of unpleasant controversy, and it is to avoid this that we adhere rigidly to our rules. If there has been any laxity heretofore, it neither can nor should be admitted as a precedent for the future.

On behalf of the National Rifle Association,
WM. C. CHURCH, President.
HENRY A. GILDERSLEEVE, Secretary.

—The officers of the Twelfth Regiment, Colonel John Ward commanding, contested for the Boylan badge, open only to the officers of that command, last week. Lieut. Charles Heizman, of Company B, was the winner for the second time. This match was the concluding contest in this command for the season.

—At a recent meeting of the officers of the Second Regiment, Connecticut, N. G., it was resolved to send a team to contest in the all comers' match at the rifle tournament at Creedmoor, Long Island, next year. During the interim the members of the regiment will practice at different distances, and from the number making the best average scores a team will be selected.

GENEROUS.—Our excellent cotemporary, *La Vie Sportive*, of Paris, has made out our people to be very generous indeed by its assertion that the moment the Amateur Rifle Club accepted the challenge to shoot the Irishmen in Dublin next year the amount of money necessary to defray all expenses to the Green Isle was made up immediately by our citizens.

This is a little premature, but we hope ere the time for action arrives that the assertion will be fulfilled.

—The Hon. A. T. Brinsmade, President of the National Sportsmen's Association has issued an address in which he reviews the motives for calling the last Convention at Niagara, and the resolutions adopted thereat. These were printed in our columns at the time of their passage. In conclusion he calls upon all sportsmen, clubs, and other organizations to aid in carrying out the tenor of the resolutions then adopted, and hopes that the next assemblage which meets in Cleveland, Ohio, in June 1875, will have delegates from every State and Territory in the Union.

ATTENTION AMATEUR CLUBS.—A Philadelphia correspondent sends us the following letter, and as he seems to think his proposition worthy the consideration of the amateur clubs, we call their attention to the matter:

EDITOR FOREST AND STREAM:

In a late issue of your paper is an item which might be worth your notice. It is the report on the match between the New York Rifle Corps and Jersey Rifle Corps, at Union Hill on October 29 last. The score, on page 5, is easy to understand without a knowledge of the language. Each marksman was allowed 10 shots, distance 600 feet, target divided in 25 half-inch rings, rings 20-25 in the black, (bull's eye). The report closes with the remark that the two corps can put forward a number of marksmen who could well compete with the celebrated American Team of Creedmoor (i.e., at 200 yards distance, as I understand it). It might be worth the while to inform the Amateur Club of this boast, and have the United Scheutzen Association (the New York and New Jersey Rifle Corps united), challenged by them.

A VON LEHMANN.

—We acknowledge the compliment of a visit from Capt. Parker Gillmore, of England, author of "Gun, Rod, and Saddle," and other works.

A TESTIMONY IN FAVOR OF ALTERED GUNS.—A Cornith, Miss., correspondent sends us the following, which we print to serve many inquiries:

EDITOR FOREST AND STREAM:

Having now shot my altered gun—alteration by Clark & Snieder—for some time, at a variety of game, and with all sizes of shot, I can safely say that in the working and shooting it is all that I could wish. It is still perfectly true in the locking, and firm and steady as it was when it came from the shop. I prefer to either of two other breech loaders that I have used for several past seasons. It was an excellent gun as a muzzle loader, but as a breech loader is an extraordinary gun, both for pattern and penetration. I have been shooting the Oriental powder—perhaps an imitation—and it fouls a gun like the very mischief, Mr. Jos. W. Long to the contrary notwithstanding. *Write his book on the "Duck."*

—Some five men tried to shoot blindfolded at a target having a sounding board attached last Saturday at Staten Island, and they did enough to prove that such work is dissipating time, though they suppose that they have proved that one can shoot well from the sense of hearing alone, and without seeing the object aimed at.

—A Southern writer deprecates the cheapness of shot guns, powder and lead. He says the shooting of insectivorous birds has this year cost Alabama alone more than \$10,000,000 in the ravages done by the cotton caterpillar.

—William Thornlaw, a noted wing shot, of Yorkshire, England, has sent a challenge to Captain A. H. Bogardus to shoot a match of 1,000 pigeons for \$2,500 aside, give or take \$200 for expenses, the choice of ground to be tossed for; shooting to be at 21 yards rise and 60 yards down. He stipulates that the gun be held below the elbow till the bird takes wing. The match to come off within two months.

PALATINE, Ill., November 28, 1874.

EDITOR FOREST AND STREAM:

On the 23rd inst. the Palestine Shooting Club held their first match on the old grounds of the Palestine Hotel Club. Although the club is principally an amateur one, there were some very nice points made. The Hon. Sol. P. Hopkins was elected president, F. J. Gilbert, vice president, and W. W. White, secretary of the club. The principle object of the club is to see that the game law of this State is rigidly enforced in this section of the county (Cook), as well as to improve the art of shooting. The club will have another shoot on Christmas day next.

F. J. G.

TORTOISES AS GAME.

PHILADELPHIA, November 18th, 1874.

EDITOR FOREST AND STREAM:

I have noticed in several sporting papers for some time past various articles upon the land tortoise, ascribing to it a peculiar scent, which is recognized and worked upon by hunting dogs. Some two weeks ago, while on a shooting trip in the interior of this State, I had a young setter dog out for the first time who had never seen game. The first point the younger made was on a land tortoise, much to my disgust. A few days after this, while hunting with a friend, his young dog Dash, an animal with a splendid nose, struck a trail in a small woods, and in a short time drew up on a point. This he held but a short time, however, and then quit, as if he had made a mistake. A few feet from his stand we found a land tortoise. Determined on investigating this, I dragged the creature for some distance over the leaves, then called up the dog and had him press over the scent. He readily took up the trail, but refused to make a second point. This creature must undoubtedly give forth a scent in a manner similar to that emitted by some game birds, although it may be in a slight degree. What an excellent chance for good shooting, Mr. Editor, might be obtained over this new game; even a novice, by moderate coolness, might be able to get in a night and left without much danger to the dogs and great credit to himself. As for the dogs, a slow old pointer would be the best, but I think that even young and headless animals would be restrained from chasing by being severely corrected once or twice; and then after the day's hunt the display of the spoils, the summing up of each one's total, not he with the greatest number would carry off the palm, but rather the fortunate possessor of the oldest and most valuable of game, which point could easily be decided by the names and dates of our forefathers cut indelibly upon the horny breast of this new game.

J. H. W.

HINTS FOR CAMPING.

AKRON, Ohio, November 9, 1874.

EDITOR FOREST AND STREAM:

During a three years' practice of medicine in Southern Kansas, I frequently care for travelers the summer heren and there, and as frequently (if not more so) the winter. I have thought that, if you think them of enough importance to publish, they are at your service.

The writer made, in the Fall of 1853, a ten days' trip through Southern Kansas, "spying out the land" for a location in which to practice medicine and surgery. The country was new, and as the grasshoppers had been there, rather more correspondingly scarce than in any of our States. I suffered because my unseasoned stomach could not uncomplainingly handle the fat pork and greasy corn bread which alone the free hospitality of the citizens could offer him. Milk, however, as in most new countries that far South, he found in plenty. And now comes "the reason" for this letter, founded on an experience obtained by three years' practice of medicine in that country. It is that of any of our countrymen, or readers who may wish, in the character of the "Solitary Horseman," to explore that far Southwest country. Let him take with him in the saddle bags (indispensable in a trip of that kind) a pound or two of good, solid, square crackers—"hard tack," if need be, some crackers, if obtainable at the last little village through which he passes, and in his coat pocket, securely packed, an ounce of good, hot, pungent sauce of ground pepper. Properly packed, the crackers need take but little room, and the man is to be pitted, no matter how fashionable his stomach, who cannot, after a good day's ride, make a satisfactory, and certainly digestible, supper off the crackers crumbed in the good sweet milk he is sure to find at any settler's cabin, especially when daily seasoned with the salt sauce pepper he carries with him.

Persons of limited or no experience in the West may smile at the suggestion that salt and pepper be carried along; but the wretches found many families, rich in acres and herds, who were "just out of salt," and to whom pepper had been so long absent that it was a cool friend. And many a palatable supper and breakfast has he made of crackers and milk and pepper in the fall salted, when, had want of foresight counselled him to the "corn dodger," made all too "short" with lard, and the bacon swimming in its native grease, which served the more roused stomach of his host, he would but weakly have bestirred him, his longing for the next day's ride.

VAINGUARD.

FALL SHOOTING IN MINNESOTA.

ALBERT LEE, FREEBORN Co., Minn., November 18, 1874.

EDITOR FOREST AND STREAM:

Being a constant reader of your valuable paper I take the liberty of sending you a partial report of the season's shooting, which is now drawing rapidly to a close.

Our pinulated gun shooting commenced August 15th with the annual chicken hunt of the Sportsmen's Club with the successful score of 979, and strange to say, very few were killed within ten miles of our town. Every one interested was on the *qui vive*, and each side confident they would not have to pay for the supper. To have a long day of it, all that possibly could, started the afternoon before for their camping ground, or some hospitable farmer's that happened to be their friend, with the intent. Gun hunting from field to field home, but fortunately for the birds, the rain that commenced falling about dark, did not abate until nearly ten o'clock the next morning, so they were obliged to get a much later start than they would have done had not the rain prevented; by the time they had hunted their time out many were as far as twelve miles from home. This year, thanks to the Legislature, the law for grouse shooting did not expire until the 15th of August, being fifteen days later than previous years, consequently the birds were much larger and fewer were killed. Some large bags have been made, three guns in the neighborhood of Rice Lake having killed in one day 220, while the hundredth with two guns was repeatedly begged. But with all this, there are more old ones to be seen than for a number of years, and the prospects are, "the land will run" and the weather still "next year they will be as thick as blackbirds."

Our duck shooting has not been a success this Fall, owing to the fine weather. Ducks were seen in countless numbers on the lakes, but the bright, warm rays of the sun induced them to remain in the open water, far from shore, and seldom flying, except when compelled to by some boat, and then flying just a short distance, rendering decoys and gunners few large bags were made that I heard of, the largest being bagged with two guns was 301, and as they were mostly mallards, they had a bad fall. Having pulled their boat in a cimp of wild rice, which surrounded a small, clear spot of probably ten rods in width, and a favorite place for

that noble bird—the mallard—to light, shot them as they would fly over; the ducks that fell in the open water they secured; while the birds that fell in the rice they did not attempt to get, knowing it was useless to look for them in the dense rice without a dog—such is their story. But I saw the 301, so can vouch for that part of it. Besides this instance, a hard day and few ducks have been the sportsman's reward.

Geese and brant have been very plenty, and a great number have been killed on the grain fields, where they go, morning and evening, to feed, returning to the lakes in the middle of the day. It is a common saying to see fully two acres of ground covered with geese, standing so thick or close it would be difficult to see the ground. But the shyness of this bird forces the hunter to devise all manner of plans for their capture when they first make their appearance. You can fool them once or twice, by apparently driving by them on a trot, while in reality you are circling round them, and near the time until you are in shot. But this method soon learns this device, and other means are resorted to. Occasionally a flock will light close to a straw stack, and when such is the case the sportsman is well rewarded. One party bagged in one day's hunt fourteen geese and five sand hill cranes, and the same party, one week later, succeeded in bagging sixteen geese and fourteen cranes.

Sand hill cranes can be seen by the hundreds on the prairies. But all this sports at an end now. Ice two inches thick covers the lakes, and all that is seen of the aquatic fowl is occasionally a flock of ducks, of probably half a dozen, skimming the lake in search of an air hole; but as these are few and far between, it is reasonable to suppose ere this reaches you they will have taken their departure. The familiar yank of the wild geese is, at times, heard when ice is so close that it is disagreeable hunting, so they are allowed to go their way unmolested.

Feeling I have already encroached entirely too much on your valuable time, I am, very truly yours,

T. VARNON HATCH.

—Herewith our good friend "Jacobstall" discoursed upon ducks and geese:

EDITOR FOREST AND STREAM:

With a party of sportsmen from "Jorsey" we recently took a trip down to Lane's, at Good Ground. We found the jelly gunner waiting for us at the station, and were soon nicely located in a comfortable and cozy den. He had the day previous put out the boxes and moved a space on the marsh (the water being too high on the bars) to place his stools—some twenty-two or more live wild geese, that by indefatigable perseverance he has brought to an astonishing point of docility, and I might add of intelligence, for they seem to understand (especially one very precocious individual) just what he is wanted of them, and seemingly take great delight in calling down their fellow birds to destruction.

Several of the party had never witnessed this interesting ceremony, and were consequently on the *qui vive* for the opportunity. But alas! for human hopes, the wind shifted in the night, and upon turning out we were met by Lane with the unwelcome salutation, "No use to try for geese to-day, as they may get shot ducks." And what those Long Island gunners don't know about wind and weather, and the flight of wild fowl, I can't tell them, that is certain.

Instead of the storm geese are expected to fly just before one, it came off warm and still. Geese did not appear, and the ducks, most of them, would provokingly persist in remaining in the centre of the bay. However, we put out our stools, or wooden decoys, and located ourselves on our backs behind the weeds and sea grass, while Lane sailed off, as he said, to "sit 'em up." Soon they commenced coming in by pairs and threes or more, and then a flock of broad bills of a hundred and fifty, or more, came right to us, and we had fair shooting for several hours, when the wind dying away, no birds approaching near us, we pulled up and started for home.

WHY QUAIL ARE SCARCE ON LONG ISLAND.

EDITOR FOREST AND STREAM:

The other day I paid a visit to Good Ground in quest of ducks, and after a day without luck, returned to Lane's, and there being yet two hours to spare, I proposed to try for a few quail. With Lane, I saw a black and white Spanish pointer—we walked out. And now comes the point to which I wish to call your attention. We found but one covey, and that contained but six or eight birds. The quail, Lane told us, had been quite plenty, and he said there had been quite a number of noisings of cocking among them. What, then, had become of them? I had noticed, on the trail at several stations small boys, of from ten to sixteen years of age, coming in, offering for sale bunches of quail, containing from two to half a dozen each. It did not strike me at that time that there would probably be no shot marks found on any, or, at least, but few of them; but when I came to travel through the bush and found the multitudinous traps and snares set all over in every direction, I was not at all surprised at the sudden scarcity of this game.

A party of sportsmen that joined us at Westhampton (they had been stopping at Raynor's) told us that it was even worse down that way, and that in a hedge of only one-eight of a mile in length, they found by actual count forty-nine of these villainous devices. Now, is there no sportsman's club in that county or on Long Island for which this outrage can be stopped? In a section of country so well adapted for the propagation and rearing of these delicious and gamey birds (for they have been, at times very plentiful), it is a disgrace and a shame that they should be so slaughtered, for it not only destroys those that are caught in this potent hunting manner, but drives the remaining ones to other haunts, and the time is not far distant, unless something is done, when quail on Long Island will be as scarce as its congeners, the pinated grouse.

JACOBSTALL.

LATE WOODCOCK.

SALEM, Mass., November, 1874.

EDITOR FOREST AND STREAM:

Do you not think it unusual to have snipe and woodcock with as this time of year? Within four days one of my friends shot a snipe; another, on the same day, flushed two. On the 25th inst. a friend hunting for quail saw a woodcock fly out of a cover where some hounds were working. He thought he would go look for the long bills. He started four, killed one, making the number of snipes he had shot four. He saw. They did not lay well to the door were in splendid condition, and the ground from which they were started or flushed was covered with whittings, as were some of the neighboring runs. It seemed to me (I visited the place Thanksgiving morning) that there had been a flight of woodcock within four days. In us or two other runs my friend's dog almost got a point, showing that the birds had been close gone long. I have frequently killed solitary woodcock much later—even the middle of December—and I started a snipe on the 11th December, also one on the same ground the 23d December. May not the continued dry weather have made the birds shy around, and also stay a month later this year? Two of the birds shot were large like females, one was smaller like males. A good many sportsmen think the night light is composed mostly of males.

Very respectfully, etc.
D. L. LAMP.
There is almost always, perhaps invariably, a late Fall flight of woodcock from Canada. The birds are smaller and more hardy than October woodcock, owing, no doubt, to their being bred in the more rigorous climate of the region to the north of us. We alluded to this flight of woodcock in our issue of Nov. 5. We do not think that the sex is necessarily indicated by the size.—Ed.

—The furs received by the Hudson Bay Company during the past year at its Northern Department, have been sent to England by way of the Red River and New York. The business has been more than usually large the past season.

Rational Pastimes.

Secretaries and Friends of Athletic, Base-Ball, Cricket and other out-door Clubs will kindly make their contributions not later than Monday in each week.

—In our efforts to be thorough in all matters appertaining to our sphere we have spared neither time nor expense, a fact which is evident to the most casual reader. The FOREST AND STREAM is the only paper in the United States that has published complete reports of the winning yachts during the past year, and the character of the prizes; and the full score of each game of base ball of any importance. By glancing at the table in the last number, readers will see in a concise tabulated form the scores of 232 games, and a full analysis of each. A table of this sort must prove invaluable to those interested in the National game, as it contains every matter of importance pertaining to the subject.

—The New York Caledonian Club held their fourth annual handicap Scottish games at Jones's World last Thursday. The attendance was quite large, and though the ground was slippery, the matches were well contested. One of the most amusing features of the day was the egg race. In this the competitors have each placed before them on the ground twenty-five glass eggs, laid one yard apart, and he who is able to pick up all his eggs, one at a time, and put them in a box at the starting point, is considered the winner. The total distance run in this race is upward of two miles. The scrambling after the eggs created much merriment. The utmost good humor prevailed among the competitors in all of the games, many of whom were gentlemen of wealth and influence, representing the best society of the Scotch citizens of New York. Medals were awarded to the winners in the games. The following received prizes:

Throwing the Light Hammer.		Half Mile Race.	
	Feet.		Time.
James Corsair.....	104	1. William Hume.....	2 min 27 sec.
John McMillan.....	90	2. Geo. Toombs.....	" 28 "
John Tacker.....	98	3. A. L. Palmer.....	" 29 "
Throwing 20 pound weight.		One Mile Race.	
	Feet.		Time.
John Tacker.....	21	1. Wm. Parker.....	5 min 20 sec.
Robert Williamson.....	21	1. A. L. Palmer.....	" 29 "
A. McLaughlin.....	21	0	Quarter Mile Race.
Putting Light Ball.			
	Feet.		Time.
J. Tacker.....	39	1. William Todd.....	40 sec.
R. Williamson.....	33	2. L. D. Robert.....	" 41 "
J. McMillan.....	34	3. Z. Dukes.....	" 42 "
Running High Leap.			
	Feet.		Time.
G. T. Addison.....	5	11. D. B. Fleming.....	No time.
A. Tacker.....	6	2. E. F. Knox.....	" 43 "
John McMillan.....	5	3. H. Green.....	" 44 "
Vaulting with the Pole.			
	Feet.		Time.
A. Tacker.....	8	1. T. McEwen.....	26 min 35 sec.
M. F. Moore.....	8	2. Wm. Hume.....	" 36 "
G. T. Addison.....	8	3. M. M. Forrest.....	" 37 "
One Hundred Yard Race.			
	Time.		
1. Geo. Ross, Jr.....	14 sec.	4. D. P. Knox.....	No time.
2. J. H. Toombs.....	" 15 "	3. Wm. P. Kier.....	" 38 "
3. Wm. Todd.....	" 16 "	A. L. Palmer.....	" 39 "

The Championship Committee of the Professional Association met at Earle's Hotel, New York, on November 25, to decide which club was entitled to the pennant for 1874. After an examination of the records they easily came to the conclusion that the Boston club exceeded all other of the championship contestants in their record of the season's play, and to that club was the emblem unanimously awarded. Taking the record contained in Mr. Chadwick's statistics of the season's play, they made up their estimate on that basis with the appended result, the figures below showing the games actually won and lost, and the games accredited after adding forfeited games:

Clubs.	Games Won.	Lost.	Forfeit.
Boston.....	43	17	17
Mutual.....	40	21	17
Athletic.....	31	21	25
Philadelphia.....	25	28	31
Chicago.....	20	29	20
Atlanta.....	21	22	28
Hartford.....	10	31	18
42			

It will be seen by the above record that the Mutuals and Athletics stand tie for second position, and the Philadelphia fourth.

Base-ball playing Day was, as hitherto, taken advantage of by the base-ball players to a very great extent, the fine weather admitting of play on nearly every field. The greatest gathering, however, was at Prospect Park, Brooklyn, where not only base-ball matches but cricket and football were participated in.

—The following clubs have made arrangements to join the Professional National Association next year, and the majority will take part in the championship campaign of 1875. The Eastern club, of Easton, Penn.; the Western club, of Keokuk, Iowa; the St. Louis base ball association, of St. Louis; and the Centennial club, of Philadelphia. The regular clubs will of course resume their places in the arena, the list including the Boston, Hartford, Mutual, Atlantic, Athletic, Philadelphia, and Chicago nines. This will make eleven professional clubs which will be contestants for the whip pennant of 1875. Even now it is not difficult to perceive that the three leading nines will be those of the Boston, Athletic, and Hartford clubs, the players of which are as follows:—

ATHLETIC.	BOSTON.	HARTFORD.
Clayton.....	White.....	Adams.....
McBride.....	Spalding.....	Bond.....
Anson, J. b.....	O'Rourke, 1st b.....	Miles, 1st b.....
Fives.....	Barnes, 2d b.....	Barnes, 2d b.....
Putnam, 3d b.....	Schafer, 2d b.....	Ferguson, 3d b.....
Porter, s. s.....	Geo. Wright, s. s.....	Carey, s. s.....
H. L. F.....	W. H. Wright, c. f.....	York, c. f.....
Beeler, c. f.....	McVey, c. f.....	Reuben, c. f.....
McMillen, r. f.....	Beale, sub.....	Miller, r. f.....
Reacher, sub.....		Cannell, sub.....

The Winona Club of Flatbush, played in 25 games during 1874, of which they won 10. Their best played game was in their match with the Aetna Club, which the latter won by a score of 2 to 1. They won games from every club they played with.

—The Pacific Club, of Philadelphia, closed the season of 1874 with the best record of any amateur club of Philadelphia, as out of 27 games they lost but 5. Five of their games were won by scores not exceeding 9 runs for the winning side, showing fine play.

The Horse and Course.

—Some pool racing came off at Fleetwood Park last Wednesday. The first race was between Dan Mace's bay mare Clara G. and running mate and John Murphy's bay mare Lady Dahlman under the saddle. The betting on this event was even. After five heats Mace's team was declared victor. The best time made was 2:24. The second trot for a purse of \$400, mile heats, best 3 in 5 in harness brought the geldings J. H. Walton and Cheston to the starting post. The former was the winner in three straight heats. Best time 2:43. The next event was a sweepstakes for a purse of \$250 mile heats. The competitors were Tommy Moore, Bricks, Humpty Dumpty, and Sagerettes. The former won after running six heats. Best time 2:47. Thursday witnessed three good trots at the same place. The first regular trot of the day was for a purse between John Murphy's sorrel gelding Sorrel Jake and T. Lee's bay gelding Judge Belle. The former won the race in three straight heats. Best time 2:43. The second event was a match between C. Walker's brown mare Lady Annie and J. H. Phillips' bay mare Susie Clay. Lady Annie after losing the first heat still had the call. The second heat was also won by Susie Clay. Lady Annie afterward went to the front and won the third, fourth and fifth heats. Best time 2:43. The third trot was between C. Simmons' brown gelding Cheston and J. P. Patton's gray mare, Ford. Cheston won in three straight heats. Best time 2:37.

—Fleetwood witnessed some interesting contests last Saturday. The first was between Charley Green to jogger and gelding Fred in harness. The former won in three straight heats. Best time 2:44. Four horses contested for a purse of \$100, mile heats, best three in five, catch weights. Quinn's Tommy Dodd won in three straight heats. Best time 2:45. Tommy Moore, Bricks, and Humpty Dumpty, competed for a purse of \$300, but victory fell again to the former. Best time 2:43.

—John Murphy has made arrangements to keep the club house, grounds and track open and in good order at Fleetwood Park until next Spring.

—Four races came off at the West Side Park last Thursday. The first trot, half-mile heats, was won by Julia H., she making the distance in five seconds. The second, a running race, mile heats, brought out five horses, but Dan O'Connell carried off the laurels. Best time 2:44. The next was a pacing and trotting race between Briggs's jockey in harness, and Thompson's Marnie under saddle. The former won two heats in succession. Best time 2:53. The fourth trot was between Rockland Prince and Butcher Boy, but the latter being distanced the first heat finished that contest suddenly, though the time made was only 3:59.

—At the Beacon Park, Boston, Lady Wentworth, Little Red Polly, and Kate, met on the 28th to compete for a purse of \$300. After five heats the former was the victor. Best time 2:43. A race between the geldings John T. Russell and Frank Hall for a purse of \$300 was won by the former. Best time, 2:41. The percentage on pools at Beacon Park during the past season exceeded \$10,000, and at Mystic Park the amount fell below that sum.

—Two trotting races were held at the Hudson River Driving Park. The first was between the American Girl and the racer Copperbottom for a purse of \$2,500. The former was the winner, having gained the second and third heats. Best time 2:53. The second trot for a purse of \$1,000 was between Barney Kelley and Annie Collins. The former won the first two heats, so was victor. Best time 2:34.

—At Deerfoot Park, Thanksgiving day was celebrated by some good trotting. The first contest was for a purse of \$50. There were five starters, but Aleck was the victor. Best time 2:58. This was followed by a running race of a quarter of a mile between the horses Cable and Buffalo Bill. After six heats the race was given to the former. Best time, 29 seconds.

—At Norfolk, Virginia, on the same day a trotting race between Ogden's Lady Patterson and McCall's Orange Blossom, for \$1,000, mile heats, best three in five, was won by Orange Blossom. The best time, 2:37. Lady Patterson beat Orange Blossom in several races previously.

—Judge Fullerton and Occident again tried their speed near San Francisco last Saturday. Fullerton was the favorite before the race but after the first heat his rival loomed up into favor and kept it until the contest was finished. Fullerton did not win a heat, so the victory was carried by Occident in a brief period of time. The heats were run in 2:19, 2:25, and 2:20. Murphy's Black Hawk and Hasset's Jerry tried their speed for a purse of \$200, mile heats, best three in five, catch weights. The former was declared winner on the fourth heat. Best time 2:55.

—We learn that a meeting of representatives of some of the prominent trotting associations was held in New York last

week, and it was decided to hold a "trotting circuit" on the following days:

HURST'S
Stereoscopic Views
OF
Natural History
For Object Teaching in Schools,
AND
PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers
of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign speci-
mens, and various Animals and Birds in grotesque at-
titudes, never before violating their natural instincts.
We offer these views not as pictures only, but as
studies from nature. One of the great moving ele-
ments in our modern system of education is object
teaching. The meeting place of the stereoscopic
transfers the animals and birds from their natural
habitat to the rooms of the student, and the breeze of
our homes, where they can fail to leave a lasting
impression of the form, color, habits, and locality of
each specimen.

An experience of more than twenty-five years as
Taxidermist of the New York State Cabinet of Natural
History, and in gathering his large collection of
native and foreign specimens, enabled Mr. Hurst to
combine in every view the locality of the specimen
with its appropriate rocks, woods or water, and coloring
from the original.

1. Wild Cat, or Bay Lynx..... *Lynx baileyi*.
2. Snowy Owl..... *Nyctalegia nyctalegia*.
3. Great Horned Owl..... *Bubo virginianus*.
4. White Pigeon..... *Columba maculosa*.
5. Northern Partridge..... *Perdix maculosa*.
6. Black Crowned Night Heron..... *Nycticorax nycticorax*.
7. Woodcock..... *Colaptes auratus*.
8. Red Necked Grebe..... *Podiceps rubicollis*.
9. Great Blue Heron..... *Ardea herodias*.
10. American Swan..... *Cygnus americanus*.
11. Red Shouldered Buzzard..... *Buteo lineatus*.
12. American Woodcock..... *Colaptes auratus*.
13. White Fronted Goose..... *Anser albifrons*.
14. Long Eared Owl..... *Otus longicauda*.
15. Horned Grebe..... *Podiceps cornutus*.
16. Horned Grebe..... *Podiceps cornutus*.
17. Golden Eagle..... *Aquila chrysaetos*.
18. Prairie Wolf..... *Canis latrans*.
19. Spotted Sand Lark..... *Tringa macularia*.
20. Marsh Wren..... *Circus cyaneus*.
21. Great Horned Owl..... *Bubo virginianus*.
22. Great Horned Owl..... *Bubo virginianus*.
23. Great Horned Owl..... *Bubo virginianus*.
24. American Deer (Albino)..... *Odocoileus virginianus*.
25. The American Bittern..... *Ardea minor*.
26. Old Wife, or Squaw Duck..... *Fuligula glacialis*.
27. The Wild Turkey..... *Meleagris gallopavo*.
28. The Beaver..... *Castor fiber*.
29. Common American Snake..... *Nolopis virgatus*.
30. The Bull Breasted Shrike..... *Myiarchus cinerascens*.
31. The Canada Goose..... *Anser canadensis*.
32. The New York Emu, *Putorius*, *Norvegicus*.
33. Red Necked Grebe..... *Podiceps rubicollis*.
34. Pinnated Grouse..... *Tetrao canadensis*.
35. The Sand Hill Crane..... *Grus americana*.
36. The American Black Bear..... *Ursus americanus*.
37. Red Tailed Buzzard..... *Buteo borealis*.
38. Butte Head Duck..... *Fuligula americana*.
39. North American Long Eared Owl..... *Otus longicauda*.
40. Virginia Partridge..... *Perdix virginiana*.
41. Common American Gull..... *Larus argentatus*.
42. Grey Fox..... *Pud. virginianus*.
43. Red Head..... *Fuligula erythrophthalma*.
44. Ruffed Grouse..... *Tetrao umbellus*.
45. The Raccoon..... *Procyon lotor*.
46. The Whistler..... *Fuligula ulula*.
47. Brown or Bald Eagle..... *Haliaeetus leucocephalus*.
48. Red Fox..... *Vulpes vulpes*.
49. Wood Duck..... *Colaptes auratus*.
50. American Horn Owl..... *Nyctalegia nyctalegia*.
51. Striped Grouse..... *Perdix maculosa*.
52. Northern Lynx..... *Lynx baileyi*.
53. Black Duck..... *Anas boschas*.
54. Belted Kingfisher..... *Bubo asio*.
55. Little Screech Owl..... *Bubo asio*.

TESTIMONIALS.

CORNNELL UNIVERSITY.
ITHACA, March 14th, 1870.
I must congratulate you upon your great success in
this new educational enterprise. If we can arrange
our amusements so as to make them impart instruc-
tion to the mind, it will be a step in advance in edu-
cation.
EZRA CORNNELL.

WASHINGTON, D. C., March 15th, 1870.
I am much pleased with the success you have met
with in giving to the stuffed specimens a very decided
appearance of life.
I hope you may be able to continue the Series, and
I have no doubt they will furnish interesting means
of information and instruction in the study of the
animals of New York.
SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 16th, 1870.
I have examined carefully the "Stereoscopic Views
of Natural History," and judging by the first ten num-
bers, should say that they will prove of very great
value, both as object lessons for students, and as a most
interesting study for the parlor. The descriptions, the
characteristic position, and color of the specimens, and
the general treatment are most perfect. I cordially
recommend them to the public attention, and trust
you will meet the success which you so justly
have earned.
EDWARD A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE,
SALEM, Mass., March 14th, 1870.
I have shown your Stereoscopic Views to the Direc-
tors of the Academy and the editors of the *American
Naturalist*, Dr. Packard and Mr. Morse.
They have all been in the practice of recommending
the views which you have displayed in surround-
ing the specimens with natural objects and scenery of
characteristic features. They are certainly better fitted,
not only for parlor and draw room illustrations, but
as educational illustrations, or the use of schools and
colleges, than any thing we have yet seen.
A. HAYT.

CORNNELL UNIVERSITY, PRESIDENT'S ROOMS,
ITHACA, March 14th, 1870.
I have received the Stereoscopic Views of objects in
Natural History, and have enjoyed them greatly.
They have surprised all who have seen them. They
wonderful fidelity, both as regards the animals and
their surroundings; and I think they can not fail to be
of great service to the study of Natural History, by
attracting students to it, and next by perfecting
them in it.
ANDREW D. WHITE.

These Stereoscopes are sold wholesale and retail by
FOREST AND STREAM PUBL. CO.,
17 Chatham St., (City Hall Bldg.) P. O. box 1991.

American Wild Fowl Shooting.
BY JOSEPH W. LONG.
Describing the habits, habits, and methods of
shooting wild fowl, with instructions concerning
guns, birds, and decoys; the training of water
retrievers, &c.
This book is written in plain English, and in a most
interesting style. A broad, and at the same time ac-
curate view, is taken of duck shooting in all parts of
the country. The habits and feeding grounds of the
various species of wild fowl, teal, pintail, wood, gadwall,
and coot; red-headed, buff-headed, and other
kinds of ducks, geese, swans, &c., have been carefully
and genevously studied, and given to the reader.
In thirty chapters the author has furnished infor-
mation for the young, as well as for the practical
sportsman.
"A book for sportsmen, by a sportsman."—*Argus*.
Tells where to find game in the morning, in the
afternoon, and in the evening.—*Son*.
"Almost indispensable to the sportsman."—*Arcadian*.
Published by J. B. FORD & CO., 27 Park Place, N.
Y. For sale by all booksellers and the leading gun-
smiths. Price \$2. Sent by mail by the Publishers.

For Merit.

VANITY FAIR.

VIENNA, AUSTRIA, Nov. 30, 1873.
Messrs. Wm. S. Kimball & Co.:

SIR.—A friend of mine sent me, with a transport
of Indian Shells, two packs of "Vanity Fair," which I declare
to be the best Tobacco I ever smoked. We have very good
tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair"
is the King of all, by its aromatic flavor and the right sort of
texture. My friend in New York got an appreciable
quantity, by the way, by the way, I am writing you, begging
you to send me for the enclosed fee, a supply of "Vanity
Fair" and send with the next steamer to Germany, if "Vanity
Fair" is a German firm that sells your excellent "Vanity Fair,"
I beg you to enclose me the address.

DR. JO. HREX.
Professor of Anatomy in the University of Vienna.

It is manufactured from the best
Virginia and North Carolina Leaf.
It is particularly adapted to Meer-
schmum and cigarette smoking—
does not bite or make the tongue
sore—is therefore unlike any other
tobacco in these respects.

HERALDS OF WINTER.

For Forest and Stream.

WINTER'S dread heralds come again,
As southward sinks the pale, sunnorn;
From frowning clouds pours the chill rain,
The latest harvest task is done.
The winds grow keen and hush, and loud,
And whirl on high the rustling leaves;
The proud old forest, chafed and bowed,
The vanished pomp of Summer grieves.

O'er the lone woodland path no more
Flange light and cool the graceful screen,
But dark, and stained, and blistered o'er,
Tendrils and vine, and trunk are seen.
E'en the shy rill, whose Summer song
Was fainter than the pine's low sigh,
Now swollen suddenly and strong,
With stormy voice goes foaming by.

Nor herd nor scattered flock is seen
Dotted the pastures far and wide,
But groning by the high bank's screen,
Or crouching by the forest's side,
With plaintive bleat and loving call
They beg the husbandman prepare
The littered sheds and sheltering stall,
'Gainst the chill sleet and sharp 'ling air.

The wild geese by the North's broad lakes
With prescience keen the warning heed,
And with her well reared young forsakes
Her Summer haunts of whispering reeds;
The monarch's signal note is given,
A thousand throats respond the cry,
And instant up the darkened heavens fly,
Southward the marshalled columns fly.

No birds herald such cheerless time,
Save the hoarse crow, or shrill, pert jay:
Their wings have sought a sunnier clime,
Their blithe, glad song is far away;
The harder few which dare to bide
Winter's dread reign, now venture near
The haunts of men, with humbled pride
And stealthy wing, and mien of fear.

And thus have vanished, one by one,
Along our pathway, bird and flower;
The solemn wood is dead and lone,
And frosts have ravished field and bower;
But shall the stern invader's threat
Cause us to other climes to roam—
His silent seal of ice be set
Upon our piteous Summer home?

No! Though the storm is wild without,
The genial fire within is bright,
And light, young hearts shall crowd about
Our warm and cheerful hearths to-night;
And friendly converse, tale and song,
Which make the charmed sitting late,
Shall bind all hearts and make them strong
To brave or brave each adverse fate.

And deer old books that torpid sleep
On bookcase shelves through Summer hours,
Shall yield new meaning, clear and deep,
And hearts long cold commune with ours;
The great, the good, the shrined of yore,
Crowned monarchs of the realm of thought,
At bidding shall reveal the lore,
With which their matchless minds were fraught.

And mightiest bards, whose words of fire
Blaze on undimmed through countless years,
Shall strike once more the slumbering lyre
From their high thrones amid the spheres.
Such are my friends, although no lords
Of vassals, lands, or storied halls,
They come like guests around my board,
Familiar of my humble walls.

Can Spring, with all its boasted green,
And birds and flowers and murmuring bees,
Or Summer, with its glare and sheen,
Yield to the soul such joys as these?
No! They but lure the eye and ear,
And tempt the restless foot to roam,
While Winter, when her skies are clear,
Sends to the heart a heaven at home.

KEUKA.

November, 1874.

Three Weeks on the Wagneteuwan.

For Forest and Stream.

NUMBER TWO—WOLVES AT NIGHT.

IT was the second week of my stay at the lovely Shesheep Lake. We had troiled its different shallows and deep waters, respectively, from the rocky bluffs of East Island, under which the bass lay in multitudes, seeking the small shrimps along the stony bottom, to the extreme upper end of the lake, where the river flows in amid long lines of pickerel weeds and lily pads; here it is shallow and still, except directly where the channel cuts in, and among the tangled mass and on the border of the deep water, the immense pickerel, that fresh water shark, lies in wait, or prowls up and down his "beat" like the grim sentinel that he is. It required no skill to take those fish. With Jenkins at the paddle and a common spoon roil, I have dragged them up to the canoe by simple main force until wearied with the sport, always taking care to return at once to the water what were not wanted. We had been taking things easy all day, and after our early but hearty supper had been discussed and Ned and I were, as usual after meals, lying under the shanty on our blankets, reducing our stock of "tobac," I felt strongly inclined towards an excursion by moonlight up the lake for a deer. Jack hunting was not new to me, but never having killed a deer by moonlight, I was tempted to try.

"What say you Ned," said I. "Would there be much show to-night along the marsh for a buck; we want meat."

"Yes," drawled he. "We'll keep waiting until to-morrow, I reckon; you'll get no deers when the moon blazes like it will by nine o'clock; you see there's nary cloud, and it was too light last night, you know; we might have had one to-day if we tried a little harder," (a dig at me.)

"Well, I suppose so," replied I, "but we had enough for two or three good cuts left, and won't starve now, I hope, but we saw four or five last night, and—"

"Got nary one," broke in he. "Them deers 'll see quick as you do 'em when we move around, but we can run up to that point and lay in the shade of the big pine and meb-be get a whack at the fellow we seen night before last."

"Why, you don't expect to see the same one, Ned, do you?" exclaimed I. "That deer may be miles off to-night."

"No, sir-ee," said he. "If that buck drinks to-night he'll come in just around the point and come about the same time we seed him then; deers are pretty regular both in time and place, and he'll come there all Summer, unless he's scaart away, and we didn't do that, you recollect."

"That's so, but when shall we go; about nine?" asked I.

"No, I guess we had better paddle in just after sundown and lay there; it'll be dark at half past eight and the moon 'll be out so quick that we'll be seen if we wait; he may go in to wet himself, and we must be ready when he comes."

The sun was near an hour high, and before the time came to start I lay on my blanket, watching the sunset, sweet digestion stealing over me, enjoying my pipe, and drinking in the glorious tranquil scene around. The Summer heat of midday had gradually tempered down to a refreshing coolness, but no air stirring, the clear, beautiful water, as far as could be seen, was still as glass—not a swell or motion, and hardly a perceptible ripple on the pebbles at my feet; the dense foliage of maple and oak, or the darker green of the pine, that seemed to touch the water, were photographed in the depths beneath with an effect almost startling; every shrub on the shore of an island, the cloudless sky above, the occasional bird flying overhead, were all reproduced in the mirror below.

It reminded me of Coleridge's weird story, and I wondered at the strange sight of the Ancient Mariner no longer, for when the clear, fresh Shesheep water, with its beautiful surroundings, seemed to reflect such wonderful sights I could understand how the ban of awful silence for weeks and weeks made his brain grow weak and dizzy when he lingered there alone on the wide, wide sea. Isaac Walton was right when he designated fishing as a

contemplative man's recreation, although I am passionately fond of the sport for its own sake. I follow with equal zest the various trains of thought and imagination that are certain to be aroused when I am following the trout stream or lying idle in my boat on salt water waiting for a nibble. There have been so many fine intellects, who were conversant with Nature before my time, and have left the rich treasures of their lives for me to improve my poor faculties with, that whenever the fitting time arrives I can always feel by recalling their beautiful ideas that other senses than mine have been and are being thrilled by the grand and beautiful, and wherever I may be I am never less alone than when alone.

As I lay there musing, the stars came out one by one, the bird ceased his flight and song, the beautiful reflection in the water died away and Summer twilight stole over lake and hill, deepening the shadows of the forest and bringing quantities of bats from its depths. My castles tumbled as Ned arose to his feet, and stepping down to the beach, lifted the light canoe from its resting place and laid it gently on the water. He never left it in the lake when not in use, even for half an hour. Cautiously stepping to the bow I drew my overcoat closely around me, and kneeling down in my old position, laid my back against the front bar or cross piece, facing ahead, and prepared for the run up the lake. We were soon near the marsh, and as the tall pines stood out clearer as we neared them, caught a glimpse of a fiery red ball between the trunks that told me that the moon was up, and we were none too soon. Silently gliding on through the pads and weeds, we rapidly neared the shore, and in a moment, the checked speed of the canoe signified caution on Ned's part, and well he did his work. Nearer the shore we drew, until only ten feet intervened and we lay under the shadow of an immense pine; then thrusting the blade of his paddle into the mud Ned turned the canoe "bow on" to the bank, and tapped with his finger on the side. Upon my turning around at the signal, he whispered to me as if we were on an Indian scout—

"There's nothing in, but will be soon; when deers come shoot as soon as you can; I'll see whatever you do, so don't wait for me to speak, but keep quiet whatever you see or do."

Minutes passed as we lay there until half an hour slipped by; the moon was lessening the shadow of the pine every minute, and slightly turning my head, I could see that the lake behind was flooded with the cold, white light, and away in the distance shone our camp fire, a flickering red speck in the universal silver; up came the moon until our protective shadow faded away and we, too, were surrounded with light as almost that of day. Kneeling, as both of us were, our heads and body to the lips only showing above the side of the canoe, we looked like some old log, and still had a show of not being detected, provided we kept perfectly still. I had heard two deer plunge into the marsh away off on my right hand, and turning a little, could fancy I distinguished their forms in the water, but it would be almost impossible to steal down upon them with that great caesium light full upon us, so I knelt still and worshipped the beautiful night; the only noise was the faint splash of the deer across the marsh, the nearer plunge of the muskrat and the "boom" of the frogs; the wonderful photographing that I had witnessed but a few hours ago, as the sun was setting, was now being repeated still more impressively by the full July moon, and as the dark forest gradually appeared so distinctly in the water below, the effect was beyond description.

My companion knelt in the stern as if a statue, not a muscle stirring, and as I looked ahead into the woods and across the silent water, it seemed as if I was there alone in the wilderness—alone with that beautiful night. Reclining against the cross piece, with the rifle resting from side to side of the canoe, ready at any grasp, all that was familiarly connected with such a situation came to me then, and as the light streamed down through the gigantic branches of the pines, fair Melrose Abbey was standing there with its grand old relics of the past, and through the gaps of the trunks I could swear that William of Deloraine and the Monk of St. Mary's Aisle were digging there in search of the forbidden book, and involuntarily repeated—

"The Lady of Brankome greets thee by me,
Says that the fated hour is come;
And that to-night I shall wait with thee,
To win the treasure of the tomb."

—Live oak is fast disappearing from our forests, owing to the large quantity exported. The total destruction of this valuable tree should be checked by an act of Congress.

Then I could see them come walking through the oriel that was flooded with moonlight, and was thinking of the awfulness of that moment, when the wizard's grave had been plundered and the soldier was full of terror, so graphically described by Scott, when I heard the faint snapping of wings and slight rustling of leaves, peculiar to the flight of an animal away off on the right hand side of the point and some twenty rods *in* from the lake. Roused from my reverie I listened intently for a continuance of the same, but heard nothing.

"It is the deer," I thought. "He is coming out on the other side of the point, and Jenkins is wrong after all; but why has he stopped, he surely is not frightened at us at such a distance."

Hearing nothing more, I concluded that a muskrat had wandered in and was the cause, when I was surprised to hear the twigs crack again, and instantly followed by three or four low "snuffs."

"Thoroughly aroused and certain that Ned was listening also, I silently lifted the rifle into the hollow of my right arm, for I shot from the left shoulder, and strained my eyes to see what was in the brush. I was puzzled at the caution of the deer, for I had heard no "whistle," and knew he was not alarmed; but why was he so slow, and what were those "snuffs?"

When all of a person's faculties are thus aroused, seconds become minutes, and I listened with "thumping" heart, but could hear or see nothing. Silently lowering the gun, as my elbow touched the side of the canoe, I felt the lightest tap of Ned's finger, and I knew that my hand was "labeled" to see what it meant. There he knelt, grasping the handle of his paddle, body as rigid as the wood itself, and eyes steadily fixed upon an object on the left hand side of the point, where I had not looked for half an hour. Not a motion from him, but knowing he saw game, I carefully and slowly turned again and following the direction of his look, saw, to my great surprise, that a deer had come into the water, and was drinking, but at any rate was now curiously regarding our boat. The light shone full upon his beautiful form and I could distinctly see the antlers, yet in the velvet, that instantly convinced me that he was the buck of the night before. Knowing that he would jump at any sudden movement, I gradually drew the rifle to my right shoulder, and when five seconds more would have let me send the bullet into the side of his head, I felt the canoe suddenly slide around, utterly disconcerting my aim, and instantly the shout of Jenkins startling the air "shoot that wolf!" sent a chill all over me, and does yet when I think of that scene. As the canoe turned to the right I caught a glimpse of a large brownish object on the extreme edge of the shore, and as I was turned toward the deer, hardly ten feet from my back. Dropping the gun to my right side, I pulled without sighting, and with the report felt the canoe spring out into the deep water, under the strong hand of Ned.

Confused, as I was, and for a moment realizing nothing, I pushed in a cartridge and looked to where I had shot. There was a long "snarl" followed instantly by a rattling of teeth, such as I had never heard before, and then a confused rush and tramping of feet, and stillness, except the distant "whistling" of the deer, which soon was silent, also. I stopped, when about twenty rods from shore and I turned to Jenkins.

"My God!" said he in a surprised tone. "That was the strangest thing I ever seen; I heard 'em come up, but never calculated they'd come so close to you; he may have only been curious, but, I swear, he looked wicked."

"That was a wolf, Ned, wasn't it?" said I. "I thought I heard the brush stirred up before you tapped, but thought it was the deer."

"Wolf! yes, and several of them," answered he. "Look here?" pointing to the pines. "You see where we lay? well, I heard the brush creak where we had been still not twenty minutes, and heard it on the right of the pine, too. I knew it wasn't deer, because I heard no tread, and it came nearer so slow. I supposed you were watching, and could see better than me, as you were nearer the bushes going back or right to the side, when I heard the buck come to the left, and waited for him to get to drinking; he got in the water mighty still, I will say, and I suppose you were looking toward that way, was why you never seen or heard him."

"Yes, I never thought of the other side after I first heard the noise to the right," said I. "Why didn't you let me know sooner?"

"Because I was afraid of starting him, we were so in the light," replied Ned. "I calculated you'd look there before he went out, but I see him stop and look, and then tapped and you turned the wrong way. I never dared take my eyes off him until I saw you shifting your gun, and while you was a doing that I seen that wolf come out and stop at the water between us, so I couldn't see him plain. I turned the boat so as you'd be further off if he jumped, and told him 'shoot!' to scare him, and tell you that he was awful close, and in three seconds more he'd been in the boat, if he was coming at all, and if he onct got to us, the rest'd come after mighty quick."

"But was he coming, Ned?" asked I. "It might have killed the deer in five seconds more."

"I wouldn't risk it," said he, shaking his head. "If he'd jumped, I'd have said like a bird and upset the canoe, but we'd had no chance in the water; the wolves take hold like a trap, and if he had bit you onct, it would have had you up, and mebbe cut your throat, for they grab there. I never saw them that bold in Summer before, but I guess they come after the buck and never see us until all of a sudden, by the way he acted; but how he barked when you shot!"

"Never mind his bark," answered I. "I don't want to see where the hell went, but would rather get to our island. I wouldn't come on the mainland to-night for fifty dollars; hang me if I ain't trembling all over."

"Well, well," said Ned, sweeping his paddle through the water, "I was skeart myself at first, but I don't mind these things when I can see the trouble in front, but you were between me and the wolf, and you know I left my gun in camp, but it's over now, so we won't worry, but I ain't the buck 'whistle' when I heard the gun! if you like I'll tell you what happened up here this Spring with a man that lives below me."

"Well, suppose you wait until we reach camp," answered I. "Then you can scare me as much as you please, but not here, thank you."

What that story was, I cannot tell at present, for want of room, but I would not wonder if when we arrived at our cheerful camp we were *comfortable*. I listened eagerly to him about the scrape they were in with the wolves, and

now, as I sit in my snug room, miles away from Shesheep Lake, recalling that eventful night, I can close my eyes and fancy that I am again off the point watching with Ned, that I can see the deer and hear his warning shout as the boat swings around, and although inclined to laugh at my fear, I can hardly repress a thrill of recollection at what I believe now to have been a near proximity to a fearful struggle, if not death itself.

For Forest and Stream.
IOWA SHOOTING—1874.

THE writer thinks, perhaps, a few observations upon the late shooting season in Iowa, and some incidental remarks, may not be unprofitable to your general readers. We had a most favorable Spring during the breeding time of pinnated grouse, ruffed grouse, and quail, and the lovers of sport anticipated unwonted pleasure. The rains did not drown out their nests or interfere with their young. The 15th of August, eagerly expected by many, commenced the attack upon the prairie chicken. [The writer prescribes calling it by this name, as most of our Western sportsmen do, and not by the name of pinnated grouse.] Now while he enjoys most delectably the sport among them, he does not believe in the vanity of shooting simply for count or boasting of slaughter. He therefore declines the labor of an immense bag, and the gratification, if such it be, of beating any competitor for extermination. He believes in using, not wasting, every bird secured by well directed shot, over a faithful, trained dog, and no wanton slaughter for senseless pride of big numbers. If all our good and true sportsmen would unite in condemning the practice of shooting, not for legitimate sport, but for the empty glory of boast, birds would have a better chance, and hunters proper exercise and healthful pleasure. But this is probably digression. We have had fair grouse shooting, even though the time for the fun flew quickly away.

The writer has been shooting some in different parts of the State, finding the best locality towards its northern line. On the 15th of August himself and Charley, taking the Davenport and St. Paul Railroad, started for the terminus of the road, 124 miles distant, to Fayette, in Fayette county. Reaching this point near sundown, there was no time except for a little amusement with the rod and fly among the banks of the Little Sioux, and at any rate, in the dusk, we returned to our hotel, and retiring early to rest, were soon lulled to sleep by the music of a neighboring mill dam and the plaintive notes of the whippoorwill. We had a right royal breakfast upon our bass before the peep of day, when with horses and machine we started for Wilson's Grove, some ten miles due west. For four or five miles our way was timbered along the Volga, when we reached the open prairie and entered westward. We had with us two yearling setters, of good stock, pretty well house-broken, but strangers to game. Our primary purpose was hunting, not birds, but lands that belonged to the subscriber; but having flushed eight flocks of chickens along the road, we killed seventeen, and returned in time to renew a different sport on the Volga. Before the sun reached the horizon we were casting flies on the stream in the presence of a large number of anglers from the village, who looked down from the bridge in laughing mood and remarked upon our attempt to hook bass with such bait. But when a three pounder struck, leaping wildly from the water, and the shout went up, "there, he's got one!" they were silent and respectful. You know science, right or wrong, scientific or otherwise, always commands respect. A few more were taken, and we adjourned, for the shades of twilight were closing slowly over the western horizon.

Early in the morning we returned southward to the next station—Brush Creek—where, from all accounts and reports, we expected glorious sport among the pinnated grouse. But we were disappointed sadly, as the sequel will show. With a good team, and fair two seated hunting wagon, we struck westward some seven miles on the prairie, passed most of the cultivated farms, and reached the open, skirting prairie, where an isolated twenty to one hundred acre wheat stubble looked the very home of the bird we sought. The day being oppressively hot, we waited patiently the evening shooting, stopping at George Hazen's, who is a fair shot and lover of the sport. George is the owner of 100 acres of rich prairie land, a fine farm, with handsome improvements, and a very comfortable residence.

At about four o'clock in the afternoon George called his dog, as pure and pretty a young pointer as can be seen, and took a seat in our wagon with his muzzle loader. We crossed the meadow and reached the stubble, when the dogs began winding, and then tracking birds. Charley, in his eighteenth year, more eager for the sport than his seniors, leaped from the wagon and got two beautiful shots, bringing down a bird. Charley pulled first the bird fell, and George dropped his gun and struck for the bird, saying "I'm shot; I'm killed." Thumping up to him quickly, and seeing blood on his face, the writer asked if his eyes were injured, and upon receiving a reply in the negative, assured him that he was not wounded seriously, and began reproving the boy for carelessness. Immediately George, taking his part, said it was an accident; that he was looking for a quail, and that he was looking for a quail. But not another shot was fired, though numbers of birds were stood, flushed, and some started from the grass by our returning wagon. Giving George a good drink of generous stimulant, to relieve him from a nervous shock, and upon washing him and examining his condition, we concluded to return to town for surgical advice. Arriving in town, found, as anticipated and asserted, that the boy was looking for a quail. This was in accordance with repeated assurance on the way; it required, however, several good drinks to inspire any confidence in the assurance. Leaving him in the care of a physician, with the promise of return in a week with a bottle of the best, we started homeward. Our hunt was a failure by reason of the accident, or, if you please, carelessness, of a young sportsman who could not shoot a man beyond a bird.

A week subsequent, the writer and Charley returning, found George convalescent, but with near one hundred pel-

lets of No. 8 shot in his person. It was beyond question a double shot, bird and man; the pellets were penetrating, for they were discharged from a Parker breech loader, loaded with four drachms powder and one ounce shot, though the gun was not much for finish, metal, or style of workmanship.

But, as the well that ends well." George, baring his carrying weight, was recovering, and again we called upon him with the joyful, and had a pleasant, successful hunt, killing thirty-four chickens in an evening's tramp. Charley killed fourteen, failing to lower his bird but twice. George and myself were mostly lookers on from the wagon. We admired, took a drink, and felt safe from youthful indiscretion. Returning to Davenport we had a fair bag, and I have now in my kennel the pretty pointer recently belonging to George.

If not out of place, let me give you a shooting excursion in Iowa of other days. Some years ago, late in September, the writer and his brother were hunting fourteen miles south of Iowa City, on the river. With a true and splendid prairie dog—a pointer and retriever—we had hunted late in the afternoon until evening without success; but just as the sun was sinking beneath the western horizon we put up a large pack of from one to two hundred chickens, which rose and settled more than a mile distant in the tall, rank prairie grass. We could in the distance faintly discern their lighting place.

Said the writer, "Let's follow them."

"Agreed," was the reply, and away we started, quick step. Moore reached half the camp, up rose the yellow moon—full, round, and as beautiful as ever moon rose on prairie land or ocean. The twilight here lingers long and lovely—later, by far, than where the mountains rise to cloud the departing sun. We drew on the birds, and our dog Grouse came to a stand. His figure was rigid and splendid in the moonlight. Now, as we approached, was snarl, low tones, "Shoot right and left, and empty both barrels." In a moment more many of the birds were flushed, and four barrels were emptied. With Grouse we retrieved four dead birds, when one of the party was confident that he had killed two with his second barrel. We soon discovered and secured the fifth bird, and starting another, killed it, Grouse giving tongue at the same moment.

"Oh, John, you've shot my dog," exclaimed my companion.

"No reply was made," I killed my bird. Examining his dog with a light and finding blood on his haunches, he observed that my gun shot with terrible force—it was one of Wm. Greener's best. After we had petted the dog, and satisfied him, apparently, that it was all a mistake in the dark—for he was almost invisible below the line of horizon—he again swept out, and were soon on a stand.

To make a long story short, we returned between eight and nine o'clock to the house where we put up, with fourteen birds, all killed by moonlight in thirteen shots. This story looks a little extravagant, but it is nevertheless as true as gospel. The bird makes a distinct, black mark on the high background, whether moonlight or twilight, and if flushed near, as is most likely in every instance, becomes pretty sure to the gun that covers it.

In the early part of the season, in August, the bird has white meat; later it assumes the dark color of its parent. Some are inclined to think the flesh changes color by change of food; but the writer is satisfied that the change is after moulting and attaining full growth.

In a recent number of your paper, under date of 12th of October, 1874, a correspondent writes that the season for grouse shooting is about closing, as the birds are getting old, and beginning to moult. This observation and experience have satisfied me that they pack much earlier, soon after they become full grown and feathered. This period is dependent upon time of hatching and locality. During the late season the writer found them in pucks as early as the close of August, and driving them from the stubble to high prairie grass, had fine sport in thinning the brush. In the South some come earlier, and in the North later, which most probably makes a difference in their packing time. The time for finding them in flocks is very brief, and in hot, oppressive weather, when man and dog soon tire, and the bird when killed spoils quickly. By the middle of September, at the latest, they are generally well packed.

Thus far, I have run my pen on chickens. Permit me, now, to conclude, by saying my remarks to ruffed grouse. The shooting of this bird West will not pay, unless it be in the heavily timbered districts of Indiana. In the wooded bluffs which usually skirt our streams they are found, but not in such abundance as the writer has found them among the Alleghenies of Pennsylvania. There he remembers killing eight in a few hours near Lock Haven. Here he has not bagged more than a few birds in a day, and loves the deep, dark wilderness, with tangled thickets and gloomy ravines, with decaying logs. Our country is not much suited to its tastes, but we have a few specimens to fill the bill.

Quail shooting has not been remarkable, notwithstanding propitious breeding and favorable circumstances. Years ago quail were superabundant along the western shore of the Mississippi. When Jack Frost made his appearance in October, it was generally thought quail commenced running, and gathered along the water courses. In olden times they did gather by thousands on the banks of our river, and often many attempting flight across struck the water before reaching shore, and perhaps became a tasty bite for Mississippi cat fish of one hundred pounds. The running was ceaseless, and we ranging the banks in tens of countless numbers. My theory is that they came into the timber along the water from the open prairie for protection from our fearful Winters, and that they have now changed the programme because the prairies are now cultivated, and clustered with groves. They have food and protection from the darting hawk instead of the bleak, cheerless sea of prairie land. The writer has killed this to forty quail in a day, and we ranging the bluffs and his largest bag has not exceeded twenty-five in Iowa, and then the quail of the West is not the bird of the East. Touching quail West, I can almost say *quantum sufficit*. But there is one relief—the rabbit, or cotton tail, as my friend Brooks, of Philadelphia, calls him—jumps more frequently, an occasional flock of wild geese pass over the corn fields, pinnated, or ruffed grouse, is now and then seen, and the scene is so diversified.

When I commenced shooting quail West I was struck with their diminutive size and light weight. It is the opinion of some that there are two species—the larger, whose habitat is the Eastern and Middle States, and the smaller the Southern and Western Bird. Possibly the climate may

have much to do with the size and development of the birds, for beyond question there is a striking difference in them. But this is becoming a long winded article, and, for fear you might repudiate, it is most respectfully closed.

Davenport, Iowa, December, 1874. J. H. B.

BUCK FEVER.

WE had just pitched our camp, Tom, Hank, Ed., and I, on a headland running into Little Tupper Lake, which lies in that section of the Adirondacks between the Racquette Lake and the Cold River mountains. We had not seen a deer yet, and many were the boasts and bets as to who would shoot the first. Our guides had told us that all novices upon seeing their first deer had what is known as the "buck fever." They described it as a feeling of great "zonzeness." In fact, a becoming so debilitated as not to be able to hold a gun. Of course I had no fear.

Our morning Tom set all our hearts jumping by saying, "Well boys, we have got to shoot a big buck to-night, or starve, one or 't'other." All was commotion in camp, getting ready, cleaning guns, preparing cartridges, and fixing "bucks," a jack, by the way, being a small box, made of birch bark, with one side open, and containing two candles. This is placed in the bow of the canoe. On hearing a deer feeding in the lily pads, the candles are quickly lighted, and the animal, fascinated or bewildered by the glare, stands immovable. The least noise and he is gone like a flash. How we prayed for a dark night, and that it would not rain or blow. At last it came. The darkness settled down upon us thick and close. Not a leaf stirred, everything seemed asleep; even the frogs had stopped croaking as if to listen. But despite the seeming sleep of all things, we knew that out there in the night were many red deer, that, with uplifted heads were scenting the evening air, and whose sharp ears were strained for the slightest sound. In a whisper Tom says, "Are you ready boys?" (Our watches indicated ten o'clock.) "Yes," is the answer, and we go softly to our canoes and are soon being paddled swiftly across the lake. We take Smith's Inlet, and Hank and Ed., Rock Pond. Wedging myself in the narrow bow of the canoe, we say "good luck," and soon are lost to each other's sight in the thick gloom. The lake is soon crossed and we reach the inlet. The fog, and whispering wind, we hear from Tom, "Good luck, my brech loader, and set my teeth to stop the beating of my heart, for the least noise now, (if the deer has ever been shot at before) the dropping of gun or paddle, would banish all hope of getting a shot at him. The inlet is three miles long and ten yards wide, with pads nearly filling the whole stream. Through this we must go silently as the flight of a bird. Straining our eyes through the fog, and with our senses alert, we creep like some huge serpent, a shake of the boat by Tom warns me to listen. Splash! splash! splash! and then all is still. With trembling hands the candles are lighted and turned toward the sound. The trunks of the trees and the bushes look like spectres, with the fog settling around them like thin mantles. Many shapes, weird and grotesque, pass through the avenue of light. But regardless of all these, my eyes have become accustomed to the light, and are riveted on a deer, standing, looking blindly at us, and with the sight *I am struck with the palsy!* "To-m," I gasped, "shall I aim at his heart?" "Yes," whispered Tom. Then a long silence. "Why don't you shoot?" "I am going to," I said. Then another long interval of silence. "Tom," I queried, "there is something the matter with the lock; I can't put the trigger." "Don't get excited," he whispered, "and don't point my gun and try to pull the trigger. The muzzle points alternately at the top or bottom of the bushes, but for my life it won't go near the deer. "Shoot," hissed Tom. I make a desperate pull, and the gun goes off. Wonders upon wonders! the deer had never moved! There he stood, still as a statue.

"Another cartridge," says Tom, "and fire lower."

Once more I aim and away he goes. *Mirabile dictu!* there he stands, as if all of a cold clammy sweat, and my heart nearly pushes me out of the boat.

"Tom," I gasped, "is he dead?" "Load again and shoot low," is all the answer I get. What can be the matter with the gun? I can't find the hole to put the cartridge in. Once again I aim—bang! The bullet strikes the water two feet in front of the deer and splashes it all over him. With a snort like a wild horse, and a bound, like a rocket, he is gone.

Holding on to the sides of the boat to steady myself (for I felt cold, and the boat never was so cranky before) I said: "T-Tom, what a made that deer stand still so long?" He is a young one, and has never been shot at before, and was stupefied by the light," is the answer of Tom. "I was as cool as could be, wasn't I?"

"Yes."

"Yes."

"Yes."

"Well," I answered, "I am glad to hear it, for if I did miss him so many times, I had much rather have that told than to have it said that I was a fool." Picking up my gun with a steady hand, I aim at different objects, and the while feeling confident of not missing the next shot. Tom said we couldn't see or hear a deer in a mile yet, if we did at all. So I calm myself and enjoy the wilderness and solitude. More than a mile have we gone and no sound save

"The water: leap and gush.
O'er channelled rock and broken bosh."

when soap! my heart bumps as if trying to get out. And bark! splash! splash! splash! just to our right, and not more than six or eight rods off. Back glides the boat, and the prow is turned toward the noise. "Quick!" says Tom, "he's a big one," and the light flashes out to the shore. Near him is a steady hand, and a bound, like a rocket, he is thrown up and eyes like two burning coals, stood a buck, (seven years old, Tom said) the glittering of his tawny hide in the bright light, the sombre woods behind, the shining water in front, and all shut in by deep darkness. One awakening from a dream and seeing the picture, might have fancied the noble animal to have been chosen by the great god Pan, from out of the wild woods, to be monarch, and now he now being crowned by all different objects, in a second.

"Aim low," said Tom (and his voice trembled) and again I am pained!

"Shoot for—sake, right between the shoulders."

"Yes," came to my lips, but it never left them.

Clutching my gun, and aiming just where Tom told me to, at one of the bucks—for somehow I saw three or four now—the gun went off with a roar like a young cannon.

Then with all my inner man struggling to get out, I dropped the weapon, and seizing my knife, I yelled to Tom to put me ashore. "Bargain near it, I made a wild leap, and landed in three feet of mud and a foot of water. Through this I wallowed for the bushes. I had a presentiment I should find the buck somewhere.

"Quick, quick, Tom," I shouted, he will get away."

"I guess he will," said Tom; and then stopping and looking at him out of one eye (for the other was full of mud) I saw him, by the light of the jack, cutting out a quid of tobacco from a velvet bag near it.

"Tom," I roared, "this is awful—it's dreadful! That deer may be seeking some place to die in, and may be suffering. I should not be a bit surprised if he was crawling through the bushes this very minute, trying to get away from us."

"I should not wonder," said Tom—and he said or did nothing more.

Then it struck me that possibly I had missed again, and with the conviction came, silence. Not a word did I answer Tom's quiet encouragement, "You'll hit him next time!" Silently I was borne home, silently I crept under my little blanket, and pulled it over my head. But I had this consolation, that outwitted all my disappointment; if I did not shoot a deer, I had hit the "buck fever," for Tom said so.

DE. L. McGEE.

RICE LAKE.

FOR a long time we had heard from Indians and trappers that, back in the wilderness, a few miles from the iron pathway, that traverses this country, was a vast lake in which green wild rice grew, and to which the Fall ducks and snipe resorted in vast numbers to feed. Putting our light boat and Carlo, the prince of retrievers, and a curly-headed veteran on the train, we moved away, and in an hour were landed at Pillager Station on the Northern Pacific Railroad.

A team and driver that were to meet us here, were not on hand, so this necessitated a four-mile walk in quest of the aforesaid driver, who was found enjoying himself in his comfortable farm house on the banks of the most beautiful stream in the State—the Crow-Wing. True Moore's, for that is his name, was never known to let any one leave his house hungry, and as the sharp walk had given us good appetites, we needed no second invitation to dinner, to which we did full justice. This over, a spanking team hitched to an express wagon was driven to the door, so we got in while True turned his pack of dogs loose, and soon were off over the prairie about the grain the team struck that ran away with "Little Breaches." Finally the wild driver checked his team, and bringing them to a sober trot, drove quietly along till we reached Pillager again, where we carefully loaded our boat, tent, baggage, &c., in the wagon, and were off for Rice Lake.

As we walked along, the dogs racing about here and there, we were advised to look out for game, and soon the yell of Phil, a handsome specimen of a wood spaniel, put us on the alert as he dashed into a poplar thicket. A moment and we found ourselves right among a pack of ruffed grouse that kept every gun in the party busy for a few moments. Picking up eight of these handsome birds we moved along, and found another small flock a half mile further on, and with them two of those elegant, but stupid birds, called the Canada, or spruce grouse. These grouse will stay still on a tree, and almost allow one to take them by hand. Moore assured us that he had seen an Indian catch them on trees with a horse-hair noose, fixed to a small pole. We opened one of them and found its crop full of pine needles. Four miles over and we stopped at the outlet of the lake. A lumber shanty that stood on the bank of the stream was soon cleaned out, a fire started, the horses attended to, and after a hot lunch the boat was launched and started up the outlet, two of us on the bank and two in the boat.

A half mile of paddling and we entered the lake, or rather rice field, for we could not see any water save the narrow stream we were pushing our boat in. At the first report of the gun, (fired at a stray mallard which got up in a hurry and came down again in like fashion,) the mallards and teal arose with a noise like thunder all around us, and all over the rice fields as far as we could see, and for two miles, as fast as we could keep the breech loaders going, we had rare sport, while our friends on shore kept up a fusillade, and assisted by their dogs, made a good bag. Carried away by the excitement, we did not notice where we were going, so when it grew dark found that we were unable to find our way out of the rice; and to add to our trouble, the breech loaders had failed, and gave us the direction, so driving the paddle into the rice, with a vengeance we pushed and dragged the boat through and over the tangled masses of rice stalks, vainly seeking for the outlet or some familiar headland, until we began to think we should have to spend the night afloat.

"It is very tedious," as the veteran sportsman in the bow observed as he turned around and wiped the rain drops from his grizzled forehead, gazing around to see if he could discover the location of the outlet.

The rain came thicker and faster, the black clouds were gathering overhead, the rice field seemed to grow denser and denser, and our tired muscles almost refused to do their duty, when the welcome report of a gun, in the willows on shore, fired by one of our party, who, alarmed at our long absence, had started to go, gave us the direction, so driving the paddle into the rice, with a vengeance we pushed and dragged the boat through and over the rice, and, finally, wet through and dripping with perspiration, we struck the outlet and floated down to camp, glad enough to see the bright fire and rude shelter again.

Cleaning his breech loader by the fire was a new comer, a duck shooter and an old acquaintance, who, belated in the woods, had seen the stars, gazing around for him. He was a swabby old fisherman, dressed in "old country" sporting suit, a man of means and education, one who had wisely left the circumscribed limits of his boyhood's home, to seek for himself and family a home in Minnesota, where he can have all the land he wants and all the sport he has time to attend to.

The evening was spent in camp drying our clothes, cleaning guns and getting ready for the morning. The old fisherman, who was a swabby old fisherman, dressed in "old country" sporting suit, a man of means and education, one who had wisely left the circumscribed limits of his boyhood's home, to seek for himself and family a home in Minnesota, where he can have all the land he wants and all the sport he has time to attend to.

wagon long miles behind, were not in sight. He told us also of a huge moose stopping his team on the Leech Lake road, and playing about the affrighted horses like a cat till he had to get out of his wagon and drive the ungainly animal off with his whip. So passed the pleasant hours away as hours in camp usually pass, and we each sought our blankets and dreamed of the sport at daylight in the morning.

The fog was just rising from the swampy rice field when we were all again astir; the ducks were in swarms, and the ringing echoes of the fast shooting guns sounded far and wide through the dim woods. Rapid was the shooting, plenty were the ducks and heavy was the bag we made. May we be there again some pleasant morning with the same good fellows, is the heartfelt wish of

HAYTHAED.

AN IDLE IDYL.

VIEWING the long line of flat beach lapped by the ocean grim, with the constant liability of tangible terra firma to be submerged by the vast preponderance of fluid, one cannot but be impressed with the precariousness of mundane probation. It is covered with the ever changing, the ever shifting hills of sand that dot these arid salt flats. There is something almost supernatural in the wild surging of the breakers; and in the commotion of the white-caps afar out, now foaming and madly careering, and then gradually lulling into gentle placid whisperings. There is continuity with a vengeance, and without parallel.

Slitting here in the middle of Autumnal sunshine, the little sailboats peer forth from their myriad perforations in the earth, purblind, bald, and unaware of constituting a link in the great Darwinian chain. Snipe scurry along the beach and rapaciously snap up and gobble the molecules and all unconscious mollusks. Fish hawks emerge from the briny deep with "bunkers" in their cruel claws. The thatched roof of a wrecker's hut juts above a sugar loaf knoll. It is covered with sea shells and the door is propped up with a whale's jaw. Around the Point, toward the Bay, two huge reels for drying seines loom up like spectres, and a man winding inside of one, looks in the grey twilight like a restless spider.

One day the remorseless waves washed ashore the body of a sailor, a fair youth. On his right arm was tattooed the name of "Jacob West." A simple cross marked the spot where he was laid to rest, and his cross was "Resurrection." As if the name of Dogberry, this sobriquet was given him in a Pickwickian spirit, come to drive me home in the water cart. This worthy of five decades avers that he has been "once to meeting and twice to mill," and is in all respects an anomalous character. He "tinklers" around the place. He states, as the emaciated equine ambles leisurely along, that when he is "to him" he wears better raiment, that he is the best of his race, and has "nigh twelve hundred dollars in bonds and a purty mortgage." He affects polities, having served in the capacity of town constable. Though much given to practical jokes and dismal facetie, he yet has a heart for any fate. After his daily toil he explains the "Miracle of the Loaves and Fishes" to the uncounted sea-farers, and he loves to dwell upon the "beatific Parable of the Lily." He is a most interesting and interesting of his first wife. Said he proudly, "I planted Marier paid forty dollars for a unofany coffin with steel tacks. Poor Marier! she is better off, for she certainly was terrible pernicuity."

Dogberry came to grief at last. He looked upon N. E. rum when it was "rosy," and betook himself to Uncle Zebedee Folsom's oyster acre and pouldred, otherwise dredged up, some succulent bivalves, was apprehended and fined. As if this shadow fell upon him, his rascious pranks were heard no more, and presently he slunk away to his native heath, quite extinguished.

There is a grateful live and let live air about the household environs. Two rabbits burrow in amity in a snug hutch under the wide piazza, and a jowled ape, suspended from a friendly cave, by his "anecdote," grins and demonstrates, the while munching lazily, the apple he has procured. In the forenoon an ebony cat and shepherd dog bark upon the wharf, alternating in the care of seven new little shepherds. Drift wood from wintry wrecks forms the kitchen steps, and against them wallow several plump, pink pigs, accompanied by their ample maternal, rooting complacently, as if the days of her tiny offspring were not numbered. Happily so is ignorant of a Christmas dinner of his pig-skip embarked in the summer's glory and hisling of his helpless infants, is now and again incarcerated in a chicken coop, in order to pre-serve intact from its ruthless teeth unnumbered pieces of wearing apparel. He considers a soggy beaver, or rusty boot a tantalizing tid-bit. Then the cows answer to their names and submit, with cheerful alacrity to the lactical dispensation, after browsing the student of their patient eyes that expresses a wish for pastures new! or possibly a vegetarian paradise. Oh! the ineffable sumptuousness of a back log fire on a chilly afternoon! The resinous block, sawed from the hull of an ill-fated ship, crackles tunelessly; disclosing no horrors of death and hissing billows, and conjuring up no visions of beleaguered craft. Large green bolts that hold the staunch leaguers together, glow and seethe in the white embers. The cat purrs on the holder by the jamb, and the hand-irons glitter, vying with the polished "reflector" in which is browning a wheaten loaf. A chicken cooking on a spit is basted with drawn butter, and with the addition of roast potatoes, who shall say that this is not a royal repast?

Now the dogged weather-beaten sea dogs circle near the bluff and "draw the long bow." The "youngsters" roost clank in the ashes, and with protruding eyes and mouth agape listen to the terrors of the main. Dare we penetrate to the garret, where are stowed away rimey nautical apparences. A suggestion of spearpoint and pennyrail pervades it, and festoons of shrunken popples and beards of sea-birds, and the rimey veterans garnish the time-stained walls. There are veteran rifles, decrepit shot guns and unwieldy fowling pieces. There are trophies of gunning excursions hung upon the door, wings of plover, grey gull and yellow hammer, and claws and sharp nails of the kingfisher. From my window may be seen lumber, ice and oyster barges listlessly gliding by, and schools of pletoric porpoises floating with the tide. Happening to awaken at night, one hears the sea lions shoot our wake with the noise, while the light house lantern glows and beacons in the blackness.

Fire Island, Nov. 1874.

Fish Culture.

This Journal is the Official Organ of the Fish Culturists' Association.

PROF. BAIRD'S REPORT.

ONE of the most interesting and important works issued from the Government printing presses in many a day, is the report of Prof. Baird, the United States Commissioner of Fisheries, a hand-book that cannot be excelled either in its thoroughness, or the manner in which the facts are presented. The work is divided into two general departments, the first being an "Inquiry into the decrease of food fishes," and the second into "The propagation of food fishes in the waters of the United States." The first part opens with an inquiry into the motives that led the Government to appoint commissioners to make a report on the fisheries and the cause for their decrease, and the result of their investigations. Of the corresponding researches of other nations he says:—

"A few years previous to the movement on the part of the United States in the establishment of a commission for the investigation of the fish and fisheries of its coast, the *Fischerei-Verein*, an association composed of several eminent naturalists, physicists, and statisticians of Germany, warmly urged upon its government the importance of prosecuting similar researches, recognizing equally with the United States that the only way of securing definite and practical results in the ways of protecting and improving the fisheries was to initiate a series of thorough inquiries into the general physical and natural history of the seas.

A commission was accordingly appointed by the German government to report upon the best method of securing the desired object. A report of what was needed was presented by the commission, which invited careful inquiry into the following points: first, the depth and character of the water, the peculiarities of the bottom, the percentage of salt and gain in the water, and the nature of its currents and temperatures; secondly, a minutely-detailed determination of the animals and plants found in the sea; and, thirdly, the distribution, mode of nourishment, propagation, and migration of the useful fishes, shells, crustaceans, &c. While this programme embraced the primary physical conditions of organic life in the sea, and their variations, the final object, of course, was a practical one, namely, the determination of the facts embraced under the third head. As, however, very little was known in reference to the natural laws of distribution, &c., of the useful animals, it became necessary to investigate them from a scientific point of view; so that the primary inquiries were strictly scientific, the deductions therefrom leading to the practical end.

The initiation of the Franco-German war interfered very materially with this programme, and it was not until 1871, and nearly at the same time with the American investigations, that operations were actually commenced. The commission consisted of Dr. H. A. Meyer, Dr. K. Möbius, Dr. G. Karsten, and Dr. V. Hansen, each gentleman having charge of some special branch, and all co-operating toward the common result. Fixed stations were established at various points for the purpose of observing the variations of atmospheric conditions, the daily changes of temperature of the water, and the occurrence of special phenomena of animal and vegetable life; and for several months in the year the commission, with its assistants, was engaged in researches at sea, prosecuted upon the government steamer *Pomorieania*, placed at its disposal, under Captain Hoffmann. Upon this work the commission has been engaged for three successive seasons, and has just published a report of its operations during the year 1871."

Of the cod fisheries of New England he says:—

"At all the various fisheries formerly prosecuted directly off the coast of New England, North of Cape Cod, the depreciation in that of the cod appears to be of the greatest economical importance. Formerly the waters abounded in this fish to such an extent that a large supply could be taken throughout almost the entire year along the banks, especially in the vicinity of the mouths of the larger rivers. At that time the tidal streams were almost choked up with the alewives, and the salmon that were stored for entrance in the Spring, and which filled the adjacent waters throughout a great part of the year.

As is well known, the erection of impassable dams across the streams, by preventing the ascent of the species just mentioned to their spawning grounds, produced a very great diminution, and almost the extermination, of their numbers; so that whereas in former years a large trade could be carried on during the proper season, now nothing would be gained by the effort.

Of late the attention of the legislatures of the New England States has been called to this fact, and to the importance of restoring their fisheries, and a great deal has been already accomplished toward that end. Unfortunately, however, the lumbering interest in Maine, and the manufacturing in New Hampshire and Massachusetts, are so powerful as to render it extremely difficult to carry out any measures which in any way interfere with their conveniences or profits; and notwithstanding the passage of laws requiring the construction of fish-ways through the dams, these have either been neglected altogether, or are of such a character as not to answer their purpose. The reform, therefore, however imperatively required, has been very slow in its progress, and many years will probably elapse before efficient measures will be taken to remedy the evils referred to.

It would, therefore, appear that while the river-fisheries have been depreciated or destroyed by means of dams or by exhaustive fishing, the cod fish have disappeared in equal ratio. This is not, however, for the same reason, as they are taken only with the line, at a rate more than compensated by the natural fecundity of the fish. I am well satisfied, however, that there is a relation of cause and effect between the present and past condition of the two series of fish; and in this I am supported by the opinion of Capt. U. S. Treat, of Eastport, by whom, indeed the idea was first suggested to me. Captain Treat is a successful fisherman, and dealer in fish on a very large scale, and at the same time a gentleman of very great intelligence and knowledge of the many details connected with the natural history of our coast fishes, in this respect worthily representing Captain At-

wood, of Provincetown. It is to Captain Treat that we owe many experiments on the reproduction of alewives in ponds, and the possibility of keeping salmon in fresh waters for a period of years. These general conclusions which have been reached as the result of repeated conversations with Captain Treat and other fishermen on the coast incline me to believe that the reduction in the cod and other fisheries, so as to become practically a failure, is due to the decrease of our coast fish in the quantity, primarily of alewives; and, secondarily, of shad and salmon, more than to any other cause.

It is well known to the old residents of Eastport that from thirty to fifty years ago cod could be taken in abundance in Passamaquoddy Bay and off Eastport, where only stragglers are now to be caught. The same is the case at the mouth of the Penobscot River and at other points along the coast, where once the fish came close to the shore, and were readily captured with the hook throughout the greater part of the year. That period was before the multiplication of mill-dams, cutting off the ascent of the alewives, shad, and salmon, especially the former. The Saint Croix River was choked in the Spring with the numbers of these fish, endeavoring to ascend; and the same may be said of the outlet of the outlet of the Saint John's Lake, about seven miles above Eastport. The lake in question is one of considerable size, and was visited by immense numbers of alewives, which could be dipped out to any extent, on their passage upward, while the waters of the adjacent bay were alive with the young fish on their return.

The fish themselves enter the waters of the streams in May or June, and return almost immediately after spawning to the sea. But they may be taken by the drift-nets along the shores as early as March and April; and, indeed, it is quite probable that the whole period of their abode in the salt water is spent adjacent to the rivers in which they were born. The young come down from the ponds in which they are hatched, from August to October, keeping up a constant stream of the young fish. In this way a supply of alewives was to be met with throughout the greater part of the year, and nearer the coast they furnished every inducement for the cod and other ground fish to come inshore in their pursuit.

It is true that the sea herring is also an attraction to these fish, and probably but for their presence our pollack, haddock, and hake-fisheries would be greatly diminished. Nevertheless, the appearance of the sea herring is less constant, and furthermore the sea herring are less constant on the coast, especially in shore, occurring as they do at stated intervals, when they come in from the deep sea to spawn. It is possible, too, that they are less easily captured by the cod, since they swim nearer the surface than the alewives. Corroboration of this idea is furnished in the testimony of Mr. W. B. McLaughlin, of Southern Head, Grand Manan, who informs me that he has seen only one stream in the island which ever furnished alewives to any extent was Seal Cove Creek, which discharges to the East of the southern extremity of Grand Manan, and into which these fish entered in immense numbers in the Spring. At that time cod, haddock, and pollack, as well as halibut, were taken in great abundance in Seal Cove Sound, between Hardwood Cove, on Wood Island, and Indian or Parker's Point, on the main island. They were to be met with during the greater part of the year, especially from May to January; and the fishery in the channel-way within a quarter of a mile of the shore was really more productive than on the banks much farther out to sea."

As this report is too valuable to be even summarized, and as it affords the very species of information which our fish culturists, and those interested in sea fishing require, we shall produce it from week to week as the state of our columns will permit.

LAND-LOCKED SALMON.

RECENT experiments with this fish have proved that it can be reared in ponds the same as trout, and that it "strips" as readily as any of its family. Mr. H. L. Leonard of Bangor Maine, has been experimenting with this species for the past year, and he has succeeded in getting from it about 400,000 eggs, which he now offers for sale. As they are the first in the market that we know of, they will no doubt meet a ready sale. The first from which the ova were taken were captured in Grand Lake stream, Washington county, Maine. They were "stripped" by the dry or Russian process in Mr. Leonard's pond, where they entered to spawn. The result of a short investigation proves that the milt of one male is sufficient to impregnate the eggs of four or five females, and that the larger portion of the young are likely to be hatched out early in Spring if the water is kept at a fair temperature. If the water is too cold they will not appear before March, but by increasing the temperature, which is usually 32° Fahrenheit, to 35°, they will present themselves a month sooner. These pretty creatures, when hatched in ponds and fed regularly, do not manifest any uneasiness about their confinement, but the old ones which are enclosed when they enter the fishways almost always die if they are not allowed to make their escape when they have deposited their spawn.

A few kept last winter in a pond in Massachusetts for the purpose of experimenting with them, died later in the season, it is supposed from a nervous irritation at their confinement, as they were constantly leaping and dashing about in a state of excitement, and finally refused all food. The youngsters, on the contrary, seemed to be content with their narrow house, and to thrive on their meals of finely ground cutfish. The old fish spawn every alternate year, and on such occasions they commence running up the streams about the latter part of July or the first of August, and continue until the middle of November, but they do not deposit their ova until late in October or early in the month following. When in this condition they are caught by the pisciculturist with hook and line, or seine, and "stripped" according to the process mentioned.

This fish will live in water having a temperature of 70°, but if kept in ponds there should be scope enough for them

to play about freely, and the water should have depth enough to give them an abundance of oxygen.

The best time to impound them is about the first of August, as they are then in good condition, and being well filled with ova their instinct of maternity is very strong, so that they will thrive in places which under other circumstances would prove most disagreeable to them.

They will live on excellent terms with the black bass, so those who have ponds containing the latter should by all means try to give them the former for companions, as it is presumed that both thrive better by this companionship.

If the land-locked salmon can be cultivated to a large extent in ponds, it will be a most important step in fish culture, and will be quite an event in gastronomy.

For Forest and Stream.

RAISING THE GRAYLING.

OUR friend Collins has given some very valuable items on raising this fish, and coming from one who has rather looked with an unfavorable eye upon their introduction, it carries great weight.

He may justly be proud of being the first to raise this fish, notwithstanding he says: "I do not see wherein consists their superiority to the brook trout, nor of what particular use they are, any how."

It has seemed strange to me why the introduction of the grayling should have been opposed in some quarters, unless it was by some very enthusiastic trout-worshipper, who could not bear a rival near the throne.

Mr. Collins is not an enthusiast; on the contrary he is a cool, observing man, generally careful as to his facts and inferences. He says they were larger at six months old than brook trout at the same age; this suggests rapid growth, and early maturity. And I claim a great superiority for them in the fact that they do not eat each other. This is a great point, especially in fish that seek their own food, as in large ponds and lakes. As to other points, it is a question of taste as to their gastronomic qualities. Seth Green don't like them, but has only eaten them in the spawning season. I ate them at the same time and liked them. Col. Skinner, of the *Turf, Field and Farm*, was eloquent over a grayling dinner at Sutherland's, and many others, among them the veteran angler, Hon. S. H. Ainsworth.

The "particular use" of the grayling seems to me to be to live in streams and lakes with the trout and not devour them; to furnish the angler with a new variety as "gamey" as his old favorite, and one to my eye and taste fully as beautiful, and as fine for the table.

Every one that visits my ponds allows that the grayling are much the handsomest fish in the water. I am glad to get this testimony from Mr. Collins as to their growth, and although he only had a hundred eggs, I hear from outside parties that he has done well with them.

My brother, who has had the care of my fish this season, says that *one trout will eat as much as six grayling*, yet the latter are plump and in fine condition. I have about sixty of the lot from the Au Sable, and they have grown considerably, and I do not hesitate to say that in my opinion they will become an equal favorite with the trout in the estimation of anglers, and much superior to them with the fish breeder, for the reasons given, viz: rapid growth, small feeders, and the absence of cannibalism. Mine have had only best lights; I never feed liver to my fish, for I cannot get it.

FRED MATHER.

SALMO QUINNAT.—The United States Fishery Commission is commencing to move the California salmon (*Salmo quinnat*), a little early, it seems to us, although we have not seen the young fish, and don't know how nearly the saes may be absorbed. Fred Mather has gone to Niles, Michigan, with a lot of the small fry, and the distribution will continue until the entire quantity on hand is disposed of. Private parties who wish to procure spawn of the California salmon can now do so by applying to Seth Green, of Rochester.

—Last week Fish Commissioners Major T. B. Ferguson and F. B. Downs, Esq., of Maryland, placed in the Marsh run, a tributary of the Antietam Creek, Maryland, four thousand salmon, averaging in size about one inch. The little beauties were hatched out in Baltimore county, from spawn obtained from fish caught in McLeod River, California. We are informed that fifteen thousand more will be placed in tributaries to the Potomac.

GREAT MORTALITY OF SHAD IN THE ST. LAWRENCE.—We find the following singular statement in the *Montreal Witness* of December 3d. It will at once engage the attention of the fish culturists on Lake Ontario, whose labor, we trust, has not been in vain.

"During the last few days the River St. Lawrence, opposite the city, has been literally filled by an immense number of small bright scaled fish, averaging two inches in length, and which have been identified by Mr. F. Cawthorne, who has shown us a sample, as young shad. The fish are floating dead and swimming down stream in such immense numbers that yesterday Mr. Cawthorne, while crossing to the island in a boat, could scoop them up out of the water by the handful. Such a phenomenon has, it is said, never before been seen in the Province of Montreal. The cause of many of the fish being dead is unknown, except that the great change of temperature in the last few days caught the little shad while they were not prepared for it. Shad ascend the rivers from the sea early in June to spawn, the offspring returning before Winter. If they were boxed up in oil, they would make an excellent substitute for sardines."

—Iowa has had 500,000 whitefish spawn placed in her ponds by the Fish Commissioner.

—A note from Mr. Atkins informs us that the spawning season at Bucksport lasted from October 31st until November 28th. Five hundred and nineteen salmon were re-captured, forty-one being females and 178 males. The whole number of eggs obtained was 3,039,000, which is 700,000 more than in any other year. The cost of collecting them is about \$2 per thousand against \$2.73 last year, and the ratio of eggs obtained to brooding salmon caught has been raised from 3,560 to 5,157. —*Maria Firmer.*

—The State Fish Commissioners have placed 3,000 salmon trout, for breeding purposes, in the ponds in the neighborhood of Newton, in the northwestern section of the State.

Natural History.

For Forest and Stream.
DOMESTIC SPONGES.

IT is not generally known that many varieties of sponges are found growing on our own coasts. The sponges of commerce come principally from the Mediterranean, the Red Sea and West Indies, and the popular ideas of the nature of sponges are all derived from these. They are, however, only the dried remains, the soft parts which once coated the bare tracery of the skeletons kept for sale having been removed by maceration in water. When obtained by the divers they are quite solid, with a surface and consistency resembling a piece of liver. The large apertures, out of which the water pours in almost continuous streams, may be seen upon the skeletons, but the minute apertures, through which it enters, are visible only when the animal is living. Sea-lungs is certainly the most appropriate name in common use, for these animals are perpetually sifting into their porous bodies, through innumerable minute orifices, the sea water, and spouting it out again through the larger ones. These last are so like volcanic craters in aspect, that a round sponge may be very aptly compared with the rugged, volcano-specked photographs of the moon. The comparison is still more complete when the animal is in full and vigorous action, since the streams of water spouting with great force bring with them immense numbers of small pellets, the refuse matter, or excrements, which may be compared to the stones accompanying the fiery stream from the mouth of a crater. The interior is a network of canals lined with a membrane composed of minute animals or cells, each one of which takes into its interior the floating animalcules, digests them, and casts forth the refuse. This floats on in the channel, which becomes larger and larger by the addition of other canals, each leading from some minute orifices in the surface, and each bearing its burden of refuse, until finally, like a swollen sewer, the enlarged canal shoots forth its burden through one of the craters into the open sea. The water is drawn in by the action of the innumerable cilia, or hair-like projections which cover the surface, each little cell of the lining membranes of the canals being furnished with one. These move with such unanimity and force that the water is perpetually drawn in through the innumerable surface pores, and then by the pressure thus created forced out through the points of least resistance the larger canals and openings. The sponges of commerce, however, are only representative of one division, the true horny or keratose sponges; those the skeletons of which contain no spicules at all. These are not represented on our North coast at all, except by a series of forms such as *Chalina arbuscula* (Verrill), *Chalina oculata* (Bowerbank) and *Isodictya*, which have a network of horny threads, but when examined by the microscope these are found to be largely composed of minute spicules, or needles of stiff, hard, flinty texture. These lead into *Haliclondria*, *Chiona*, etc., which, upon our coast, in the shallow waters, represent the next division, or true silicious sponges. In these the spicules are united by a very small quantity of horny matter, or none at all, and are of many and varied forms. The prickling sensation experienced in pressing the common, flat, yellow sponge, suberates found in Martha's Vineyard, is due to these spicules, which penetrate the pores of the skin and cause considerable irritation.

The most interesting of these is the *Chiona sulphurea*, which begins its existence by penetrating the interior of shells, clam shells being a favorite resort. It speedily increases until the shell is entirely honey-combed, the large exhalant orifices penetrating completely through to the surface on either side. When there is nothing more to conquer it spreads into the outer world in a yellow, solid mass, with a thick outer rind. Here it voraciously undertakes the consumption of sand, gravel, stones, or anything else which touches its surface, but these being impenetrable, it has to content itself with growing wrong. Then it forms those large, coarse-looking yellow masses so frequently brought up from the bottom by the fisherman. The next division of the sponges are called calcareous, their spicules consisting of lime. These are little bottle-shaped masses, open at one end.

PROF. S. V. VERRILL.

SPITZBERGEN MAMMALS.—The animals of Northern countries are few in number. According to recent reports the mammals of Spitzbergen and Nova Zembla, consist chiefly of seals and whales. The terrestrial mammal-fauna comprehends only two species of lemming (*Myodes torquatus* and *M. agensia*): the arctic fox, common fox, and wolf and sea-bear among the carnivores, and a single ruminant—the reindeer—seven species in all. The birds are more numerous, though here again the marine species far predominate, the land-birds being only ten in number out of a total of fifty. Amongst the former we are surprised to see recorded

as an accidental visitor the Hoopoe, usually considered as rather an inhabitant of the tropics, but of which a single straggler was captured in Southern Spitzbergen by a merchant-vessel in August, 1868. Reptiles are conspicuous only by their absence in Spitzbergen and Nova Zembla, but of fishes thirty species are recorded as having been obtained on various parts of the coast, all belonging to known forms either of the Atlantic or of the waters of Northern Asia.

THE SCARCITY OF WOODCOCK.—It is noteworthy, if not singular, that the same complaint is heard in England as here, of the unusual scarcity of woodcock this season. Is this merely a coincidence, or is it possible that we are to read the speedy extinction of this bird in its rapid annual decimation? A letter from our correspondent, Jackson Gillbanks, written at Carlisle, Nov. 14th, says:—

"Our woodcock are very scarce this season. Although mine is a noted place for them, I have not yet seen one. They become fewer every year, (though many breed here now,) and will eventually become extinct."

THE BLUE BACK TROUT.

PHILADELPHIA, DEC. 1, 1874.

EDITOR FOREST AND STREAM:—

In response to the call for information concerning this truly interesting fish, I would communicate the following items, which I hope may not prove altogether devoid of interest to your readers. Some three years ago my attention was first called to this fish, that well-known woodsman and hunter, Noy Benedict. It was while camping on Nardvay's Pond, not far from his dwelling, that I engaged him as guide to take me to a beaver pond that lay back in the forest some six or seven miles. He assured me that this pond abounded in brook trout of a fine size, and most delicious flavor. From his account I anticipated rare sport, as the pond was seldom visited by anglers. I am glad to be able to say that my most sanguine expectations were more than realized. Such a day's sport seldom falls to the lot of the most enthusiastic and persevering angler. Some day I may give your readers the record of it. While on our way tramping through the woods, among other questions Benedict asked me if I had ever seen a blue back. On replying I never had, he gave me an account of the fish that excited a special interest in it. I could not but be must be a new species of trout, and from that time became anxious to obtain a specimen for examination. While at Rangleys Lake during last season I made the acquaintance of that veteran hunter and guide, George Soule, a most trustworthy and intelligent man, who has lived some forty years on or near the waters of Rangleys and Richardson lakes. From him I received similar statements in regard to the blue back. I engaged him to secure and send on a box of them some time during the past month. For some reason or other they have not yet come to hand.

In the meantime, however, I received a fine specimen from my son residing at Bangor, Maine, which he wrote me was out of a lot of ninety-five sent from Rangleys to E. M. Stillwell, Fish Commissioner. I infer that it was one of the same lot of fish sent to me by Page of New York. I spent some time in making a critical and scientific examination of the specimen and became fully satisfied that its distinctive characteristics were such as to constitute a new species. I searched in vain to find any description or even mention of this singular fish in such works on ichthyology as I possessed, or had access to. In view of this fact I took the specimen to the Academy of Natural Sciences as a donation, and at the stated meeting of the members on Tuesday evening the 17th ult., gave a minute description of it, pointing out the specific differences between it and the *salmo fontinalis*.

There was an unusually full meeting, and the members all seemed to be much interested in what was regarded as a new species, for none of them had ever seen the fish before, or met with any description of it. I was requested to write out my description and to propose a name. I did so, giving the name of *salmo cervinoides*, regarding it as a distinct and heretofore undescribed species of the genus *salmo*. It was referred to the Standing Committee on Ichthyology. A day or two after this meeting Prof. Leidy, acting Secretary, suggested to me that I should send it to Prof. Baird, of the Smithsonian Institution, at Washington, for his opinion. Dr. L. kindly consented to send it on for me, and this evening handed me Prof. Baird's letter, to use as I pleased.

The following is a copy of his letter in reply, and is quite to the point:—

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, NOV. 27, 1874.

DEAR LEIDY:

I shall probably find the specimen of blue backed trout at the Smithsonian when I go over this morning, but I do not need to see it to answer the question in regard to it. They were described many years ago by Girard as the *salmo agassizii*. We receive specimens nearly every year from Rangleys. It is apparently quite distinct from the common brook trout.

Yours very truly,

DR. JOSEPH LEIDY.

Academy of Sciences, Phila.

S. P. BAIRD.

P. S.—The fish has come, and is the *S. agassizii*. It will go back tomorrow. See description in Proceedings Boston Natural History, Vol. IV, 1854.

In referring to the above volume I find that the blue back was described and named by Chas. Girard as far back as October 20, 1852. His description is very accurate and interesting, and was given to the Academy of Natural Sciences at Boston subsequent to a visit he made to Rangleys Lake. He speaks of the fish as being more delicate even than the brook trout in its edible qualities. The specific name given by Girard is derived from the aboriginal name of Rangleys, and indicates its locality rather than any specific characteristic. I have been much interested in the contributions of Geo. S. Page in regard to this fish, appearing as they have just subsequent to my own inquiries in a similar direction.

C. A. KINGSBURY.

Mr. Eugene Blackford, of Fulton Market, to whom a lot of these fish were consigned, as noticed by us some weeks since, has kindly handed us the subjoined letter from Mr. Milner, which is in reply to a letter of special inquiry from him respecting the blue backed trout. This letter was not received in season for publication in our last issue:—

UNITED STATES COMMISSION, FISH AND FISHERIES,
WASHINGTON, NOV. 25, 1874.

DEAR MR. BLACKFORD:

The specimens of the Oquassos trout came to hand and were specially valuable for their bright spawning colors, which were not well retained in the alcoholic specimens we had before received; besides, they were suitable for photograph and cast, which is not the case with specimens in alcohol.

You ask for distinguishing characteristics between them and *salmo fontinalis*. It is not very easy to define *S. fontinalis* from others and similar species, because it ranges through a great variety of forms, which differ in the general form of the body; the shape of the head, the teeth on the vomer, and other characters. I enclose you two drawings, displaying the most constant points of difference between *salmo oquassus* and *salmo fontinalis*.

The type of form in *S. oquassus* is much more slender, with a tendency in its different parts to prolongation not seen in the brook trout. Thus the length of the fish, compared with the thickness, with the length of the head, the thickness of the head to the length, the pectoral fin prolonged to a slender point, the two lobes of the caudal extended in the same way, showing a decided fork, and the opercular bones prolonged into a more acute angle.

On the contrary, the maxillary bone extends much less far, back of

the position of the eye, or toward the hinder end or blade of the lower jaw in the Oquassos trout.

The interopercular bone is much larger in *S. oquassus* and the suboperculum is wider.

The tail in *salmo fontinalis* is more flattened than in any species it is likely to be confounded with. The drawings show a comparison of the caudal fin when spread and when partially closed. I think the most of these characters will be found constant, even under the varying forms the brook trout assumes.

Do you ever get any salmon trout or Lake trout from Hamilton county New York: from what DeKay called Louis Lake or Lake Louis? I've could obtain one or three they would be very valuable in the study of the lake-trouts. In fact, the lake trouts from inland waters generally are desirable.

Yours,

JAMES W. MILNER.

To E. G. BLACKFORD, New York.

[The foregoing letters, it seems to us, cover the ground of inquiry pretty thoroughly.—Ed.]

OFFICE OF PHILADELPHIA "SCHIETZEN-VEREIN,"
PHILADELPHIA, December 3, 1874.

EDITOR FOREST AND STREAM:—
By changing "our" in the MSS into "your" in your issue of December 3d, page 265, the whole of my last item is rendered perfect nonsense. The MSS reads distinctly "In the last issue of our paper" (meaning the *Schützen-Zeitung*). Please have this corrected. A. VON LEIKNAH.

RIPE SHAD IN DECEMBER.

PEEKSKILL, N. Y., December 4, 1874.

EDITOR FOREST AND STREAM:—

As I came past the fish market last evening I saw on the slab a fine shad, weighing 4 pounds, full of eggs, and to all appearances just ready to spawn. It was "taken yesterday" (according to the Hudson River, about three miles below here, between Verplanck's Point and Stony Point), in a trout net for bass. The fish sold for \$3. I was told by an old fisherman standing by, that half grown shads are frequently caught while fishing for bass at this season of the year, but that he never saw or heard of anything like this—a ripe female shad in the Hudson in December. Thinking it might interest some of the readers of your very interesting journal to know of these facts, I therefore write you.

S. H. M.

CAMBRIDGE, MASS., November 30, 1874.

EDITOR FOREST AND STREAM:—

In your issue of the 23rd inst., I note the remarks on the capture of an albino, *Columbus septentrionalis*, in Salem Harbor, Mass., by "R. L. N." After passing through some three or four hands, I have the good fortune to be the present owner of the specimen, and most acknowledge it to be one of the finest and most striking specimens of albinism I have ever seen. Mr. "R. N." speaks of not having heard of albinism occurring among water fowl. To be sure, it does not occur as frequently in this class of birds as in some others, though I have seen fine specimens of the *Anas boschas*, *Querquedula discors*, *Perdix borealis*, *Harporhynchus*, *Meleagris gallopavo*, and *Meleagris gallopavo*, pure white, with the exception of the feet, which had a decidedly yellowish cast, and partial albinism in the *Bernicla brenta* and *Aythya vitellina*. I can call to mind some forty or fifty different species in which I have seen this freak of nature represented, some pure white, some pied, while others bore but slight traces. I, for one, shall be pleased to see an account of the capture of any specimen of albinism noted in the columns of your paper, of which I am a constant reader. Yours truly,

REUBEN DEANE.

THE WHEELER EXPEDITION.—This expedition has returned from its arduous labors in Arizona and New Mexico. Dr. Rothrock, the botanist, has collected about 900 species of plants, averaging 12 specimens to the species. Many of these will doubtless prove new to science. Special attention was paid to the timber, its abundance and quality, with reference to economic purposes. The forage plants were also carefully studied, and attention was given to a statement of their quality and quantity, with reference to their grazing properties in the forthcoming report. Many of the plants now attracting attention among florists are found very abundant in Arizona.

Professor Henshorn, the zoologist of the expedition, began his collections about the middle of June at Fort Wingate, and worked south to the Sonora line. He has collected about 1,000 specimens of birds, with a large number of insects, snakes, &c., which have been sent forward to Washington, and which will be eventually placed in the Smithsonian Institution. Quite a large number of birds new to our fauna have been found.

Among other discoveries made was what is believed will prove to be a new variety of deer. It is of very diminutive size, and with this exception nearly resembles the common white-tailed deer. It is found in great numbers all through the southern portion of Arizona territory. The meat of a full-grown doe, after being divested of the entrails, hide, &c., only filled a camp kettle, and was very delicious eating. A fat four-pronged buck weighed only sixty pounds. Grasshoppers were found with colors brilliant and beautiful as the butterfly, and of great size. Fully developed black grasshopper was over three inches long.

EVOLUTION OF THE HOG.—The predecessors or ancestors of the hog, Babirusa, and similar existing animals, are being gradually brought to light by modern paleontological studies. One of these nearest the domesticated form has been found in the miocene of France, and is referred to the genus *Pelechocarpus*. It is also related to the peccaries, which appear to have existed during the same early period in North America in considerable abundance. Their existence in South America at the present time is one of many indications that that region has not advanced in respect to its fauna as rapidly as our own and the old continents. Another miocene genus of hogs is the *Eotherrion*, which has left remains in France and North America. The common species of the Nebraska beds is the *E. mortoni* of Leidy, which was as large as a pig. Its front teeth are much developed, at the expense of the hinder ones; and it had bony tuberosities on the under jaw, in the positions now supporting wattle in the hog. Prof. Cope of Hayden's United States Survey discovered during the past season in Colorado much the largest species of *Eotherrion* yet known. The skull was longer than that of the Indian Rhinoceros, and the tuberosities of the lower jaw were greatly developed. The front pair formed divergent branches on the lower front of the chin, so that it appeared to bear a horn on each side, which the animal doubtless found useful in rooting in the earth. The species was semi-aquatic in its habits, like the Hippopotamus and the Dugong; but while these are furnished with extraordinary developments of the lower incisor teeth for tearing up their food, the *Eotherrion ramoum* is the only animal known which possessed horns in the same position and for the

same purpose. A still older type of hogs—which may claim to be the predecessor in structure as well as in time of all known genera—is the *Achoanodon*, Cope, from the Eocene of Wyoming. The *A. insensu* was a powerful beast, larger than a bear, with a comparatively short head, and with the uninterupted series of teeth which belongs to all the oldest forms of the mammals and to the higher quadrupeds.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS, {
New York, Dec. 9, 1874. }

Animals received at Central Park Menagerie for the week ending December 5th, 1874:

One Mottled Owl, *Scops asio*. Presented by Mr. Chas. M. Schieffelin.
Three Guinea Pigs, *Cavia capensis*, *Lib.* Brazil. Presented by Mr. H. A. Brown.

Two White-fronted Geese, *Anser albifrons*. Received in exchange.
One Muscovy Duck, *Anas domestica*. Presented by Mr. Samuel Smith. W. A. CORKIN.

Woodland, Lawn and Garden.

FERNS AS A DECORATION.

THE little tuft of ferns, spoken of heretofore, gives us a hint how to use the evergreen beauties of the forest. How well they are adapted for decorative service; how nicely they adjust themselves to the elegances of social life! Our native ferns are numerous, handsome, and, intermingled with a tasteful hand, manifest in their arrangement many original creations not devoid of artistic beauty. There may be found in our American and English ferns an almost limitless variety of beautiful ornament for house and public decoration. Why not, then, make use of them? They have all their uses—the love of the beautiful in the last floral offerings of Autumn seems to me particularly appropriate. We should receive them as a thankful recognition of God's universal bounty to us as exhibited in the changing seasons, so wonderfully developed in his crowning the landscape with a chaplet of enduring flowers. We need not seek far to find many of the last leaves of the season so well adapted for use. Go with me to the woods; look beneath that old willow, beside that old gray rock, and behold the clusters waiting to be plucked. Is it not exceedingly brilliant for a fern? Truly one would hardly believe his own eyes. Yet so it is. Here we have only to turn around to behold another plant we would add to our collection. Carefully pluck this green crested lastrea. This will give a fine contrast to your scarlet maple leaves. Now for a clump of this prickly *polystichum*. Then spray leaves, like this maiden hair, is just what you want. Here is a rare old wild plant of the deep woods, not often found; but its scariness adds to it a wealth of beauty. It is the red veined wild calladium. Carefully remove it, and as carefully place it in your basket. Now, after gathering these purple wild asters, we have all we desire for our table decoration.

OLLIPOD QUILL.

THE FALL OF THE LEAF.

THE phenomenon of the "fall of the leaf," common as it is, is very difficult to obtain satisfactorily. The following are the facts, so far as we understand them, which are exceedingly interesting and instructive. It seems that Nature begins the provision for separation almost as soon as the leaf is born in Spring. When first put forth into the atmosphere the stalk of the leaf, supposing one to be present, is continuous with the stem. As the leaf and its stem grow, however, an interruption between their tissues (fibrous and cellular) occurs at the base of the leaf stalk, by means of which a more or less complete articulation or joint is gradually and ultimately formed. This articulation is produced by the continuation of the growth of the stem after the leaf has attained full growth, which it generally does in a few weeks.

The growth of the leaf being completed, the base of its petiole, or foot stalk, is no longer able to adapt itself to the increasing diameter of the stem, and a friction between that base and the stem necessarily ensues; the excision advances from without inward, until it finally reaches the bundles of woody fibers, which form the main support of the leaf. While, however, Nature is forming a wound, she is at the same time making provision to heal it, for the cuticle or epidermis of the stem is seen to grow over the surface of the scar, so that when the leaf is detached the tree does not suffer from the effects of an open wound.

The provision for separation being thus completed, the leaf is parted from the stem by the growth of the bud at the base, the force of which, even in autumn, is sufficient. Therefore, as soon as the glorious colors of the Autumn leaves begin to fade, this provision for separation is completed, and the winds sing their death dirge as they carry them away from their Summer's home on the branches of the trees, and scatter them in countless numbers upon the ground.

The fall of the leaf is therefore the result of a regular vital process, which commences with the first formation of the leaf, and is only completed when it is no longer useful to the tree. There is no decaying, however, that the frosts of Autumn, by suddenly contracting the tissues at the base of the leaf stalk, accelerate the fall of the leaves. All must have noticed, on a frosty morning in Autumn, that the slightest breath of air moving among the decayed and dying leaves will bring them in complete showers from the trees to the ground.

The leaves of the beech, hornbeam, and oak, die in Autumn, but frequently remain attached to these trees throughout the Winter months, provided that the trees are not so situated as to be exposed to violent winds. Such leaves, when examined, will be found to be continuous with the stem, and therefore without that articulation or joint which so naturally assists in the separation of the leaf from the tree. Those dead leaves fall off when the new leaves are put forth in Spring; they are, in fact, pushed off by the expansion of the stem when the growth of the season commences. The leaves of evergreen trees and shrubs, and of coniferous trees, as the pine and fir, do not fall in Autumn, but in Spring, when the growth of the season is proceeding, and as this annual leaf fall is only partial, consisting of one half or one third at a time, there is always a sufficient number of leaves left on such trees to keep them clothed with perpetual verdure. Hence it is

that their foliage consists of leaves which have been attached to the stem from one to three or five successive years.—*Garden.*

ANSWERS TO CORRESPONDENTS.

M. SALMON, Pennsylvania.—I have upwards of 250 apple trees, some four years old and some a number of years older. Last fall the leaves began to curl up, looked as though they had passed through a fire—and so badly were they injured from some unknown cause that the young twigs died. In one or two localities, quite near together, all the varieties died in the scion. What is it? Is it blight? Please tell me.

It is quite difficult to give an adequate answer to a question like yours, lack of personal observation being unfavorable to a correct solution of the evil you desire to rectify. We think in your case the land is exhausted from over-cropping, and needs potash, lime, bone manure, and good strong barn manure; and, what would be the best rectifier of all, if easily attainable, slaughter house manures spread upon the surface of the soil and deeply ploughed in. Give your trees a careful scooping and a good trimming, cutting back thoroughly the long twigs of your young trees. To this add a wash made as follows, namely—One part cow manure, fresh from the yard; one part stable manure, new and free from straw; one part loam, or clay; half part of pulverized charcoal, and half pound potash. Add water to render this admixture the consistency of paint, and apply with a whitewash brush. This will restore your orchard to bearing and thriftiness if anything will.

OLLIPOD QUILL.

B. R. M., Pennsylvania.—The snail you send is a garden snail of the order or family *Phragmocephala*, generally called slugs. It is sometimes found beneath melons in the garden, and upon choice fruit, particularly peaches and pears. One kind eats the leaves of many garden plants, and some are very troublesome to the farmer in other ways beside eating fruit, &c. The species you send are very cold well, and quite hearty. I gave them some fresh leaves, tender and succulent, and they immediately thrust out their little horns, or feelers, and commenced eating at once. They have some characteristics of the true snail, as they are termed. Both eat in the night, and their habits are to be found in damp places—under logs, beneath loose boards and decaying soils, or stones; among the grass in Massachusetts, and under stones in short grass, in great numbers in all places of dampness. They do not hibernate, and cold makes them torpid. Cold weather kills them; warmth gives them life. They are particularly troublesome in gardens. Dry lime and sulphur is an antidote for them. There are a great number of these slugs and snails, belonging to many classifications, and they are quite interesting as a microscopic study.

OLLIPOD QUILL.

THOMAS BOYDEN, Missouri.—The insect you sent in a phial came safely to hand, and in good condition. It is a prominent, injurious insect, noticed, among several others, by Mr. Riley, of the Agricultural Experiment Station, and a new enemy found upon the cucumbers in Massachusetts as well as in your region. It is the *Phorebia nitidula*, and is the offspring of a small caterpillar, which perforates the cucumber when about the size for pickling. One worm will destroy a cucumber, by causing it to rot. There is no remedy for its ravages yet found. We conclude, from several microscopic examinations of this insect, made during the last Summer, that it is very tenacious, and is not likely to become troublesome, at least in this section.

OLLIPOD QUILL.

L. L. S., Orange, N. J.—We would meet your enquiry—"Would not planting trees around a low pond hole correct the atmosphere?"—I am not a horticulturist. How large is your pond of water, and how deep is it? Is it surrounded by vegetation growing into the edges from its borders, and does the water get low and remain so for days and weeks? If such is the case, you should first drain the water from this low pond hole, then cover it with soil, and you need not set out any trees upon it. You evidently have a good plantation for a cranberry ground, and with a little labor you might make it so. Sprinkle the soil with a good and wholesome healthy loam and a fine cranberry plant.

OLLIPOD QUILL.

HELEN BARRY, Chelsea, Mass.—The trouble with your pet canary is from the presence of a great multitude of parasites, which look like a red powder, or rust, at the top of the wire cage. These are often found in the cages of canaries, goldfinches, and other singing birds. When such is the case the bird will be continually picking himself, and appears restless and wretched, and will die at last, with all your washing and care, unless you take it from the cage and, with a candle flame, burn carefully and thoroughly every portion of your cage, at least the top, sides, &c. By doing you will get rid of the parasites, and your bird will be all right, and in good voice as ever, and at once warbles forth his thanks for your care and attention. If you could only examine the biting apparatus of these little parasites, you would cease to wonder at the uneasy restlessness of your bird.

OLLIPOD QUILL.

WM. LANDOR, Nyack, N. Y.—The package of pens and beans you send to our address was received. The pea contains the pea weevil (*Bruchus pisi*) of Linn., and the beans contain the *Bruchus fabre* of Riley. They are the common weevil. You should notice them in the time of the young pods of beans and peas. You will observe them attached to the outside of the pod at this season of their growth. These eggs contain the young grubs, which, as soon as the pods are hatched out, can turn the pods into ruin, and establish themselves. So minute is the hole made in their passage that you cannot notice it. Now the work is done. Here begins its insect life and after transformations. In the pea one weevil lives, and you never find but one. You cannot well prevent their entrance into the seed, but you can hope for a good autumn crop. Some farmers recommend putting the seed over for two years in tight vessels. Camphor will kill them, and prevent their depredations in the bean and pea. Put an ounce of camphor in a bag, and place it in your tight tin box of beans and peas, and the weevil will not trouble you. Peas and beans that are the product of the latest planting are not usually affected with weevil. Give yourself no trouble concerning these weevils. There are other and much worse enemies to the farmer than these.

OLLIPOD QUILL.

H. L. B., South Falmouth, Mass.—The animal you so carefully enclosed in the tiny box came safely to hand. It is known as *Chalcid latellus*. This insect is found under the bark of trees and shrubs, and about old stumps under the familiar name of the wood tick. It is oval shaped, brown in color, and possesses a remarkable tenacity of "holding on" to a subject. It has long antennae, and is a very uncomfortable companion to encounter at any time or at any place. It is often found near the sea shore, and is sometimes mistaken for the moss chelifer.

OLLIPOD QUILL.

The Kennel.

BEAGLE HUNTING.

A CORRESPONDENT of the New Orleans *Picayune*, writing from East Baton Rouge, discourses on beagles in this wise:—

"Imagine an ordinary fox hound with his legs cut down about half their natural length and bowed like those of a bull terrier, with nose even elongated beyond that of the hound, and ears of equal flatitude, and body rounder and chunkier; give him the same tremendous power of yelping and howling—on every and too often on unsuitable occasions—and you have a faint idea of the beagle.

With some eight or ten of these animals we started one bright day on a "rabbit" hunt. Unlike the deer hunt, the mimic substitute involved a short walk and a luxurious promenade through a dry and well beaten field, interspersed with briar patches. The beagles were called together by the assembled hounds from a cow-horn by a young Creole mounted on a mustang pony. The beagles responded to the horn with prolonged yells. Then, at a signal, they struck into the briar patches and disappeared from sight. What they were doing, what progress they were making, could only be judged from their yells. When these were faint and intermittent, we were told that a trail was struck; when they grew quicker and louder, the trail was strong; and when at last the whole pack burst out in one continuous yelp, we were told to look out, which we did very closely on our side, whilst our companions, forming a "quadrilateral" around the bushes and the beagles, were alike vigilant on their side. Bang! bang! from two guns announced the better fortune of my two companions, when, forgetting my orders, I rushed to their stands and, with a brace of hares lying prone on the grass, and their slayers coolly reloading their guns, whilst the pack had emerged from the bushes on my side and were in full chase of a fine hare, which I had missed the chance of arresting in his course by the breach of discipline in abandoning my post. But the fleet little mimic hounds were not to be so easily fooled. The young Creole on the mustang joined in the chase and pushed the beagles to their full speed, until they had struck into a brush, where they pounced on him, and were about to devour him, when their master arrived in time to arrest their strongly-developed carnivorousness. After this little lesson, I comprehended the whole scheme of this style of hunting. At the next engagement I stood to my post, and had the satisfaction to get the first shot and to bag a fine cotton-tail. The next gratification was the beagles, who licked their jaws approvingly as I shook my victim over their heads. And so the hunt proceeded—the indefatigable little keen-scented, bowlegged brutes peering into every briar bush, rooting up every suspicious-looking grass tuft or knoll, and inquiring in every retired post and corner for poor Molly, and never resting until she was discovered, and sent in wild and fleet terror careering across the field under the fire of some half a dozen first-class marksmen. Fortunately here to escape beagles and barrels, if she only had the sagacity to emigrate, and not, as is her foolish habit, return to the scene of her great peril and escape. Thus after a few hours of this easy and pleasant sport we managed to bag about a dozen fine fat hares, which we found delightful food for next day's breakfast and dinner. Another trial of the same sport was equally successful and satisfactory, confirming our decided preference for hare hunting with beagles over deer hunting with stag hounds, in the sneaking style of that sport known as driving, or of duck hunting in a damp and unsteady pirogue, or up to your thighs in water and mud, and with so tricky, uncertain and watchful an adversary to deal with.

We recall all that we have said in depreciation of the merits of beagles and satisfactory, confirming our opinion as I shook my victim over their heads. And so the hunt proceeded—the indefatigable little keen-scented, bowlegged brutes peering into every briar bush, rooting up every suspicious-looking grass tuft or knoll, and inquiring in every retired post and corner for poor Molly, and never resting until she was discovered, and sent in wild and fleet terror careering across the field under the fire of some half a dozen first-class marksmen. DOGS IN PARIS.—According to *La Chasse Illustrée*, Paris has dogs enough to last its population a long time in case another siege should render canine food necessary. It has 1,857,793 inhabitants, and these own 17,944 watch dogs, or rather dogs that are useful in guarding houses, and 47,838 hunting dogs and those used as household pets. In the central arrondissement there are more pets than any other kind; but in the mercantile portion and in the suburbs the watch dogs prevail; whilst among the aristocrats of the Champs Elysées, Faubourg-du-Roule and vicinities, hunting dogs and pets are the most common. In other portions the various species predominate according to the grades of humanity. Among the pets the King Charles spaniels are the most numerous, and among the hunting dogs the setter and pointer, while the third class is almost wholly represented by bull dogs and Newfoundlanders. How they keep trace of all these animals seems somewhat a puzzle to us; so we can only account for it on the common ground that "they do these things better in France." The numbering of these dogs is the work of the police force, but if our "stars" were asked to do such work we fear we should never hear of one-half of these in our city.

—On the 10th of October, while John de Banes, whom most sportsmen well know, was hunting, he had the misfortune to break his knee pan. The old veteran writes to us, saying:—

"It is now two months and I am still tied to a board, but I am in hopes I will be able to be on my feet New Year's Day."

St. John, New Brunswick.—Where can I obtain pickerel for stocking purposes? Ans. They could be found in nearly all the bays bordering on both shores of Lake Ontario and the St. Lawrence River. They can be bought of the fishermen. Any party wishing to stock ponds with pickerel could get them in lakies some cane (if he is in Canada) and going to the lake, or to the bay, from the Presque Isle, or to Prescott, on the Canada side of the lake, or to any of the bays or rivers on the American side, from the Genesee River to Ogdensburg. They can get all they want from early Spring to late Fall. Do not your own lakes contain pickerel? If they do not, your Province is fortunate. We would advise you not to introduce them.

MAGAZINES.

The *Overland Monthly*, California's excellent literary representative, has reached us. It is filled with an excellent assortment of sketches, and each has that pugnacy peculiar to the minds that work on the shores of the Pacific. One of the best articles in it is a sketch by Stephen Powers on the California Indians, and another very readable one is Pharaoh's Cabin. The magazine is up to its usual standard, and that is expressive enough to convey an idea of its excellence.

A WEEKLY JOURNAL,

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INSTRUCTION IN MEN AND WOMEN OF A HEALTHY INTEREST IN OUT-DOOR RECREATION AND STUDY.

PUBLISHED BY

Forest and Stream Publishing Company,

17 CHATHAM STREET, (CITY HALL SQUARE) NEW YORK,
[POST OFFICE BOX 2824]
125 SOUTH THIRD STREET, PHILADELPHIA.
CODY'S BUILDING, DEARBORN ST., CHICAGO.

Terms, Five Dollars a Year, Strictly in Advance.

A discount of twenty percent, allowed for five copies and upwards.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 40 cents per line. Reading notices, 50 cents per line. Advertisements in double column 25 per cent. extra. Where advertisements are inserted over 1 month, a discount of 10 per cent will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, DECEMBER 10, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will wander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements should be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.
WILLIAM C. HARRIS, Business Manager.

HUNTING CLUBS.

PERHAPS no sport known to modern days has occupied so much of the attention of aristocratic sportsmen as the pursuit of the hare, fox, or stag with well-bred, well-trained hounds; and even the poor peasant or drudging costermonger will leave his labor to take a run with the baying pack, whose musical chorus resounds through the gorse, or is echoed in various tones by the heath-clad hills. It has a charm for almost all classes of people that few can resist; but to its devoted lover it possesses an attraction nearly amounting to delirium. The cry of a ringing, deep-toned pack of hounds has more allurements for the latter than the most delicious tones ever evolved by Verdi, Gounod, Rossini, Mozart, Haydn, Beethoven, and other great masters of the soothing, sensuous art, for the former arouses their virile nature, which loves the break-neck dash and dangers peculiar to the hunting field, besides that peculiar and indescribable sensation produced by being first in at the death, and receiving the compliments of fair ladies and gallant rivals, while the latter merely tranquilizes the senses, or aids in developing the higher social qualities. One is the spur to manly deeds; the other the incentive to the gracious courtesies of the drawing room, and the development of certain aesthetic qualities; hence, while every virile nature responds with alacrity to the first, it requires a certain amount of culture to be intelligently impressed by the second. It is on these grounds alone that we can understand why the sturdy squires of old would expend thousands of pounds upon their kennels, and become ecstatic in their descriptions of the fine tongue of a well matched pack, when they would not rent a box at the opera, or perhaps go fifty miles to hear the most famed songstress. Any one who has ever ridden a spirited hunter after the wild music of the hounds can readily forgive these devoted lovers of the chase for their enthusiasm, and sympathize with them rather than criticise their, to some persons, eccentric taste. It is this love and practice of physical exercise that has kept the natives of the British Isles in their sturdy manhood, and has imparted to them that courage which defies danger, and in fact makes them court it, for they will go far afield to assault the treacherous tiger in its lair, or pursue the elephant over the torrid plains of Africa. This education has brought them blessings which one might not readily deduce from such pursuits, for it has given them that spirit which will not brook any tyrannical restraint on their liberty, and imparted those

qualities of daring and endurance which defy all obstacles, and lead them on their conquering mission whenever they plant themselves among other peoples.

In our own great land these same characteristics exist; but they come to us by inheritance rather than by cultivation, for we have not yet devoted any attention, except in few instances, to developing our physical powers, as all our energies have been given up to the collection of the "root of all evil." Now that our people, or a large proportion of them, have attained a position of comfort, if not of luxuriance, they are enabled to indulge in the exhilarating, health-giving sports of their ancestors, and, by practicing these, they not only make their life one of healthful pleasure, but they transmit to their posterity a vigor of frame which they must have if they would be able to carve out a niche for themselves in this bustling, crowding world.

The ancient Greeks attained fame as athletes and horsemen ere they became a nation of warriors, poets, and sages, yet they did not carry bodily exercise to too great an extreme, for they argued that such an action would only lead to a dull and material, though vigorous race, as much as the indulgence in music, painting, and the fine arts alone would to an effeminate one. It is only by the judicious combination of both that as perfect a race as the mutations of the world will permit can be developed. Our most cultured citizens support the higher class of arts quite liberally—such as music and painting—but they do not, we fear, pay attention enough to their own physical education. Many of them, we doubt not, suppose that the training of nerve and muscle is contrary to mental culture, and opposed in every way to the acquirement of the esthetic qualities; that it is, in fact, coarse, and therefore unfit for persons of refinement. This is a most serious mistake, for some of the ablest statesmen, poets, artists, and military strategists the world has known were accomplished in all physical exercises, and to this condition may be traced, to a certain extent, the vigor which characterized them.

To attain health, surety of eye, and presence of mind when confronted by danger, we know of few pastimes so excellent for this purpose as a good canter after a pack of hounds. It is one which may be indulged by the most fastidious member of society, so that there can be no objection to it on account of plebeianism. The cost of a pack of hounds is trifling compared with the pleasure it gives, and its salutary effect on health and longevity.

If the pack was sustained by subscription, the sum to be paid by each member of the hunting club would be quite small, and to a gentleman would hardly be worthy of consideration. In Canada, where money is much scarcer than in this country, and where it is more difficult to be obtained, they support two or three hunt clubs in excellent style. If this can be done in the Dominion, it certainly ought to be here, and it seems to us a matter of surprise that our sporting gentlemen have not inaugurated such associations long ere this. With the exception of a hunt club recently organized in Baltimore, Maryland, we do not know of another in the country; for the gathering of individual hounds from their owners for an occasional run, which is quite common in the South, cannot be called a hunting pack in its literal sense. There is nothing to prevent the formation of hunting clubs in this country, as we have all the materials required for its success, for game, horses and money are plentiful enough. We have also advantages which they do not possess either in France or the British Isles, so that the only thing lacking to make mounted hunting popular here is a few gentlemen to lead in the matter. The cost of a pack of about twenty couples should not be over \$6,000 per annum, including the person attending to the kennel, and this certainly could be raised quite readily. We hope to see clubs organized in various portions of the country at an early day, and we are much if they will not be well supported, and furnish more solid pleasure than can be extracted from any sybaritical pursuit.

TERRAPINS.

PLACE a dish of cooked terrapin before a Philadelphian or a Baltimorean, and he will readily determine by its flavor whether it was raised in Maryland, Virginia, Georgia, or South Carolina. Their sense of taste is as delicate and critical as that of the Chinese tea tasters, while the flavor of the terrapin itself is more difficult to define or to analyze than the grateful odor of the truffle. In New York we scarcely appreciate the distinction, as we are not educated to it. We do not wish to decry the merits of the terrapins found South of Maryland, but we know that in our markets the Long Island and Chesapeake terrapins command much higher prices than their Southern congeners. To keep terrapins—to pack them—has long been the dream of our various market dealers, and numerous experiments have been tried to preserve them, so as to have them ready for the season. The festive supper period being over, say about February in the Northern States, the demand for this most delicate tortoise ceases. In July and August they are found quite plentifully South. The problem is to buy them in the South, when out of season, for use North, and to keep them for Winter, when the demand sets in. Seeing a live young terrapin, scarce larger than a trade dollar, swimming along uncommonly lively in an aquarium the other day, we determined to trace up the origin of the infant phenomenon. A gentleman purchasing the terrapins coming from Georgia, South Carolina, and even Texas, they were introduced into a preserve arranged for them at Long Branch. As the terrapins from

the South arrive North just at the period of laying their eggs, it was hoped that they might be hatched, and a supply be obtained; but as their growth is very slow this is rather a difficult matter, for a terrapin a year old will not exceed two inches in length. Another obstruction to the success of the enterprise is the fact that the young terrapins are often eaten by the parents the moment they appear. The age of the terrapin is judged from the wrinkles on the shell, and by competent persons it is supposed that it takes from eight to ten years before it attains full growth. The Southern species is readily distinguished from the Northern by its darker shell, and having less prominence of knobs on the ridge of the shell.

The only large establishment in the Northern States devoted specially to the breeding of terrapins is that belonging to Mr. West, at Long Branch; but how far it may be successful it would be hard to decide at present. The hatching of the eggs by artificial process has proved successful to a certain extent, for many of the eggs are often thrown away owing to a want of that knowledge required for incubating them properly. If fifty per cent. are hatched it is considered good returns; so it will be seen that a large capital is required to carry the enterprise to a successful issue, as a terrapin does not lay over five or six eggs, and the young are assailed by many enemies, prominent among which are the crab and some voracious fishes. At the Long Branch establishment 1,500 terrapins are now being reared; but it will be a long time before they yield any financial returns, owing to the slowness of their growth. They do not require any food throughout the Winter, as they hide themselves away from the cold, and lie in a dormant state until the return of warm weather. Their usual food is fish, for they refuse all meat. One reason given for the decrease of shell fish in our rivers, where they were formerly plentiful, is that the terrapin catches tale and young alike, and as the creatures do not commence laying eggs before they are four years old it is evident that their increase is prevented by this needless slaughter. The only way to prevent this idle destruction is to make a stringent law, fining every person who sells one under six inches in length. This will allow the creatures to increase, so there will be little danger of a scarcity when they are wanted.

HINTS FOR SOUTHERN HUNTING.

THE birds are now well on their way to the Sunny South; our streams will soon be ice-clad and their finny denizens shut from pursuit, and the game animals in the snow-covered forests will be found only by men of unusual hardihood after days and nights of exposure, but, still, within easy access are hunting grounds that will never be without abundant game, where free from ice, snow and bitter storms the gun and rod may be carried amid novel and pleasant scenes, and not only our familiar Northern birds be found in unfamiliar haunts, but new forms of animal life be met with in interesting variety.

The Gulf States, with woodland in unlimited areas, with broad rivers of fresh water and estuaries without end, with open sea beaches and rocky and coral harbors, invite Northern hunters; and if perchance he meet the Southerners in their homes, or at their camps, a new and genial companionship is assured, that once enjoyed will not fade from memory, for Southern welcomes are as broad as Southern fields, and as full of sunshine.

In going far from home there is usually an inclination to carry many articles of impedimenta that are found not to repay the annoyance of their care. The enthusiastic Englishman, Sir George Gore, invaded Florida last Winter with as much luggage as filled a store house, comprised of cases of every imaginable thing needful, and everything unnecessary, and as may be inferred, he did not go to Florida and return for "One Hundred Dollars," his bill for extra luggage being some three hundred dollars on a short trip, and it is doubtful if his curious assortment is all yet removed from the State.

We will not counsel those who would go with much "duffel," as the guides term luggage: they will suit their own abundant fancy; nor will we hint to the luxurious yachtsman how to store his lockers with dainties, although pleasant memories recall the way it has been bountifully done, but will venture on a few simple suggestions that may be of some value to persons going South.

First and foremost, as to guns: For all but boat shooting, guns to be used under the hot sun that, even in Winter, falls on the Southern fields with a fierce heat, should be light, and of not too large bore, to economize weight of ammunition.

A rifle should be short, and one chosen that will in opening be free from long levers that may catch in bridle reins, will avoid annoyance. For alligators, the Mead explosive ball is unequalled, and its use increases very materially the chances of so shocking and stunning those tenacious animals, as to recover them at once. As they lie on logs, and on slimy banks, they usually retain life enough to wriggle into the water, when they sink; but we have shot them with the Mead bullet, and saw them dash out upon land, and be unable to get any command of their movements. All the talk of a ball glancing harmlessly from their scales may have been true years ago, but the modern rifle carries its missile through the scales and skull, and penetrates any part of the animal, even at long range.

For all but "gaiter," the shot gun is the convenient arm. Deer are usually "jumped" and shot bounding through the large leaves of low Palmetto, and at all times one load of fine shot is needed for quail, snipe and plumage birds, that are constantly fluttering up.

Wild turkeys are hard to kill, but often an expert caller will bring them so near that missing is needless, and the use of a wire cartridge of large shot in one barrel will do all that can be to insure success in getting this superb bird, which is a far finer trophy, and more difficult to obtain than any that tempts the sportsman from his camp while the day has not dawned.

No dainty split bamboo rods, nor leaders of tinted gut need be carried South of the Mountains of Carolina; for the trout, grayling and *salmo salar* live not in the streams that bear away the washings from rich mellow bottom lands. The trout of these rivers is a black bass, and when gar fish, cat fish and other heavy-mouthed fellows try physical force with the angler, artful devices are not called for; but one or two stiff boat rods, all the better if in pairs with all the joints interchangeable, and some large lines, gimp and wire-mounted hooks, strong spoons, a gaff and one or two spears for torch fishing, and some ponderous sinkers for tide ways, will fit the fisherman for all ordinary work. If he wishes a new sensation, it may be obtained at the end of a half-inch rope, with shark hook and chain, but beware of any coil about the legs, and get up anchor for a tow seaward, if a large shark or swordfish accepts the challenge.

About Anastasia Island, St. Augustine, the Minoreans capture huge swordfish and sharks by fastening the rope to a post, and carrying the hook out in a boat, leave it, and retire to conduct their share of the conflict on, *terra firma*. A boat is as useful in Florida as a horse on the plains. For short trips from the settlements, nothing will be more convenient, and render the sportsman more independent, than a flat-bottomed boat, with small sail, centre board, and a water tight end with tight trap to carry dry clothing, tea, sugar, &c., to protect from the frequent showers. Floating quietly with the current or tide, a patient hunter may surprise almost all the game birds and animals, and he will see more of interest in the little streams than in miles of the frequented channels. For exploration and travel a boat 18 to 22 feet long, 41 or 5 feet beam, with the full width carried to the stern, built with a flat keel, and broad bearings to insure light draft, fitted with centre board and sail, the latter on sliding topmast for compactness, will be found the best. When anchored the bow will point to the wind. A tent open aft may be hung under the boom, spread with stretchers, and furled sail; and with light boards a bed for three or four may be arranged, and cooking by spirit lamp be done at the wide stern.

With such a boat, and two good negroes, boatmen, (cooks they generally are,) more interesting trips can be made than with a yacht, and more unfrequented points be reached. If cruising in the wide waters is intended, some considerable shear to the bow lines will make a dryer and safer boat, and a canvas bow deck will do good service. Air cushions will be found very comfortable, and in mishaps they are invaluable as life preservers.

One of Pond & Dunclee's stoves will fit out such a party, but a spirit lamp is very useful to heat water for a preventive punch, or for a bowl of soup from Liebig's Extract of Beef, and with it and an old Dominion coffee pot, excellent hot coffee may be made, or Borden's Extract will give it more sippy.

Often for miles no hard ground is to be found, and some heating apparatus is indispensable. No one should brave the night air of the everglades without warm and stimulating food and drinks, and a little quinine will do no harm. Light wines are of great service, and the water flowing from the swamps will not be harmed by a "wee drop," and for the rattlesnake or moccasin bite that never comes, the same is needful. Prudent ones usually do not wait for a bite, but show unbounded confidence in preventive measures.

For sleeping in camp, in this animated land of fens, spiders and the creeping things so unfortunately taken into the ark, a hammock should be used; one arranged, (as it may easily be,) with a light canvas roof, with sides of netting. Two or three rafter-shaped triangles hung on a line will spread such a shelter, and in a canvas hammock under it, one can rest free from the companionship of the guides and dogs, and without vivid ideas of snakes and centipedes. Sportsmen are often disabled by the forest animal in Florida, the flea. High boots will be some defence, but keep away from the vicinity of domestic animals, and sleep not in any of the "cracker" houses, but camp in remote pine woods and keep the dogs away from the tent. Such forest is comparatively free from mosquitoes, and in mid Winter the sand flies are not very annoying.

For minor details the hints common to all hunting will afford a general idea, and perhaps at another time some more suggestions may be made if these are found to warrant such an appendix.

AMATEUR CLUB.

Colonel Wingate, the energetic Captain of the Amateur Rifle Club "team," has written to Captain Midway, Secretary of the Wimbledon Association, stating that a party of American riflemen will be in England during the Wimbledon Meeting, and that he would like to know under what conditions, if any, they would be permitted to shoot. He also desired to learn if they would be allowed to enter in the military match, that is, of course, provided they wished to do so. No answer has been received yet, but one is expected ere long. Colonel Wingate has made no direct request for an opportunity to display the skill of his men, as all he desired was to know what the conditions would be in case he desired to do so. What the probabilities are for our "team"

being represented at Britain's great contest, it would be hard to specify at present, as the matter of competing or not will depend much, undoubtedly, on their mood and other circumstances. In the military match they would labor under the difficulty of not using the calibre required by the rules of the Wimbledon Association, for according to these every rifle used in the contest must be of .45 calibre, whereas those used here are only .44; so if the latter were allowed, they could only use a ball having a .43-90 calibre, while the others use .44-90.

This may have some weight with the English riflemen to prevent their extending the unsolicited courtesies they otherwise would to our men.

But inasmuch as no request has been made to allow our "team" to enter the contest, and the purport of the letter was to learn what conditions would be required in certain cases, if they do not compete at all it leaves them in the same position as they are at present. We should, however, like to see them test their skill with the best riflemen of the United Kingdom, that they might be able to make certain deductions which they cannot do here, owing to atmospheric effects. That they would worthily represent the skill of our riflemen under all conditions we know very well. So their principal object in competing would be to gain experience.

MAN IS NOTHING.—According to scientists man is nothing, or at least next to nothing, as he came from a little mite of dirt, or fluid, or something of that sort; so those who believe with Shakespeare that he is like an angel or a god must feel small, and with them those who boast of "blue blood," for, after all, this peculiar hue of the vital force only comes from a watery source, and the god- and angel-like creatures are only developments from a bit of mucus, that is, if the scientists are to be believed. This lowering of man to the category of *mollus* is not very pleasant, but if facts are facts, why we must do the best we can under these peculiar circumstances. The first effect ought to be to take away from some persons their egotism, self-importance and vanity, and if it does this, the new theory will have accomplished its good.

Among the recently published reports of the British Association, is a paper read by Mr. E. R. Lankester, "on the Genealogical Import of the External Shell of Mollusca," in the course of which he introduced the recapitulation hypothesis, as it has been called, which effects to see in the development of all living things a rapid series of resemblances of their ancestors arranged in historical order. Taking man as an example of this theory, the origin of human being was a small speck of protoplasm of mucus-like consistency, such as might be found in ponds; the next stage shows him in the shape of a small sac, composed of two layers of living corpuscles, the inheritance from poly-like ancestors; later he is an elongated creature with slits, like the gill-slits of a shark, in the side of the neck, inherited from an ancestor of a shark kind. Tracing the child's peculiarities after birth Mr. Lankester showed how in its crawling, climbing and striking qualities it exhibited other results of inheritance.

CREEDMOOR.—The Scottish American Rifle Club tried their skill at Creedmoor on the 26th ult., with the following result. Military rifles only were used:—

	200	500		200	500	
	Yds.	Yds.	Tot.	Yds.	Yds.	Tot.
1. Lindsay.....	30	35	65	7. Robertson.....	23	5
2. Ross.....	27	31	58	8. Clarke.....	23	5
3. Fulton.....	30	28	58	9. Duke.....	19	4
4. Pyle.....	27	30	57	10. Hickling.....	16	4
5. Cameron.....	31	26	57	11. Vannett.....	25	4
6. Edmondstone.....	25	28	53			

—The Winchester Rifle Club, of Connecticut, made the following scores at the last meeting. They shot at a 200 yard range, five shot strings. The honors and prize were won by J. Daniels:—

H. B. Sullivan.....	28	J. J. Sherman.....	38	3
J. E. Stetson.....	28	A. Piton.....	43	3
J. Daniels.....	46	J. Lyons.....	39	7
T. W. Wetmore.....	46	F. G. Barnet.....	33	4

THE CHALLENGE ACCEPTED.

We published a few weeks ago a challenge from Co. E, First California Regiment, and now comes the answer.

D COMPANY, TWENTY-SEVENTH N. G. S. N. Y.

NEW YORK, December 7, 1874.

EDITOR FOREST AND STREAM:—

On behalf of this Company, we accept the challenge issued by Co. E, First California National Guard.

As their proposition is in an indefinite condition, we make the following suggestions as our idea of what would equitably determine the superiority:

First—Let a team of, say twelve men, be named by each Company, to be regularly enrolled members of the Companies, according to the laws of the State under which they exist.

Second—Let the arms be either Remington or Sharps's military rifle.

Third—Distances, 200 and 500 yards; standing at 200; any position at 500 without artificial rest. Target, same dimensions as now in use at Creedmoor, scoring by the same scale as prescribed by the N. R. A., seven shots and two sighting shots at each distance, so that the weather may be nearly equal. Let the match occur on or about June 28th, 1875. Let each team begin firing simultaneously, telegraphing result on completion of firing.

Of course more definite arrangements may hereafter be made.

We trust this match will improve the marksmanship of all participants and move others to more ardor in rifle practice.

Very respectfully, your obedient servants,

H. B. SMITH, Captain,
JOHN H. WOOD, 1st Sgt.,
ACACULUS WOOD, 2d Sgt.,
M. D. FARRELL, Private,
THOS. J. DOLAN, Private.

—The First and Second Regiments are practicing dutifully in hopes of being able to make a good record at Creedmoor next year.

—We are still short of our issue of February 12, 1874, and shall be glad to receive copies from our subscribers.

Shot Gun and Rifle.

GAME IN SEASON FOR DECEMBER.

Moose, *Alces Alces*. Caribou, *Theraps Rongifer*.
Elk or Wapiti, *Cervus Canadensis*. Red Deer, *Cervus Virginianus*.
Hares, brown and gray. Quail, *Ortyx Virginianus*.
Wild Turkey, *Meleagris gallopavo*. Pinnated Grouse, *Tetrao Canadensis*.
Woodcock, *Colinus virginianus*. Wild Duck, *Geese*, Brant, &c.
Ruffed Grouse, *Tetrao umbellus*.

[Under the head of "Game, and Fowl in Season" we can only specify in general terms the several varieties, because the laws of States only so much that were we to attempt to particularize we could do no less than publish the laws of every State, that would be to give to our readers a great deal of trouble, and would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for constant reference. Otherwise, our attempts to assist them will self create confusion.]

DECEMBER.—FURS AND SKINS.—THE QUOTATIONS ARE:

According to size, color and quality.	Northern and Eastern.	Western.	Southern.
Beaver, per lb.	\$1 50 to \$2 00	\$1 00 to \$1 10	\$2 50 to \$3 75
Beaver, dark, per pce	3 00 to 4 00	2 50 to 3 00	1 00 to 1 50
Beaver, pale.....	2 50 to 3 00	2 00 to 2 50	1 00 to 1 50
Beaver, black.....	10 00 to 12 00	8 00 to 10 00	2 00 to 3 00
Badger.....	2 00 to 3 00	1 00 to 3 00	1 00 to 2 00
Cat, house, black.....	10 00 to 15 00	7 50 to 10 00	2 50 to 4 00
Fisher.....	10 00 to 15 00	8 00 to 10 00	4 00 to 6 00
Gray, house.....	2 50 to 3 00	2 00 to 2 50	1 00 to 1 50
Fox, cross.....	2 00 to 3 00	1 00 to 3 00	1 00 to 2 00
Fox, red.....	1 50 to 2 00	1 25 to 1 50	1 00 to 1 25
Fox, white.....	1 00 to 1 50	1 00 to 1 50	1 00 to 1 50
Fox, blue.....	5 00 to 10 00	5 00 to 10 00	5 00 to 10 00
Fox, gray.....	7 50 to 10 00	7 50 to 10 00	7 50 to 10 00
Lynx, prairie.....	5 00 to 10 00	5 00 to 10 00	5 00 to 10 00
Lynx.....	2 00 to 3 00	2 00 to 3 00	2 00 to 3 00
Marten, dark.....	5 00 to 10 00	3 00 to 5 00	1 00 to 2 00
Marten, light.....	5 00 to 10 00	3 00 to 5 00	1 00 to 2 00
Mink, dark.....	3 00 to 4 00	2 50 to 3 00	1 50 to 2 00
Mink, pale.....	1 00 to 1 50	1 00 to 1 50	75 to 1 00
Mink, white.....	8 00 to 10 00	8 00 to 10 00	4 00 to 6 00
Otter, sea.....	10 00 to 15 00	10 00 to 15 00	10 00 to 15 00
Muskrat, Fall.....	20 to 25	18 to 20	15 to 18
Muskrat, Winter.....	20 to 25	18 to 20	15 to 18
Muskrat, Spring.....	20 to 25	18 to 20	15 to 18
Muskrat, Kitt.....	5 to 8	5 to 8	4 to 6
Chinchilla.....	20 to 25	18 to 20	15 to 18
Raccoon.....	75 to 80	60 to 75	20 to 30
Seal, fur.....	5 00 to 10 00	5 00 to 10 00	5 00 to 10 00
Seal, skin.....	5 00 to 10 00	5 00 to 10 00	5 00 to 10 00
Skunk, black.....	1 00 to 1 25	1 00 to 1 25	1 00 to 1 25
Skunk, short striped.....	60 to 75	60 to 75	60 to 75
Skunk, long striped.....	40 to 50	40 to 50	40 to 50

GAME IN MARKET.—The market is well supplied with game at present. Canvas back ducks in fine condition, from Havre de Grace, bring \$3 per brace; red-heads \$2; black-heads 75 cents; mallard \$1 25. Ruffed grouse bring \$1 per brace; prairie chickens \$1. Venison from Minnesota, 25 cents per pound; quail from the West and the interior of New York bring only \$2 per dozen.

NEW JERSEY.—*Barnard*, Dec. 5.—At last the brand have made their appearance in large numbers. Our flats are covered with them; a good customer-stored. You will hear of big shooting. T. D. Wederick killed five swans near the "Cedars" one day last week, and C. Parker and J. W. Kinsey killed thirteen brant on Tuesday. C. Parker killed six brant and two geese Wednesday. Weather too mild to make big days; plenty of black ducks; fair show of geese; no show of any broadbills, which generally are so numerous here.

MR. EDITOR.—Your article in reference to the scarcity of seal, and the "apparent want of a nose in this season," was well timed, as many so-called sportsmen were under the impression that their dogs were worthless, not knowing the effect produced by drought. One good thing has been perfected by this, viz: Few birds have been killed, and naturally the increase will be greater next season, thereby making the sport all the greater. I never knew partridge to be so plentiful as this year, and they, like the quail, have succeeded in escaping death by the gun. The leaves in the mountains are so thick and dry as to make it impossible to approach within gun shot of the birds, and if the foxes and weasels don't kill them this Winter they will be out in full force next year. Have you noticed the scarcity of rabbits? The minks, foxes and weasels have laid them out in certain sections. I shot one large brown weasel, and my friend of mine killed a large mink last week, whilst hunting for quail. In getting to protect our game it would be well for you to suggest to the conventions the necessity of offering a large bounty for every mink and weasel caught running wild.

E. S. WAXMAKER.

MARYLAND.—*Deer Park*, Dec. 4.—Since I wrote you last the people here have been attacked with hunting fever, and during the light snow of this week the woods were filled with hunters. One gentleman named Lashorn had splendid luck last Saturday. He was out rabbit-hunting, and was standing in a thicket waiting for the dogs to run out a rabbit, when a large buck and doe ran up to within twenty-five paces of him and stopped. He could see nothing but the buck's horns, but being afraid to move, he calculated the distance to his (the buck's) shoulder and fired, shooting him through the neck and wounding him mortally. He had a muzzled loading shot gun, with a load of No. 1, 2 and 4 shot mixed, and shot him with one barrel. Another hunter shot a buck with No. 4 shot. I don't know at what distance. Deer are very plentiful. I heard of one man's bringing eight saddles to town one day this week, and of many others had from one to four. Great numbers of rabbits, grouse, quail, squirrels, &c., are for sale at the stores throughout the county. Grouse bring 50 cents per brace, quail \$1 25 per dozen, rabbits 30 cents per brace, venison 12 cents per pound. I think of going turkey shooting to-morrow. I will inform you of my luck.

ALLEGANY.

TENNESSEE.—*Memphis*, Nov. 30.—Without going into details as to the probable yield of game in this vicinity for the next week or ten days, I will say that since my last letter lovers of the dog and gun have had a fair week's sport, and each and all who have been "out" note an improvement in the supply of small game, and "old hunters" have had their time well occupied in the pursuit on this as well as on the other side of the Mississippi, of bear and deer, as is attested by the fact that our market is glutted with venison, and at nearly every game stand can be found choice cuts of "bar" meat, which is so highly (?) relished by epicures, and notwithstanding that the weather has been exceedingly mild, large numbers of ducks and geese have been seen in the "bays" of the "callers." The canebrakes and swamps adjoining nearly all of the

bays on the river are full of the finest game, some of them showing up handsomely in the way of bear, panther, wild cats, wolves, deer, and occasionally elk are found, and especially is this the case at Bayou Remont above here, which lies on the river, partly in Missouri and partly in Arkansas, and just now about a dozen "sports" are there, some from this city and some from St. Louis. The cane below here is equally well supplied, and hardly a day passes that parties do not leave here for a few days' gunning, and all have good luck. Some of the amateurs make some terrible mistakes—that's what they call it—in their shooting, as in the case at Bayou Remont, when a couple of gentlemen lifted themselves out with wagon, mule, camp equipage, &c., and located in Noncon-ham bottom, and after a day's sport would tether their mule close to the cane and near the camp. On Friday night his muleship longing for a square meal of oats, broke loose from his fastenings and wandered off to a neighboring farm house for a "mubbin or two," and there he was met by a pack of dogs who gave chase, "Muley" making for camp, head and tail erect, in dashing through the cane woke the sleeping hunters, one of whom declaring that the noise in the cane was occasioned by a deer chased by a pack of hounds in pursuit, planted himself near an opening where suddenly the mule popped out, and the hunter (?) let go both barrels of a double barreled gun "loaded with mugs to the muzzle" and to make a long story short, I need only say that the mule died, and the hunter, he was dead the hunter had to foot it to the city and get another vehicle, but declares that he never will shoot at another "animal" until he knows what it is. It must not, however, be considered from this one mistake, that even our amateurs are prone to such errors. On the contrary, they are skilled in the deer hunt as a general thing, and seldom return from a hunt without plenty of meat. The present cold snap will serve to improve the supply of game in this immediate vicinity, as well as in the central part of the State; but there, from the latest reports, they do not require even a dog or gun to bag their game, but wait for a first-class hail storm, as was the case one day last week, and then start out with a cotton basket, which they fill in a short time with birds killed by the falling hail stones. Mississippi is well supplied with large game this season, and, in fact, partridges and the like are so abundant. However, the old sports there make up the deficiency in the latter by devoting their time to the former, and their average luck is shown by the hunt of Mr. A. F. Lewis, of Coshango County, who one day last week, with his dogs, ran four yearling bears up a tree and killed three, capturing the fourth alive. The swamps and cane along both the Arkansas and White rivers in Arkansas are full of game and the many interior lakes about with fish and wild ducks. Red River is also equally well supplied, and there I learn that vast numbers of ducks are slaughtered daily; so many, in fact, that Shreveport's citizens are living on luscious mallards at from ten to fifteen cents each, the average day's yield for gunners in that stream being from 100 to 150. Our fox chasers have not been idle during the week, but have had two days fine sport. On the first chase Reynard was turned out at noon and on Nov. 13 and Nov. 27, in Currituck Sound, 55 canvas backs, 7 swans, 8 geese and 400 ducks, mostly red heads, bald patches, black ducks and sprig tails. Mr. Noah Curtis, of Boston, joined them Nov. 27, and the first day's shooting brought in 11 canvas backs, 25 other ducks and 6 geese.

KENTUCKY.—Shelbyville talks of organizing a shooting club.

NORTH CAROLINA.—Messrs. C. P. Keeler, Judge Tufts and B. E. Ricker, of Boston, and members of the Monkey Island Club, shot in Currituck Sound, Nov. 13 and Nov. 27, in Currituck Sound, 55 canvas backs, 7 swans, 8 geese and 400 ducks, mostly red heads, bald patches, black ducks and sprig tails. Mr. Noah Curtis, of Boston, joined them Nov. 27, and the first day's shooting brought in 11 canvas backs, 25 other ducks and 6 geese.

ILLINOIS.—*Elkhart, Dec. 3.*—The hunting has been good here this Fall and Winter, and the quail and chicken are plenty. In five days—Friday and Saturday of last week and three days of this week—I killed 223 quail and 74 chickens, and mostly in cornfields and along hedges. There are no ducks here now.

CHAMPION WING SHOT OF AMERICA.

Netting quails is indulged in very freely by pot-hunters.

OHIO.—*Tiffin, Dec. 5.*—In publishing an extract from one of my letters you make me say, "I killed the first buck," &c., which is a mistake, of course, *first* being the word used in my letter. Several larger ones, however, have lately been killed. Since writing the letter above referred to the slaughter of deer has been immense, seventy-six having been transferred in one day at this point alone. As the deer shooting season has closed, this class of sport must be postponed until next Fall, when I fear they will be nearly exterminated.

SPORTSMEN will do well to take notice that the season for killing deer in Ohio closed December 1. The penalty for violating the law, which will be rigidly enforced by the Sportsmen's Association, is a fine not less than \$16, nor more than \$30, or imprisonment for not more than thirty days, or both, at the discretion of the Court.

VIRGINIA.—*Montebello, Dec. 5.*—Although duck shooting is over at Puckaway Lake, comparatively good shooting may be had along the Fox River, as considerable numbers of mallards and red heads seem loath to leave the "chill North." I bagged a few brace of the latter three days ago, but do not consider the sport sufficient to sacrifice one's self to the "keen blasts of Winter," nor could it be compared to Fall shooting, and, as such, is not very exciting, there is something far more exciting and exhilarating in cutting down a mallard as he rises from the rice, than in getting an occasional shot in Winter by walking along the river bank with numbed hands and using all caution to prevent being long in the crusty snow. I anticipate some fair sport ere long at Buffalo Lake, the margin of which abounds with spring loons, and here ducks are plenty all Winter. My usual plan is to hunt on skates at this lake, a somewhat novel mode, but it adds to the attraction.

MINNESOTA.—*Brainerd, Dec. 2.*—Snow a foot deep (splendid for deer hunting) and buffalo overcoat at a premium. It is safe to say that 150 deer have been killed within four miles of town this season and ruffed grouse by the hun-

dred. Deer shooting will be over on the 15th, and it is a good thing.

No deer shooting in Minnesota after the 15th of December.

IOWA.—*Burlington, Dec. 1.*—On the river are plenty of geese and brant, floating down on the ice blocks; quail plenty; chickens scarce on the bottoms; deer found only beyond the Des Moines, in a southwesterly direction in abundance, on the line of the Burlington and South Western Railroad, now completed to Unionville, Missouri, 130 miles. There is not a thoroughbred dog in this town, though there are some first-class sportsmen.

NEBRASKA.—The Sioux tribes of Dakota, Wyoming, are hunting buffalo in the Republican Valley. Their luck has not been great so far.

MAST DESTROYED.—Heavy frosts several weeks since destroyed the mast in a number of counties in Arkansas. Notwithstanding that, however, Horsfall, who has emigrated from Memphis to that peaceful (?) State, is having plenty of sport, and has thirty-nine dogs in training. So many that it required two steamers to transport them.

—Company C, Third New Jersey, had a match on the 26th at 100, 200 and 500 yards, with the following result, the highest points possible being sixty: Captain W. H. DeHart, 26; Corporal Spinning, 26; Private Hoagland, 24; Corporal Prescott, 21; Private Ayers, 21; Corporal O'Neil, 20; Private Houston, 20; Private Gregory, 20; Sergeant Moore, 19; Private Robt. 18; Private Clay, 17; Private Naar, 16; Private Nair, 16. The tie in the first and second score was shot off and won by Captain DeHart 15 to 14.

—Congress at its last session made an appropriation of \$10,000 for the purpose of testing Lee's breech loading arm. A small number are now being made at the National Armory under the supervision of the inventor, and when completed will be sent into the field for trial.

—Mr. Post, of New York, and Mr. Baylis, of Brooklyn, accompanied by a number of sporting friends, went to Long Island last Wednesday to test their skill in a pigeon shooting match. The conditions were: 3 birds, 25 yards rise, \$25 a side, H. & T. traps, Long Island rule. Baylis, who was the favorite among the betting men, used a Scott ten-bore, and his rival a Dougal twelve gauge. Mr. Baylis won the match, having killed 13 out of 18, while his opponent only killed 4 out of 18.

After this Mr. Greene, of Brooklyn, and Mr. Post agreed to shoot 15 birds each, from 5 traps, English rules, for \$25 a side. Mr. Greene had a good gun, but, under the rules, and not having a twelve gauge gun, as called for, was compelled to allow his opponent one yard for the ten bore, which he desired to use, making the distances: Greene, 31 yards; Post, 30 yards. At the fifteenth bird they had each killed six, when Greene missing and Post scoring, the latter proved the winner, killing seven to six for Greene.

Following came a match for 10 birds each, 30 yards rise, 5 traps, and English rules, between Mr. Baylis and Ira A. Paine. Baylis took the initiative, and at the tenth bird had killed seven, which obliged Ira to retire, as he had scored but five out of nine, and could not win.

A second match of 10 birds, 30 yards rise, English rules to govern, for \$20 a side, was gotten up between Mr. Post and Mr. Hickock, of Brooklyn. The latter at the ninth bird had missed but, on the tenth, he won the privilege of retiring, as out of eight he had killed but five.

A handicap sweepstakes of \$5 each, 3 birds, H. & T. traps, wound up the sport of the day. Eight entered in this, these being Messrs. Van Buren, 25 yards; Baylis, 25 yards; Lott, 21 yards; Ireland, 24 yards; Monroe, 21 yards; Post, 24 yards; Paine, 27 yards, and Wingate, 24 yards. Baylis, Monroe and Wingate each killed their three, when the shot of Mr. Paine, who was sitting on the third bird, and Baylis and Wingate, each killing three straight, divided the money.

—Messrs. Belmont and Robinson shot a pigeon match against Messrs. Lowry and Grymes at New Dorp, Staten Island, last Saturday. It resulted in a victory for the latter. The following is the score:—25 birds each, 28 yards rise, 5 traps, English rules, Grymes, 15; Lowry, 19; Belmont, 11; Robinson, 20.

QUAIL SHOOTING IN GEORGIA.

SATANAHL, November, 1874.

EDITOR FOREST AND STREAM:

Yesterday morning, while in the office of a friend on Bay street, he proposed that we should go out for an afternoon's sport. If we could not get some more of our kind I had no objection, and after talking over the subject awhile, we arranged to meet at his house at two o'clock. At the appointed time we were both ready, and getting into his buggy, with him and Dick behind, the dogs, three in number, two handsome liver and white pointers, the third a fine white setter bitch, got by "Bismarck" running along on either side the road, we speedily made our way to our gunning grounds. Some four miles out on the Ogeechee road we got out; leaving Dick in the buggy with directions to meet us at a point near town, we loaded our guns, and getting over a fence, entered a rice field, in which the rice had been cut about a week previous. Not more than fifty yards was we gone before the dogs came to a "standby, boys," says my friend, and stepping up to the cover of a fine cover of a dozen birds. Three barrels ran off their full, round reports, and two birds are down. Marking the remainder of the cover down in a piece of heavy cover along the edge of a ditch, we go on after them, first placing in our pockets our birds, which the dogs retrieved handsomely. Reaching the place where we had marked them down, the dogs again came to a point on different birds. Your are up in front of me, says a quick shot, brings them down, while the double cock, with a single bird flushed from under my feet is at once cut down, and loading our guns another gets up and goes off unharmed. Two of our birds are speedily bagged, the third, a crippled one, defying the attempts of the dogs to find him. Two more single birds are put up and knocked over, and bagging them we work toward the road, and getting near the edge of the cover, a swamp, but they are flushed by the young pointer who ran in wild on them. After administering a severe flogging to him, we hunt them up, the dogs pointing them beautifully, and as they rise one falls to the right barrel of R. L. Laucaster, while the contents of the left go on an exploring expedition through the top of a fallen tree. Catching two as they pass, a quick shot, brings them down, while the double cock, thinking no doubt, he was going to get off, silently falls to my second barrel. Puncturing our birds, we try another field, as the rest of the cover had gone into the heavy swamp; but here no birds are to be found. In the next one, which was heavily planted in grass, we flush a fine large cover, out of which we get three fine birds. Marking them down, the dogs come to another point, and in a short time two more are down, the two of which are only wing tipped, and running into a swamp, we are compelled to give up the search for them, it getting late, and R. being obliged to get back to attend to some unfinished business,

so we return homeward, perfectly satisfied with our afternoon's sport.

It is expecting soon a valuable addition to its kennel of a splendid young setter of the famous Giltshire strain, bred and raised by that veteran sportsman, Henry Smith, Esq., of Philadelphia, and if he does not get an A No. 1 dog in even fewer days, I am sure he will. If it is half as good as my dog "Jack," which I got from Mr. S., some years ago, and which was pronounced by several of the finest shots and best sportsmen then and now living in this city, to be the best and most perfectly broken dog they had ever shot over, he will have a dog which any sportsman would be glad to have.

GEORGETA.

GAME IN WEST VIRGINIA.

New York, November 30, 1874.

EDITOR FOREST AND STREAM:

A year or two since I spent several weeks alone on those mineral springs which are so numerous in the Alleghany Mountains of West Virginia, and I was really amazed at the abundance of game of all descriptions, making it a very paradise for sportsmen with either the rod or gun. Thinking a few lines on the subject might interest the readers of your valuable paper, I will trespass on your space to a limited extent.

The Virginian Springs, or most New Yorkers are well aware of, are but twenty-four hours distant from the metropolis, and the last twelve hours ride is through a most beautiful region, passing by the Shenandoah Valley, and the fine mountain scenery of West Virginia. At the period of my sojourn at the springs the Chesapeake and Ohio Railroad (since completed) was only running to Covington, W. Va., from whence a line of stages connected with the White Sulphur, Sweet, Red, Sweet, Bath, Warm, Backridge, or whatever point the tourist might wish to be transported to. Well do I recollect arriving at Covington in the dusk of a Summer evening, after a rapid railroad ride, the last fifteen miles down a grade of sixty or seventy feet to the mile, and run in seventeen minutes by the watch, and then putting up at the village hotel, where was spread a supper of chicken, venison, brook trout, &c., such as an epicure might envy. Some of our party, left by the night stage, but myself and a number of others, comprising most of the ladies, preferred waiting until daylight, especially as there was a risk of too "rapid transit" by the stage missing the road and tumbling down the mountain side, which catastrophe had happened a short time before. After a refreshing night's rest, we were up and away next morning at 6 A. M., after a lovely ride of from twenty to thirty-five miles according to destination, up and down the mountain sides, fording streams with the water over the hubs, and which were so numerous that we crossed one rivalled seventeen times in twenty miles. We reached our objective points, some going to the White Sulphur and others, including myself, keeping on to the old Sweet, which, if my recollection is correct—about thirty-five miles from Covington.

Now, since the completion of the railroad, the traveler, by leaving the train at Alleghany Station, has only nine miles staging to the old Sweet Springs, and to the White Sulphur none at all, the cars stopping within a stone's throw of the hotels. The White Sulphur Springs are highly respected, not least for my part, I always preferred the old Sweet to any of the other resorts, on account of its being less crowded, and of its unequalled location. Situated in Monaca County in a beautiful valley, it is surrounded by charming highland scenery, and the temperature is delightful, even in July and August. The hotel and cottages accommodate 700 or 800 persons, and was very well kept, at that time, by the gentleman, Mr. Cornery of the Pennsylvania House, Savannah, Ga. The bath houses are superb, and one can bathe in the limpid element as clear as crystal, and which has a temperature of 75° the year round.

These springs were discovered in the last century by the Indians, who would bring their sick and infirm, and bionic by their side. Some wonderful stories are told of the cure effected by these highly medicinal waters, which I will not weary you by relating here. But I am disgracing from my subject.

Game of all kinds, fish, fowl, is so abundant as not to be appreciated. Woodcock frequently were shot within five hundred feet of the house, and a mile or two back in the hills was one of the finest drives for deer to be imagined by the most ardent sportsman; while for the disposal of Isaac Walton ten minutes' walk from the house was a trout brook, where the capture of two to three pounders was an every day occurrence. Every day we had the speckled beauties served up on the table, which, with tender, juicy, venison steaks and side dishes of woodcock, pheasants, &c., formed a menu unsurpassed anywhere. The deer were actually so plentiful that on my return ride to Covington, when about halfway to that place, as we stopped by the wayside to let the team drink, my driver, who was sitting on the front seat, said, "There, sir, if you wish to see a grand sight, look there." I did look, and lo and behold on a mound about one hundred yards distant, stood as fine a stag as ever I beheld, with his head erect, and his large, soft eyes staring at (to him) wondrous sight of so many intruders on his royal domain. A moment he stood there, but one of the horses raising his head, and looking like the stag, and the deer was gone. I was so much we could have shot him with ease. The driver told me that he frequently saw them crossing the road about of him. Altogether, I know of no region within a day's journey of New York that offers such inducements to the hunter, whether of fur, fin, or feather. I have just finished reading your letter on Salmon Fishing in California. In your issue of Nov. 16th, I saw that you mention that you had been to the coast of California, the most salmon fishing in the world. When I was in San Francisco, in 1870, salmon was so plentiful that it sold for 5 cents a pound, and I suppose that the succeeding years have caused no diminution in quantity. Should it meet with your approbation, I might send you a short account of my experience during a Winter trip across the continent the first Winter the railroad was completed, with an account of a day's fishing near Ogden, Utah. Yours truly, FLETCHER.

A QUEER OLD CASE.

DEER PARK, Md., December 4, 1874.

EDITOR FOREST AND STREAM:

I took a trip into West Virginia some time ago, and had some amusing incidents happen to me which I am now to relate. One of them was, I have a tall and thin man of about forty years of age, and who on being told me had not a razor on his face for thirteen years, which fact caused his face to resemble the "jack o'lantern" underbrush on the sides of our road. He was dressed in buckskin breeches and a homespun coat, which he had bought of one of his neighbors, and were the only articles of "bought clothes" that he had in his wardrobe. We rode to Covington, and he informed me that he lived at a place called "Thunder-struck." On the previous morning he heard one of his boys squealing, and on going out discovered four bears, two old ones and two cubs, dragging the hog off. He was afraid to "hackle" them alone, and they took themselves and the porker into a neighboring huckleberry thicket. During the conversation I asked him some questions, and he was so much interested that he told me that he had been a "thunder-struck" for some time. Presently my companion said: "Say, Mister, will you let me smoke awhile on that cigar?" I gave it right back. I didn't say nay one to the score; they're two cents apiece, and I ain't never no count, now." After a short, but violent struggle with my disabilities, I conquered, and offered him a clear from my own "thunder-struck." He said he had the one "gave him good luck to smoke the same cigar that anyone else had been smoking."

The country fairly swarmed with game of all kinds. I met one man, who told me he had killed a (I recollect rightly) sixty-three deer the previous Winter and said that it was a grand place for hunting, and quite handy, being but fifteen miles from B. and O. R. R.

Yours respectfully,

ALLEGANY.

—Great Britain annually consumes 27,000,000 home-bred rabbits, not counting the Welsh ones on toast.

The Horse and Course.

—Three trotting contests came off at Fleetwood Park last Wednesday. The first was between Mace's Clara G. and running mate in harness and John Murphy's Lady Dahlman under saddle. Though the latter was admirably ridden by her owner the team won. Best time, 2:28. The second race was a sweepstakes of \$400 between Sherman, Willie, Lady Trilling and Sorrel Jane. The former won in three straight heats. Best time, 2:41. The third affair was a sweepstakes for \$900, between Black Hawk, Jerry, and Jericho. The former lost the first heat but won the next three and the race.

—Eleven heats were trotted last Thursday afternoon at Fleetwood Park to decide two matches, five in one and six in the other. The race was between C. Walker's lay gelding Tommy Moore, to wagon, and R. Smith's bay gelding Humpty Dumpty, in harness; and F. Lowndes' bay mare Butcher Girl, to wagon, and Ben Wilson's bay gelding Pet, in harness. In the first match Humpty Dumpty had the call in the betting for two heats, both of which he won; but when Tommy Moore and scored the third heat he in turn became the favorite. Tommy Moore also won the fourth heat; but when the horses started for the fifth Humpty Dumpty sold for the highest price. The latter won the concluding heat and the race. Best time, 2:46. In the match between Butcher Girl and Pet the first heat was won by Pet, but the latter lost the second and third heats and became a great favorite. She made a dead heat for the fourth, gave Pet the fifth, and then went about her business and won the sixth heat and the race. Best time, 3:04.

—Fleming's Alice Gray and Jno. Murphy's Tip trotted at Fleetwood Park last Saturday for a purse of \$200, and after four heats the former was winner. Best time, 2:55.

—Walker's Pet and Lowndes' Butcher Girl trotted at Fleetwood last Monday. The former won the race in the fifth heat. Best time, 3:08.

—Joe Platt and Lady Woods tried their mettle at Sea View Park last Saturday for a purse of \$100. The former won in three straight heats. Best time, 2:50.

—The Louisiana Jockey Club Fall meeting was inaugurated last Wednesday. The first race was a hurdle race, for eight hurdles; club purse, \$500; \$250 to the first, \$100 to second, and \$50 to third horse. The race was won by Biloxi, beating Chris Doyle, Huntress, Mary Forrest, and Captain Jack, in the order named. Time, 4:02. Captain Jack fell at the second hurdle. The second race was a hurdle race, for eight hurdles; club purse, \$500; \$250 to the first, \$100 to second, and \$50 to third horse. The race was won by Puss Broadway, beating Leap-year, second, and Pauline Sprague, third. Time, 4:50. The third race was for the Club purse of \$500, for all ages; \$100 to first and \$100 to second horse; mile heats. Ballinkeeel, Bonaventure, Mary L., Bob Britton and Tom Leathers started, but the former winning the first two heats was declared victor. Time, 1:44, 1:45.

—The third day of the Louisiana races witnessed some excellent contests. The first event was a handicap hurdle race of two miles, for a club purse of \$500, of which \$250 to the first, \$100 to the second and \$50 to the third horse. The race was won easily by Biloxi, beating Captain Jack, Chris Doyle, Mary Forrest, Huntress and Astral, in the same order. Time, 3:36. The second race was for a club purse of \$400, for all ages; \$350 to first, \$100 to second, \$50 to third; one mile and three-quarters. The race was won by Ballinkeeel by six lengths, beating Carrie P., Palmouth, Colonel Nelligan and Rainy Day, in the same order. Time, 3:10. The third race was for a club purse of \$700, for all ages; \$550 to the first and \$150 to the second horse; mile heats; best three in five. The race was won by Lottie Moore in three straight heats, Crown Prince taking second money. The first and third heats were secured easily, but the second was almost dead between the winner and Crown Prince. Time, 1:45, 1:45, 1:46.

—The last day of the Louisiana races closed last Monday. Pauline Sprague, Puss Broadway, Nannie and Leap Year carried off the Howard Stakes for colts and fillies. The former was the winner. Time, 2:06. In the Consolation Stakes for a purse of \$400, Carrie, Brown Prince, King Amadeus, Mary L., Captain Jack and Bob Britton were entered. The former was the victor. Time, 1:59. For the Club purse of \$1,200, four mile heats, there were five entries, and victory fell to Colonel Nelligan in the two first heats. Time, 8:34, 8:39.

—It is announced by the San Francisco papers that a handicapped running race—two miles and repeat—is about being arranged between Katie Pease, Henry, Hardwood and a horse called Gallinipper, Katie Pease to carry 105 pounds, being four pounds more than rule weight; Henry to carry

ninety-five pounds, which is nine pounds less than the rules call for; Hardwood to carry ninety-two pounds, being twelve pounds less than rule weight; and Gallinipper, although an aged horse, will be allowed to run with ninety pounds up. The purse is to be \$1,000, and the race to be decided over the new track, the time to be set.

—Syrian, the winner of the great Shropshire handicap, distance one mile, was timed by Benson's chronograph in 1 minute, 37.4 seconds. Syrian is an aged horse and had 101 pounds up.

—F. Archer, a well known English jockey had 507 mounts during the past season, out of which he succeeded in winning 143.

—The largest training stable in the country is shortly to be established at Ranococas, Burlington County, New Jersey, by William Brown, formerly with Ten Broeck, England.

—CHALLENGE.—Mr. John Rook, of Manchester, England, offers to trot his mare, Steel Grey, against any horse in the world for either \$1,000 or \$1,500. The sum is too small to cause any American "cracks" to go to the trouble of meeting the grey mare.

—SPEED IN HORSES.—Just at this time, when trotting horses that can trot a mile in 2:20 are becoming so common, and when horses taken out of butcher carts in California are trotting a mile in 2:18 with ease, it may not be uninteresting to inquire whether this class of horses are really the most useful as well as the most valuable, their value being judged by the money they will sell for.

When perseverance as well as speed is required in a horse, another style than the American trotters must be chosen—the well known roadster. He is not built like these celebrated trotters. He has deeper shoulders, a straight back, and much stronger loins. He possesses stouter forelegs, and all his legs are shorter. His foot points straight forward; he lifts it well, and brings it down square on the whole bottom at once. Such a horse is very useful, for he can maintain great speed all day, and can even take with him the commodities and produce which his owner is compelled to transport by this kind of conveyance.

Some of the recorded achievements of these horses are of a nature to command our admiration, and from various sources we compile some of them for the benefit of our readers.

On the 25th of July, 1753, in England, Mr. Crockett's gray mare trotted 100 miles in 12 hours, without seeming fatigue, but

the rider was so exhausted that he had to be held in the saddle during the last few miles. The celebrated horse Phenomenon, bred by Sir Edward Astley, in Norfolk, trotted 17 miles in 53 minutes, with perfect ease. This mare was pushed so hard in these long heats that she ran down, and sold in 1810 for about \$35. Under good care she recovered, and when she was 23 years old trotted 9 miles in 28 1/2 minutes, and gained four matches in one day. A Shetland pony in an exciting match ran 44 miles in 3 hours and 45 minutes, and a Galloway nag ran 127 miles, all the way at the rate of 9 miles per hour.

Two noblemen of England, in 1750, furnished a rig, consisting of four horses attached to a four-wheeled coach, that accomplished 19 miles in 5 1/2 minutes, on ordinary roads, and Mr. Giles drove his celebrated mare Maid of the Mill, 28 miles in an hour and fifty-eight minutes—on the trot throughout.

The inhabitants of Toorkistan, it is said by way of forcible illustration, are born in the saddle, and their horses are perhaps the best in the world on long, speedy excursions. One hundred miles per day is their standard.

They train them especially for long, hostile excursions into neighboring territory, and when a horse is in proper condition, they express it by saying: "His flesh is marble." In 1800 a Toorkman horse carried a dispatch from Shiraz to Teheran, a distance of 500 miles, in precisely six days.

A CARD.

In the issue of FOREST AND STREAM of 7th month 23rd last, we inserted an advertisement containing an extract from a letter of James Purdy, 314 Oxford street, London, which, it appears, was only intended for our own information, and not for publication. Our use of it—which we regret—was caused by our misunderstanding the object of Mr. Purdy's letter, and we very cheerfully make public the following:

JOS. C. GRUBB & CO.,

712 Market street, Philadelphia, Pa.

LONDON, Nov. 13th, 1874.

GENTLEMEN:—

I observe with great regret in the issue of FOREST AND STREAM of the 30th of July last, my letter to you of the 8th of June. This letter was intended quite as a private communication to you, and certainly never intended for publication. I should further remark in simple justice to several well known gun manufacturers in Birmingham, that the remarks made in the first paragraph of such letter, in regard to the quality of work turned out by Birmingham gun houses, did not in any way apply to them, for, on the contrary, I am convinced that there are many houses there who have and are manufacturing good, sound, and excellent guns. Begging you to set this matter right.

I am, gentlemen, yours very truly,

JAMES PURDY.

To Messrs J. C. Grubb & Co.

INTERNATIONAL EXHIBITION—FAIRMOUNT PARK, PHILADELPHIA.

PHILADELPHIA U. S. AMERICA APRIL 19th - OCTOBER 19th 1876

Length (East and West) 1,880 ft.; Width, 464 ft.; Height, 70 ft.; Height of Central Towers, 130 ft. Main Entrance on Elm Avenue. Area covered, 934,098 square feet, thus divided into parallel zones, lengthwise of the building. Could not occupy portions of the building. This arrangement will bring the products of each class from the whole world into the same line.

ART GALLERY.

DIMENSIONS OF THE BUILDING.

Fishing Tackle

Made and repaired with the utmost despatch.
Also, covered by the best selection of TROUT AND SAL-
MON RODS, REELS, LINES AND FLIES.

Medals awarded at the World's Fair and American
Institute for our superior Artificial Flies.

VIENNA, AUSTRIA, Nov. 30, 1875.

Messrs. Wm. & C. Scott & Sons,
Straw-A friend of mine sent me, with a transport
of Italian Shells, two boxes of "Vanity Fair," which I declare
to be the best tobacco I ever smoked. We have very good
tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair"
is the king of all, by far the most delicious and the right one for
strangers. My friend in New York got an appointment in
California, by this means. I apply for more of the "Vanity Fair"
and send with the next steamer to Germany. If there is
any more from that, tell your excellent "Vanity Fair" man
I beg you to excuse me the address.

Dr. Geo. Hyatt,
Professor of Anatomy in the University of Vienna.

It is manufactured from the best
Virginia and North Carolina Leaf.
It is particularly adapted to Meer-
schaum and Cigarette smoking—
does not bite or make the tongue
sore—is therefore unlike any other
tobacco in these respects.

ters of 1 and 5 lbs.

AUDUBON POWDER.
Very quick. For woodcock and quail. Nos. 1 to 4.
Packed in metal kegs of 124 lbs. and 64 lbs., and in
pound canisters.

ORANGE RIFLE POWDER.
The best for rifles and for all ordinary purposes.
Sizes 1/2, 1/4, 1/8, 1/16, the last being the finest and
most true. Packed in wood and metal kegs of 25
lbs., 124 lbs., and 64 lbs., and in canisters of 1 lb. and
1/2 pound.

All of the above give high velocities and less resid-
uum than any other brands made.

INVENTOR AND MANUFACTURER OF
Holabird's Shooting & Fishing Snits

Made of the best English duck, rendered Water and
Mildew proof. Dead grass color, arranged so as to
carry a large load of shells and game and balance well.
A vest with sleeves which will carry shells to be
worn with or without a sleeveless coat, thus giving the
freest movements of the arm, the coat worn without
the vest of course, and snit shooting, and the whole suit
for wet weather.

Price—Coat, \$10; Vest, \$4.00; Pants, \$3.50;
Hats, \$2.50

The goods are made up splendidly, and will be made
to measure at the above prices, and sent U. S. D.
Trade supplied at the usual discount.

Address S. W. L. HOLABIRD,
Valparaiso, Ind.

Field, Cover, and Trap Shooting.
By Captain A. H. DOUGLASS.

CHAMPION WING SHOT OF AMERICA.
This book contains in sixteen chapters and about
400 pages, a full and instructive account of the expe-
rience acquired by Captain DOUGLASS in twenty
years with the gun in all seasons; the best methods
of finding and killing with dog and gun Pinnated
Grouse, Quail, Hated Grouse, Woodcock, Plover,
Snipe, &c.

Also the most successful methods of shooting Wild
Ducks, Wild Geese, and Cranes, and the best way
of hunting Deer and shooting Wild Turkeys.

Sporting Dogs, their breeding, and how to break
them.

THE COMPLETE ART OF SHOOTING ON THE
WING, with full and clear instructions for young
sportsmen, by means of which they may become
crack shots.

The habits, habits, and varied flight of birds in
their season.

Pigeon Shooting as an art, with the rules of the two
Championships and report of champion
shooters.

EDITED BY CHAS. J. FOSTER.
Published by J. B. FORD & CO., 27 Park Place,
New York. For sale by all bookellers and the lead-
ing gunsmiths. Price \$2. Sent by mail by the pub-
lishers and by Captain DOUGLASS, Richard, Log-
gans, Illinois. Also for sale at office of Forest and
Stream, 17 Chatham street, N. Y. Oct 1

Martin Pat. Imp. Safety Bit,
Patented April 6th, 1874.

The Martin bit is designed to be the easiest bit
made for a tender-mouthed horse, warranted to
pull any horse from running away, Pulling, Lugging,
Biting, Tossing, Lolling or Biting on one rein, after
being driven from three to ten times. If on trial they
do not prove satisfactory, money in all cases will be
refunded.

Price list. C. O. D.—Coach Bits, first-class, nickel
plated, \$10; Road bits, first-class, nickel plated, \$6;
Coach bits, second-class, C. plated, \$7; Road bits,
second-class, C. plated, \$5. Liberal discount to deal-
ers. N. B.—Send width of horse's mouth.

PULEX IRRITANS—FLORIDA.*

FAIR Florida, enchanting and sunny land
Of azure skies and a climate bland;
Low murmuring surf on a golden strand,
Grey vines with gentle zephyrs fanned,
With lovely scenes upon either land,
Thy fleas are as many as grains of sand.

And fearfully made is this wonderful mite,
Fitted to conquer in foray and fight,
Agile and fierce in clewion or sprite,
Snelling a march in the darkness of night,
Drave as a soldier whose cause is right,
Ah! valor is nothing; seek safety in flight!

Yes, a terrible beast is the Floridian flea,
A scandalous fellow indeed, as he;
The bloodthirsty rascal he biteth me!
Attacketh we, an I frighteth she,
Making himself intolerably free,
In a manner really unpleasant to see.

Nor careth he whom he may be on,
High bred prince, or low bred peon,
Crawling about, feeding perfectly free on
The purest blood, in heralric tree on,
And we venture to say that Ponce de Leon,
In his Florida hide, had many a flea on!

Theory (not Darwinian) of the origin of Pulex Irritans:—

The Devil one morn, cross after a spree,
As blue and upset as a Devil could be,
Without any soda, and no eau de vie,
Gathered his limbs, and announced to their glee,
As a low, most infernal, triumphant blee,
The hot colic in disguise, the Florida flea.

Anticipated result of the Pulex Irritans fully realized:—

A wicked covee does this small seed bear,
For it maketh full many a good man swear,
And pions lies, ever guarded with care,
Exclaim "old scratch!" instead of a prayer,
While in many a way more foul than fair,
Has it jarred with curses the Florida air.

Lesson to be impressed by the Pulex Irritans upon those who see "good in everything":—

'Tis a sad, sad moral, the rose and the thorn,
That hops will wither, tho' brightly born,
That in fairest breasts beat hearts foulorn,
That the dearest smile may be used in scorn,
That the brightest land carried by the sea,
Has its thorn and its bane in the Florida flea.

*The mouth of *Pulex Irritans* will be the first member to impress its wonderful adaptability upon the unscientific observer, who may feel interested in the following description of its construction. See *Encyclopædia Britannica*, Vol. IX, p. 597.
The mouth is composed of a labium, two almost membranaceous mandibles, a pair of maxillæ, each furnished with a palpus of from five to six articulations, and of a labium of four emarginations, bearing two quadricarinate palpi.

For Forest and Stream.

Winter Sport in the Mississippi Bottom.

BY FAHMAN WYDE.

THE extensive tract of lowland, forest and swamp, known as the Mississippi "Bottom," is one of the various regions in different quarters of the globe to which, at one time and another, I have resorted in search of sport; for there, at certain seasons of the year, an abundant variety of game is to be found. The Bottom is not to be recommended to anybody as the right place to go, either in the Summer or in the Fall, for at these seasons the unfortunate sojourner is so sorely afflicted with the tropical heat, the ague, and the mosquitoes and other blood-sucking insects, as to make life seem well nigh intolerable, and death a blessed relief. But with the first month of Winter the pleasant times begin, and for two or three months thereafter the man who loves a genial sky and bracing atmosphere, a rough labyrinthine territory to explore in, work for his gun in variety and abundance, and last, though not least, very good living, that man will find in the Mississippi Bottom all these attractions. It has been my lot to shoot on both sides of the river; but I prefer the Eastern shore, although the mallard in Arkansas has always seemed

to me to be a bird of bigger size and brighter plumage than his kinsman of Mississippi. Of course, that is nothing more than a mere fancy. At a distance from any of the towns, the country on the Arkansas side is sparsely settled, and my recollections of it are not the pleasantest. Many a weary mile have I ridden in search of a cup of cold water, and often have I been turned away from rude cabins and log huts almost always with the same answer—a scowl, and a slam of the rickety door. But I have found an excuse for such rude treatment, similar as it was to the inhospitality Goldsmith's "Traveller" may have experienced,

—where the rude Cornishian poor
Against the houseless stranger shuts the door.

I say I have found an excuse for it, in the sickness prevailing among the people, for all seemed to be wan and yellow, worn out and shaking with the fever and ague.

No such miserable experiences mingle in my recollections of Mississippi—only happy memories recur to me in thinking of that rich State. It cannot with propriety be called an Arcadia, but there is nothing in it to repel any one somewhat used to roughing it, and not afraid to wet his ankles. The temperature at this season of the year is apt to be changeable, and the ice of the morning is often melted at noon. A roaring log fire is very desirable at night, especially in the airy frame houses of the Bottom, raised off the ground on trestles as they sometimes are, to keep them free from the damp. Nevertheless, it is no difficult matter to put oneself in a perspiration tramping through the woods in the day time. But what a country it is for sport, when once the aquatic birds begin to fly South! Here they find great scope of open water, and great score of cornfields. The crops that are grown in the Bottom are corn, cotton, and sorghum—the corn averaging eight feet high, and the cotton five feet—and the fields are now no doubt white with cotton not yet gathered. But the cultivated land is a mere patch in comparison with the extent occupied by the swamps, the woods, and the canebrakes. Let me try to describe the features of the region.

Immediately behind the levee, constructed to keep the "Father of Waters" within bounds, there is generally a cypress swamp, a belt of cottonwood trees, or a canebrake—the canes being so dense that a man on horseback has a hard and painful job of it to get through their ranks, the while they conduct a vigorous *bastinado* on every part of his luckless body. After all, he may fail to penetrate. Behind these swamps and canebrakes lie the cultivated fields and the tracts of "deadening," in which the tree trunks lie rotting, or stand upright, black, charred, and spectral, amid the tall rank grasses. How like ghosts these black trunks look in the dusky twilight, as they loom up from the vaporous ground and are dimly outlined against the murky heavens! And what a hard time you would have getting a "colored brudder" to pass in their awful vicinity after dark! In these fields of "deadening" the deer lie ruminating, and dogs give tongue ere they have been in their covers many minutes. Deer are to be had either by still hunting them, or by running them before the dogs; but as the former method requires not only great experience, but also an accurate knowledge of the country, a stranger will find the other the more productive and satisfactory of the two. Although some of the planters in the Bottom keep their own packs of hounds, yet it will be as well for the sportsman, if he go South with the intention of running deer, to take along a couple of dogs. The people are generally very ready to point out the deer passes, or "stands," and I must acknowledge that with or without dogs I never found myself in a difficulty, or came away disappointed. However, it should be borne in mind that a letter of introduction, though not absolutely requisite, will be found a never failing "open sesame" to the hospitality and good offices of the people.

Behind the swamps and canebrakes, behind the cultivated fields and the tracts of "deadening," stretches the great forest, encroached upon at intervals by patches of cleared land, and intersected by lengthy bayous and broad lagoons. These are the Winter haunts of aquatic birds,

and this is a veritable sportsman's paradise, rivalling the hypothetical hunting grounds of the red man. Here the sportsman may bag ducks and geese innumerable, and swans also, if he can stalk them. All kinds of water fowl are as thick as blackberries in August, and may be shot in many places where they are easily recovered at the cost of a wetting; but when one has to thread his way among the lagoons and bayous, a good retriever is an almost indispensable assistant. Some of the lagoons are of great extent, and are almost invariably provided with a skiff, a dug out, or a floating machine of some sort, the use of which is generally to be had without any trouble by an application to the neighboring planter, whose property it is. To my mind, duck shooting afloat is better than duck shooting on terra firma. Pushing out from the little cove where the skiff has been moored, let the sportsman paddle towards one of the clumps of reeds which dot the surface of the water here and there like little islands, and let him run the skiff close by its edge, or even a short way among the reeds, so as to leave a fringe of them between his craft and clear water. By these means he is placed fairly in concealment. The birds in the neighborhood have of course been disturbed by this manœuvre, but before very long a string of ducks flies overhead, and when once the firing has begun all the water fowl on the lake are set in commotion by the noise, and one train after another sweeps past within easy range and in rapid succession. Indeed, it very soon becomes necessary to set about removing the dead and wounded birds, and though it is with considerable reluctance that one proceeds to paddle to and fro to find the birds he has hit, especially when the game is so plentiful as to give even a breech loader little rest; yet the duty should not be omitted or too long postponed, and no disabled bird should be allowed to creep into sedges to linger on in pain. When the birds have all been picked up, the position should be changed to another clump of reeds; for ducks may soon become sly of the spot where their enemy lies concealed when once it is discovered, and are certain thereafter to give it a wide berth. Swan are also to be found in considerable numbers on these lagoons, but are not easy to get within range of; yet I have seen them very readily tumbled over by making a bullet ricochet along the ice. The best sort of place to post oneself to shoot ducks and geese in the morning and in the evening is among the rows of cornstalks in some field with a pond in it, as many fields in the Bottom have; or, at least adjacent to some water. A man with an observant eye very soon discovers the right spot, and is successful in his sport accordingly. Flocks of wild turkeys are often to be met in the woods in the Bottom, and, for my part, I prefer them to come across my path, for I have not been very fortunate when I set out to hunt them with premelitation. Often I have invited them to my neighborhood with dulcet notes blown upon the shank bone of one of their own kind, but my invitations have been in vain. They either did not hear my call, or, having heard, deemed not to give it the slightest heed, a circumstance which, while it has caused me to abate some of my pretensions to be a master of the sporting craft, has unquestionably raised the turkey in my respect as a bird possessed of some small modicum of sense, all reports to the contrary notwithstanding. I have never had an opportunity to entrap them by means of a decoy bird, but at dawn of day I have lain in wait for them at their roost on the persimmon tree, and have carried off most of the brood. It is the early bird that gets the worm, and this early method of circumventing the turkeys is the only satisfactory method I have learned in my experience. There is only one difficulty about it—the difficulty of finding out their roosting place, but the roost found, one must be a very indifferent sportsman if he do not find the turkeys also. If the visitor to the Bottom can enlist the aid of any of the local Nimrods, he may probably vary the monotony of his sport with an occasional bear hunt. The bruin of the Bottom is far from being a formidable animal, and is rarely in a humor to molest anything bigger than a shote, or sucking pig; but when he has been smoked out of his hollow tree, or teased out of the cozy quarters

Fish Culture.

This Journal is the Official Organ of the Fish Cultur-
ists' Association.

PROF. BAIRD'S REPORT.

We continue this excellent report this week.

"The act of Congress specially directed that investigations should be conducted on the great lakes, of the same kind as those ordered for the United States; and, under this provision, Mr. James W. Milner was appointed assistant commissioner, with instructions to collect as reliable evidence as possible of the existence of the evidence of decrease in the numbers of the food-fisheries; and, this fact established, to ascertain its causes, and what practicable methods may be applied for their restoration. It was determined to confine the inquiry for the first season to one lake, and to give it a thorough examination. Lake Michigan was selected, because it is the largest of the United States and the largest number of fisheries, was selected as the region for the investigation,

Instructions were also given him to make full collections of all forms of life found in the waters, and to take as full notes as possible on the habits of the species; making the white fish, the most valuable food-fish of the lakes, the principal object of attention and efficient action for their restoration.

On the 13th of April, 1871, the first visit to the fishing shores was made, and it became evident from the first, that to obtain any definite knowledge of the amount of decrease, it would be necessary to make the entire circuit of the lake. The migratory habits of the fish and the tendency to entirely change their locality after a term of years, at least in the opinion of the fishermen, made it evident at once that the conditions as to numbers could not be understood from any circumscribed area of shore, but that a collection of accurate statistics through a term of years for all the fishing regions must be gathered to give satisfactory evidence as to their condition.

The Southern end of the lake was visited from point to point by steamer and rail before the middle of Summer, and, at the Northern end, where no steamers plied, the tour was made in an open boat, the trip lasting about five weeks, the sum of the distances traveled from point to point being about six hundred miles. Seventy-one stations were visited, embracing nearly the entire number of fisheries.

Though recorded statistics in the fishing localities were rare, still good evidences were obtained of the decrease and its causes, and many interesting notes of the habits of species and their mutual relations procured. Information was constantly sought and obtained, from fishermen, dealers and residents, on the subject of the fisheries, which was noted for use in preparing a report of the subject of the inquiry.

The inquiry was renewed in the latter part of June, 1872; the region of Lake Superior was explored, collections and notes were obtained, and similar inquiries were made with reference to numbers of fishes. Much less evidence of decrease in this lake was the result, though a marked diminution was ascertained to have taken place in certain localities.

In the Autumn of 1872 nearly a million of white fish eggs were obtained by Mr. Milner and placed in Mr. N. W. Clarke's hatching-house at Clarkston, Mich., from which in the Winter a large number were forwarded to California for the waters of Clear Lake. Arrangements were also made for the hatching of salmon for the waters of Michigan and Wisconsin.

At the close of the field work of the season, Mr. Milner visited all the prominent dealers on the chain of the lakes, and obtained the amounts of their receipts of lake fish for the year.

After the close of the distribution of the shad in 1873, Mr. Milner visited the shores of Lake Huron, and obtained a collection of its fishes. The inland locality in that region inhabited by the grayling was also examined, notes relating to its habits were obtained, and a knowledge of the facilities for obtaining the spawn acquired.

Later he proceeded to Lake Erie, and made a large collection of fishes in the vicinity of Sandusky, Ohio; and afterward at Cincinnati the species of the Ohio River were obtained."

PROPAGATION OF SHAD IN 1872

"Little time was to be lost in carrying out the suggestions with reference to shad, as the appropriation was not available until the 1st of July, and the season during which the eggs could be successfully hatched lasted but a few days beyond that period.

Both Messrs. Green and Clift, however, undertook to do what they could, and worked with great energy. In addition to the large number of eggs introduced by Mr. Green, in behalf of the State of New York, into the Hudson River, Oneida Lake, Lake Champlain, and Genesee River, he furnished 30,000 fish for Lake Champlain to the Commissioners of Vermont, and, in behalf of the United States Government, placed 30,000 in the Alleghany River at Salamanca, N. Y., and 25,000 in the Mississippi River, a few miles above St. Paul, Minn.

above St. Paul, Minn., which the shaw spent in the Connecticut chaise Mr. Clift to secure a larger margin of time for his arrangements; and, by the kind assistance of the Commissioners of the State of Connecticut, he succeeded in procuring, from the State hatching-house at Holyoke, Mass., a snucent number for his purpose. Mr. Clift started on the 2d of July, with several hundred thousand young fish, filling nine eight-gallon cans. Of these, a portion, estimated at 100,000, were placed in the Allegheny at Independence, and a like number in the Connecticut at Watertown, River at Watertown, and the remainder were carried direct to Denver, (Colorado;) and, on the 7th of July, liberated at 2000 ft. in number into the Platte.

Very valuable assistance was rendered in this experiment by the express companies, especially the Adams and the American and Merchants' Union. Without the help of special instructions to their agents to assist Messrs. Green and Clirt, it would have been difficult to accomplish the object in view.

Accumulations are also due to the commissioners, both of New York and Connecticut, for placing their hatching establishments at the disposal of the United States in order to furnish the necessary number of eggs.

Concurrently with the operations on the part of the United States, the commissioners of both New York and Connecticut were industriously engaged during 1872 in

continuing experiments previously instituted in regard to stocking the waters of their respective States with shad and incredible numbers of young fish have been introduced. Thus in New York, under the efficient direction of Mr. Seth Green, 7,000,000 shad were released in the waters of the State, while the extraordinary number of 92,065,000 young fish is reported by Mr. Hudson to have been turned into the waters of the Connecticut. Dr. Edmonds, Commissioner of Vermont, also obtained 50,000 young fish from Mr. Green, which were placed in Burlington Bay, Lake Champlain,

Whether shad can live permanently in fresh water, and maintain those characteristics of flavor and size which give them such a prominence, and whether they can be established in the Mississippi Valley, are problems not yet solved; but the results to be obtained, in the event of its possibility, are of such transcendent importance in relation to the food-supply of the country, and the cost of the experiment so very trifling, that it would be incenseable not to attempt it.

HAMBURG, Pa., December, 1874.

We haveving counted several articles prior to this, concluded to give the promised notes on pisciculture at this writing. To begin, we will write of the Schuylkill River, which half a century ago was famed for its shadness, where now in this section not a snake can be found in its waters, every species of living creature having been exterminated from the effects of foul water, which has run into it from the great and unhealthy coal region of Pennsylvania. It is a fact, however, that the shad fishery on the Schuylkill is now a thing of the past, and the only people who are able to make any money out of it are the anglers who come to the river to fish, but even these are successful operations in the coal regions the fish diminished in number and size, until all were eradicated from this section, while at a distance of fifteen miles south from here the members of the flyline tribe seem to flourish, although few in number. The river at or near that point was stocked with a black bass fishery, which, while it has increased rapidly, and afforded some fine sport, although few fish from the river are valued, as fish incident to the river became more abundant and plentiful. North of the above headwaters referred to, nothing living whatever can be found in the waters affected by the deposit of coal dirt. There are exceptions among the small rivulets in that section, at which places a few bait fish might be caught, but the query naturally presents itself: "What can be done to save the shad fishery?" The answer is, "nothing," unless the shad are usually returned from whence they were taken, and the streams so populated other streams to an alarming extent, as the erection of dams was a necessity which prevented the passage of the fish. Shad, in the beginning of the present century, were very abundant in the Schuylkill at which places no fish, or any other living creature, having its abode in the aqueous fluid, can be found. It was surmised that fish would be abundant in the Schuylkill, and the fact was proved all too false. What thoughts enter into the mind of a disciple of Esau Walton, living upon the banks of a river, and still unable to entice any members from the unruly waters, while further down the stream, a distance of sixteen miles, the folks are catching mammoth fish of different species? Surely, the mere thought is really disgusting. All efforts to propagate by pisciculturists in this stream there would be no use, as the shad are not abundant in the Schuylkill, and in the stream in which the fish are of medium size, but "few and far between," not unlike eels' visits.

Since we have concluded the article of the fish of the Schaykhlik River, north of the county seat, Reading, some, no doubt, will infer that Hana- burg is an "out of the way" place; but this is not the fact, as a visit would amply prove. It has won considerable notoriety as a Summer resort, and the range of mountains (Blue), about one mile north of it, present elegant views, and the pure, healthful, and fresh mountain air which is sought by all pleasure seekers. The population, although not large (about 2,500), is composed of quiet and respectable people, and visitors cannot fail being pleased with the citizens of Hamburg.

WHEN BLACK BASS SPAWN.

NEW HAVEN, November 2^d, 1871.

ONLY FISH AT STREAM—
I occasionally saw in the Forest and Stream instances of variation in the breeding habits of fish, and as a knowledge of all such instances is of importance to fish breeders and others, I send you the following of a black bass in the Housatonic River. I observed a bass of about one-half pound weight carefully guarding a nest near the shore. Thinking at first that the bass had taken possession of the nest of a roach (which most men resemble that of the black bass) for the purpose of catching the small fish, which are always swimming around a nest, watching for a chance to seize it, I went on to examine the nest, and was surprised to find the conclusion that the nest belonged to the bass, and thinking it very strange for that species to be breeding at that time, I resolved to find out if it were so. Casting my fly directly over the nest the bass immediately seized it, and darted into the current. Drawing it in as I pleased, I saw that it was not a roach, but a black bass, and that he was himself from the hatch. I set it at liberty again. After disappearing for some time, it finally returned to the nest, and commenced guarding it as before. This, I think, clearly proved that the nest belonged to the bass.

CALIFORNIA SALMON.

CHICAGO, ILL., December 8, 1874.

EDITOR FOREST AND STREAM:—
The U. S. Fish Commissioner has already commenced the distribution of the California salmon. Mr. Fred Mather and his assistant, Mr. Chas. Bell, passed through here last night, having in charge 15,000 fish for the Brazos River, Texas. They came from the Michigan State Hatching Works at Niles, which are in charge of Mr. George H. Jerome, who has about \$40,000 more, which will, however, be distributed within the States. The fish were lively and in good condition.

MORE SALMON.

LEESBURG, VA., December 12th, 1874.

Major Ferguson had 1,000 salmon put in the Big Spring, near this town, this evening. They were transferred immediately upon their arrival at the depot to a carriage and driven directly to the spring. All were lively and well. We hope to hear of them again. The Big Spring branch is tributary to the Potomac.

BELMONT'S TROUT

PHOTON FLOCKS AND STREAM—
 "I wish I went to the island for a few days' shooting, and had excellent sport. Ongoing on board the boat for Hunter's Point, I noticed a few milk cans with a crowd about them. Supposing the milk had been well watered, I walked up, and was surprised to see them filled with live trout, four inches long, as lively as if they were in a brook. I learned that Mr. Thompson, of Pennsylvania, had sold Augustus Belmont two thousand trout, and they were being delivered to his place at Babylon. If trout can be raised in such quantities in Pennsylvania, why cannot it be raised in the same way in the Chesapeake? I have some fish traps, if they cannot be hatched there, let us make up a purse and buy some trout and stock our ponds and have some sport. Let someone who understands it start, I am glad."
 C. S. II.

Natural History.

THE WHITE TAILED DEER

EDITOR FOREST AND STREAM:—

A RECENT article in your paper, by Judge Caton, in which he specifies that the metatarsal gland is alike in the common deer (*O. virginianus*), and the white-tailed deer (*O. leucurus*), of the Pacific States and Territories, has attracted my attention. From the assumption of the article I am led to believe that the writer considers the two species or varieties mentioned as being the same species, differing only in minor details, not general enough to form each into a distinct species.

If I am correct in my comprehension of the matter, I would best leave to call the attention of Judge Caton and others to an article on the cervidae of the Northwest, which I saw published in your journal last Summer, under the *nomme de plume* of "Mortimer Kerry," in which he states that hybridity is very common among the white-tailed deer and not only that, but also, that small herds of white deer are met with occasionally in the mountains of Oregon and Washington Territory, and that they are supposed to be albinos of the *C. leucurus*. He called the former, I believe, *C. leucurus* var. *carolinus*, and to the latter he gave the specific name also, classifying it as variety *albus*. In his measurements of the white-tailed deer I find that it also differs materially from the Virginia deer, especially in length of tail, legs and breadth of head, while the colors differ quite materially. Its mode of running is also unique. Now if both these deer are the same species, it seems peculiar to me that one is not found west of the Rocky Mountains, nor the other east of it, and that two varieties of albinism should be so general in one species, and so rare in the other. If they differ in such essential characteristics it does not seem plausible to me to infer that, because they may have the metatarsal glands alike, that they are the same species. The subject, I think, has not yet received the decisive stamp of naturalists who have been able to make an extensive investigation, so, ere we can accept the assertion that both the deer mentioned are one species, I should like to hear from Prof. Baird, Judge Caton, Dr. Coues and others who have had an opportunity of judging for themselves. While I give Judge Caton the tribute he so richly merits as a pains-taking naturalist, yet, might he not decide hastily in this case? The matter may have no general interest, yet it has for the hunter and lover of animals, so I hope to see the opinions of our naturalists given in the columns of your able journal. T. J. S.

A CURIOSITY.—A phenomenon, indeed, in natural history has been found in Canada, if the facts be true. This is no less than the killing of a *deer* with antlers. We should deem ourselves obliged to our Canadian friends if they would give us the particulars of this case, as it is to us one of unusual interest.

SUICIDE OF A SCORPION.—It has been a mooted question whether animals purposely commit suicide. An English correspondent gives the following detail of the suicide of a scorpion, an animal one would not suppose to be troubled with such a mania:—

"One morning a servant brought to me a very large specimen of the black scorpion, which, having stayed out too long in its nocturnal rambles, had apparently got bewildered at daybreak, and been unable to find its way home. To keep it safe, the creature was at once put into a glass entomological case. Having a few leisure minutes in the course of the forenoon, I thought I would see how my prisoner was getting on, and to have a better view of it, I took it out, and placed it on the palm of my hand. The light and heat seemed to irritate it very much, and this recalled to my mind a story which I had read somewhere, that a scorpion, on being surrounded with fire, had committed suicide. I hesitated about subjecting my *pet* to such a terrible ordeal, but taking a common lantern lens, I focused the rays of the sun on its back. The moment this was done, it began to writhe violently about, and *scuttling* and *spitting* in a very fierce manner. This experiment was repeated some four or five times with like results, but on trying it once again, the scorpion turned up its tail and plunged the sting, quick as lightning, into its own back. The infliction of the wound was followed by a sudden escape of fluid, and a friend standing by me called out, "See, it has stung itself; it is dead," and sure enough in less than a minute it lay quite motionless. I was struck by this brief case to show (1) That animals may commit suicide; (2) That the poison of certain animals may be destructive to themselves.

—The remains of a gigantic steer have just been found in Seneca township, Leavenworth county, Mich. The place occupied by the skeleton is over twenty feet long, and the bones of the horns were about twenty feet apart. The ends of each are decayed, but they now measure eight feet nine inches in length, and must have measured about ten feet when whole. Three feet from the large end they are twenty-two and a half inches in circumference, and they weigh 175 pounds each. Some of the ribs were seven feet long. The tooth secured is a frontal tooth, three inches square, and weighs four and a half pounds.—*Western Rural*.

—I. Newton, of Alstead, has a white hedgehog.—*ib.*

—A California exchange has this to say of the California deer:

"We are at a loss to conceive how this beautiful animal should be confounded with the clumsy, ill-shaped elk. It differs from the elk in a great many respects, especially in its most striking features. The elk, besides the great hump on the neck, has a much longer head and ears, and heavier horns. The nostrils of the elk also resemble those of the horse; while those of this deer, as will be observed,

near no resemblance to the horse. A most striking peculiarity of the California hares, and one which has doubtless been observed by hunters, is their savage disposition after being wounded. After being pursued for hours, and arrested at length by a bullet, they turn suddenly on their pursuers, and make desperate battle. This movement on their part, as may be imagined, generally creates considerable excitement; still, as it is never resorted to until a sudden messenger has been felt, the gallant bearing of the animal is of but short duration. The venison of California is pronounced the finest in the world.

A NEW SPECIES OF FISH.

NATY YARD, WASHINGTON, D. C., December 8th, 1874.
 EDITOR FOREST AND STREAM:—
 The specimen of Little Falls, New York, I was shown several small and peculiar fish that had been taken in a dip net by Mr. James Smith while catching minnows to feed some magnificent brook trout which he has had in an aquarium for some years past. The new fish was about two inches long, color of a perch, with transverse bars of black, two dorsal fins, one large and one but slightly developed. Its motions were those of a gar or bill fish; lying very quiet at the bottom, it would suddenly dart rapidly and come to an abrupt stop. The brook in which they were caught had formed a mud bank, and the fish were taken from the hills to the northward and westward of Little Falls, and empties into the Mohawk above the falls, and about three miles above an old feeder that connects through basin and aqueduct with the Erie canal. No fish of this description has ever before been found in this brook, nor known in this vicinity. The year before, about the first of June, a specimen had been placed in the brook. I brought the specimen in alcohol to Prof. Baird, who has written me the accompanying letter in regard to them, which will be interesting.

J. A. BEARDSLEE.

UNITED STATES COMMISSION, FISH AND FISHERIES,
 WASHINGTON, December 10th, 1874.

MY DEAR CAPT. BEARDSLEE:—
 The small fish from Little Falls, which you sent me some time ago, proved, on examination, to be an extremely interesting species belonging to the family of *Etheostomidae*, characterized by the absence of an air bladder, and some other peculiarities. It is a new species, and is named, in honor of you, only two, as far as I know, being found in waters emptying into the Atlantic. Your fish is neither of these, and is either an undescribed kind, or is one of the Western forms. I have sent it to Prof. Baird, who is a specialist in such matters, and as soon as I get his reply will write you. Yours truly,
 S. F. BAYNE.

THE "DEVIL WORM."

ROCHESTER, N. Y., December 15th, 1874.
 EDITOR FOREST AND STREAM:—
 I send you a short description of a worm which I discovered last week. It is one of the enemies of small fish. Its home is in the moss that grows on sticks and stones in running streams. It is about one and a half inches long, having a small head, and a tail of an inch and a half. It watches for its prey by lying concealed in the moss with its head protruded and its arms spread out each way. It has a small head, and looks like "fool for fishes," and when the small fry come to take it the worm wraps its arms around its victims and devours them. Yours,
 SETH GREEN.

[These worms are undoubtedly the larvae of the dragon fly (family *Libellulidae*). They are especially destructive to gold fish, and we have known a single "devil worm" to eat five small fish a quarter of an inch long in an hour.]
 —ED.

CENTRAL PARK MENAGERIE.

DEPARTMENT OF PUBLIC PARKS,
 NEW YORK, Dec. 13, 1874.
 Animals received at Central Park Menagerie for the week ending December 12th, 1874.
 One *Opussum, Didelphis Virginiana*. Presented by Prof. J. W. Hall.
 Three Double-striped Thick-knees, *Actitis macularia*. Hb. Central America. Presented by Master Arthur P. Chabonneau.
 Two Mexican Squirrels, *Sciurus collettii*. Presented by Commander Edward P. Lull, U. S. N.
 Two Crested Porcupines, *Hystrix cristata*. Hb. Africa.
 W. A. CONKLIN.

Woodland, Lawn and Garden.

ALTERING AND PRUNING OLD APPLE TREES.

IN a former number of FOREST AND STREAM I gave the treatment necessary to render an old apple orchard productive. In this article I will speak of still older trees. Trees thirty years old require a different treatment from those of fifteen to twenty years' growth. The wood of an apple tree being made up of annual layers, will in very thirty young growing trees be found of half an inch in thickness, and composed of large, open cells, through which the sap flows in full volume. Like a well and healthy man, full of good blood, they live only to grow and bear well to certain stages. Whenever the tree becomes old and enfeebled, either from neglect of culture or overbearing, from want of the stimulants which at this particular time it requires, the cells become smaller and the layers thinner and thinner, until their growth becomes almost imperceptible. Now, every well informed agriculturist knows that the sap of the tree ascends through this sap wood, which is composed of layers of yearly wood, and also, that the layers of the latest formation send or transmit a larger proportion of sap than the older ones.

Now the above information should be known to the orchardist as well as the scientific arborist and agriculturist, for it belongs to the domain. If, therefore, our readers will please give their careful attention to what I write about these old trees, I will try to make my teachings interesting and profitable.

In the first place, nothing worth having is usually to be obtained without care and labor, study and observation; therefore I say to my friends, commence at the commencement, and take up the outer layer of the bark and examine toward the centre; here you find less and less sap in each successive ring of wood; presently you reach the young heart of the wood, where no sap is found. This is dead wood, and of no use, as it has no vitality in it. I have frequently pronounced—in the course of my observations of all orchards—trees as "dead at the heart," and have rarely found my judgment wrong. Such trees never do much, even with the very best of culture. I have found in different sections of country a different result. In our Eastern States I have found many old, young trees, neither hollow nor over sixteen years old, that gave every prestige of old age; they were dying slowly, and at the same time inevitably. For them there was apparently no

help. Now comes the important question, What will you do with these trees? Is there not some remedy by which they can be saved a little longer; is the axe to be laid at the roots of all these trees? All the fertilizers or cultivation in the world would not save the extremest scion. Let us try both together, and note the results. Some fifteen years ago I was called to examine an old orchard of apple trees of a very large size, and some of which being natural fruit trees were some seventy feet from the ground, the trees being originally planted by the cows some ninety or perhaps a hundred years ago. These old trees grew upon the meadows of the estate of H. W. Longfellow, and were there in the days when Washington held his headquarters in this historical vicinity.

The question again recurred to me, What shall I do with these old trees? One good agricultural friend advised me to cut them down. The owner said, by no means spare them yet a little longer, and make an examination of them with reference to future treatment. I found some of them measured two feet and upwards at the ground, growing in cold, clayey meadow land. They grew near to a woody enclosure, and were very tall, with from four to six large limbs branching from the main trunk fifteen to twenty feet from the ground.

It was proposed to graft these trees at the near extremity of the branches, usual in cleft grafting; they were too high altogether to admit of it. All the extreme limbs and small branches bore fruit yearly of a diminutive size, and not good for cider only. I also found upon an examination that from the force of the wind several of the larger limbs had been broken off some thirty or forty feet from the ground, and had sent out suckers all along and around the trunk; near the portion just where they were broken off, some of the suckers had become of sufficient size to graft with the ordinary cleft graft. It came to my mind that here was a case clearly not laid down in any agricultural journal, and consequently I had no law or precedent, but must become a law for myself. In my future examination one fact plainly revealed itself to my mind, that as the sap rises slowly in trees as they grow older, or as certain circumstances predetermine, I found all the sap arising had been used up and absorbed by these suckers and the apples on the extreme end of the thrifty branches. One fact please notice here, that wherever you find these sap shoots about the centre of the tree you have an indication that there is still hopes for this old trunk. These trees, at the age of ten years or less, if grafted, would have yielded a plentiful harvest. But in those days they did not care much about apples or apple orchards.

I commenced operations on these old trees—some twenty feet in number—by reducing the height of them some twenty feet, and by cutting off the limbs with a very fine saw, taking care not to start any of the bark. Some of these cuts would measure eight inches in diameter for the larger limbs, down to four and even three inches. Whenever a good strong shoot was found to make a good limb, it was left for the usual method of grafting for the next year, the main limb being cut off one foot above the shoot. Next the treatment of the large limbs end off was by cleft grafting—a method of grafting made by inserting all around the crown of the limb scions of from half an inch to an inch in size, made of the most thrifty scions to be had. This is easily performed by use of a nice little ivory tool, with which the outer bark is removed, and the scion, sharpened all from one side, inserted; when necessary, the scion is to be sharpened all from one side, and to be half inches apart. On the succeeding year every old limb—in width being tied around the head of the scions to keep them in place. These were covered with grafting wax, and left until the following year. The trees were scraped, and then washed with a composition of cow manure, clay, and potash. The next year every other scion in the crown of the large limbs was sawed out, and the process of a new head formation was taking place, much to my satisfaction. On the succeeding year every old limb—for they had become quite large now—was sawed out, and a good, strong, firm head had grown out from my trees.

Since that period I have had numerous letters of inquiry as to how to handle these old trees of the forest and farm, and I have given one only of more than a dozen of well noted experiments made by myself among the old orchard proprietors. I never recommend such treatment unless you find much vigor of root in old subjects, which may be known by a profusion of suckers about the bodies of large trees.

Such treatment, you will understand, will not give you a very ornamental tree, as we learned in my first experiment, but we can assure you that the fruit these old trees bore in after years was proof positive that it was a complete and remunerative success.
 OLIVER QUILL.

THE SURPLUS STOCK OF WATER.—The surveys authorized by the last Legislature to determine to what extent and at what probable cost the immense accumulation of water in the Adirondacks could be held in reserve and drawn upon as needed for State purposes, result in the following conclusions:

First—That immense quantities of water can be safely stored at a comparatively low per centage of cost on the Upper Hudson, and of which it is now impossible to get it runs to waste in the Spring freshets, which in various ways are the cause of great damage annually.

Second—That this excess alone is sufficient to supply the deficiency of the main river at the low Summer stages for 100 days, after a liberal discount for any losses in its passage.

SAVE THE MOOSE.—The following petition is in circulation in Maine, and will be presented to the next Legislature. We called attention to it some three weeks ago:—

"The undersigned, hunters, trappers, sportsmen, farmers, merchants, and business men of Maine, respectfully represent that the moose of our forests are in great danger of extermination, and of which it is now impossible to get it runs to waste in the Spring freshets, which in various ways are the cause of great damage annually. Viewing their destruction as already certain, our own hunters have decided to strip the forest at the earliest opportunity. We therefore earnestly pray that so valuable an animal may be protected by suitable legislation. Our forest lands are as capable of producing their crop of meat as our tiller fields are of grain, and without other outlay than that of a gun."

"We would propose an act which should prohibit the killing of moose for five years, and direct the seizure of the hides, at all seasons, wherever found."

The Kennel.

THE IRISH SPANIEL

PREVIOUS to his departure for home, Mr. J. K. Milner, of the Irish team, gave us a description of the famed Irish water spaniel, and as he has received several prizes for the dogs of this breed that he has placed on exhibition on several occasions, we consider him the most competent authority on the characteristics of the animal. He says that throughout Ireland the brown water spaniel is found quite generally, but that the best breed is somewhat scarce and is confined to the kennels of a few gentlemen. This strain is readily known by its marked peculiarities. The larger the dog is the better it is appreciated among fanciers. The body is round and strongly made, the legs are rather short, the feet broad, the hind quarters or stern should be short, broad and tapering to a fine sting, and covered with short hair like a pointer. Some have short, crisp curls, and in this case there should be no straight hair or fringe.

The head should not be broad or coarse; the nose should be long and free from wave; the ears should be long and so broad in the leather that they will meet across the nose, and be covered with the long ringlets which give the animal such a striking appearance. A moustache is considered a sign of bad blood or impurity; so this is an important point to be considered by purchasers or breeders.

On the forehead, between the ears, there is a long ringlet which hangs down between the eyes. This is one of the most important signs of the thoroughbred, and should be carefully noted, as some are inclined to wear a "wig," instead, and in this case such a peculiarity is most objectionable.

The legs of the pure blood are heavily feathered with ringlets, whilst the remainder of the body is covered with short, crisp curls of a rich, dark liver color, entirely free from white. A breed in the North of Ireland, known as the "Lough Neagh," differs somewhat from this description, and though all are splendid retrievers, yet they are not considered as good as the type described. They are readily recognized by their "feathered" tail.

As a retriever, the Irish spaniel cannot be surpassed, especially in its own element, the water, so that no more valuable dog can be found for duck or goose shooting.

AN AMENDED PEDIGREE.

WE have received the following letter from Mr. F. Furman Taylor, of Colt's Neck, N. J., the owner of the celebrated orange and white setter Sancho, better known as the one-eyed dog, in which he wishes to correct a former pedigree sent us and which our readers will remember we published. We take pleasure in giving this amended pedigree to our patrons, and are happy to notice the growing carefulness with which our sportsmen are keeping such records; this FOREST AND STREAM has continually advised as tending to improve our stock of field dogs in America, and we take not a little gratification in believing we have materially assisted to this end:—

EDITOR FOREST AND STREAM:—
 In giving you the pedigree of one-eyed Sancho, some time ago, I told the strain a little mixed and not complete. I have obtained since from Mr. George Van derhoff of Fr. child, N. J., who was one of the owners and breeders of Sancho, the true and true of my dog. Van derhoff is perfectly reliable, and I do not doubt the correctness of his statement. Never having raised any dogs for disposal, I did not remember the pedigree much farther back than one generation. As the late Rich Kitch, of C. Harris, was so far from the ordinary case of dogs for breeding and sale, I should never care to know where she came from, for wherever any of her stock is left among us it is good.

Trusting that the amendment will cast no reflection upon any of us on account of the publication of the first, I remain, yours respectfully,
 F. FURMAN TAYLOR.

PEDIGREE OF ONE-EYED "SANCHO."

THE PROPOSED BENCH SHOW OF DOGS.—We learn that among the members of the Philadelphia Sportsman's Association there is quite an agitation in regard to a Bench Show of dogs to take place some time after the present shooting season closes. Although the matter has taken no decided shape, and has not as yet been discussed at a meeting of the society, we have strong hopes, owing to the interest that appears to be taken, that an exhibition of this description will be arranged, and under the present board of directors we cannot doubt of its success. As an illustration of the confidence which a friend of the FOREST AND STREAM has in the financial success of a movement of the kind, the gentleman expressed a willingness to guarantee against a loss in such an enterprise, providing he could have the profit accruing therefrom, and be given the privilege of offering prizes for poultry in connection with the Bench Show.

THE CLEFT OR FURROWED NOSE.—The cleft or double nostril appears to have been at one time a semi-characteristic of the Spanish pointer, and frequently present in a breed of the same dog in France, which was originally brought from Spain. It is never seen in purely bred Eng-

By the way, speaking of broad hills, Mr. John Beattie of this city, and the writer, by courtesy of Colonel Henry T. Sisson of Seacoast Point, J. R., were allowed to shoot on his pond. They had no decoys and shot from open boats, making out of ammunition before the day was half over. Gunners know it is no use to try to get a wounded broad bill, and may perhaps think these gentlemen did comparatively well to bring home thirty-one fine birds. Another year, if Col. Sisson repeats his courteous invitation, equipped with decoys, and plenty of ammunition, they hope to do better. Mr. Beattie shot a No. 10 Dougal gun, the writer a No. 12 Greener. The game was about equally divided between the guns. Yours very truly,

CARIE JO.

TESTING A GUN.

EDITOR FOREST AND STREAM:

A friend, who owns a 12 bore Remington, says he loaded some brass shells as follows: Four drachms Orange powder, two Ely's wads, then five bushels of a proper size for fire, to be lightly layered in a space in the barrel, which was just filled by a B. B. shot; then a wad of cork-board; then another layer of shot, putting in three layers. These charges, when fired at a 12 inch target, at 25 yards, made an average of thirteen (not counting the B. B.s). He killed four deer at eight shots (only two clear misses), and in no instance was a shot left in the game; all went clear through. None of the shots made more than fifty yards, and some were forty.

It seems to me that the above manner of loading is pretty hard on the gun, as the muzzle is four sizes smaller than the shell; but it does not seem to injure it in any way, and the recoil is said to be no greater than the same weight of small shot. As to pattern and penetration, it is (to my thinking) perfect.

O. H. HAMPTON.

HUNTING NOTES.

HARTFORD, December 7, 1874.

EDITOR FOREST AND STREAM:

I received a private letter from my friend Charles Denton, dated Dec. 2, from which I take the following, which I thought might be of interest. Mr. Denton was born at No. Four as it is called, in Lewis county, N. Y. He has lived in the State of New York, and is now a resident of the State of the home named after himself, and knows how to keep a house.

"He was as fit to fish and hunt, as all wild who visit his house. He says: 'For nearly fifteen years I have followed still hunting every year in its season—that is, from Nov. 1st to Jan. 1st. The 1st of Jan. used to be the closing season for hunting deer. I have killed over nine hundred deer, besides harts, partridges, and many other birds and mammals.'"

"There have been more deer killed along the Beaver River and its tributaries during the months of October and November, than at any previous year since my residence here; the number will reach one hundred. They were killed by driving with hounds, by the parties here." He says: "This is not my way of hunting, however. I don't fancy driving deer into a lake with dogs, where they have no chance, and killing them with clubs, as many do. It seems to me to be unmerciful. A person is not fit to do it if he has been run down by dogs, and the smell of such venison while cooking would be too offensive to endure, and nothing but starvation would induce me to eat it."

"The first snow of the season fell upon the last day of October, to the depth of five inches, which remained four days. Eight deer were killed by still hunting during the snow at No. Four. The snow came again on the 26th of November to the depth of three inches, and has been accumulating ever since until it is nearly one foot deep and good sleighing."

"Deer are quite numerous in this vicinity, as we find plenty of tracks within two miles of the house. A young man who is stopping with me from Massachusetts killed one with a shot gun last week, and I killed four with a bow and arrow. It seems to me that the deer are more numerous now, owing to the fact that the weather is so cold and frosty, rendering it too risky for still hunting."

"Beats, which were plenty here in summer, have all left, as they always do in years when there are no beetles for them to eat. I am at a loss to know where they go to. I am not certain whether they migrate or die up early—that is, before the snow, in years when there is little food for them."

"There are two or three panthers prowling about here. I saw a track across the road several times, twice miles towards Stillwater."

"For bearing animals are quite plenty. I went around to some traps last Monday, which I set for muskrat and mink two weeks ago. I captured six muskrats and one mink, which I considered very good for twenty traps. I have already kept in hand, each day's transactions with my muskrat, so I am able to get a hundred in a week."

Mr. Denton promises to keep me posted as regards this vicinity during the winter, and also promises to tell me some of his adventures years ago, when this was in use of a wilderness then at present, and perhaps, if they prove interesting enough, I will write them up for your paper."

With much respect, I remain yours, F. BOLLES, JR.

MOBILE, Ala., December 1, 1874.

EDITOR FOREST AND STREAM:

Each art and science progresses as the "experience" of its devotees is more and more circulated. In view of this axiom I give the experience of a sporting friend, whom we will call Bill for short, living in this town, who has been hunting water fowl since he was a boy, and is now a well known sportsman. He has been hunting water fowl since he was a boy, and is now a well known sportsman. He has been hunting water fowl since he was a boy, and is now a well known sportsman.

Mr. Denton promises to keep me posted as regards this vicinity during the winter, and also promises to tell me some of his adventures years ago, when this was in use of a wilderness then at present, and perhaps, if they prove interesting enough, I will write them up for your paper."

With much respect, I remain yours, F. BOLLES, JR.

HOG HUNTING IN LOUISIANA.

NEW YORK, November 2, 1874.

EDITOR FOREST AND STREAM:

In your paper of 20th of October, I noticed a paragraph about hogs in Virginia, which reminds me of a little experience of my own with Louisiana hogs.

During the Winter of '71-72 I lived in a fort in the Atchafalaya Swamp, and having plenty of leisure, I amused myself exploring the swamp in a canoe out of a log, always taking my Enfield rifle for the benefit of such game as came in my way, and when nothing better presented itself, I practiced upon the numerous alligators lying upon the shore sunning themselves.

One occasion, being out with two comrades in arms, and having a good appetite, but only one little duck, we resolved to have some fresh pork. So we paddled up a small bayou, till finding a spot where the muddy shore was firm enough to admit of our landing, we pushed through the palmetto scrub and started inland in search of hogs. There are many hogs in that locality, whose ancestors were the real civilized hog belonging to the plantations bordering the swamp; but the original Mr. Hog is no more like his descendant "Glean I to Hercules." During the season the young ones are quite palatable, and as we were in a position requiring us to produce a hog, or to camp with only a small duck for supper, and nothing for breakfast, we kept our "weather eye" open for tracks.

After proceeding a few hundred yards we reached an opening in the cypress forest where were about a dozen hogs, at which we were almost simultaneously. For a moment the animals were much demoralized, but with considerable grunting and snorting, they recovered from their surprise, faced us, and charged. I was quite amused at their antics, until I noticed my comrades (who being old hunters knew what was proper to do under such circumstances) disappearing through the underbrush in the direction of the trees, which I heard coming through the underbrush. Under the impression I had seen the devil himself, I did not stop to watch the hogs in their peculiar movements, but followed the advice so hurriedly given, and pointed for the same place. After tumbling down several times, the result of cutting off corners, I found myself considerably behind my more experienced fellow sportsmen, and only a short distance from the hogs, which I heard coming through the underbrush at a fearful rate behind me, though I had no idea it was a low playful (2) hogs I was running away from, until our picking myself up nearly came, I saw the snouts of the more advanced animals within a few feet of me. My rifle was not very in the retreat, and being empty, would have been as useful as a feather duster. My crew, having been drawn up on the shore, was equally as surprised by the hogs being little less than five feet in diameter, and I was not very often alternative was to leap into the bayou among the alligators, when I did with a promptness showing very plainly I was not afraid of the hogs. Oh! merely a little warm from the exercise I had taken, and desirous of having a bath in the cool, refreshing water.

When my head appeared through the green foliage covering the dirty water, I realized that though out of the firing pan, I was certainly in the fire. On the shore were drawn up as if for inspection a herd of enraged hogs, thirsting for my blood, hair erect, and showing by the movements of their jaws that they doubtless thought, if they could not say, "jus, you come out from among those a ligators, and we will teach you a thing or two in hunting," which I declined with thanks.

In their hurry to get off my companions had not stopped to pick up their paddles, and though not far from me, were quite powerless to render any assistance. The noise of the alligators tumbling into the water, being aroused from their slumber by the noise we were making in their quiet domain, forcibly reminded me that I was invading them to come to supper so I struck out for the opposite shore, feeling quite confident I should not lose track of it, as in the mud I had seen the tracks of the alligator. After a short swim I reached the other shore, and crawled up the muddy bank more dead than alive. Had I been less scared and not quite so dead, I could have laughed at the peculiar turn of affairs; but under the circumstances I contented myself with several smiles, drawn from a flask found in one of the canoes, which had drifted across with their occupants upon the safe side of the bayou.

After discussing the situation for an hour, during which time the enemy had withdrawn from view, we crossed the bayou and went in search of our rifles and game, taking good care to examine every bush on the way, and even looking up into the cypress and live oak trees, lest our enemy should be lying in ambush for us. The rifles were carefully loaded, and the young pig, which I had shot, was skinned and prepared to the canoes and quickly transferred to a suitable and safer camping ground, where a good meal was soon eaten by three hungry—what shall I say? no hunters, as that would be putting the shoe on the wrong foot.

Yours, F. G.

Answers To Correspondents.

We shall endeavor in this department to impart and hope to receive such information as may be of service to amateur and professional sportsmen. We will cheerfully answer all reasonable questions that fall within the scope of this department, and will be glad to furnish information regarding, and trapping, and giving advice and instructions as to outfit, equipment, rules, distances, seasons, expenses, ranges, trails, species, and general sportsmen's information. Anonymous communications not noticed.

257 We will positively answer no more questions through our "Correspondents" Column from anonymous writers.

POET.—We have several poems on hand awaiting publication.

B. G., Boston.—In type these two weeks, but waiting space.

P. F. H., San Francisco.—"Salmon Fishing near Vascadero" received with thanks. Will publish soon.

SALTVILLE, GA.—Where can I get a pocket map of Florida? Ans. Apply to C. W. Deane, Jacksonville, Florida; price \$1.25.

P. L. W., Dear Park.—What can I get a pair of brace hounds for in New York? I want them full-blooded and varnished. Ans. Cannot tell. See answer to another correspondent in this column.

A. N. G., New York.—We have used the Maynard rifle at the distance you refer to with the best effects. You can order barrels any length you please, and the weight to be as low as 7½ pounds, or less.

ANTHONY, Providence.—For information about shooting around Providence, inquire of E. C. Clarke, of Kingston, or W. C. Clarke, Wakefield, R. I., or A. Tucker, of Alden & Tucker, Providence.

J. H. P., New York.—Do you keep or offer for sale any works on the art of embalming birds and animals? Please answer through the columns of next number. Ans. Not.

J. W. W. B., New York.—I want to know the best book on chess? Ans. Staunton's Chess Praxis, say \$2. Stanley's Chess Book, published by DeWitt, 50 cents, and Keable's ten cent works on chess for beginners.

STRYZ, Philadelphia.—By going to a game dealer, or speaking to your restaurateur, you can readily obtain deer or doe heads for mounting, which are in demand at \$4 each. Mounted specimens, \$20 to \$25 for best bucks.

BUCKEYE, Grafton, Ohio county, O.—We cannot tell you where you can obtain a Springfield carbine, as they are not for sale in gun stores. By applying to Lieut. Metcalfe, of the Springfield Armory, he might send you one. Cannot learn when Ward Burton will be put upon the market.

R. R., Rochester.—If you have invented something that will enable a gun to use small or paper shot, in its small or large game, it ought to be both useful and popular. Here pressing an opinion we want to see your invention, and then we may use your diagrams.

D. H. E., Hartford.—I can a 13 G. Damascus barrels, double gun be altered to a reliable breech loader? Ans. Yes; send it to Clark & Snel-

der, Baltimore. 2. Would there be any difficulty in securing the shells and other breech loading requisites for a gun of this gauge—13? Ans. Not at all.

W. H. H., New York.—Please answer through your next issue where I can obtain, abroad, either in England or Ireland, a brace of Irish setters (red). I only want puppies from five to six months old. I reside in Kentucky, and am of the opinion they will perform better than pointers in our climate. I want the best strain to be had. Ans. Write to Mr. J. K. Milner, Dublin, Ireland, and he will get you the best strain.

W. L. J., Boston.—Could you give me the address of some one of the New England gun dealers who has a good stock of deer and dog heads in good condition, for dissecting, and also something of the cost, as it is impossible to get them in the Boston market? Ans. Mr. Eugene Blackford, of Fulton Market, will get them for you. The price must be very low.

H. F., Conestableville.—Will you please inform me through your columns where a beagle hound can be bought, or where they are raised? Do they in fact grow hounds? What is the breed? I would be found. Ans. 1. Cannot refer you where a beagle can be found, but some of our correspondents will no doubt tell you. 2. Beagles are too small for fox hunting where such is required. Hares and rabbits are more in their line. 3. Do not know any person who sells the best dog hound.

R. W., Webster.—I wish your opinion of the shooting quality of my gun. I have a German gun, 29 inch barrel, 13 gauge, weight 7½ pounds, charge, 3 drachms Dupont's No. 2 grain powder, 14 oz. No. 6 shot; at 100 yards it will shoot a 30 inch target, and at 200 yards it will shoot a 40 inch target. This is the same I send your number of shot in circle, 7½ Ans. This is very good shooting for such a weapon, and the penetration is excellent.

P. E. B., City.—I saw some half a dozen quail in a store window this morning, and they were so frightened that they beat themselves against the sides of the very small box in which they were contained. Now, I want to know if it is lawful to keep quail shot in this manner? Ans. There is no law against keeping any species of bird in cage confinement, be it quail or snipe, though we deprecate the trapping of quail, as well as their use as cage birds. No game bird ought to be confined for show in this way, unless previously tame or tamed.

N. E. B., Fall River.—I am troubled with moths in my fly book. I don't understand how they get in, for when not in use I have kept the book carefully wrapped in oiled silk, and when it was packed away for the winter, I sprinkled gun camphor between the leaves. On opening the book this A. M. I found several of the flies so badly eaten as to be almost worthless? Ans. Get a new book, as moth eggs may be in the paper, the same is the case. I send your number of shot in circle, 7½ Ans. This is very good shooting for such a weapon, and the penetration is excellent.

J. C. R., Brooklyn.—In your issue of Dec. 3rd you stated, in answer to a correspondent, that a 12 bore with a certain load, should hit 8 or 10 pellets of No. 6 or 7 shot in a 3 inch target at 40 yards. Was it meant that the target should be square and 3 inches on a side? In what kind of shooting can a gun that scatters be used to more advantage than a close shooting one? Ans. L. Target three inches on a side. 2. In shooting at large or spreading cover, as in the case of power or increase your shot, and your gun will shoot more closely.

N. B., New York.—Please let me know in your next paper the proper way to load a gun made by or called "Hubert's" Dacier, weighing 14 lbs., 18 bore, length of barrel, 23 inches; also, what game is best to shoot with that gun? Please let me know if I can get a boat at Seaside Grove, L. I., and the price of a boat for one day, and if there is good duck shooting there? Ans. Are not acquainted with the gun you refer to. 2. Boats can be had there for \$1.50 per day. Duck shooting has been good there this season.

J. S. K., Binghamton.—There is quite a difference of opinion among those heretofore using muzzle loaders, but who wish to adopt the breech loaders. Which is best? Ans. Breech loaders have no many advantages that an opinion seems scarcely worth asking. The muzzle loader has only one advantage, and that is in showing very cartridges for long shots. But after that, the breech loader is better in every way. I have a preference obtained through personal tests. So you see, we cannot give you much light. When other and more careful gun trials have been had, perhaps the world will gain some positive knowledge on this vexed question.

L. T. M., Philadelphia.—A relative of mine in Basle, Switzerland, is desirous of presenting me with a breech loading gun, and requests to know my preference as regards weight, length of barrel, and bore. Having been an expert gunner for many years, I have no objection to give you, through your valuable paper, the kind of the breech loader, and what position of lever to be preferable? Ans. If he presents me with a European gun, we should advise you to ask for an English make. Either a Scott, Douglas, or Westley Richards is a good arm. 2. Get a 10 bore, side lever. Selecting a shot gun for another is a difficult matter, as almost every one has his own preference in such matters.

O. H. H., Iowa.—Are black and gray squirrels the same, and the color of the tail? I send you a pair of squirrels, one black and one gray, which I found in the same nest, having a gray mother? 2. Where can I get Reeves' gun felt, or Shultz's wood powder? Ans. 1. The black and gray squirrels are not the same. Such a case is true of almost all. 2. Reeves' gun felt is a preparation of gun cotton. The fibre is fibrous, then treated. In France, a similar material used on paper pulp, is used. Have tried it, and it is excellent. 3. I have no objection to give you, through your valuable paper, the kind of the breech loader, and what position of lever to be preferable? Ans. If he presents me with a European gun, we should advise you to ask for an English make. Either a Scott, Douglas, or Westley Richards is a good arm. 2. Get a 10 bore, side lever. Selecting a shot gun for another is a difficult matter, as almost every one has his own preference in such matters.

N. E. B., Fall River.—I send you by mail this P. M., in school, a little fish, for which I would like a name. Please notice his two distinct dorsal fins, and also the size of his pectoral fins. I have several in my aquarium, and though quite lively, they do not move with the same grace as the other fish, but with a peculiar motion, for which, in dainty of their fins, I call them "claw fish." I have a pair of them in my aquarium, and though quite lively, they do not move with the same grace as the other fish, but with a peculiar motion, for which, in dainty of their fins, I call them "claw fish." I have a pair of them in my aquarium, and though quite lively, they do not move with the same grace as the other fish, but with a peculiar motion, for which, in dainty of their fins, I call them "claw fish."

W. G., New York.—Supposing a person is foolish with a dog and the dog accidentally bites him; the dog, not being mad, can he have it shot? 2. This question will I have never seen, or heard of, in the past. I can the person bitten make owner produce? 3. Do you think that if the dogs permitted to live and should go mad that the person bitten would? Ans. 1. A case recently in Maine proved that the owner of a dog can have no redress, if his animal is killed by a man which it had bitten. 2. We are not certain of that matter, but on logical grounds I should say it would be better to shoot the dog than the man. 3. It does not follow that the bite of a healthy animal should affect a man, in case that animal afterward showed symptoms of hydrophobia. We consider such statements—which have been made—at the worst of both, and not worthy a moment's thought.

B. G. H., New York.—Will you be kind enough to inform your readers, through you or paper, whether disemper in dogs is constitutional or infectious, what the symptoms are, and its treatment? You may have a dog with a sore appetite and hunched expression. The means for curing it are so varied that, to be explicit, would occupy the whole of this column, so we refer you to Mayhew, Listone, or Stonehouse's works, where you will find all needed information.

FLORIDA.

The season in Florida is now fairly open, and invalids, tourists, and sportsmen are wending their way thither. Old habits are seeking out their well-known haunts, and strangers are in ecstasies over the prospect of viewing the charms of the flowery land, which to them will be a new revelation. And what a delightful land it is! replete with perfume of flowers, luxuriant with vegetation, balmy with the genial air of the sub-tropical winter, and abundant in summer fruits and vegetables! Let us read a few paragraphs from the Jacksonville *Floridian* of the current week.

"Strawberries have been selling in our market last week. They were grown at Mandarin. Cucumbers, grown by Mr. J. Hawkins, near this city, have also made their appearance in the market, and met ready sale.

"The schooner Rover brought 8,000 oranges from Vass and Dummitt's grove last week. They were sold off in one day at \$25 per thousand.

The finest potatoes we have seen this year have been sent in by Mr. John R. Herndon, from Sanderson, Baker county. They were huge things, of the red yan variety.

Fish is plentiful; a four-pound mullet selling for twenty cents. The market is well kept up with good meat of all kinds.

The weather all last week was very warm. On Sunday night, the fish, it began to rain, which continued to fall all night, and it got colder on Monday, the wind northwest.

What a relief must be a "little colder" weather in this month of December! Our New Smyrna correspondent reports the average mid-day temperature for November to be about 75 degrees. It varies about ten degrees in the twenty-four hours. And our Northern friends who shivered here last week are courting the shade of the olives, the magnolias, and the China trees. The *Floridian* says the steamer brought over two hundred of them to the city last week.

At St. Augustine the Magnolia Hotel is in full blast, and doing a good business. The Floridian has been repainted and otherwise improved. The St. Augustine has a new tin roof and new attractions. All the boarding houses are open and doing as well as can be expected. The *Press* reports an unusual number of visitors, both transient and permanent. And so, Florida is in life once more; loungers stroll upon the old sea wall that flanks San Marco, and passengers-waive handkerchiefs of recognition from the steamers that ply up and down the St. John; invalids are picking the luscious oranges once more at Padatka, and the alligators of the Ocala already recognize the familiar pellets of the thundering eight horses that rattle on their armor plates. We shall soon have stories of exploits to print from venturesome sportsmen. Says the Palatka *Herold*:

"The Ocklawaha River never grows old and never tires the eye. Its crooked course and picturesque scenery by night as well as by day, ever furnishing exciting objects to the curious mind and eye of every traveler. That distance of a hundred miles through the cypress and palmetto forest is in our judgment, the finest collection of curiosities in the world, to say nothing of Silver Spring, one of its grand sources, and one of the most astonishing fountains of pure water on the continent. The alligators and snakes afford a splendid opportunity for shot-gun sporting, while the birds, both large and small, and of varied plumage, add interest to the journey, and afford an opportunity for shooting.

This paper reports the people on the head waters of the Ocklawaha (upper lakes) in earnest upon the subject of building a railroad from Lake Harris to the waters of the St. John's River, connecting either at Hawkinsville or Lake George.

A gentleman who has no land interest on the upper lakes says that the lands on Lake Harris are the best that he has seen in East Florida. The scenery is unusually beautiful and attractive. Frost seldom, if ever, injures the sugar-cane; it tassels, and grows from fifteen to twenty feet in height. Lake Harris connects with Lakes Griffin and Huastla. The timber around the lakes is tall and stately. Fine fish in abundance abound in their waters. This section is healthy, and is rapidly filling up with new settlers, and will in a few years become one of the most interesting settlements in this country. These settlers find most profit in the culture and sale of fruits and vegetables for the early Northern markets. Even in the interior of the State, notably at Lake City, many of the citizens are speaking of giving up the cultivation of cotton and turning their attention to English peas and other vegetables for shipment to Northern markets. Several intend trying tobacco, and, if successful, it will soon become a leading production. Eighteen years ago, with the exception of Welaka, scarcely anything was to be seen but the interminable forests along the St. Johns River. There was scarcely a settlement or clearing to mark the advance of civilization. What a change now appears! Landings, clearings, houses and orange groves map out to the eye of the traveler the rapid improvement now going on.

One of the most useful improvements contemplated is the canal, now being laid out by the U. S. Coast Survey, across the narrow strip of dividing lands between the Indian River proper and Mosquito lagoon, where the present canal has been cut. This strip of land is coquina rock, soft, and very easy to excavate, about ten feet above the water, and only 800 yards wide from this canal north to the head of navigable waters. On the Tomoko the channel is open and clear. The distance is about seventy-five miles. From thence across the land to navigable waters of Haws' creek, the distance cannot exceed ten miles, and the average height above the water level of both streams cannot be over six feet. No dams or locks will be required; there will always be water enough. In fact, these two canals

will make Indian River a tributary to the St. Johns one hundred times more valuable than the whole upper St. Johns. This scheme, the Palatka *Herold* says, is receiving the gravest attention of the most practical men.

There seems, no doubt, that the population and developed resources of Florida are destined to double in ten years. Those who have some prescience will do well now to take time by the forelock that they may reap coming advantages.

We have often spoken of the necessity of a hotel on Indian River, where sportsmen with their families could be comfortably housed and fed, in hope that some gentleman of means, who know how to keep a hotel, might be induced to take the venture. Sportsmen are often deterred from visiting this most delightful part of Florida because they cannot find suitable accommodations for their families. Two or three applicants or inquirers approached us on this subject last Summer, but none, we believe, have decided to take hold. Now, our readers will congratulate themselves and us, and especially admire the courage of our well-known correspondent, Major Geo. J. Alden, now or late of the U. S. Signal Service at New Smyrna, when we inform them that, although not a gentleman of large fortune, by any means, he has consented to open his house to guests, and presently to enlarge it to meet the requirements of the situation. Mr. Alden, we are forced to say, was the projector of the only game protective club that now exists in the State of Florida. He is well and favorably known to all gentlemen who have visited New Smyrna. Perhaps we can explain the present situation and progress of his new enterprise in no better way than to copy from one of his recent letters. This letter was a private one, and not intended for publication, but we will venture it:

CUSTOM HOUSE, NEW SMYRNA, FLA.,
DEPUTY COLLECTOR'S OFFICE, Dec. 7, 1874.
CHAS. HALLOCK, Esq.

I agree with you that we need a large hotel here, but as I had not the funds I thought best to commence in a small way, and thus get a class of sportsmen to come here who would see the advantages for hunting and fishing I have over others, and thus perhaps be induced to aid me further. I have room for several buildings, which I think better than to house all guests in one large building; if not, I could work my way so as to build what I wish eventually. I enclose a rough sketch of the peninsula. You will see 100 acres north of me, and section 16 (160 acres) south. I shall have the deeds for all in January. The beach where I am located is heavily wooded, and an excellent place for gardens, oranges, lemons, bananas, etc. One can get all the deer they want within four miles, and within twenty yards of the house good bass and sheephead fishing. Your correspondent, S. C. Clarke, will vouch for this, and for the desirability of the place for a hotel. It is, by all odds the best location between St. Augustine and Key West. Any yacht that can come over the bar can come to my wharf, and it is the only place where this can be done. Good anchorage close by. I intend to have a carriage and horses for those who wish to drive on the beach, which is one-half mile back of the house, plenty of good dogs for deer and bear, and boats for fishing.

That we do not write specially in the interest of Mr. Alden, will be seen by the following, passage which shows what a demand exists for just such a resort as we think we have been instrumental in securing for readers of *FOREST AND STREAM*:

"As to taking boarders, I have all rooms engaged, and have rejected over fifty applicants for want of room. Had I a hundred rooms I could engage them all in advance."

So much for Florida—at present.

ARMY OFFICERS AS RIDERS.

The latest Vienna papers received contain a description of the grand military steeple-chase, under the patronage of the Emperor, which came off recently at the Austrian capital. From this we should infer that German officers are much better "cross country" riders than they have received credit for, and that they have a breed of horses that will take a wall as quickly and with as much ease as an Irish steeple-chaser. This race is the great event of the year on the turf, and is attended by all nobility, aristocracy and bourgeoisie of the capital, so that the course is usually one mass of gay toilets and brilliant uniforms, whose glittering hues are only increased by the sober black of the quiet and aged gentlemen. This meeting is patronized more than any other for the reason that none compete in it but officers, and they generally belong to the cavalry, and in Austria that is the most famous arm of the service, so that the young fellows who wear the hussar jackets are the military pets of the country. When these pets enter the list for a contest in equestrianism, of course the populace must see them, for it would never do to miss such an event for fear of social ostracism. This interest has caused the previously rigid and mechanical riders to assume a firm seat and a flexible attitude; to become, in fact, horsemen in its literal sense, so that no matter what sort of broken country they meet, they may be able to go to it, or over it, provided their horses have courage and power. This is an important element of the education of cavalry officers, as it increases their efficiency by giving them confidence in their own ability when they may encounter danger.

Steeple-chasing and riding to hounds is also getting more popular in France from day to day, so that it is no unusual event now to see a French officer taking his walls and ditches with the same ease that one of Lever's heroes would. This equestrian exercise is encouraged by the war office as much as possible, in order to make the officers what they should be—thorough horsemen.

In the British Kingdom the hunting field has long been the great display ground for officers of all arms of the ser-

A WEEKLY JOURNAL.

DEVOTED TO FIELD AND AQUATIC SPORTS, PRACTICAL NATURAL HISTORY, FISH CULTURE, THE PROTECTION OF GAME, PRESERVATION OF FORESTS, AND THE INDOLENT ARE MEN AND WOMEN OF A HEALTHY INTEREST IN OUT DOOR RECREATION AND STUDY.

Advertising Rates.

In regular advertising columns, nonpareil type, 12 lines to the inch, 25 cents per line. Advertisements on outside page, 10 cents per line. Reading notices, 50 cents per line. Advertisements in double column 20 per cent extra. Where advertisements are inserted over 1 month, a discount of 10 per cent will be made; over three months, 20 per cent; over six months, 30 per cent.

NEW YORK, THURSDAY, DECEMBER 17, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted. All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notes of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of *FOREST AND STREAM* aim to merit and secure the patronage and commendation of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will pander to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money is omitted to us in full.

Advertisements should be sent in by Saturday of each week, if possible. CHARLES HALLOCK, Managing Editor. WILLIAM C. HARRIS, Business Manager.

A COLLEGE RIFLE CLUB.

NO better idea of the hold which rifle exercise has taken of our people can be given than the statement that the graduates of Harvard have organized a rifle club. This proves how rapidly the love of manly accomplishments is springing into an active existence, and how generally it is being diffused. In order to make this organization one which will bind all the members of the gray old *alma mater* together, all good shots who are now in the University will be entitled to fellowship.

Our colleges have within the past few years devoted much attention to all exercises that tend to strengthen the muscles, improve the health and impart that sturdy, self-reliant spirit to their students which all men should possess; so the introduction of rifle practice now caps the climax and gives them the whole range of physical education. The men who can jump the highest, run the fastest, and lift heavy weights, ought certainly to become excellent marksmen, for besides possessing these qualities, their brains have also been educated to reason on cause and effect, and to make the proper deductions, so that mistakes may be detected and the remedy applied.

We believe it can be asserted boldly that the best riflemen must be persons of intelligence, who will have the nerve to fight bravely in a contest, the assiduity to practice with diligence, and the observation to note closely, and to reason from certain results.

These are the men who can practice self-denial also for the sake of honor, and who will leave no effort untried to gain an honorable victory, or attain a fair eminence in any contest which they may enter.

The matches in the British Kingdom, Canada and the United States have proven that the best marksmen have been, as a general rule, persons of superior intelligence, as they seemed to be the best able to understand the force of the wind, and the principles which govern the flight of projectiles. Such being the case, it ought to follow that our students should in the future be not only at the summit in physical and mental power, but also in surety of eye and steadiness of nerve, and consequently in marksmanship. The effect of the exercise now introduced must be highly beneficial, so we have to learn of other colleges following the lead of Harvard.

—Earthquake last week all around New York, but the wicked city was not shaken.

vice, and but for them the hurdle race and steeple-chase would, in all probability, long since have fallen into disuse. The consequence of this attachment to the dangers of the "cross country" run, is, that the officers of John Bull's troopers and artillerymen are, as a general rule, bold riders, who will stay on their steeds as long as men can.

In our own army, where regiments are scattered far apart, and only one or two companies are at the same post, it is very hard for our officers to practice horsemanship; so their only school is the plains and mountains of the far West, where they have an abundance of rough riding in pursuit of the painted savages; and while this is an excellent one to impart a certain kind of thoroughness, yet it does not seem complete enough to finish their equestrian education. For this reason we think that they should be encouraged to organize hurdle-races and steeple-chases whenever a few of them may meet at one post and remain there for any length of time. Such exercise not only tends to kill time at those dreary places, but it also gives animation to the camp, and certainly imparts pleasure and experience to the participants. The higher powers should stimulate such contests by word and action, and, if necessary, a sum should be devoted for premiums every year. A grand military steeple-chase, open to all officers of the regular army, should certainly be a feature of our turf, but it should be under the patronage of the army, though run by any of the principal courses of the country. Such a meet would be very popular, and would do much to encourage a desirable *esprit* in our officers, and the breeding of a class of horses that are needed by our cavalry. If the matter can be successfully carried out in Europe it certainly ought to be here. So we hope our officers will take the matter into consideration and inaugurate a yearly contest if possible. It will do them much good, and attract the people more to them and their arduous and often unacknowledged labor.

BICYCLING.

THE enthusiasm with which this species of exercise has been adopted in England recently, seems somewhat surprising to us on this side of the Atlantic, who have been rather apt to classify any person treading a bicycle through the streets or over the roads as one devoid of much sense, not to use a coarser term, and rather fonder of silly display than a man ought to be. We know that the French people devoted some attention to the pastime long ere it was introduced into this country, and that bicycle races were among the pleasures of the young beaux frequenting the Bois de Boulogne and other prominent places of resort, but on trying to analyze the source of enjoyment of such means of locomotion, we failed to find it, so concluded that it was merely a Parisian whim, and that it would die out at an early day.

Such a fate seems to be rather distant at present, however, for not only has the two-wheeled machine become a greater favorite than ever in France, but it has also been elevated into the niche occupied by the higher classes of physical exercise in England, and is now patronized by some athletes and officers of the army. The consequence of this is, that bicycle matches are now quite general, and elicit more attention than one could possibly expect. To make them popular, the experts in these contests pit themselves against horses, and sometimes with good results, though the victory most frequently falls to the four-footed creatures.

Matches between the four-in-hand clubs and the bicyclists are the last efforts of testing the speed of men and horses, when used as propelling powers, and to make the matter a test of endurance also, the distances range from two to fifty miles.

What important deduction one can make in case the velocipedes drivers should win every race, does not present itself at first glance, unless it is that driving two wheels with two legs aids in the development of the latter to a certain extent; for we certainly cannot see that bicycling has any other advantage; inasmuch as it has no apparent merits from which one would argue that its introduction would be of any benefit to mankind in general, or to many persons in particular. It has met its fate in this country, apparently, so from present outlooks it does not promise to be revived.

THANKS.—We tender the members of the Junior Gun Club of Toronto our thanks for an invitation to attend their annual dinner. We hope their reunion was a pleasant one, and that it encouraged them to perform greater deeds than ever with their favorite weapon. The repast was a decided success seems quite evident from the *carte*, and that genial fellowship reigned we can readily imagine from the names of some of the gentlemen present, who are among the leading citizens of Canada. We under the Junior Gun Club our congratulations, and hope they may have many reunions of the same sort.

—We are glad to find that the Commissioners and Wardens appointed under the auspices of the Game Protection Society of Nova Scotia to carry out the new game laws, are vigilant and active in the discharge of their duties. Not long since a young sportsman of Halifax was fined heavily for illegally shooting a moose near Sheet Harbour, and more recently a firm in Guysborough county were fined thirty dollars for having three moose hides in their possession. The legal penalty was \$50 for each skin, but a rebate was allowed.

—A country paper prints the information that a heavy tycoon (*sic*) in Japan recently caused the destruction of two hundred lives.

GROUSE CULTURE IN MARYLAND.

OUR valued correspondent signs only his initials below, but we trust we violate no confidence or law of etiquette in this case, by stating that he is no other than Mr. N. H. Bishop, the celebrated canoe voyager, who is now on his way to Key West. The information he gives our readers is not only most interesting, but to those who are endeavoring to restock sundry Eastern States with prairie chickens, is of much practical value.

MARSHES, HEAD OF CUMMERTUCK SOUND,)
NORTH CAROLINA LINE, December 9, 1874. }

I take this opportunity to write you about the attempt that was made to introduce the prairie chicken into Eastern Maryland. About five years since a resident of Philadelphia sent to Dr. F. J. Purnell, near Berlin, Worcester county, Maryland, a few pairs of prairie chickens, and a covey of both the "valley" and "mountain" partridge, or quails. I am now using popular terms. Dr. Purnell has an estate of fifteen hundred acres lying along the banks of Newport Creek, which stream flows into Sinepuxent Bay, on the Eastern Shore of Maryland. Since the war this estate has been worked for the doctor by his tenants. Much of it is woodland and salt meadows. The partridges were kept confined for some time in the house and then set at liberty. They soon disappeared, excepting one pair which returned daily to the kitchen door to be fed. For some cause the pair went to a neighbor's house, on the same estate, and were fed in the kitchen door for some weeks. This pair of birds nested in the garden near the house, and raised a brood of young birds. The covey left their old quarters, and were not heard from but once since their departure. A person reported that he saw the covey of "California quails on the other side of the creek." This was two years since. It is now supposed that these partridges have been shot by gunners, or have died from natural causes.

The prairie chickens adapted themselves to their new home with but little trouble to the proprietor of the estate. Their nests filled with eggs were found along the fences of the fields near the meadows. The birds became tame, visiting the cattle yards, and feeding near the buildings of the farm. They multiplied rapidly. A law was passed by the Maryland Legislature, protecting them from gunners. The birds seemed to like the large salt meadows of the estate, and exhibited but little fear of strangers. Unfortunately for the birds, a number of terrapin hunters from New Jersey ascended the bay and river in their small vessels. Seeing these tame birds on the meadows the Jersey men commenced a war of extermination upon them, which soon resulted in the destruction of almost the entire lot. A workman on Dr. Purnell's estate informed me that he had seen eighteen prairie chickens in the corn field, near the house, in November of the present year. It was the only covey left by the Jersey terrapin hunters, who came up from Chincoteague Inlet. The same gentleman who sent these fine birds to Dr. Purnell is about to send down from New Jersey the ruffed grouse, called in that State and Pennsylvania, the "pheasant." There are no ruffed grouse on the Peninsula. Truly your friend, N. H. B.

PROTECTION OF GAME.

THE regular monthly meeting of the New York Association for the Protection of Game was held at the residence of Mr. Charles E. Whitehead, No. 61 West Thirty-fifth street, last Monday evening, the President, Mr. Royal Phelps, in the chair. The Secretary, Mr. William J. Hays, not being present, Mr. Thomas N. Culbert was appointed Secretary *pro tem*. Several reports were made, among which was that of the President and Vice President Roosevelt, regarding the character of the fish for the sale of which out of season the association had brought suit against Messrs. Chappell & Storer. While upon this subject Messrs. Penniman, Roosevelt, and Whitehead referred to the subject of the killing of bay snipe and other bay birds on Long Island, and thought it would be beneficial if amendments were made to the game laws that would in the future enable the officers of the association to prosecute any person found shooting such birds in the Spring. Mr. Whitehead advised that it was only a matter of time for the association to give expression to such views in the passage of new enactments, as it was their intention to ask the Legislature for greater power when the public mind was educated to a point that would enable them to move successfully.

The President presented the resignation of the Secretary and Treasurer, Mr. W. J. Hays, made necessary by his seriously impaired health, and, on motion of Mr. Whitehead, it was accepted, whereupon Mr. Clinton Gilbert offered some highly complimentary resolutions, thanking Mr. Hays for his efficiency, which were unanimously adopted.

After considerable minor business the association unanimously elected Thomas N. Culbert to the position of Secretary and Treasurer. Several members were then elected, when Mr. Culbert, with appropriate explanatory remarks, introduced the following, which received unanimous approval:

The attention of the New York Association for the Protection of Game is invited to the probability that during the coming session of the Legislature efforts will be made by marksmen and others who are now being prosecuted by the association, to procure the alteration or repeal of some of the most important provisions of the game laws of this State. One of these provisions, which is most objectionable to them, and which they have repeatedly decided upon to have repealed, is that which prohibits the possession or sale during the close season of game that has been killed out of the State. It is scarcely necessary to remind the association that without some such provision the game laws could never be enforced, owing to the impossibility of proving where game was killed. Another objectionable provision is that which provides for searching suspected places, without which law operators, who only supply their regular customers, could never be detected.

An attempt will also probably be made to reduce the

penalty imposed by the present statute, or to secure the insertion of a provision that but one penalty be imposed for any violation of the statute, instead of a penalty for each bird or fish, as now provided. Several dealers have claimed that prosecutions for violations of the game laws should be brought by the District Attorney alone, and it is not improbable that an attempt may be made to have a provision to that end inserted. In that case it is doubtful, to say the least, whether the law could ever be enforced. The District Attorneys in this State now have the power to bring these actions; but we have yet to learn of a single instance of their having done so.

In view of these facts, it would appear advisable to refer this matter to the committee appointed at the last meeting on proposed amendments to the game laws, with instructions to oppose the passage of such acts introduced during the coming session of the Legislature, in co-operation with the State Association and other associations, and to authorize said committee to draw upon the funds in the hands of the Executive Committee for their necessary expenses.

It was then read from Gov. Dix's thanking letter for electing him an honorary member, and stating that it will afford him much pleasure to co-operate with the organization to put an end to the abuses which they are associated to suppress.

Adjourned to meet in January, at the residence of the Vice President, Robert B. Roosevelt, No. 26 East Twentieth street.—*Amold*.

THE BIG HUNT.

Colonel McClary writes us from Chicago, under date of December 9th: "I am perfecting my plans and making contracts all through. To-morrow I close with the Pullman Car Company, and for my wagons, teams and harness, &c. I want this to come off as a grand affair, and will soon have it in such a shape as will preclude all possibility of such a thing as failure."

TREASURER'S OFFICE,
ERIC R. R., 23d street, Dec. 9th, 1874. }

FOREST AND STREAM grieves me now for the first time, in favoring that diabolical big hunting and fishing crusade scheme. That's not the way for you and me to hunt or to recommend. It will be a most reckless, foolish, destructive slaughter, and it may be inaugurated by a "big" series. Think of half a dozen such murderous armies sweeping over our plains and mountains every season for years to come. It makes my blood boil to think of it. I sincerely hope McC— may get impaled on a bison's horn, or hugged within an inch of his last breath by a grizzly, or kicked to pieces by a buck, or bunted black and blue by a mountain ram. Excuse my heat, but I am dreadfully sorry you don't pitch into this plan. These "big" operations may be crude, but I am strong in my convictions, and I hear them confirmed by others among your readers.

Yours truly, H. H. THOMPSON.

OBITUARY.—Hon. Ezra Cornell, of Ithaca, the founder of Cornell University, who died last week, was a gentleman of fine aesthetic tastes, and extremely fond of natural objects. Although he was in no sense of the word a sportsman, he was nevertheless a member of the Blooming Grove Park Association, and interested himself in its affairs. For one year he was a director of the same. As an instance of his enthusiasm, as well as of his perseverance in objects which he undertook, he two years ago rode out from Ithaca on fourteen miles to the Park in a driving rain storm, which came on just as he was about to leave the depot. He arrived at the club house drenched to the skin, but having taken a warming stimulant he proceeded to make a tour of the breeding park and adjoining premises, and after a three hours' inspection drove fourteen miles back to the depot in the same soaking rain. Perhaps the seeds of his fatal illness were sown in that trip.

INTERESTING SPORTING NOTES.—The following notes on sporting matters in the West have been forwarded to us by our special correspondent, M. M. Barker, brother of K. C. Barker, Commodore of the Northwestern Yacht Club, of Detroit, who is now traveling extensively in that region, and who has everywhere had the most unbounded hospitality pressed upon him by public and private parties. The officers of the Missouri, Kansas and Texas Railway especially have placed us under great obligations on his account, and we owe them acknowledgments in other respects. It will be seen by perusing our correspondent's letter that Mr. Hope, of Layrange, Missouri, who is a prominent dog fancier, has issued a challenge to all comers for a field trial, to take place within the next six months. No owner of fine strains of dogs will regret its acceptance. General Singleton, spoken of herein, honored two members of the Irish Team by extending abundant hospitalities to them during their recent Western tour.

LA GRANGE, Mo., December 8th, 1874.

EDITOR FOREST AND STREAM:—To the lover of rural sport, in almost every variety, there is no country offering greater inducements, from its ready access by steamboats and railroads, than the valley of the Mississippi, from St. Louis to Burlington, Iowa. Here you will find field and river sports in abundance. Game is so plentiful that any bushwacker, with a shooting iron and no regard, can fill his bag in no time, and the real sport which springs from science is thereby overlooked. Notwithstanding this, we now and then fall in with those of rare degree of excellence in field and other sports, equal to any in the States. Kennels of imported thoroughbreds are occasionally met with, having choice strains, and pedigree as long as desired. That of Mr. Ed. W. Hope, of this place, in whose hospitality I am a guest, contains a fine thoroughbred and well trained dogs, as can be found anywhere. He is an English gentleman, with the title of Nature's nobility—imported his own stock, and hereby puts forth a challenge to any gentleman in the country in setters. He will put up \$100 or more against any brace of woodcock and partridge, or snipe, with his brace of dogs, now nine months old. The accepting dogs must be three months older, and the trial to take place in this State or in Illinois within six months, subject to the rules adopted by the State Sports men's Association of Tennessee.

I can assure any gentleman who may accept this challenge that a rare treat is in store for him not only in the field, but in the good old English hospitality extended to him by Mr. Hope and his inestimable lady at his

private mansion at Riverview. I will send to your office all information necessary, so that due inquiries and arrangements can be made. "Hoo!" take notice!

Gen. Singleton and party returned from their hunt in the Indian country with satisfactory results. Their trip was pretty much over the same route as that of the first team, somewhat extended. The aged war chief, Gen. S., bagged five deer, one bear, and one opossum, saying nothing of the feathered game. At his bountiful table I had a taste of his venison and opossum, though the latter smacked very much of pig; but pig or opossum, in the confusion of tongues, Madame Clapot, the veteran lady who presides over the table here, is alone responsible for the true discrimination, and with her I will let it rest. The untolded hospitality of the General is proverbial, which marks the true Southern gentleman, "all of the olden time." He is not of those doughty families hugging old musty quarrels to their hearts, buffeting each other from generation to generation, but is extremely liberal in his views. Adhering to the old that is good and abolishing in his Southern relations, he opens his heart and home to hosts of friends; that his congeniality has drawn around him. Besides, he is a crack sportsman with his famous rifle, "Kildeer," which, if any of you should wish to examine, he would be happy to show up his points on call.

Of his kennel he does not have much to say, and neither could I interest the sportsman in his pedigree, other than to say that ancestry were of the high altitude of the Alps, and their coursing noted only for their run after deer. His excellent stud is famous throughout the West, as well as his cattle, sheep, and hogs, and his extensive farm a model for the continent farmer. It is located about three miles out of Quincy, to the Eastward, and where a gathering of the clan is often made on many festive occasions.

Sea and River Fishing.

FISH IN SEASON IN DECEMBER.

Striped Bass, *Morone chrysops*. Woodchuck.

Southern Waters. Pompano. Trout (black bass). Sheep-head. Snapper. Drum (two species). Tail-oh-sh. Grouper. Klogfish. Sea Bass. Rockfish. Striped Bass.

FISH IN MARKET.—Codfish is abundant, owing to the large catches made within the last week off the Jersey shore. Price, eight to ten cents per pound. Blue fish from the South, but principally Norfolk, Va., is profuse at ten cents per pound. A small catch of mackerel has been made during the last week, but not enough to reduce the price, as it now brings twenty-two cents, or an increase of two cents per pound, since last report. Whitefish is scarce at eighteen cents, but white perch is abundant enough at fifteen cents per pound. Striped bass has been very rare at from twenty to twenty-five cents per pound. One caught last week off Long Island weighed sixty-four pounds. Smelts are still coming in abundantly, so they sell now at twenty cents per pound. These are caught off the Maine Coast at present. The only unusual fishes in market are the eels, a denizen of the Florida waters, and a few Spanish mackerel. The former bring eighteen cents per pound. Green turtles, weighing from twenty to 150 pounds, are coming from Georgia and other Southern States, so that they are now so common that they sell at from eighteen to twenty cents per pound, according to size, the smaller bringing the highest price. Hard crabs are plentiful at \$2.50 per hundred. Lobsters from Massachusetts are abundant enough to supply the demand, which is not large. One on Mr. Blackford's stand weighed ten pounds. Price, ten cents per pound.

—Our esteemed correspondent, F. C. Field, Esq., of this city, has shown us two rods of exquisite finish and apparent excellence of quality, manufactured by Mr. Crook, of Fulton street. One is a black bass rod, of ash and greenheart, and the other a natural bamboo, with lancewood tips. The mountings are superb on each. Indeed, the order to the maker was without limit as to price. That one in which we were most interested was a fly rod of extra length, representing just what we have often thought would be most serviceable in Rangleley, Grand Lake, and Nepigon waters. It is less than a salmon rod, and more than a trout rod, as to length and weight, while its quality as a fly tosser would unquestionably stand the most critical test. The bass rod, we think, would certainly pass muster before our Western anglers. We have had several opinions expressed of late in these columns as to what constitutes "a good bass rod," and believe that this rod would cover the most reasonable of them all.

—A fine display of fish was made at the Halifax market last week. Cod and pollock were abundant, and some fine salmon were offered at forty cents per pound.

—A cargo of 419 striped bass, one of which weighed more than fifty pounds, was brought into New London, Conn., by an old fisherman a few days since. One hundred and eighty-five of them were caught with a hook and line in three hours.

THE LATEST FISH STORY.—A Southern exchange tells of a Methodist divine of Alabama, Ala., who recently caught a trout that had swallowed a juvenile alligator.

—The Philadelphia Star says:

"Somebody would do trout fishing correspondents a great favor by inventing some other poetic designation for their favorite fish than 'speckled beauties.' It has been worn threadbare."

Well; why not call them "trout" for short?

—At a meeting of the Great Falls Fishing Club, of Washington, D. C., the following gentlemen were elected officers: Mr. Conrad Eber, President; Mr. L. Oppenheimer, Vice President; Mr. Theo. Firebas, Secretary; Mr. S. Breton, Treasurer, and Messrs. Oppenheimer, Sloan and Scheidt, were appointed Executive Committee.

THE PERFECT BASS ROD

St. Louis, December 8, 1874.

EDITOR FOREST AND STREAM:

By some unaccountable oversight I did not read your remarks on bass rods in the number for November 20th, until my attention was specially called to it to-day. You say truly "there is something in knowing just

what a good bass rod is," and then, pardon me, go on to show that your "lacking" in that knowledge is indeed "a younger brother's portion." The perfect black bass rod is in three pieces of five feet each, the but and second joints of equal diameter, handles cut from near the top end, and of the taper, the tip (five feet long) of rent and glass Malacca cane.

The lower pieces should be thoroughly saturated with boiled linseed oil before finishing, and then varnished with shellac, and the three pieces should be joined with ordinary German silver ferrules, and provided with highly polished standing guides. The tip should be of a strength and taper about half way between the best split bamboo salmon rods, and the common split cane, single hand, split bamboo trout rods.

Thus far I shall have the hearty concurrence of all true anglers for genuine black bass; but when I announce my preference for a large single multiplier click reel, I am aware that many users of the elegant Meek or Milburn reel will take issue with me—they casting in the manner of striped bass anglers, while I cast everything, minnow, crabs, spoon and fly, by it, and I will give the due I wish to me, lifting it from the water, swinging it straight behind me, and then launching it lightly forward.

I am tempted to use some very harsh expressions regarding those "Eastern sportsmen" (I) who, having hooked their fish (bass), drop the rod and draw in on the line, hand over hand. What you would think of a snail who should haul a speckled trout in "hand over hand" that do I think of any snailless pot hunter, such as alone could be guilty of the crime which you describe.

I feel a sense of personal injury in such unfeeling treatment of a noble game fish. Because you love your spauld, therefore, (if for no other reason) you would refrain from kicking my head, would you not? and in common reciprocity of respect, while we concede the superiority of brook trout, let Eastern sportsmen refrain from lashing black bass in "hand over hand."

GASCONADE.

St. Louis, Dec. 8, 1874.

EDITOR FOREST AND STREAM:

I will try to reply briefly to the interrogatory of Z. A. L. Colon, Mich. who desires information of "the game birds, animals and wild fowl of the Gasconade." Premising that I am not a gunner, but derive my information from friends who have hunted there, and from the "natives," who are all good rifle shots, I say that that quail are very plentiful along the entire valley, but that pinon quail are of rare occurrence. I hardly know what would be considered good duck shooting, but am impressed with the conviction that a fair abundance of them may be found there. Squirrels are, along the valley where it is wide enough for farms, surprisingly numerous. The great game attraction, however, of the beautiful Ozark range, and especially of the Gasconade region, is deer; these, with wild turkeys, are easily found in great numbers by even inexperienced hunters. The week before last Mr. Kelton, as a mere incident of a fishing trip, the Boiling Springs, shot two deer, four turkeys and an average of fifteen brace of quail per day—this within sight of his camp, and only with the object of adding to his larder. The game market of St. Louis is conceded to be the cheapest and best in the United States, and is supplied with larger game chiefly from the Ozark Mountains.

If Z. A. L. wishes to try it, let him disembark from the St. L. & N. R. R. at Jerome and look up Bruce Harris or old man Rutherford, who will give him a local information. Smith, fifteen miles above Arlington, has a good pack of deer hounds, knows all the runways, and is a good tempered and reliable "native."

Although not germane to the inquiry, I add that since cold weather has set in, splendid, and I believe unique sport, may be had at Boiling Springs. It will be remembered that in a former letter I described the place. They may be imagined when I say briefly, that it is the irrigation of a river out of the bed of a river. The water of the springs being now warmer than that of the river, swarms with large and game black bass in splendid condition, which may be taken in almost any quantity with the live minnow.

Mr. D. A. and Kelton intend to hunt there during Christmas week, and I will report the trip for the further information of Z. A. L.

GASCONADE.

TO SOFTEN LEATHER.

New York, December 7, 1874.

EDITOR FOREST AND STREAM:

In a late issue of your paper, "W. N. P." asks what means do to render a shoe leather gun case that is stiff and warped from wetting, soft and pliable.

Answer: Soak it in water until it is wetted through, hang it up, mouth downwards, for two or three hours; then by stretching it over a "hay fork handle or round, straight stick," whip it into shape; next pour into the case as much castor oil as is necessary to thoroughly coat, or grease the inside of the case, and apply the oil to the outside as often as long as the leather will absorb it; dry in the sun, or a warm room, occasionally rubbing and bending the case with the hands. After this treatment it will be more soft and pliable than when first made.

For years I have treated my fishing shoes, which are made of heavy French kip, after each boot, and while wet, to a large size of castor oil, and by that means keep them soft and pliable, rendering them less liable to rot, and much more durable. Anglers who wade the stream, if they have not tried the expedient would do well to try it. Never suffer the shoes to dry after wetting, before they are thoroughly oiled, soles, as well as uppers, with castor oil.

BISHOP'S CANOE VOYAGE.—This intrepid and persistent voyager has written us a note in lead pencil, dated at the head of Currituck Sound, on the North Carolina line, where he has been driven by stress of weather, away up among the marshes. He says his hands are much swollen, as he has had the misfortune to break his row-lock. He writes: "As my row-lock is broken, I must wait until night, when the strong northerly wind will go down, and then I can paddle to a blacksmith's shop, if one is to be found within ten or fifteen miles of camp. I will mail this at first opportunity. I hope to reach Newbern, N. C., in about ten days."

—Mr. Frank Rees, the Captain of the Columbia College crew, has received notice of the postponement of the Intercollegiate Boating Convention, which was to have been held at Hartford on Wednesday until next January. J. K. Rees, the President of the club, and Edward S. Knappe, the delegates elected by Columbia, attended the convention, and they have been instructed to cast their

vote for Saratoga as the place for holding the next college regatta. The plans for the new boat-house on the Harlem River have been adopted by the Columbia Club, and it is expected that it will be finished in time for next year's crew. It will be one of the finest boat-houses in the country. The cost will be about \$150,000, half of which has been collected.

The eighteenth annual meeting of the Waverley Club was held on the 31st inst. at the Knickerbocker College, Sixth Avenue and Twenty-eighth street. The following gentlemen compose the board of officers for the ensuing year: President, Doctor Walker M. Fleming; Secretary, Wm. H. Innet; Treasurer, John Stout; Captain, William K. Williamson; Recorder, Benjamin F. Brady; Trustees, John O'Neil, Benjamin F. Brady and William Martin. The Waverley Club has for many years been known as one of the best of our rowing organizations, and with but two exceptions is the oldest boat-club in the United States. The members have always confined themselves to pleasure rowing, and their log-book contains the record of many notable events, more particularly their famous trip to the beautiful Lake Mohopac, and their many fites on the Russian and French men-of-war visiting our harbor. Recently a disposition has manifested itself in the club to send one or more racing crews to engage in the principal regattas of the season of 1875, and everything looks favorably to that end.

—The copper sheathing of two royal English yachts was covered in the Fall of the year, by order of the Admiralty, with "Josty's Anti-Fouling Composition," and after remaining moored in the harbor, until the end of the following April, they were found as free from algae and other deposits as when first coated, except in very small patches near the rudder. This should be employed on our own yachts if we would prevent the annoyance so common to them, and which often proves detrimental to their sailing powers.

—The pilots of the Sylvan Glen and Harlem, two rival boats on the East River, have been censured for their racing and colliding proclivities by the United States Inspectors; but any cases of the same sort will in the future receive the full penalty of the law.

—Canoe clubs are increasing rapidly in England. It seems to us that this cheap and pleasant mode of aquatic exercise ought to be popular here.

—Brown and Sadler are expected to row somewhere in Ireland early next summer.

BOATING AT CAMBRIDGE UNIVERSITY

Ac correspondent of the *Messenger*, writing from Cambridge University, England, gives the following gossip sketch of how they select crews there for the great college regattas:

"Harvard seems at last to have awakened to the fact that if she wishes to retain the high place among American colleges which is her's traditionally, she must exert herself to secure the best possible training for the men who row her boat."

Another and perhaps the most important step towards the selection of the "Varsity" crew at Cambridge, is the "Trial Eight." Substitute the word "Sixes," and it becomes applicable to Harvard as well as to Oxford and Cambridge. They—"the Trials"—are just getting under way here, and a short account of them may not be uninteresting or unimportant to the captains of the Harvard clubs. They are rowed during the first week of December, although the Varsity race is not till April. The reason is, that men get "rowed out," and utterly "stale" if they are kept at it without intermission, and a three or four months' absolute rest from work at the oar is found most beneficial in ninety-nine cases out of a hundred. Any man, however poor an oar, has the right to ask his (college) captain to send in his name to the Secretary of the Varsity; they are then tubbed once or twice by members of the Varsity, the hopelessly bad ones weeded out, and about three Eights taken down the river every day for a week or so. These three Eights, by another "weeding" process, are reduced to two, and go into training under two of their members as captains for from two to three weeks. Then they row a three-mile race, and those that acquit themselves best, without reference to their being in the winning boat or not, are selected to fill the places on the Varsity.

The selection of those who are to row in the "Trials" rests with the President of the Varsity, and even old Varsity oars are not excused if he is not satisfied with their form. In the last two years, for example, five men have rowed in the Trials who were on the preceding Varsity crews. Of course, the selection is not definitely made so long before; quite a number of men—say sixteen—are put into half training and tutored for some weeks before the Varsity go to Putney and the next best four are kept in training at Cambridge for a week after their departure, to supply the place of any man who may "crack." In furtherance of the plan of not overworking a Varsity oar, the first Division (answering to the "Champion Sixes") of the Cambridge boats do not take part in the Lent term races that precede the Varsity by a few weeks. The members of the May races that follow it, since some of their members being wanted for the Varsity, it would be impolitic to make them row, and unjust to force the clubs to which they belong to race without their best oars.

If the same rule in regard to subscriptions were followed at Harvard as here, the clubs would soon be in a flourishing condition in regard to money matters. The charge is \$20 the first year, and \$15 each succeeding year, which is divided into three equal payments; the Varsity expenses for cups, medals, boats, training expenses, etc., while the *esprit de corps* is so strong that, practically, everybody belongs to his college boat-club.

SAILING REGULATIONS.

Boston, December 14th, 1874.

EDITOR FOREST AND STREAM:

In looking over the sailing regulations of our yacht clubs, whose headquarters are not a thousand miles from South Boston Point, I find one or two rules which I do not think at all necessary. The first is: "No ballast shall be thrown overboard after the start." Now, this is an old rule, and I have seen it in the sailing directions of every club, but what is the reason for it? Is it a sort of supplement to the rule forbidding the shifting of ballast? If the wind dies out during a race, what possi-

his objection can there be to throwing out superfluous ballst? No doubt those who put in very expensive ballst favor this rule, but that is not a good reason for its enforcement. Then there are very few yachtsmen who do not throw over ballst if occasion requires, the regulation to the contrary notwithstanding. I have seen a man tumble out over three hundred pounds of ballst in a race, and, though his yacht won the race, nobody made any claim to the judges, which proves the rule to be a dead letter.

The other rule provides that any yacht whose hull shall touch a stakeboat in going round shall forfeit all claim to a prize. Now, a yacht surely cannot save any time by running against a stakeboat, but runs some risk of losing considerable by it. It is natural enough that a skipper should be anxious to shave as close as possible, and save as much as he can in going round the course, and if he happens to be unfortunate enough to run against one of the boys, away goes his chances for a prize. I confess I do not see any reason whatever for such a regulation, unless, indeed, it is that a yacht-man has no right to save time. I do not recollect that a boat ever lost her prize by any such misfortune, and it is not likely that one ever will. I think the rules and regulations of any club would be sufficiently stringent and explicit if these two rules were left out. The rule prohibiting shifting ballst is a thing of the past. It was always disliked, and last season several of the clubs came out flat-footed and abolished it. I hope before next Spring to be able to inform you of the striking out of the other two. Yours,

C. FRED GORMAN.

Rational Hashimes.

THE CURLING SEASON.

THE blasts which herald the coming of the "lust'ring rafter" are giving the lovers of the "roaring game" warning that it is time to bring their brooms and stones out of the enforced torpidity of Summer, and to hold themselves in readiness for the first call to the icy board. The curlers of Paterson had commenced operations on Haldon Hill last year before Thanksgiving, an unusually early date, as the season does not generally open for some weeks after that day. It may be expected, unless the premonitory warnings are false, that the "jolly" curler will soon be gratified by having his implements in full use. A brief historical retrospect and short sketch of the arrangements for the coming curling season may be acceptable before hostilities commence.

The game, although sufficiently Americanized to be regarded as one of our regular Winter sports, was originally imported from Scotland. To trace its development in that country backward to its origin is a difficult matter. Some authorities say it originated in the Low Countries at a very early date, and that it was imported thence into Scotland, while Scotchmen generally are desirous of claiming it as indigenous to the "land of their birth." Without entering into that matter, or speculating upon the probability of its introduction by us with St. Andrew, the question of its arrival here may briefly be stated as one involving an investigation confined entirely within the bounds of this historic period. A very few years ago hurling huge stones along the ice was regarded by Americans as very poor sport, indeed; but the enthusiasm of its Scotch supporters has proved infectious, and numbers of our countrymen are now to be found among its most ardent admirers. It has one recommendation which might have passed it more speedily into their favor, that even in so far as its pre-American reputation goes, it is conducted on the most approved republican principles. Writers tell us that when rinks are pitched in Scotland, every mark of caste is thrown aside, and the peer, the parson and the peasant are thrown together in a way which obliterates for the time being the more well-defined grades of society. Lucky, then, for the aristocrat and the churchman, if their son is to meet their conqueror. This circumstance, peculiar in itself, arises from two things with which we in this country have more to do; the merits or attractions of the game, and the sociability which it invariably engenders. The former may be estimated from the fact that every curler is a "keen" curler. One almost always finds the adjective associated with the substantive, and it is claimed as one of the peculiarities of the game that it acquires such a hold upon the affections of those who practice it, that they *would* become enthusiastic. The curler, they say, has no divided affection. To him there is only one sport in the world worthy of man's serious attention; and it is called "curling." This very feature accounts in part for its devotees styling each other Scottish "brithers," though the fraternal feeling is more correctly attributed to the character of the game. One cannot play, nor two; there must be the full "rink" of eight players, and the more rinks the merrier. The game has many other merits. It is one of the most healthy pastimes known, and what is true of it physically is also true of it morally. Gambling is entirely foreign to it, and has no place among its associations, while that form of speculation, which consists in selling a game, is simply an impossibility. There is not a curler living, it may safely be said, who, if he did demean himself by doing so, so far as his own individual play could effect the desired result, would not forget all about wagers, and in the excitement of the fray, with all his true instincts strong within him, would not play to win. The game, therefore, stands almost alone in many respects. There is, however, one characteristic of its lovers which ought to be put down on the debit side of the account. They are fearfully prone to indulge the result of an adverse game, and to confound themselves with the victors in a manner which, to say the least, is very singular. This trait might have been heard very amusingly illustrated at one of the meetings of the Grand National Curling Club by a prominent officer of that organization. From what was there said it might have been gathered that no one was ever beaten, in which case the oral traditions differ very widely from the historical records of the game.

From the date of its introduction into the United States to the present day, curling has gradually advanced in public favor. The Scotch have been and are its chief supporters and the chief means of disseminating a knowledge of its principles and practice in every nook and corner of this broad land. One has only to pass a single hour on the ice within reach of the sound of the rumbling "stones" and to hear the frequent shouts of "rich Dore," to recognize in many of the players a son of St. Andrew. But it would be wrong, as has been said above, to suppose that all the curlers are Scotchmen, or that there are not many Americans among the "knights of the broom." The game

has grown in favor surely, if not rapidly, among the men of all nationalities, who meet in our cosmopolitan country. Many clubs, such as that of Paterson, are largely composed of American members. From a few Scotchmen meeting in some retired retreat to have a quiet game a few years ago, curling has now become an American institution, under the central supervision of a Grand National Curling Club, having its affiliated members in every part of the United States and Canada.

This central body meets once a year to arrange for the season following its close, and to make such regulations and alterations upon the laws of the game as may be deemed expedient. The last meeting was held in this city in June, and several matters were there discussed, which will more or less affect the season about to open. In the first place a challenge was presented by a Toronto curler to fifty rinks from the United States to meet a similar number of Canadians in a grand international "bonspiel" some time in the early or next year. A committee of five to make the arrangements necessary for the match, and the secretary has now addressed a circular to each club for information as to the number of players it will engage to send. A great amount of interest has hitherto been shown in these friendly frays across the border from either side, and if a match can be arranged on a scale as large as that proposed, the season 1874-5 will have a more commensurate importance in the annals of the game. It must be admitted that, although the Canadians were slightly worsted on their last appearance in Central Park, the conditions were anything but satisfactory, and that they have generally manifested a proficiency not yet developed by their Southern opponents. The gap of disparity is, however, fast being bridged over, and the competition growing keener every year.

To keep alive a healthy spirit of rivalry among the individual clubs, the Grand National has for some years back given a series of medals to be played for by specified clubs. The following are the matches for these medals arranged by the Committee on Distribution for this year:—The Caledonian Curling Club of Brooklyn vs. The Thistle Club of New York; Burns, N. Y. vs. Thistle, Brooklyn; Jersey City vs. Empire City, N. Y.; Paterson vs. Ivanhoe, Paterson; Caledonia vs. New York; Jonkers: New York Club vs. St. Andrews, N. Y.; Albany vs. New York Mills; Milwaukee vs. Chicago; Granite, Detroit vs. Thistle, Chicago; Caledonia, Buffalo vs. Burns, Cleveland; Thistle, Detroit vs. Orchard Lake; Burns, Ogdensburg vs. Four Brothers Club, of Canada. The dates for these matches are left to the competitors in each. Besides the above series the grand Scotch match for the medal presented by Mr. A. Dalrymple of this city, between players from the North and South of Scotland, will be played as usual.

The indications, therefore, are in favor of the ensuing season being one of unusual interest. Any sudden accession to the ranks of the fraternity is not expected, but it appears that representatives from Philadelphia and Newark are soon expected to seek admission within the fold. It is further worthy of note that an attempt has been made with every prospect of success, to introduce the game into our colleges. With an eye, it may be, to the possible national proclivity for tactics, Dr. J. C. Davis, of Princeton, has just issued a notice, which bids fair to have a successful issue.

The several curling clubs of New York are preparing for the coming season, and they expect to have a lively time on the ice this Winter. The New York Curling Club has elected the following gentlemen as "skips": J. Adie, David Reid, George Grieve, and Alexander Pyle. The following gentlemen have been chosen "skips" by the St. Andrew's Curling Club: Messrs. A. Dalrymple, Major Ferguson, Joseph Ferguson, and James Kirkcaldy. The silver prize medals given by the Grand National Curling Club have been completed by Mr. Wilson. On one side is the motto, "We're brithers a'," and the name of the competing club, while on the other side is a cross formed of two brooms, with a curling-stone beneath, and the words "Grand National Curling Club of America," the whole surrounded by a wreath of thistles.

Professor Judd who attempted to walk 500 miles in six days and a half commenced his work a week ago last Monday at the American Institute and walked until Saturday P. M. when he was compelled to give up the undertaking owing to the failure of his right leg which seemed to be badly strained. His long, steady, unobtrusive gait only counted 369 miles, which is comparatively far below Weston's first attempt. One reason for the failure of Mr. Judd in not making better time is that he manifested a decided laziness, and did not attempt what is fresh to make his best time. He was cheered on his weary way by several members of the Athletic Club, by the applause of ladies and gentlemen and the strains of Gilmore's band, but all could not counteract the effects of the long, monotonous march. Nature would permit. The Professor had pluck enough to fight fate to the last; so he will attempt the feat a second time when he has thoroughly recovered from his present arduous task.

Several members of the Athletic Club, judging from their exhibition of walking the other evening, are admirable specimens of physical power, as the poorest pedestrian walked his mile in a little over eight minutes. Prof. Judd's fastest mile was made in 14 minutes and 22 seconds and the slowest in 30 minutes and 25 seconds.

THE ST. LOUIS CLUB.—This new base ball club is now fully organized, and below will be found the official list of officers and players of the new club for 1875:

President—J. B. C. Lucas.
Vice President—W. C. Steigers, of the St. Louis Times.
Secretary—Charles A. Fowle, 406 North Fourth street.
Treasurer—S. Prentiss Smith, son of "old" Sol. Smith.
Catcher—Thomas F. Miller, Easton, Penn.
Pitcher—George W. Fletcher, Easton, Penn.
First Baseman—Harmon W. Dehman, Atlantic.
Second Baseman—Joseph V. Battin, Atlantic.
Short Stop—Richard Pearce, Atlantic.
Third Baseman—William Hull, Easton, Penn.
Right Fielder—Charles C. Waitt, Easton, Penn.
Center Fielder—Lipman Pike, Hartford.
Left Fielder—Edgar E. Culbert, Chicago.
Substitutes—Thomas Barlow, Hartford.
Will be one other, not yet decided on.
S. M. Graffen, of the old Olympics, of Philadelphia, will be the manager.

The annual meeting of delegates to the National Amateur Association was held at the Astor House on Dec. 16, the attendance being limited, owing to the dissatisfaction of the majority of clubs with the administration of its affairs during the past season. A new President and Secretary were elected, and next season the rules of the association will no doubt be issued.

The Metacomb club of Taunton, Mass., played in eleven matches during 1874, of which they won all. Their best games were those played with the Independent club, of Easton, at Taunton, marked by scores of 8 to 2, and 9 to 4.

The Clipper club, of Webster, Mass., played in twenty-nine games in 1874, of which they won 23 and lost 7. Their best games were the following:

June 23—Clipper vs. Picked Nine of Worcester..... 4 to 1
July 14—Clipper vs. Star of Boston..... 6 to 2
Sept. 12—Clipper vs. Star of Boston..... 7 to 2
Sept. 14—Clipper vs. Star of Boston..... 9 to 4
Oct. 14—Clipper vs. Law Oak, of Lynn (11 minutes)..... 2 to 6
Oct. 10—Clipper vs. Grafton..... 2 to 4

The Neshannock club—champions of Western Pennsylvania—played in fifteen games during 1874, winning 12 and losing 3 only. Their best game was that the Mercer club, which they won by a score of 9 to 7, their only single figure game of the season.

The cold snap of Dec. 15 resulted in the covering of the ponds in the parks of the metropolis and its vicinity with a thick coating of ice, and by Christmas, if not sooner, the signal for skating will no doubt be flying both at Central as well as Prospect Park. On Dec. 15 the thermometer fell to 19° above zero in New York, a fall of over 30° in twenty-four hours.

A championship medal, offered by the Amateur Bicycle Club in a ten-mile race, was contested for by J. Keen, D. Stanton, and C. Hicks, at the Lilliebridge Grounds, London, England, Nov. 23. The race was exciting between Keen and Stanton, the first named winning in 36 minutes 32 seconds; Stanton's time, 36:47. The latter ran the first mile in 3:44, one second quicker than Keen, and the tenth in 3:29, the victor covering his last mile in 3:23.

An amateur pedestrian of the name of Franklin is anxious to walk a thousand miles in a thousand hours, and a proposition has also been made by another who believes in his staying powers to walk 1,000 quarter miles in 1,000 quarter hours.

A Pigeon Flying Contest, for a silver cup, gold lined, is to take place at Fairmount, Philadelphia, on Christmas Day. It will be given by Joseph Buckley, to whom entries can be made, at No. 2,311 Callowhill street, on or before Dec. 21.

Billiards.

PROFESSIONAL CONTESTS IN THE METROPOLIS.—Two matches of more than ordinary interest marked the week's record of metropolitan billiard playing. The first was the contest between Maurice Vignaux and Cyrille Dion at the French game, 800 points up, which took place December 8, at Tammany Hall, in the presence of an audience which crowded the hall. The second was that between Rudolph and Garnier, at the same game, 600 points up, played at Tammany Hall, December 10, before a moderately sized assemblage only, a rather exciting time being anticipated, owing to the bitter rivalry which exists between the players. The Vignaux and Dion game proved to be one of the best contested matches of the season, the former showing his best nerry play throughout, while Vignaux proved himself to be cool and collected in his style of play, as he is masterly in his execution of the most scientific shots known to the game. It was anybody's game almost to the last, Vignaux only winning by a lead of 28 points in the 800. At the call of the first hundred the figures stood at 124 to 53 in favor of Vignaux. At the second call he was still ahead by 216 to 101. At the third the figures were 246 to 200, showing Dion to be gaining. The fourth left them at 310 to 278, and the fifth saw Cyrille in the van for the first time by 450 to 361. The sixth call, however, left Vignaux once more with the lead by 526 to 493; but again did Dion make a successful rally, and the seventh call left the totals in his favor by 612 to 567. Now it was that the contest became exciting. Dion's first lead was obtained by a merely run of 127, and on second Cyrille was knocked by a run of 122. Immediately following this, however, came Vignaux's first "century," and as it left the totals in his favor by 667 to 659, the contest began to be intensely interesting. Once more Dion rallied for the lead, and the close of the fifty-fifth innings left him in the van by 728 to 692. Neither did much after this until the sixtieth innings, when Vignaux ran 26, and adding 48 immediately after, he took a winning lead, and in his sixty-seventh innings he ran the game out and won by 800 to 752. His average was 11 66-67, and his highest run was a hundred, while Dion's average was 11 26-46, and best run 127. The referee was Isadore Gayraud.

In the Rudolph and Garnier match, Rudolph led at the first call by 141 to 87, and at every call thereafter he was largely in the van, except in the third, when Garnier led by 319 to 219, a run of 101 materially assisting him. The next call, however, saw Rudolph leading by 500 to 337, a splendid run, 161, having practically given him the game. The final result was Rudolph's success by 600 to 387, a signal defeat of his rival, who thereby lost—metaphorically—the championship cup, which, by the way, was stolen from him two weeks before. Rudolph's average was 14 26-41, while Garnier's was 9 27-30. The next match of importance will be that between Vignaux and Joe Dion, named to take place December 30th, at Tammany Hall.

The *Billiard Cue* for December, published by Messrs. Collender & Co., contains the full scores in detail of the games played in the recent tournament held at Tammany Hall, besides other interesting billiard information.

In a three ball practice game, between Joe and Cyrille Dion, last Saturday, Joe made the remarkable run of 258 points.

Mr. George Gardner succeeded in holing the fifteen balls at Dean's room, corner of Fulton and Smith streets, Brooklyn, last Saturday night, when he received the standing prize of a ten dollar gold piece.

THE BABOOLAST AMATEUR TOURNAMENT.—On Saturday last Messrs. La Torre and Dorian played off their game at Samuel's Billiard House in Brooklyn, to settle the question of the ownership of the third prize in the tourney, La Torre winning the game and the prize. Afterwards the

prizes were duly awarded in accordance with the decision of the party to whom an appeal was made, and the result was that Mr. Pickett became owner of the champion cue and \$300. Mr. Frankfurter of the second prize, and Mr. La Torre of the third. Appropriate resolutions of thanks to Mr. Samuels, and Messrs. Phelan, Grote and Fowler for their respective assistance in making the tourney a success, were adopted, and the amateur tourney of 1874 came to a close. Mr. Frankfurter has challenged Mr. Pickett for the cue, and the match will be played at Samuels' in January.

Chess.

THE CENTENNIAL TOURNAMENT.—Provision has been made for a grand international chess tournament to take place in Philadelphia in 1876, and in furtherance of the plans arranged by the American Chess Association, the following circular has been sent to the European chess centres, and the *London Chess Magazine* in commenting on the enterprise, says:

We have received, and are requested to publish the following communication respecting the proposed International Tournament of 1876. It is evident the players of America intend, if possible, to make the forthcoming event one that shall have a very high place in the history of chess. We wish them all success, and shall do our utmost to assist the scheme from this side of the Atlantic:

TO THE CHESS PLAYERS OF EUROPE.

GENTLEMEN: The chess players of the United States desire to hold a grand International Chess Tournament in Philadelphia in conjunction with the Centennial Exhibition, during July, 1876.

The Tournament will hardly have the desired success unless a number of the best players in Europe participate. We desire to ascertain what is the least amount of prizes that will induce the strongest players in Europe to enter the list.

The funds of the tournament will all be collected by subscription, the liberality of the American lovers of the noble game will, undoubtedly, be equal to the occasion, if they are satisfied that this Tournament will produce a real contest for the championship of the world.

The time limit will be fifteen moves per hour, with the usual rules.

The first prize will consist of two-fifths of the amount subscribed.

The second prize will consist of two-fifths of the remainder.

The third prize will consist of three-fifths of the remainder.

The fourth prize will consist of three-fifths of the remainder.

The fifth prize will consist of the remainder.

The players who think it probable that they will enter the Tournament, are respectfully invited to address Mr. James Roberts, Athleteum, Philadelphia, U. S. A.

Other chess journals will please copy.

J. A. CONGOS, President A. A. C. A.

JAMES ROBERTS, Secretary A. A. C. A.

PHILADELPHIA, Oct. 1874.

—The Kingston, Canada, Chess Club has elected for the ensuing year W. R. Mingage, President, T. W. Nash, Vice President, Robert T. Burns, Secretary and treasurer.

The Colleges.

The death of Ezra Cornell, Esq., the founder and patron of Cornell University, is a serious loss to that institution in more ways than one. The testimonials of regret paid to his memory show a deeply felt regret for the deceased.

—We take the liberty, without solicitation, to invite all alumni and those having relatives and friends at Yale, to take and read the *Yale Record*. It is a very full and interesting compendium and purveyor of college news and current topics, and is edited with an ability which some professed newspapers would be proud to possess and boast of.

—Yale has organized a natural history society, and at the last meeting several interesting papers were read by the members. The membership at present is rather limited, but it promises to increase rapidly.

—The building at Vassar College, N. Y., formerly used as a riding-school, has been altered so to accommodate the museum, picture gallery, art studio, laboratory, and gymnasium.

—A number of Yale seniors dressed in night-gowns and old hats created quite a sensation recently by marching in solemn line from Duffee to the rooms of several of their classmates. Entering a room, they would range themselves in a line and sing the "Conspirators' chorus" from "La Fille du Marquis." Their success was great until a tutor appeared upon the scene.

EDITOR FOREST AND STREAM.

In all probability the Yale crew for next Summer will be constituted as follows:

1. B. Brownell, East Haddam, Ct.; bow, 1. F. Wood, Norwich, Ct.; 2. H. H. Kellogg, Spayten Duvell, N. Y.; 3. E. C. Cooke, Worcester, Mass.; 4. J. Kennedy, Straubers, Ohio; 5. R. J. Cook, Fayette City, Pa.; stroke and captain, 6.

As yet the election has not been made, but the general opinion is that Yale will be represented in the next Intercollegiate regatta by the above mentioned men. At any rate a stronger and most trustworthy crew could hardly be selected. They are all boating men, in the true sense of the term. Capt. Cook, without doubt, is the most prominent name in college boating. He has pulled on the "Varsity" for three years, and although the story is old, it is worthy of record that the Yale crew, under his captaincy, had a long succession of defeats, succeeded at last in winning the "shell" above all others. Kennedy is Cook's right hand man. He has pulled No. 2 on the Yale crew for the past two years, and is an excellent oarsman. Cooke, the new man, was captain and stroke of our Freshman crew at Saratoga last Summer. He is a strong and true is a valuable acquisition. Kellogg was a member of the crew last year, as were Wood and Brownell, and all of them have shown that they are well worthy of the positions which they occupy. Taken as a whole, the crew, if this body up, will be stronger than that of last year, and, indeed, a New York paper of prominence has already settled upon us, editorially, as the coming victors. Your correspondent can only hope that its prediction may be true, and that without any foils or obstructions to hinder us, once more we may come out ahead. In this connection a few words about our new boat house may be acceptable. Last year subscriptions were raised to erect a spacious and suitable building. We were promised to see it erected when this college year began, but our fondest hopes were blasted. Owing to necessary delay, arising from some legal quibble, nothing had been done on it up to the middle of October. At last the only obstacle in the path of its progress was removed by arbitration. Governor Ingersoll was the arbitrator selected by the city and by the college, and a short time after the building was under way. It is now promised that it will be finished by April 1st, provided a further subscription is raised. When finished our boat house will be a model one, and will supply a long-felt want. In this connection it may be interesting to state that an entertainment is to be given early next term, at Music Hall, in order to raise funds to furnish the parlors of our new building. The affair is to be conducted entirely by graduates, and the project originated with Henry E. Elliot, of '74. Much interest is felt in it, and a fine entertainment is expected, and it is also anticipated that money enough will be raised to furnish entirely and splendidly our rooms.

Our Chess Club is now occupied over a game with Cornell College, and as yet neither side has a marked advantage. We only hope and expect that Cornell will act differently from Williams, as last year, when we had the latter named institution, she refused to continue the game, and then commenced away by sending us new challenges. It would be a good thing if all the various colleges had organized chess clubs, when contests could easily be carried on between them by postal cards. Surely much time could be spent very profitably in such a game.

It had her last chess election yesterday, and the following persons were elected by ballot: President, C. DeWolf A. Jones, '75; Secretary, N. Y.; Hugh J. McElwain, Cincinnati, Ohio; Edward C. Smith, St. Albans, Vt.; William W. Seymour, Troy, N. Y.; Edwin H. Weatherhead, Chatham Village, N. Y.

Stall-clerks—Charles E. Bloodgood, Hensenville, N. Y.; Walter A. Fuller, Belvidere, Ill.; Lewis P. Reid, Chazy, Ill.; Chairman.

Clas-Cup—Augustus P. Melf, Canadian, N. Y.; Charles W. Cochrane, White Plains, N. Y.; Joseph A. Griffin, Topkay, Kansas; Guy Howard, Portland, Oregon; John A. Post, Newburgh, N. Y.

Try—Samuel J. Huntington, Cincinnati, Ohio; Henry M. Harding, Bath, Maine; George P. Torrence, Cincinnati, Ohio.

Clas-Cup—Messrs. S. Gordon, Exeter, N. H.; Albert V. Smith, Pittsburg, Pa.; Eugene W. W. Whitney, Chicago, Ill.

Examinations began today, and the term closes on Thursday next, when all will go homeward or to visit friends. Several parties have been formed to indulge in hunting, but we fear that not much hunting will be done. However, we trust that all will enjoy themselves and return to their college duties next year with renewed vigor to prosecute their various studies.

—The Princeton College, December 10, 1874.

EDITOR FOREST AND STREAM.

Examination and very cold weather together have caused a rapid decline in the interest exhibited by the college generally in all our door sports. Since Rutgers experienced her severe defeat here, nearly three weeks ago, not a single match game, either between other institutions and this, or among the students of themselves, has taken place. Even the good number of those who were wont to exhibit their zeal and fondness for the above diversion in the campus, between East and West colleges, at noon, and after chapel each day, has dwindled down to an enthusiastic few. On Tuesday a meeting of the boat club was held, in order to elect delegates to represent Princeton at the Convention of the Intercollegiate Rowing Association, to be held at Hartford on the 10th inst. Messrs. A. Alexander, '75, and W. A. Butler, Jr., '76, were elected delegates, with J. E. Ely, '77, as alternate.

The views entertained by Princeton, in regard to rowing with coxswains at the next regatta, coincide with those held by Harvard, Yale, and Columbia, and it is to be hoped that the other members of the association will each favor this most desirable change in the manner of rowing. The great number of contestants in the college regatta prove the inefficiency of the present mode, and that unpleasant occurrence which marred the last Intercollegiate race at Saratoga, furnishes abundant proof that a new method should be adopted. Let each crew have its coxswain, and all such misfortune will be obviated, and peace and harmony will prevail.

It is to be hoped that the Intercollegiate Rowing Association, for the rapid increase in the membership of the association will cause the contestants to become so numerous that this danger of fouling will be very great, unless the above plan be adopted.

Princeton will be represented at the Intercollegiate Literary contest to be held at New York on the 7th of January, 1875, by W. D. Nicholas, of the class of '74.

PRINCETON COLLEGE, December 12, 1874.

EDITOR FOREST AND STREAM.

In my communication of the 10th instant I stated that Messrs. Alexander, '75, and W. B. Butler, Jr., '76, had been elected as delegates to the Convention of the Intercollegiate Rowing Association to be held in New York on the 7th of December. The latter of the two named above was elected on the ground that he was the only one who could leave college at that time, being exempt from examination on account of illness. But the fact that the meeting of the convention has been postponed until some time in January having become known, another meeting of the boat club was called to-day, in which the former election was declared null and a new one was instituted. Messrs. A. Alexander, '75, President of the Princeton College Rowing Association, and B. Nicoll, '77, Captain of the University Crew, were elected as delegates. Through the change has caused considerable ill feeling, it is generally considered to have been advisable and strictly necessary, as the president and captain of the club should be its natural representatives at the convention, in virtue of their respective offices.

PRINCETON COLLEGE, December 12, 1874.

EDITOR FOREST AND STREAM.

—Mr. H. L. Butler, of Paterson, the secretary of the committee appointed at the last meeting of the G. N. C. to arrange for this match on behalf of the States, has issued a circular to the secretaries of clubs, asking for information as to how many rinks each club will send, and requesting an answer not later than the 5th prox.

—A pigeon shooting match came off at St. Catharines on the first inst., between Mr. C. Bolton of Niagara, and Mr. G. Rogers of St. Catharines, 21 birds each, \$50 a side. Bolton killed 15 birds and Rogers 14, one of the birds shot by the former fell out of the bounds, also three of the latter. The friends of Mr. Rogers are willing to back him to shoot another match from \$50 to \$500 a side. —*Sportsman*.

—Mr. James Poulson, of Fendon, while out deer hunting at Four Mile Lake shot a doe with horns, or rather, with one horn; the other having been broken smart off. The one left was a single spike, seven or eight inches in length.

—While hunting at Buckhorn recently, Mr. Robert Walton, of Peterboro, fired a large duck gun, heavily charged, at a rising duck; the shock caused him to lose his balance and upset his canoe, the contents of which, in-

cluding three guns, a revolver and a complete camp equipage, went to the bottom, but Mr. Walton didn't. His companion in another canoe towed him ashore.

—The leading gentlemen of Halifax, Nova Scotia, have just organized the "Halifax Snow-Shoe Club," membership limited to fifty. The uniform adopted is the "tunique bleue," blue blanket, blanket coat and red sash. The following gentlemen were unanimously elected officers for the present year:—President, M. B. Almon, Vice-President, W. Macfarlane; Secretary and Treasurer, F. C. Sumiclarst; Committee, John Albro, C. Ogden, A. C. Edwards, G. A. Black.

—Deer hunting is now in course of vigorous prosecution throughout the Dominion, so the number shot is quite large.

—A buck weighing 350 pounds was shot last week in Pustish Township.

—The Curling Clubs are making active preparations for the Winter campaign. The greater number have elected their officers for the ensuing year.

—The Lobster Factories of Cape Breton have closed for the season.

—A disease has broken out among the poultry in portions of the Dominion.

—A new half-mile course is being built at the west end of Hamilton, and will be open by Christmas.

—Messrs. Bowie and Allen, of Montreal, two good pedestrians, who were to test each other's speed in a one mile walk for a cup valued at \$250, have given up the attempt owing to an accident that befell the former.

—The Markham Club held a pigeon match last week.

—Whitby is agitating for a skating rink.

—Ice fishing has commenced.

—Twenty geese were bugged by two young sportsmen at Bay du Vin last week.

—Two thousand barrels of oysters were raked at Lower Bay du Vin during the autumn just closed.

—The Junior Club practised at snow birds last week.

New Publications.

Publications sent to this office, treating upon subjects that come within the scope of the paper, will receive special attention. The receipt of all books delivered at our editorial rooms will be promptly acknowledged in the next issue. Publishers will confer a favor by promptly returning us any suggestions in this respect. Prices of books inserted when desired.

BOOKS RECEIVED.

HOMES AND HOW TO MAKE THEM. By E. C. Gardner: Jones, H. C. Ogden, & Co.

Every man should have a home, is made a specialty of this little companion of all who would gather in the family relation. It was not writ ten for bachelors, but for the socially inclined, and is just such a book as comes within our own department. The aim of this visitor is to give practical information in a series of pleasant suggestions to all who would have a home of their own, rather than a journeyer's trestle board talk. Reviewers through a course of some forty letters, the whole subject of housebuilding, family wants and counting the cost, is ably discussed in this valuable work before us.

HALF HOUR RECREATIONS. No. xiii, 2d Series. By John Tyndall. AND **GRANITE CATTLE FISH.** By W. Saville Kent.

These popular works are well known to every scientific student. We would that they passed before a larger class of general readers. These, as the titles are full of deep interest, the first part of this No., upon the transmission of sound, presents some facts heretofore unknown and gives information of a series of experiments not known before, except to some of our scientific sportsmen and backwoods-men. How often does the scientist have to inquire of some backwoodsman—your Bruce, or more cultured deer shooter, as to the most simple facts concerning the transmission of sound in the forest and on the sea shore, in fogs, or in clear weather? How much depends upon the simpler laws of nature! All should read these monthly half hour chats with our greatest minds.

MAGAZINES.

The *Galaxy* for January has been placed on our table, and a glance at its varied table of contents informs us that they are indeed mental *bonnet bachelors*. If we may be allowed to view this rather material expression in such a case. The standard of the articles is high, without rigidity. From its scientific miscellany we take the following note of the sagacity of the partridge:

"An interesting instance of the sagacity with which the partridge will pre-empt the winter is given in the *Galaxy*. The bird, in the west of the one hundredth meridian. While riding through pine woods, a brood of partridges, containing the mother and four or five young birds, were seen. The mother was coming down the fence, the father of the brood was almost lost on them. The young rose, flew a few yards, and dropping down, were in an instant hid in the underbrush. The mother, meanwhile, began some very peculiar tactics. Rising up, she fell back again to the ground as if perfectly helpless, and imitated the actions of a wounded bird so successfully that for a moment it was thought she had been really trodden upon. Several of the men, completely deceived, attempted to catch her, but she flattered away, keeping just out of reach of their hands, until they had been enticed ten or twelve yards off, when she rose and flew like the wind. Her tactics had successfully covered the retreat of her young."

—Any tourists who may travel in Florida this Winter would do a kindness to Prof. Baird, of the Smithsonian Institution, by turning over some of the shell heaps at Palatka. Perhaps they will find something interesting.

—No more useful and acceptable holiday present can be given than a year's subscription to *FOREST AND STREAM*. The recipient will appreciate it above anything else of like value.

—Caracas, the capital of Venezuela, is mentioned as an excellent Winter resort for those who desire to flee from Northern climes. The city is about 3,000 feet above the sea, and the atmosphere mild, dry and bracing. The days are warm, the nights cool and refreshing; there is good society, also, at Caracas.

—That man only is truly educated who has been so trained in his youth that his body is the ready servant of his will, and performs with ease and pleasure all the work that, as a mechanism, it is capable of doing.

—Some person has been counting the hens in France and gives the number at 40,000,000 and their value at \$30,000,000. The figures are surprisingly round.

The Horse and Course.

—Four trotting races came off last Wednesday afternoon at Fletwood Park, the first being a sweepstakes for \$300, mile heats, best three in five, to wagons. The contestants were John Murphy's bay gelding Charley Green, William Thoms's brown gelding Phil O'Neil and Peter Maunce's bay gelding Boy. Charley Green was the favorite over the field at odds. Seven heats were trotted before the race was decided, and with all the vicissitudes of the race Charley Green was the favorite. Best time, 2:40. The second event was a match between the bay gelding Harry and the sorrel mare Long Branch Maid, mile heats, best three in five in harness. Harry won the first and fourth heats; in the latter he distanced the mare. Best time, 3:01. The third race was between the bay gelding Genuine and the brown stallion Talonah. Genuine won in three straight heats. Best time, 3:03. The fourth event of the day was a trotting match under the saddle between John Rogers's bay mare Lady Annie and John Murphy's sorrel gelding Sorrel Jake. The betting before the start was in favor of Sorrel Jake; but after the first heat Lady Annie had the call and continued favorite to the end. She won the race in three straight heats. Both horses were finely ridden. Best time, 2:37.

—The horses Mystery and Paul competed at Deerfoot last Wednesday for a purse of \$500; three mile heats; the former won. Best time, 9:41. Allick and Christian met, the latter being speeded for a purse of \$200; mile heats, best three in five, in harness. The former was victorious in the fourth heat. Best time, 2:58.

—The Board of Appeals of the National Trotting Association, who have been in session in New York during the past week, have decided several important questions.

—An adjourned meeting of delegates to take into consideration and arrange the Spring and Fall Eastern trotting circuits was held at the Everett House, this city, on Tuesday evening. The following gentlemen were present:—Samuel T. Payson, Pascal C. Burke and A. S. Chase, of Brooklyn, representing the Prospect Park Fair Grounds Association; George Sturges, of Philadelphia, representing Point Breeze Park Association; Burdett Loomis, William H. Peck and Alexander Harrison, of Hartford, representing the Connecticut Stock Breeders' Association; L. I. Powers, H. M. Phillips and H. S. Hyde, of Springfield, representing the Hampden Park Association; F. E. Longstreet, of Providence, representing the Narragansett Park Association, and George W. Brigham, of Boston, representing George H. Bailey & Co., as proprietors of Mystic Park, and D. W. Becker, as proprietor of Beacon Park.

The meeting was organized by the selection of L. I. Powers of Springfield, as chairman, and D. W. Longstreet, of Providence, as secretary. The records of the last meeting being read, the assignment of days as informally agreed upon at the former meeting, was unanimously adopted.

Point Breeze Park Association, Philadelphia, commencing Tuesday, May 25.

Prospect Park Association, Brooklyn, commencing Tuesday, June 1.

Connecticut Stock Breeders' Association, Hartford, commencing Tuesday, June 8.

Narragansett Park Association, Providence, commencing Tuesday, June 15.

Mystic and Beacon Parks, of Boston, the two weeks commencing Tuesday, June 22, and Tuesday, June 29.

The Hampden Park Association, of Springfield, declined a place in the Spring circuit, for reasons which the President explained.

Upon motion of Mr. Longstreet, it was unanimously voted that the meetings at each park shall comprise four days trotting, instead of three days, as proposed at the former meeting.

The amount of premiums to be given by each was then changed from \$10,000 to \$12,000, and the following programme was unanimously adopted:—

FIRST DAY.—Class 2:45, \$1,000—\$500 to first, \$300 to second, and \$100 to third. Class 2:50, \$1,500—\$800 to first, \$450 to second and \$150 to third.

SECOND DAY.—Class 2:31, \$1,500—\$800 to first, \$450 to second and \$150 to third. Class 2:32, \$2,500—\$1,500 to first, \$750 to second and \$250 to third.

THIRD DAY.—Class 2:40, \$1,000—\$600 to first, \$300 to second, \$100 to third. Class 2:45, \$1,500—\$800 to first, \$450 to second and \$150 to third.

FOURTH DAY.—Class 2:34, \$1,500—\$800 to first, \$450 to second and \$150 to third. Class 2:39, \$1,500—\$800 to first, \$450 to second and \$150 to third.

Entries to close at each park on Tuesday, May 18, 1875, at nine o'clock, P. M., and to be addressed to such persons as shall be hereafter announced in the advertisement. The following gentlemen were appointed stewards, to whom was referred all matters in detail:—

George Sturges, of Philadelphia; Pascal C. Burke, of Brooklyn; Burdett Loomis, of Hartford; F. E. Longstreet, of Providence; George H. Bailey and D. W. Becker, of Boston.

FALL CIRCUIT.

After completing the arrangements for a spring circuit as above, the following dates were agreed upon for a fall circuit composed of the same associations, with the addition of the Hampden Park Association, viz:—

Hampden Park Association, Springfield, commencing Tuesday, August 17.

Connecticut Stock Breeders' Association, Hartford, commencing Tuesday, August 24.

Narragansett Park Association, Providence, commencing Tuesday, October 31.

Mystic and Beacon Parks, Boston, the two weeks commencing Tuesday, September 7 and September 14.

Prospect Park Fair Grounds Association, Brooklyn, commencing Tuesday, October 5.

Point Breeze Park Association, Philadelphia, commencing Tuesday, October 12.

The same stewards were appointed, with the addition of L. I. Powers, of Springfield. Without completing the programme for the Fall circuit the meeting adjourned at the call of the chairman.

TOUGH AND PLUCKY PONIES.—A specialty of renown in Russia are the little horses of the Muskh. They are hardy in the first instance, as everything is in Russia, and they are quick and strong. Two of these little horses, hardly enough to be called ponies, will draw a plough all day, with a pause at noon. They are now largely exported (under the name of Littlehauers) to Prussia, and in some places have altogether supplanted the oxen of their old privileges. I marked with them one of the estates of Barton Place, where they were fed upon chaff of any description, even of lupines, very successfully, conditioned with some potato refuse from the distillery. In harvest time, when the little mice had to work like brewers' horses, I administered to them some bran, and they grew fat even under so unfavorable circumstances. We soon had some twenty more sent down, and so we would spare them a little, and send them into the inclosure with the foals low and then. Two of them were able to draw the reaper all day long, and got two pecks of oats each as an encouragement. They, too, laid on flesh during the time. I mean to say that they are the most useful animals for easy agriculture existing, as we used to work them. —*Russian Journal.*

STEEPLECHASE.—They don't do these things in Portugal as they do in England and France, says *La Chasse Illustrée*. In a match between Señors Joseph Martins and Carlos Relvas there was a ditch, an Irish leap, and seven fences, which the cavaliers surmounted nobly. After clearing the last, they returned courteously side by side at a walk to the starting-post, amidst the enthusiastic plaudits of the spectators, who regarded them as rivals worthy of the days of ancient chivalry.

Miscellaneous

DR. RADWAY'S Sarsaparilian Resolvent.

THE GREAT BLOOD PURIFIER.

FOR THE CURE OF CHRONIC DISEASE,
SCROFULA, HEREDITARY OR CONTAGIOUS.

BE IT SEEN IN THE
Lungs or Stomach, Hair or Bones, Flesh or Nerves.

CORRUPTING THE SOLIDS AND VITIATING THE FLUIDS.

PRICE \$1 PER BOTTLE.

R. R. R.

RADWAY'S READY RELIEF. THE CHEAPEST AND BEST MEDICINE FOR FAMILY USE IN THE WORLD.

One Fifty Cent Bottle

Will cure more complaints and prevent the system against more sudden attacks of epidemics and contagious diseases than one hundred dollars expended for other medicines and medical attendance.

The moment RADWAY'S READY RELIEF is applied externally—or taken internally according to directions—pain, from whatever cause, ceases to exist.

In all cases where pain or discomfort is experienced, or if seized with Influenza, Diphtheria, Sore Throat, Bad Coughs, Hoarseness, Whooping Cough, Inflammation of the Bowels, Stomach, Lungs, Liver, Kidneys, or any other, Quinsy, Fever and Ague, or with Neuralgia, Headache, The Rheumatic, Toothache, Earache, or with Lumbago, Pain in the Back, or Rheumatism, Diarrhea, Cholera Morbus, or Dysentery, or Burns, Scalds, or Bruises, and with Strains, Cramps, or Spasms, the application of RADWAY'S READY RELIEF will cure you of the worst of these complaints in a few hours.

DR. RADWAY'S REGULATING PILLS.

Perfectly tasteless, elegantly coated for the cure of all disorders of the stomach, liver, bowels, kidneys, bladder, nervous diseases, headache, constipation, costiveness, indigestion, or general biliousness, without fever, inflammation of the bowels, piles, and all derangements of the internal viscera. Warranted to effect. Price 25 cents per box. Sold by Druggists.

Dr. RADWAY & Co., 32 Warren St., N. Y.

COL. JOHN BODINE.

WE present our readers with a portrait of Col. John Bodine, of Highland, Ulster County, N. Y., one of the members of the American Team, in the late International Rifle Match.

Col. Bodine is a true representative of the Amateur Rifleman of America. His great steadiness and unvarying high scores at Creedmoor, together with the nerve displayed by him in the International Match when firing the "Last Shot," has procured for him the sobriquet of "Old Reliable."

His experience in rifle shooting extends over thirty years, commencing with the heavy target of twenty to forty pounds, with telescope sights and light bullet, and range of one to two hundred yards, and ending with the superior breech loader of ninety grains of powder, and five hundred and fifty grains of lead, weight 10 pounds, and range accurate and effective at two-thirds of a mile, as used by him at Creedmoor.

His experiments for the past few years have been thoroughly practical and scientific, and his suggestions in regard to modifications and improvements in the construction of rifles or methods of preparing ammunition for the same, has had much to do with the present perfection of the Creedmoor target gun, which now equals anything in the world in simplicity of action, rapidity of fire, length of range and accuracy, a breech loader equal, if not superior to the famous muzzle loaders of Great Britain in accuracy and power. Col. Bodine is also an accomplished sportsman in the field, and his collection of modern sporting guns is perhaps the finest in the States.

He is forty-eight years of age, was born in the county in which he now resides, and is descended from the "Huguenot Patentes" who settled the valley of the Wallkill. He was brought up a farmer, and followed this business up to the year 1854. At this time leaving the farm, he engaged in the service of the New York and Erie Railroad for two years, since which he has resided on the Hudson River, at Newburgh, being engaged in the Bank of Newburgh as paying and receiving teller. His health failing from close confinement, he relinquished his position in the Bank for his present business, and for a number of years past, has been prominently identified with Steamboating and Bargeing on the Hudson River. He is now engaged in running a line of barges between Highland and New York, doing a Freightling and Commission business in Merchandise and Farmer's Produce.

Although a most active business man, yet he finds an occasional day for his favorite pastime of rifle shooting and field sports, proving that it is not necessary that men should be "professionals" to excel in manly sports. Previous to leaving the farm, he was connected with the State Militia, and held the rank of Colonel in the 92d Regt., 5th Brigade, N. Y.

Colonel Bodine is a type of the men who are to make Creedmoor as famous in America, as Wimbledon is in England.

New York, November 16th, 1874.

E. Remington & Sons:

GENTLEMEN—I take great pleasure in furnishing you with accompanying transcript from my "Score Book," of copy of target made in the Bennett Match October 2d, 1874, distance 500 yards, together with the memoranda for the same.

Yours truly,

JOHN BODINE.

Wind—6-7-8. Gentle to brisk. Atmosphere, damp. Distance, 500 yards. Time, 10 to 11 A. M. Elevation, 101, 102. Direction, S. E. Wind, light and variable. 2:31. Light, dark grey, no sunshine. Rifle, pistol grip, Remington bullet, 557 gr., hardened. Powder, No. 1.

Remarks—A very favorable morning for shooting, both on account of favorable light and of slight effect of wind from rear.

To Housekeepers.

All housekeepers and others who desire to make their houses or apartments wear the appearance of elegance should call on Mr. Bendall, 112 Fulton street, and select a handsome carpet for about one third its real worth. The stock embraces all sorts of carpets for parlors, sitting rooms, libraries, chambers, dining rooms, and stairs; also a large invoice of oil cloths.

"It is certainly the best of American Magazines,"—*Express*, Buffalo, N. Y.

"Its present popularity is the result of pure merit,"—*Commercial*, Pittsburgh, Pa.

There is not a dull page between its covers,"—*N. Y. Times*.

"A model periodical,"—*Philadelphia Press*.

Stereoscopic

Natural History

For Object Teaching in Schools,

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To these will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never however violating their natural instincts. We offer these series of pictures only, but as studies from nature. One of the great moving elements in our modern system of education is object teaching. The student learns to see, and the teacher transfers the animals and birds from their natural habitat to the rooms of the student, and the lives of our homes, where they cannot fail to have a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of native and foreign specimens, enables Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the originals.

1. Wild Cat, or Bay Lynx..... Lynx Lynx
2. Snowy Owl..... Scops Owl
3. Wild Pigeon..... Ectopistes Migratoria
4. Northern Parula..... Parula Parula
5. Woodcock..... Scolopax Rusticola
6. Red Necked Grebe..... Podiceps Podiceps
7. American Swan..... Cygnus Americanus
8. Red breasted Buzzard..... Bubo Virginianus
9. White Fronted Goose..... Anser Albifrons
10. Long Eared Owl..... Otus Americanus
11. Horned Grebe..... Podiceps Cornutus
12. Golden Eagle..... Aquila Chrysaetos
13. Prairie Wolf..... Canis Lupus
14. Spotted Sand Lark..... Tringoides Macularia
15. Marsh Harrier..... Circus Cyaneus
16. Great Horned Owl..... Bubo Virginianus
17. Great Lark, or Diver..... Columba Virginianus
18. American Duck (Bibbiana)..... Anas Americana
19. Old Wife, or Squaw Duck..... P. tringa
20. The Wild Turkey..... Meleagris Gallopavo
21. The Beaver..... Castor Fiber
22. Common American Snake..... Coluber Constrictor
23. The Bull Headed Salamander..... Salamander
24. The Canada Goose..... Anser Canadensis
25. The New York Ermine..... Marmota Americana
26. Red Breasted Sucker..... Catfish
27. Pinnated Grouse..... Tetrao Canadensis
28. The Sand Hill Crane..... Grus Americana
29. The American Hawk..... Bubo Virginianus
30. Red Tailed Buzzard..... Bubo Virginianus
31. The Blue Jay..... Corvus Americana
32. Virginia Partridge..... Ortyx Virginianus
33. Common American Gull..... Larus Canadensis
34. Grey Fox..... Urocyon Canadensis
35. Red Head..... Fuliola Canadensis
36. Ruffed Grouse..... Tetrao Canadensis
37. The Raccoon..... Procyon Canadensis
38. The Whistler..... Ptilinopus Canadensis
39. Brown or Bald Eagle..... Haliaetus Canadensis
40. Red Fox..... Urocyon Canadensis
41. Wood Duck..... Anas Spinosus
42. American Barn Owl..... Scops Canadensis
43. Spruce Grouse..... Tetrao Canadensis
44. Northern Lynx..... Lynx Canadensis
45. Black Duck..... Anas Canadensis
46. Belted Kingfisher..... Alcedo Canadensis
47. Little Scaup Owl..... Bubo Canadensis
48. American Opossum..... Didelphis Virginianus
49. American Crow..... Corvus Canadensis
50. Ptarmigan..... Tetrao Canadensis
51. Shoveler, or Spoonbill..... Anas Canadensis
52. American Woodcock..... Scolopax Canadensis

Prices: By the Dozen..... \$3.00
By the Set of 5 Dozen, in Elegant Case..... \$16.00
Dealers supplied at a liberal discount from these rates. Back numbers and parts of sets always on hand.

TESTIMONIALS.

CORRELL UNIVERSITY, ITHACA, March 13th, 1870.

I must congratulate you upon your great success in this new educational enterprise. If we can arrange our arrangements so as to make them advance instruction to the mind, it will be a step in advance in education.

WASHINGTON, D. C., March 13th, 1870.
I am much pleased with the success you have met with in giving to the stuffed specimens a very decided appearance of life.
I hope you may be able to continue the Series, and I have no doubt they will furnish interesting means of information and instruction in regard to the wild animals of North America.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.
I have examined carefully the Stereoscopic Studies of Natural History, and judging by the first ten numbers, should say that they will prove of very great value, both as object lessons for students, and as an interesting suite for the parlor stereoscope. The delineations, position, and color of the different groups and the general treatment are most perfect. I cordially recommend them to the public attention, and trust you will meet the encouragement which you have created.

BOWDITCH A. SAMUEL,
Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE, SALEM, Mass., March 19th, 1870.
I have shown your Stereoscopic Views of Objects in Nature to the Directors of the Academy and the editors of the American Naturalist, Dr. Peckard and Mr. Morse.

They concur with me in praising their truthfulness and the taste which you have displayed in surrounding the specimens with natural objects and scenery of characteristic fitness. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations for the use of schools and colleges, than anything we have yet seen.

ITHACA, March 19th, 1870.
I have received the Stereoscopic Views of Objects in Natural History, and have enjoyed them greatly. They have surprised all who have seen them by their wonderful fidelity, both as regards the objects in their surroundings; and I think they can not fail to be of great service to the study of Natural History, first by attracting students to it, and next by presenting them to it.

ANDREW D. WHITE,
These Stereoscopes are sold wholesale and retail by
FOREST AND STREAM PUBL. CO.,
17 Chatham St., City Hall Sq. P. O. box 2832.

American Wild Fowl Shooting.

BY JOSEPH W. LONG.

Describes the habits, habits, and methods of shooting wild fowl, with instructions concerning guns, blinds, boats and decoys; the training of water retrievers, &c.

The book is written in plain English, and in a most attractive style. A broad, and at the same time accurate view, is taken of duck shooting in all parts of the country. The habits and feeding grounds of the mallards, blue-winged teal, pin-tail, wood, gadwall, and, coveiler; red headed, buff-headed, and other kinds of ducks, geese, swans, &c., have been carefully and ingeniously studied and given to the reader.

In thirty chapters the author has furnished information for the young as well as for the practical sportsman.

"A book for sportsmen, by a sportsman."—Argus. "Tells where to find game in the morning, in the afternoon, and in the evening."—Sun. "Almost indispensable to the sportsman."—Arcadian.

Published by J. B. FORD & CO., 37 Park Place, N. Y. For sale by all bookellers and the leading gunsmiths. Price \$2. Sent by mail by the Publishers. Also for sale at the office of Forest and Stream.

extra for double fore sight, \$2.50.

Extract from the "Army and Navy Journal," Official Report, Dated Oct. 3, 1871.
"The match decides several disputed points, as clear as they can be decided; first, that there is no percep-
tible difference in accuracy between breech loaders and muzzle loaders, but that if anything the former are the
best, as they are certainly the quietest; second, that in our clear climate we may look for even better shooting
in the future; third, that the Remington rifle stands at the head of all others for accuracy, as it does in sim-
plicity of mechanism. The Remington rifle in the match secured thirteen points ahead of the same number of
muzzle loaders, and to every two points ahead of the same number of breech loaders in the same team."
In the International match, six muzzle loaders, three Remington, and three other breech loaders were
used. Lieut. Fulton, Col. Bodine, and L. L. Hepburn used the three Remingtons.
For full official report, see "Army and Navy Journal," Oct. 3d, 1871.

KINS, 7 Warren street, N. Y.

Miscellaneous.

This arm was submitted in competition with over
one hundred different systems, American and Euro-
pean, to the Board of United States Officers, appoi-
nted by Act of Congress, 6th June, 1872, for the pur-
pose of selecting the best arm for the service, and of
which Brig. Gen. A. H. Terry was President. It suc-
cessfully passed through all the tests.

The following is the report of the Board:
"Resolved, That the adoption of magazine guns for
the military service by all nations is only a question
of time; that whenever an arm shall be devised which
shall be as effective as a single breech-loader, as the
best of the existing breech-loading arms, and shall at
the same time possess a safe and easily manipulated
magazine, every consideration of public policy will re-
quire its adoption."

That the experiments before the
Board with the Ward-Burton Magazine System have
so impressed the Board with the merits of this gun,
that they consider it more nearly fulfilling the con-
ditions above specified than any other tried by them
or which they have any knowledge, and it does
recommend that a number of magazine muskets be
made on the plan for further trial in the field." (See
Ordinance Report.)

We are now receiving orders for these guns, and due
notice will be given in this paper when they are ready
for delivery.

The following is our scale of prices: Special Magazine
for large game, carrying from 3 to 8 cartridges,
70 to 85 grs. of powder, \$50 to 400 grs. of lead, is \$10
the initial cost, and upwards according to finish.
Special Long-Range Magazine Rifle for Creedmoor
shooting, 90 grs. of powder, 480 grs. of lead, carrying
3 to 8 cartridges, weighing 10 lbs. from \$30 and up-
ward. Magazine guns for general use, carrying 3 to
8 cartridges, 60 grs. powder, 350 grs. lead, from \$40
and upward. Single Breech-Loader, Creedmoor
shooting, for long range, 90 grs. powder, 480 grs. lead,
from \$40 and upward. Single Breech-Loader for
general use, 60 to 80 grs. powder, 350 grs. lead, from
\$30 and upward. The calibre of all our rifles,
unless otherwise ordered, will be .40-100. In
all communications should be addressed to

LUCAGO'S ISLE.

A THOUSAND little worlds are they,
The islands of the Southern sea;
With silver corals and many a bay,
Delightful are thy scenes to me.
Then chant ye trade wind breezes, chant,
Along Bahama's sunny shore,
Let Neptune, if he pleases, grant
Smooth seas to thee for evermore.

Thy fragrant trees and shimmering sands,
Gave joy to me in youth's bright days;
The ocean sighed along thy strands,
And sadly sung her mournful lays.
Then chant ye trade wind breezes, chant,
Along Lucago's sunny shore,
Let Neptune, if he pleases, grant
Smooth seas to thee for evermore.

I love these islands of the sea,
Where gently falls the pattering rain;
'Tis sweet to sing, dear land, of thee—
I long to view thy banks again.
Then chant ye pleasant breezes, chant,
Along Bahama's coral shore,
Let Neptune, if he pleases, grant
Smooth seas to thee for evermore.

St. John, N. B. J. NEWTON WILSON.

Sea Fishing in the Tropics.

BY PERSE.

"WHAT do you think of pompano?" asked a friend with whom the writer dined some time ago at a hotel in the neighborhood of Boston, famous for the excellence of its fish and game. "Some persons say it's delicious."

"I know the fish," I answered, "though not under that name. I have been not a little amazed at observing in the sudden popularity of this novelty how the mere rarity of a dish, outside of any peculiar merit, takes people. This pompano, as you call it, is well known in tropical waters, where it attains a pretty good size, up to twenty or twenty-five pounds weight. It is not held in much account for the table, though to a new comer, the taste, until from its richness it becomes tiresome, is not unpleasant. Its best merit is its strength and the resistance it makes when hooked, though in this respect, as well as in point of flavor, it is immeasurably inferior to the king fish, which, not unlike the salmon in appearance, still more resembles that most game of all fish in flavor, and the brilliant, well-sustained efforts it makes for escape, rushing about with great speed, pulling hard, and sometimes leaping fully four or five feet clear out of the water. In size it seldom exceeds, at least in the parts I am acquainted with, twelve or fifteen pounds, but is so full of strength and play, that unless the fisher has his hand protected by a good glove, he runs the pretty certain risk of having his fingers cut into the bone. The king fish, its congener, the Spanish mackerel, and the cavalli, the West Indian name for your pompano, are principally caught by hand-lines, trolling in a boat or dug-out moving at full speed—the bait being generally a long strip of glistening flesh from certain fish, the balahou being considered the best for this purpose.

Talking of cavalli, reminds me of my first experience of hand-line trolling in the tropics, and an incident, which, though trivial enough, remains in my memory as an instance how large and fierce fish are not unfrequently taken by means, which, in comparison with their strength, would be as weak as a thread in a man's hands. I have often put out, as night-lines for shark, a stout rope with a large strong hook and a float in the shape of a small keg or some such thing, and in the morning have found the rope snapped like a thread, and hook and barrel gone. While on the other hand, I remember having drawn in with the seine a sawfish, thirteen feet long, counting the saw, and in girth over four feet, which allowed itself to be hauled ashore without a motion, a courtesy that we in utmost alarm for our slender

net, were extremely obliged for. It was not until safely placed on *terra firma*, and it had received a thrust or two from a machete, that the bulky brute condescended to move its formidable weapon. But such is the exception.

The barracouta is *par excellence*, the most ungentlemanly of all fish to have the misfortune to find in the seine. He dashes wildly about in all directions, tearing everything before him in blind fury, until, at last setting himself at liberty, he leaves the melancholy marks and tokens of his unwhished-for presence in the tattered fragments of the net, damaged to an extent requiring a couple of days' hard work for repairs. The only plan with this high-way robber of the deep, when you have the mishap to catch the Tartar, is with all hands in the boats to hurry up the seine and fold it round and round, and thus hamper his lightning-like movements. This is, however, much more easily said than done, even with a small net, of, say from forty to fifty yards long. The difficulty of hauling the heavily weighted net from the boats, in addition to the hurry, scurry, rush and confusion of the occasion is seldom attended with success, the result being that in most cases, every effort to the contrary notwithstanding, Signor Barracouta effects his own escape, and the destruction of the seine.

The grouper, too, constitutes a most disturbing element, if by chance a stray one gets in, though as these frequent the deep water round rocky headlands, where netting is impracticable, such seldom occurs. A medium-sized, moderately well behaved sea citizen of this class is, however, a very welcome item in the haul. The grouper, by the way, holds by universal consent first rank among West Indian fish for the table, and—stewed in chafin—is, I may tell you, a thing to remember. But, save us from an ungovernable scoundrel of from forty to sixty pounds weight in a seine. He is worse than a bull in a china shop, or a pig at a dance. He must have everything his own way. What a commotion, to be sure, he does cause, and how confoundedly glad we used to be to get rid of the unmanageable, unmanly brute, and be left even a few meshes to patch together. But I am getting away from my cavalli.

Last time I was down the West Indies I spent some time in Trinidad. Shortly after my arrival I received an invitation from my good friends at Sweetbrier, that gem of a tropical country house. They were off to the Fire Islands for a month or so, and would be glad, they said, if, when business permitted, I could spend a few days there with them.

These Fire Islands, a favorite bathing resort of the people of Port of Spain, are a picturesque cluster of rocky islets, distant about six miles from the town in the direction of the Northern Bocas, or mouths of the Gulf of Paria, and lying three miles out from the shore where the land bends inward into a broad bay, the mountains with their glorious luxuriance of tropical foliage reaching down almost to the water's edge, and to the long sandy beach lined with prickly roseaux and lofty coco palms. Behind the further arm of the bay which, with the elevated Island of Carreras at its extremity, backs the Fire Islands, lies the deep and exquisitely beautiful harbor of Chaguaramas. Here it was where the Spaniards sank their fleet at Abercrombie's approach. And from these ancient sunken war vessels Yankee enterprise was able not many years since to extract sufficient treasures and stores to pay all expenses and give sufficient profit. Beyond Carreras and Chaguaramas, the background of wooded mountains with numerous spurs ridging to the sea, circle round to meet the first Boca and the Islands of Moros, Haecros and Chaguachacare, that stretch like broken links of a connecting chain across to the Spanish Main.

The phrase in Trinidad is not, as with us, to "take a bathing lodge," but the more sounding term, to "take an island." On each of these rocks, for in reality they are not much more, is perched a house, or rather a collection of small one-storied buildings. Every nook and cranny on the isle is, moreover, utilized in the shape of terraces and verandas, the whole making each spot quite a picture of snug prettiness, standing out independently in the sunlit

sea. When three or four families, congenial and pleasant, a conjunction by no means difficult or unfrequent in Trinidad, are at the islands together, then may jolly times be expected—perfect *abandon*, mirth, flirtation, delightful bathing in the almost tepid waters, break-of-day excursions to seine the quiet coves all around, swarming with infinite varieties of fish, or shooting in a canoe at top-most speed along the open waters, trolling for those that love the deep.

I was not long in seizing an opportunity to join the G.'s at Mercer's, as their temporary habitat was called. C. was also coming, and in his gig, rowed by four sturdy negroes, we put off one Saturday afternoon for the islands. The breeze blowing bright and strong against us, the inconvenient awning was willingly dispensed with, the baits put on, and the lines let out. No fish, however, came to our allurements. Schools of porpoises were tumbling about here and there, but that could not have been the cause, for now and then a silvery cloud of skip-jacks would flash over the dancing waves, or a man-of-war bird swoop down with unerring aim—showing that fish were there in plenty. At length the tide, sweeping strongly in shore, compelled our boatmen to keep farther out, and in this change of course the luck was better. Beyond the occasional necessary jerk to the line, my arm had been for some time doing its duty in a listless and perfunctory manner, when, whew! I got a pull that nearly twisted me right round, and I was engaged with a stunner. "Cavalli," said Lico, our bow oar. No fish was to be seen, but the style of play told the sort. The line was out far, the only business now was to haul in. Down went the fish, pulling like a demon. But no go for him against a strong line and a ten-foot leader of best copper wire. In a few minutes an eighteen pound cavalli was flapping his green and gold streaked sides at the bottom of the boat. Some more cavalli—with a couple of Spanish mackerel—when C.'s capture of a dashing king fish made me eager for a trial with one myself, especially as the islands were not far, and the morrow being Sunday and an idle day. My wish was gratified. I hooked a splendid fellow. The work was every whit as exciting as tacking with a rattler at a salmon fresh from the sea. This was a totally different mode of proceeding from the unceremonious treatment of the plebeian cavalli. No, sir. Bear too hard on the king fish, and his majesty comes to the surface, swift as a bolt from a crossbow, and dashes straight up, quivering, several feet out of the water. By George! 'tis a sight to see him then, just like the instantaneous flash of a silver spear-head in the sunshine. But this is the most dangerous time, too. It is no use pulling hard, if you want your fish. You must regularly play him, the boat giving way, when required, as in lake salmon fishing. If you try rough work with the king fish, you lose him; in his quick rustling resistance he will actually tear himself out the hook. He must be taken in exhausted after a careful, patient play—no easy thing, either, with such a thorough game fish, when you have no rod and do the work with the hands only. I got this one, and I must say that I would have been terribly disappointed if I had lost him.

We reached Mercer's just as the sun was sinking into the sea. In a moment after, and for a few moments only, the whole Western sky was resplendent in the multitude of magnificent tints of the gorgeous tropic sunset. It was a pretty sight—the picturesque rocky islet, with its quaint caves and verandas amid the broad-leaved wild almond trees, in bold relief against the burnished waters and the departing splendor of the day—and no less pleasant, too, was the throng of friends watching our coming at the little jetty on the leeward side, and foremost, A. R. G., himself, ready with that heartiest of all greetings, a West India planter's hospitable welcome to his home.

They take you in awfully, do Trinidadians, when they ask you down to the islands. You have to rough it, you know. I easily got used to it; so would you, if you were one of the twenty or more, men, women and children, that, immediately after our arrival, sat down to dinner—turtle soup, delicious fresh-caught red fish, roast mutton and guava jelly, hams, capons, plantains, cush-cush, cassava

and Waterbury's, and after a glorious dinner hour on the bank of Prince's brook, quaffing its crystal waters between sandwiches, and taking a happy snooze under the shade of some favorite old tree, have again strapped on my creel and slowly wended my way along the river, now and then picking out a "beauty," until heartily satisfied with the day's sport, have reached Diminick's bridge, meeting the team that carried us to an early supper at the Fisherman's Home.

To many of those who in past years have visited this favorite old spot, certain names will fall upon the heart like the memory of delicious music from the lips of loved ones in days langsyne. I will only mention a few of them: Seymour's and Corey's Bridge, The Meadows, North Branch, with its slippery boulders, the Brick Yard, Petrie's and Stoney Brook. Many of those who went there at an early day have "died," still, every year finds not a few of old time sportsmen, with rod and fly, tramping over old familiar scenes, not with the fire and ambition of youth, but, nevertheless, with hearts as young and delights as keen as when no spectacles were needed to tie a broken leader and no threads of grey adorned their heads. Not alone do these genial old sportsmen visit these scenes, but every year finds new names and new faces amongst the old. It is true the "speckled beauties" are not taken by the basket full as in days of yore, but enough of them still remain, and doubtless ever will, to induce the patient and careful fishermen to visit the place for years to come. My companion on one occasion made the remark, in which I fully agree with him, that "it was worth a journey to Redfield to look over the beautiful scenes and breathe in the invigorating air if we don't take a fish."

The Fisherman's Home, with its cheerful dining room, where the photograph of the six-pound trout so long adorned the walls; the lower stoop, with its wicker seats where so many "traps" have been displayed preparatory to the day's sport; and the upper portico, over whose railings "wet pants" have been so oft at evening hung, have fallen a prey to the all-devouring flames, but many landmarks still stand ready to make the visitor feel at home.

How wildly and how far have I digressed from the thought that induced the penning of this communication! Begging your indulgence, I will return.

One beautiful June morning, some four years since, a party consisting of W. C. B., J. H. G. and J. L. G. made one of their visits to the loved old grounds and were soon at home in the lazarous quarters that they, for many years had occupied on similar occasions. The morning being foggy, we did not go out until after dinner, while the latter two decided to visit the meadows of North Branch. A buckboard wagon, with lively team attached, soon carried us safely to the point of attack just below the old dam and above the alders. Some choice selections soon graced our creels, and in the endy that whirled under the roots of overhanging trees just above the bridge, a careful snare was made and rewarded by a gleam of gold, and fully two pounds were instantly struck and spinning out the contents of our reel. Two minutes sufficed to entangle stretcher, droppers, and leader so inextricably in the roots that to land the prize was impossible. A sigh of disappointment, a few minutes of work seated on the bank, and philosophy prevailed, and we entered the meadows below the bridge, where hay-making was in progress. Almost immediately we saw every square-built individual of the genus homo, dropped his scythe and came towards us. We had not studied German then, and what he said was, of course, all "Greek to us." In order, however, to make himself understood, he drew from his pocket—not a revolver—a pouch, from which he took a five dollar note, referring to it in words, repeated pointings and rapid gesticulation, by last the thought forced itself upon our unwilling minds that we were required to pay five dollars for fishing through his meadows, and upon our stoutly, and with some warmth, refusing such an outrageous demand, he as loudly persisted in exclaiming, "Nine! Nine!" At last we told him flatly that he might go to any place he chose, but that he would never get nine dollars out of us.

Matters were approaching a crisis rapidly when one of his co-laborers came up and explained that he wanted change for a five dollar bill, which we very gladly furnished him and proceeded on our way rejoicing.

Auburn, Nov. 26, 1874.

TRIALS OF A SALMON FISHER.

For Forest and Stream.

MAINE and the Adirondacks have suffered for several Springs from my perseverance as an angler, but this year, induced by an advertisement in your journal and perusal of a recent issue of *Forest and Stream*, the Canadian salmon rivers, and perhaps it would be instructive or amusing to some of your readers to hear my experience.

Leaving one of our pleasantest watering places early in July, I gathered together my numerous fixings in New York preparatory to starting. In looking over the map for the easiest way to Quebec, I unfortunately ran across an advertisement of a French agent, who offered to take me to Quebec. Their time-table looks, at least, like the real thing. If the trip could be made in twenty-four hours, whereas two night changes were required, involving no little inconvenience. After leaving Quebec, three days' sail on a steamer, with a twenty-five miles drive brought us to our destination. "Now for the exhilarating sport of salmon fishing," was my first thought. My first pool was devoid of salmon, with a few trout, and I had to do me as I liked; my bank was adorned with a catamaran, or log-raft, showing the inventive genius of our near neighbors; in the third, the best pool on the river, we found three genial Bluesoes amusing themselves with the spear!

Strange infatuation of these simple countrymen! They knew I had the lease of the river and would arrive that day. They had just been on the lookout down the river expecting us to come up with the salmon. They had experienced the pleasure of being poled up a shallow river, before we had shown our preference by being driven in; so we had the pleasure of capturing three poachers, (a new game for me.) It is needless to say that we discharged our river guardian for wilful neglect of duty.

My friend, who is a first-class salmon fisher, said that after all these depredations, we must give the salmon pools a rest by not fishing for at least a week or so. As far as living was concerned, we had all the salmon we could use, so we had confiscated the fish taken by the poachers. My experience in mosquitoes has been very extended. I have had blood extracted on Jersey Flats, Louisiana Bayous, California Ranches, Cuban Plantations, and Jamaica Plain,

but nowhere have I seen the same audacity or persistency as in the insect that inhabits the wilds of New Brunswick. Its song is the most unmusical I ever heard. Bats of penny-royal or creosote were only a slight preventive.

At last after three tedious days we were blessed with a slight rain, which raised the river some inches. Our hearts were cheered the next evening by seeing salmon in all the pools. Toward evening my friend, who wanted to give me all the snow possible, said, "Pitch in!" I had passed the two previous days in practicing with my salmon rod, and had become so expert that I could throw out fifty feet without getting it snarled more than every third time. Putting on my English wading pants, (I had all the late improvements,) selecting some of Forest of Tulse best flies, I waded in up to my waist and began thrashing the water, but being unable to get near the center of the pool, with doubts of being able to cast that far, I waded in a little deeper. I wish I hadn't! I trod on a slippery stone and lost my balance. The air in the pants took my feet up and I passed an agreeable five minutes learning the steps of a new dance, sometimes with one foot on the bottom, oftener with both higher than my head. Oh, Jimminy! wasn't the water cold! I did not mind the cold water so much as seeing my friend and the guides on the bank laughing at me. Some one sang out "Dive for them that is the surest way to catch salmon." My good nature gave way under such circumstances, and I am afraid I used some hard words in reference to salmon fishing, &c., &c. After numerous hot potions my genial spirits were revived, and I enjoyed my *faute pas* as well as any one.

At last the long wished for day arrived. One afternoon, while fishing one of our best pools, I was rewarded. The day was perfect, with breeze enough to keep a ripple on the water, without disturbing the enjoyment of the flies (black). I had been casting for an hour or so, more or less, (by the way I have calculated it takes 733 casts to every rise, at least it did me.) So, feeling the necessity of the enlivening effects of tobacco to enable me to continue, I made a long cast, letting my fly sink well, was filling my pipe. As I took a puff, I saw a flash of light, and I was frightened by what I thought was a new boiling spring! The next moment I struck something that appeared to be solid, when up into the air went a beautiful salmon. It appeared to my unaccustomed gaze like a good sized whale. For the next five minutes the fish equally divided his time between the water and air, with rather a partiality to the latter. The strain of his body was better on the bank, so, gathering himself up he started on a rush, with the impetus of a 100 pound Parrot shot, taking out a hundred yards of line. I checked him just as he was about entering the rapids. Now began the labor, (and labor it is.) After the first five minutes of excitement, the weight of the rod increases at the rate of a pound a minute. At the end of twenty minutes I would gladly have said, "Give us a rest, old fellow!" About the time I was about to give up, I was the same thing. After careful manipulation, it was brought within reach of the gaff, but clumsy handling of it gave my tired arms five minutes more work. At last my prize was gently reposing on the mossy bank of the river. What satisfaction, after a severe tussle, to see your opponent finished up! It was a magnificent fish, weighing not quite twenty-one pounds. I never caught large fish, but never did I feel the same satisfaction as when I landed this one (my first salmon). I was fully repaid, even for my trip on the Great Passumpsic through route to Quebec. Our river was not a success. With low stage of the water and partiality of our neighbors to fish diet, we were only rewarded after persistent fishing, with twenty-two salmon, of which I had the pleasure of taking nine in out of the wet.

Could we have done any better, this season, in offering a reward for the successful extermination of the insect pest? My friend says it would not do at all, as we come to the woods to get hardened, and nothing hardens one so much as to be bitten by mosquitoes, black flies, fleas, gnats, no-see-ums, &c., in rotation. Hoping to have a better two weeks' fishing next Summer, I am, Mr. Editor, &c.

For Forest and Stream.

HOW WE SAVED THE BRIDGE.

IT was in March 1874—that a party consisting of Lawyer L. Col. H., Ben R., his son and the undersigned, dismounted from the stage and entered the saloon of the Vincennes. Snipe was the principal sport that we had come for, though of course we would not refuse a stray duck which might come in range.

It was about midnight, if I remember rightly, when we got out of the cars. We hired a conveyance for us and our traps, to take us to the hotel. When we arrived at the mansion we found it enveloped in complete darkness. Not a light was to be seen in, or any where about the building. Repeated knocks on the door, given lustily by our delirious, soon brought the night-capped head of the barkeeper to our thankful vision.

"Charlie, cum right down heah," said our Jehu, "heahs some gemmen bin waitin' morn an hour for you."

"Dat is all right," replied a voice in the upper regions; "vel, we will be down."

We soon obtained an entrance, but were disappointed to hear that there was not a vacant bed in the house. We had telegraphed from Cincinnati when we started, but the telegram had not been received. We passed the night with billiard playing and arose (?) ready for the work we had before us. We drove out to the fields in which we were to shoot, loaded up and started. The first rise of the day was to me, a fine brace of snipe, which I bagged! Bang! but not begged. "Better luck next time," awaited me, for I killed my pair in fine style. But I must not to the end of my story. We had fine sport all day and were returning home when we came near a long trestle work on the O. and M. railroad. We were obliged to wait a short time until a train went thundering by. We noticed that the engine gave out an unusual amount of smoke, and as it passed I saw it crossing the bridge Col. H. saw a small column of smoke rising from the center of the bridge. He jumped out of the wagon and ran to the spot.

"The bridge is on fire!" he shouted to us. Jumping out of the wagon we ran to the place where I stood trying to stamp out the fire with his feet. The fire was almost in the center of the bridge, on one of the large beams which ran transversely in the bridge. The beam was so situated that the oil in the engines passing over would fall on it. In time this accumulation was very great, and a spark alighting in it, a blaze was the immediate result. When we first saw it the hand could easily cover the space occupied, but it was growing with dangerous rapidity.

What to do no one seemed to know. There were three drinking cups in the party, but it was so far to the end of the bridge, then down to the water, that it would take too much time to get so little water. At the end of the bridge was a small house in which buckets and tubs were kept in case of fire, but the door was locked and the keeper, as we afterwards found out, was lost in the pleasant occupation of shooting snipe. But something must be done, and that something quickly. We arose from the house, and I said, "Let's kick in the old door of the house!" said the Colonel; "if we don't get a bucket we can do nothing."

The door proved to be less strong than we had imagined, and a few sturdy kicks burst it open. As we entered, the first thing visible was a row of buckets filled with water. Seizing one each, we were soon at the conflagration. A dashing of the contents of our buckets on the blaze soon extinguished it. We arose from the house, and I was confronted by the bridge keeper, gun and handkerchief equipped in the usual manner. On learning the cause of the trouble, he dropped his gun, and rushing frantically to his house brought out a couple of buckets and dashed their contents on the now extinguished blaze.

"The company pays me to watch and put out fires and I'm a-going to do it." ALGONA.

DISEASE IN TOWN AND COUNTRY.

IT has been the question of the times whether sanitary regulations in our cities, and even in the country, have been such as the magnitude of the subject demands. We are now passing through a period in which inquiry is made by parties whose business it is to know how men live, and why they are so prone to mortality in places where the common observation would find only the elements of health. We believe much good to be the result of the proper remedies for the various ills that flesh is heir to, and in the prompt use of the resources of the mineral and vegetable kingdom. We would not mean to put out the fire of the chemist, or overturn the laboratory of the skilled pharmacist. We would give the disciple of Galen and the gatherer of roots, herbs, and plants, their proper place in the world—would say to the allopath and the homoeopath, Go work in the vineyard of the world. Nor would we end our suggestions here. We believe a still greater good will be had from the examinations into the physical and natural causes which underlie the disease, the prominent feature of many of the diseases which men suffer, both in city and country, and which to the faculty, learned and unlearned, are sealed from their knowledge.

As an illustration of our true position in this matter, we restate that physicians are often baffled in their efforts to produce a cure simply from the lack of a true knowledge of the inducing or predisposing cause of the malady of their patient.

A young, strong man was stricken down with typhoid fever. Why should he have it? But he had it, and the learned doctor was greatly puzzled to know why he should take sick in the midst of such healthful surroundings. His case progressed, and was considered under the head of doubtful ones. The old gray-headed physician was indeed much puzzled. He thought much, but it seemed of no avail. His patient lay in great pain, and low, notwithstanding he lived among the green trees and clear, bracing atmosphere. "Something new must be tried," said the physician. You are right for this time, venerable disciple of old Esculapius. Something must be done, and that very specially, or you will lose that young man.

After a few moments' thought, our old friend came to the conclusion that it would be prudent for him, before he proceeded to extreme measures in this case, to call in the services of a young doctor recently settled in the village. It was with much self-denial that he finally consented to pen a note to the other doctor to meet him in professional consultation. (Some M. D.'s are jealous and narrow minded; and why should they be?) He accordingly came, and after a short time physical examination, and a few signs were welcome. In his opening question to him, and his answers for sending for him, he took occasion to remark: "This case, I admit, has baffled my own expectations. At first it exhibited none of the later alarming symptoms. I had no fears that it would not yield in time to the usual remedies. This is a healthy location, and why should it be so obstinate a case as it is?"

"I have heard," said the young M. D., "that when all the outer surroundings are healthful, we must look for a nearer or secret cause, for secret cause there must be."

"No," remarked the old M. D., "I do not read so much or so many new books as you do. I have not the time; my patients demand all my time."

They commenced a thorough search into the probable cause of the illness that you might find. After a careful search in and about the house, they proceeded to the cellar, where the secret enemy of health lay self-evident in some ten bushels of rotten potatoes. They adjourned to the sitting room, when the old doctor said—

"Well, what do you think of my treatment of the young man? (no allusion to the rotten potatoes.) Would you add anything to my formula?"

"I have well managed the case," said the young doctor. "Only one addition need be made; and continue to carefully nurse the patient and his cure will be sure."

"Thank you, Dr. Jones, thank you; please write your additional prescription, and I will have it administered."

The young doctor wrote upon a slip of paper as follows:—

"With the least possible delay have true pure rotten potatoes, in the quantity of one bushel, and give him a pound of chloride of lime over the bottom of the cellar."

It was done, and the young man speedily recovered.

This brings us to the consideration of a great agricultural question, which has occupied much of our personal attention and observation as a sanitary power for the prevention of many diseases for some thirty years. We believe that for many years past, in scarcely any of our great cities, has the proper consideration been given by the constituted authorities to the simple and not costly appliances for the comfort and health of the masses of the citizens. The importance of this subject, added to the expressed request for our views upon the sanitary bearing of the question, and the use of trees in our cities, has induced us to place our thoughts and observations before the readers of *FOREST AND STREAM*. In our next paper we shall give the results of our observations, illustrated by cases of well known and authenticated facts. We shall show that with the horticulturist, the agriculturist, the florist, and landscape gardener, rest a responsibility none the less important or inexcusable for not being known. OLLIPHANT QUINN.

Fish Culture.

PROF. BAIRD'S REPORT.

(Continued.)

PROPAGATION OF MAINE SALMON IN 1872.

More time was allowed for satisfactory arrangements in regard to the propagation of salmon than of shad, because of the much later period in the year when they spawn; this in the common salmon (*S. salar*) not taking place until the end of October or the beginning of November, and varying with the locality.

In compliance with the suggestion of the meeting at Boston, I had an interview with Mr. Charles G. Atkins, at Bangor, and ascertained the probable degree of expansion that he could give to his operations at Bucksport, on the Penobscot River, with additional funds.

The method devised by him consists in obtaining mature fish as they come up the river and are taken by the fishermen, placing them in a pen situated in a large pond of about 150 acres, and keeping them there until the season of reproduction, and then securing the spawn, and after impregnating it, hatching it in a suitable hatching house.

The only method of obtaining salmon in sufficient numbers was to offer the full market price to the fishermen for all they may deliver alive to the hatching establishment. About six hundred fish were obtained during the Summer. But little mortality occurred among these fish, and on the 28th of October, Mr. Atkins and his assistants commenced taking the spawn, securing about 1,500,000 eggs. These were brought forward in the hatching house at Bucksport until February. During that month and March they were distributed to other hatching houses in different parts of the country in order there to be fully developed.

The experiment had for its purpose the securing of a hatching establishment was initiated in New York on the 17th of April, 1872, by an agreement of several parties to contribute funds to a given amount, the division of the spawn to be made in the same ratio. The subscriptions were as follows:—

E. M. Stillwell and H. O. Stanley, Jr., for the State of Maine..... \$300
J. A. Blackett, for the State of Massachusetts..... 100
J. H. Baird, for the State of Rhode Island..... 100
W. M. Hudson, for the State of Connecticut..... 100
W. C. C. for the State of Vermont..... 100

These gentlemen kindly consented to be supplied, from the funds at my disposal, the means to greatly enlarge the scale of operations, and received a pro rata share of the eggs. The full history of the entire enterprise connected with the taking of the eggs in 1872, and their distribution in 1873, will be found in Mr. Atkins' report, beginning page 226 of the present volume.*

PROPAGATION OF THE RHINE SALMON IN 1872.

The possible contingency of failure in Mr. Atkins' experiment induced me to look to other sources for an additional supply of eggs; but I was unable to make any arrangement in America to that purpose. In consequence of the scarcity of fish, it was impossible to organize upon other salmon rivers of Maine the experiment that Mr. Atkins had begun on the Penobscot; and the regulations of the Dominion authorities in regard to gravid salmon and their eggs are such as to preclude the idea of looking across the borders for assistance.

The Canadian government has, it is true, a hatching establishment at Newcastle, on the north side of Lake Ontario, near Toronto, and has occasionally allowed a surplus, left after it has supplied its own wants, to be sold to parties in the United States. The charge, however, being \$40 a thousand (in gold), was considered excessive, and the only alternative left was to look to Europe, where the streams emptying into the North Atlantic abound in precisely the same species. Under such circumstances, and after much consideration, I decided to obtain what I wanted from the Rhine, the fish of that river being famous for their excellence and size. I accordingly applied to the secretary of *Deutsche Fischerei Verein* at Berlin, inquiring whether any eggs could be procured from the government fish breeding establishment at Hiltigen. To my gratification, I was informed that, on the representation of the *Verein* to the German government, it had decided that 250,000 eggs should be presented to the United States at the proper time, all ready and packed for transmission, provided I would agree to have them transported to a point of shipment under the care of an experienced operator. To this, of course, I gladly agreed, and named Mr. Rudolph Hessel, of Offenbach, an eminent fish culturist and highly esteemed correspondent, from whom I had already derived much valuable information, to take charge of that duty. Articles by this gentleman upon the salmon of the Danube River (*Salmo hutchi*), the breeding of the cyprinoid fishes, &c., will be found in the appendix to his report.

The following letters on this subject were received from the authorities in Germany:—

[TRANSLATION.]
BUREAU OF THE DEUTSCHE FISCHEREI-VEREIN,
BERLIN, JUNE 11, 1872.

In consequence of your letter of the 10th of May, addressed to Prof. Jentz, of this city, in relation to the securing of salmon eggs for your Government, we apply to the superintendent of the fish culture establishment at Hiltigen, and have received his reply, of which we inclose a copy.

Placing you thus in possession of the facts in the case, we beg that you will favor us as speedily as possible with a reply as to whether your Government is ready to assume the cost of the transportation of 250,000 salmon eggs.

DR. SPENCER F. BAIRD, Washington.

[TRANSLATION.]

HILTIGEN, June 7, 1872.

On receipt of your letter I placed myself immediately in communication with the circle president in reference to the conditions under which the establishment could supply salmon eggs to the American Government. On my proposition, it was agreed that, in any event, the eggs should be furnished free of expense, although it is not possible to supply "several millions." As the salmon eggs are hatched in the first place, for Germany alone, the establishment could not justify itself to supply more than 250,000 at most, and this only on the condition that the necessary care be exercised in their transportation. It is an indispensable condition that the eggs shall be taken from here by a special messenger to Havre or Cherbourg, so that they may be secured against heating during the journey. Arrangements must also be made for their preservation on the steamer in a uniformly cool place, and for their reception in New York by an expert in such matters. The double packing of a quarter of a million of salmon eggs will require at least thirty boxes,

each weighing about fifteen pounds; so that the whole will weigh nearly five hundred pounds, and occupy a considerable space.

HERR MANARD.

BLACK, Director.

[TRANSLATION.]

IMPERIAL FISH CULTURE INSTITUTION,
HUNTINGEN, NEAR ST. LOUIS, ALSACE, August 13, 1872.

HONORABLE SIR—I have been asked by the Bureau of the German Fishery Association to write directly to you in reference to the sale of salmon eggs to be sent to America. The first eggs are nearly obtained by the middle of November, but in such small number that it would be impossible to make one quarter million of eggs for one million. This is one of the most difficult points for large transports. The institution receives from 20,000 to 30,000 eggs a day, and taking into account the considerable loss of the eggs in the incubating, I require from twelve to fifteen days to collect a quarter of a million. With so great a difference in time of collecting, the eggs are, of course, not ready for transportation at the same time. It is true, at the very end of the season we obtain occasionally 80,000 to 100,000 eggs a day, and we have to arrange that such days be reserved for the intended large collection. These days usually occur a quarter of a million of eggs, and the eggs to be sent to America could not have our place before the middle of January, since about five weeks are necessary for the incubating hatching. Besides, the day of sailing of the steamer has to be taken into consideration, and I believe there are only two trips per month during the winter season. These are difficulties to meet and to overcome which we have only the power to still hope for success. I consider it an affair of honor, and mention the many difficulties only to explain a possible mishap.

The sending of one-quarter million of eggs will require twenty-five single parcels, each consisting of two double boxes. Each parcel weighs about one hundred and fifty to two hundred pounds, or 2½ hundred weight. Believing it to be absolutely necessary that an expert should accompany the transport to Hamburg or Bremen, and direct the suitable packing there, the expenses of the steamer have to be taken into account. I consider the cost of the parcels per hundred weight.

Since our institution furnishes the eggs gratis, and no funds are available to meet for defraying the expenses, I respectably have by the end of the year a sum of money of the above amount placed at my disposal, so that no delay may be caused by its want.

Accurate accounts will be rendered in time.

Prof. S. F. BAIRD.

BLACK, Director.

As a still larger number of eggs was considered desirable, at the suggestion of Mr. Hessel, I applied to Oberbürgermeister Schuster of Freiburg, and ordered from him for a million eggs, which he agreed to furnish at the very reasonable price of two thalers per thousand (their actual cost amounted to \$1.67 currency per 1,000), guaranteeing them to be taken from large healthy fish. These were also placed in charge of Mr. Hessel for shipment, who finally agreed to accompany the two sets of eggs to New York for the greater certainty of their safe collection.

As is well known, the best period for transporting salmon eggs is when they are about half hatched, and when the eyes are visible through the envelope. They are then put up in damp moss in shallow boxes, and enclosed in other dampened receptacles. In this condition they may be kept out of water for a long time. Indeed, the eggs are not infrequently hatched out in the moss itself, it kept long enough, without being placed in water at all. Mr. Norris gives an instance of this kind in regard to some eggs which had been shipped from the Wilmut establishment at Ontario, a portion of them, that had been thrown aside with the damp moss having subsequently hatched, and this has since been confirmed by the experience of the commission.

Owing to the fact that the water at the Hiltigen establishment was warmer than that at Freiburg, and from the excitement by the German government were developed first, those at Freiburg requiring some further time, so that it involved considerable effort to combine the two sets so as to prepare them for shipment to the United States at the same time.

Mr. Hessel, in accordance with the agreement, took charge of the eggs of Hiltigen, as also those at Freiburg, and brought them to Bremen, where they were immediately shipped on board one of the steamers of the North German Lloyd's. Unfortunately several circumstances concurred to render it doubtful to Mr. Hessel whether these eggs would come safely through. In the first place, the weather was exceptionally warm throughout Germany, no cold weather being experienced up to the middle of January, so that the eggs were developed in their shells much too fast for their welfare. It was impossible to retard these by the application of ice, as the stock in Bremen was very low, and supplies were only to be had at an enormous expense.

Again, the steamer upon which the eggs were first placed broke down, and was obliged to return to port. Mr. Hessel's packages of eggs were exposed to the continuous heat for another week. The consequences were that on his arrival in New York, to his great distress he found that the eggs in large part had been prematurely hatched, and the gases resulting from their putrefaction had destroyed many more of the eggs.

Application had been previously made to the Secretary of the Treasury to have the packages containing the salmon eggs of the Hiltigen and Freiburg facilities was covered by the inspector of customs and other authorities. The boxes, sixty in number, occupying nearly 300 cubic feet of space, were transferred to the hatching houses of Dr. Slack, near Bloomsbury, N. J., and the contents immediately assorted, but of the 750,000 eggs only four or five thousand were sound. These were successfully hatched out, and ultimately introduced in the Musconetcong, a tributary of the Delaware, and the troutery was established there.

Much help was rendered in this experiment by the authorities of the North German Lloyd's, who gave up a special house on deck for the accommodation of the eggs, and assisted in various other ways, especially by advancing all the funds needed for the expenses in Germany and allowing the settlement of the account in New York. I had the assistance, also, in the reception and transfer of the eggs, of Dr. W. H. Hutton, of New York, and Dr. H. H. Hutton, of New York, and Dr. H. H. Hutton, of New York, the whole party, with the exception of Dr. Hudson, proceeding to Bloomsbury with Dr. Slack, for the purpose of giving the eggs the best attention. I have no doubt that with a winter of average severity, which would not carry the eggs forward so rapidly as happened in this very exceptional instance, the introduction of salmon eggs can be made from Europe without the slightest difficulty, and even the eggs may arrive. Perhaps a somewhat different method of packing would be required, and the inclosure of the eggs in smaller boxes would tend to promote their safety. In the extreme probability that hereafter there may be obtained from American waters all the eggs that can be properly handled, I think it will be unnecessary to repeat the experiment.

The entire cost of the enterprise, including the purchase of a steamer for the transport of the eggs, the traveling expenses and salary of Mr. Hessel, and every other outlay, amounted to \$1,969.83, or about \$2 62½ per 1,000. The value of this donation of eggs from the German government is not to be estimated by its worth in money, but to be appreciated as an evidence of kind feeling on its part toward the United States, especially as there is a

very great demand for salmon eggs throughout Europe, and as the supply received from Hiltigen is entirely insufficient to meet the calls from Germany alone.

SALMON IN MARYLAND.

DEER PARK, Md., December 16, 1871.

EDITOR FOREST AND STREAM:—

I bear that Mr. Ferguson is stocking the streams around here with salmon. I will find out the number of fish and the names of the streams as soon as a fair load of fish comes here, which I have been told is expected soon. ALLEGANY.

SALMON IN TEXAS.—Our frequent contributor, Fred. Mather, Esq., has arrived safely at Austin, Texas, in charge of the salmon sent there under his charge by the United States Fishery Commission, for the purpose of stocking the Colorado River. The *Austin State Gazette* of December 12th says:—

"We are truly glad to see our river being stocked with such an excellent quality of fish, and are perfectly satisfied. We think with the two importations we have had (of shad and California salmon) that our market will be supplied with fish of this character inside of two years. C. Mather informed us that he had considerable trouble in getting the salmon here alive, it being necessary to change their water every few hours, and the particular kind of water he desired being hard to get, especially in the Indian Territory. He started with 15,000, and arrived here with 10,000. One thousand, according to instructions, were left at Hempstead with Mr. L. S. Daniels for the Brazos River. Some necessarily died, but those he brought here were all well. He informs us that he intended to take some of these fish to San Antonio, but as he had been so long on the road, and they not having had the necessary frequent change of water, he was afraid to attempt to take any trip across the country by stage or wagon. He will probably be on again to stock some of the streams tributary to the Colorado, and also the San Antonio River and other streams in that portion of the State. Texas has some beautiful streams for fish as any State in the Union."

We notice in the same paper that the city council of Austin passed an ordinance on the 10th of December, prohibiting the taking of any fish in the Colorado within the city limits at any time except with hook and line. This looks as though the Texans were in earnest in sustaining the efforts of the United States Fishery Commission.

—In illustration of what may be done in the way of multiplying food fishes in new localities, we refer to the results of experiments made in Tasmania in connection with the English trout and English perch. In four successive years prior to 1861 attempts were made to introduce these fishes into Tasmania from England, but it was not until November, 1861, that a fifth attempt succeeded. A certain number of live fish having been brought out and placed in ponds expressly built for them by Mr. Alport, others were obtained in the following year, from which the immense supply now so extensively distributed throughout Tasmania and Australia has been derived. The present abundance may be estimated from the fact that, in Lake Vendouren, at Ballarat, no less than nine tons were caught during the last season. One fish, three years old, weighed three and a half pounds; another, taken in 1874, weighed four pounds. The parent fish were brought from England to Tasmania, and afterward from the latter country to Victoria. Five small fishes represent the ancestry of the fish referred to as existing in the last mentioned country.

—A contributor to the *Popular Science Monthly*, speaking of the oyster, says that for a creature of lowly rank in the scale of animate being, it is wonderful what a literature attaches to the oyster. Through the roll of ages it has been a factor of prime importance in convivial instincts, the moralities and the industries of men. It has honorable mention in classic song and story. When imperial Rome had her many million populace and her almost fabulous wealth, the oyster figured prominently in the more than lavish luxury of that extravagant city. Do our oyster growers know how ancient their calling is? About 2,400 years ago one Sergius Grata, a man of a practical mind, turned Lake Avernus into an oyster bed, and through his culture of that "evil-smelling" oyster, as they are called, became the proprietor of the "Saddle Rock" of Rome. And what a splendid market he had! His practical genius carried the new industry of oyster planting to great perfection; and such was his reputation that the Romans had a saying that, should the oysters stop growing in Lucina Lake, Sergius would make them grow on the tops of the houses. Avernus has at last succumbed to the mutations of the lake, and is to-day a mirable hole of volcanic mud. It now offers a good opportunity to test the great man's abilities; but Sergius Grata himself "dried up" some time ago.

FISHWAYS ON THE PRESUMPSCOT.—The cases of appeals on the Presumpscot River, in Maine, have all been decided in favor of the plans submitted by the Commissioners of Fisheries. Most of the plans were spiral fishways, in imitation of that invented by Commissioner Pike of Connecticut.

SALMON BREEDING AT BUCKSPORT.—The season at Bucksport has been very successful. Over 500 of the breeding salmon have been recaptured, leaving less than fifty to be accounted for. The number of eggs obtained is 3,039,000, being 700,000 more than last year.

—Sixteen States now have Fishery Commissions engaged in replenishing depleted waters and protecting the fish. Three have been added during the present year, namely—Ohio, Iowa, and Minnesota. The others include the six New England States, New York, New Jersey, Pennsylvania, Michigan, Virginia, Alabama, and California.

—We are indebted to Mr. E. M. Stillwell for a most interesting report on the fisheries of Maine. We shall review it at an early day.

Natural History.

For Forest and Stream.

MORE FACTS ABOUT THE NEWFOUND- LAND DEVIL FISH.

OUR now celebrated devil fish has lately come to the front once more, and has awakened fresh interest in scientific circles in England. Sir Stephen H. Kimberly, late Colonial Secretary, in a despatch to Lord Kimberley, late Colonial Secretary, enclosed photographs of the specimens of this extraordinary fish, of which I was fortunate enough to obtain possession, together with my description. Lord Kimberley forwarded these to Mr. Frank Buckland, permitting him to "make such use of these papers, in the interests of science, as he thought proper, and requesting to be informed in which Museum he considered they should be finally deposited." Mr. Buckland published the papers in *the Field*, and he and Mr. Stead printed the fish to life from the photographs, and placed the painting in his own Museum. The London press, including the *Times*, has been discussing the subject, and the *Daily Telegraph* had an interesting article on the subject. The discovery I was fortunate enough to make, last year, of a perfect specimen of these gigantic cuttle fish, is now regarded by naturalists as one of the highest importance, enabling them to set at rest the vexed question regarding the scientific men were so divided in opinion, and to positively define the degree of affinity existing between certain of these monsters and the numerous smaller representatives of the group, with which they were previously acquainted. The existence of gigantic cephalopoda, having bodies from twenty to thirty feet in length, and tentacles from thirty to forty feet long, may now be regarded as settled. In the time science will elucidate their habits and social economy. In all probability this group of cephalopodous mollusca contains representatives of enormous dimensions distributed in the seas throughout the globe, and embracing many distinct genera and species. In size these giant calamaries vie with the cetacea, and are therefore among the largest animals on earth.

It is sometimes asked, "how comes it that these remarkable creatures have been so seldom seen; and that never before last year was a perfect specimen secured, even in Newfoundland?"

In answer to this I would remark that, in all probability, they inhabit the open ocean, and only occasionally approach the land, when driven by storms—hence the specimens seen last year being few and far between. In the open ocean a shoal of them might pass a ship unnoticed, having no occasion to rise to the surface to take in air. Their appearance, however, around these shores is by no means uncommon; but as their importance was unknown till lately among our people, no attention was paid to the specimens which drifted ashore. In proof of this, and affording additional evidence of the correctness of my statement that recently I met with an intelligent and respectable inhabitant of Bonavista Bay, who gave me a minute account of a "big squid" which was cast ashore close to his residence. The name of my informant is John Quinton, of Redcliffe Island, Bonavista Bay; and I have every reason to believe that his narrative is in accordance with fact. A few days before Christmas, 1872, on going out one morning, he observed a large shapely monster stranded about fifteen yards from the beach. There had been a violent storm the previous night. On examination it proved to be "a big squid," and the people of the settlement resolved to drag it ashore. A rope was passed round it, and it required fourteen men to haul it close to the beach. My informant was struck with the enormous length of the tentacles, and he was curious to measure them. He found them thirty-two feet in length, somewhat thicker than a stout man's wrist, and having rows of suckers at the extremity, each three inches in diameter. The short arms were eight feet in length, and "thicker than a man's thigh." The eyes were of immense size, and the beak "as large as the crown of his hat" in diameter. Unfortunately he did not measure the body, but he says it could not have been less than fourteen feet, and of immense girth. He lay on the beach for a short time, and one of his neighbors carried home the beak and preserved it for a time. Soon after a storm came on and the waves washed the fragments back into the ocean. He is in hopes that the beak is still in existence in his neighbor's cottage, "if the children have not destroyed it," and if so, I am to become its owner. He says that the monster was the same year stranded on the beach as was cast ashore at Long Island in the same bay; and that three years previously an immense one was stranded at Southern Bay, where it was cut up and carried away for manure. I have no reason to doubt these accounts. My informant is an intelligent, honest man, and had no motive for misleading me.

It has been computed that the female of the common squid, which is about seven inches in length, deposits no less than 40,000 eggs. Should these giant calamaries at all approach the lull in reproductive powers, there must be enormous shoals of them in the unfathomed depths of the ocean. They move about at an enormous speed, and the destruction they work among the inhabitants of the deep must be immense when their great size is taken into account. Mr. Saville Kent, late Superintendent Naturalist of the Brighton Aquarium, and now of the Manchester Aquarium, says in an article in *The Popular Science Review*, "Calamaries are themselves an easy prey to other tenants of the deep. The whales, in fact, with which they have been compared in size, are their most formidable and implacable enemies. It is probably only animals existing which could oppose these monsters with any prospect of success in their native element. Our remarks in this case are of course restricted to the toothed whales, and with these we have abundant evidence to show that the colossal cephalopoda constitute a favorite diet." M. HARVEY.

THE ENGLISH SPARROW.—Mr. Robert Ridgway, a naturalist of the Smithsonian Institute, in a recent number of the *American Sportsman* says:—At one time the native song-sparrow was by far the most numerous and familiar bird in the extensive park surrounding the Smithsonian Institution. As the park was being built, a few individuals to hundreds of pairs, the song-sparrow decreased from dozens of pairs to none. I have not seen a single individual for at least a year, while three years ago they were

numerous on every hand; and to me, the harsh, monotonous chirp of these foreign intruders is a sorry substitute for the cheering song of our equally familiar native bird (where protected) now so entirely replaced by them.

Whether or not the desertion of the parks by the song-sparrow is caused by persecutions inflicted by the introduced species, or by a scarcity of food caused by the large numbers of the latter, I will not attempt to say; but that the European sparrow is in a degree pugnacious, was proven to me only yesterday by witnessing the determined pursuit of a straggling snow-bird who chanced to alight in a cotton-wood tree in close proximity to a box near which a pair of sparrows were sitting.

At the present time the number of European sparrows is at least twice that of all native birds combined; three years ago, song and white-throated sparrows, snow-birds, cardinals, towhees and other species, counted at least five times their present number.

It may be that this diminution in numbers of the native species in the parks of this city may be brought about by causes independent of the presence of the house-sparrow; but the facts as above stated are too conspicuous to escape attention."

RARE BIRDS.—M. W. Clark, Esq., of the Maine department of the Grand Trunk Railway, has just received at Danville Junction, per Allan line of steamers from Sheffield, England, one pair silver pheasants, one raven, one starling, one jackdaw, two magpies, two larks, and one black bird, all in fine condition. These were imported for his private collection, and are not for sale. Mr. Clark says:—"The raven, jackdaw and magpies constitute the most comical 'bird family' I have ever met."

THOSE BLUE BACKS.

EDITOR FOREST AND STREAM:—

A word more about the blue back I sent to Rangleys and Moosemen's Lake. Five or six miles I spent the month of October in the Maine woods, and for the first time saw the blue back trout, of which I had heard. This was in the Androscoggin River, between Indian Rock and the dam. The trout came from the Cuscutic or Moosemen's Lake; they came up from Indian Rock to the dam. In the pool below the dam there were myriads, but water being literally black with them, and under every stone, slab, or log in the stream, stones would shoot out when disturbed; they would creep slowly anywhere in the stream without starting some, and so of the streams emptying into the Rangleys Lake. We ate of them several times, and found them a nice pan-fish—juicy, tender and delicate, but from my little experience, would not give up the brook trout for them; but tastes differ. Some are highly colored, and have a bright salmon tint, as they only come to light or knowledge but once a year (about Oct. 10), and then all at once, and so suddenly, would it not be an interesting study for some of our scientists to learn and note their habits and peculiar characteristics, &c.?

George and Charles Soule gave me many interesting facts concerning this fish, and they could furnish any one, at that time, with plenty of trout to examine, and opportunity to study their habits, &c., and perhaps their habits. If they are up the streams for spawning, when do the young go to the "home of the parent" for they are not seen in the stream except in October, when, as Mr. Soule says, they are caught by the barrel, and their name is legion. Whether they ever take fly or bait, seems to be a mooted question. Mr. Soule says, no. That used to be the common received opinion, and may be now, as our party did take a few with bait. I thought that the reason of their not being free was because they came on other business, and were too busy attending to that to pay any attention to biting. E. S. MERRILL.

Our correspondent is referred to previous numbers of FOREST AND STREAM for much information on this interesting subject.—ED.

Woodland, Lawn and Garden.

WINTER GARDENS—WHY CANNOT WE HAVE THEM.

WE present a short paper this week in response to several letters which have been sent us asking the above question. We might say that the public taste is not sufficiently educated to the point of appreciating such methods of recreation, and that many of our wealthy citizens have in their extensive and elegant greenhouses a very good realization of a Winter garden. And still another reason may be found in the answer a gentleman gave us a few weeks since when speaking of this subject. He said:—"We have Summer parks and gardens that are entirely adequate to the wants of all our citizens; they must suffice for the present, or at least until money is more plenty."

Allowing the soundness of his remarks in part, we cannot agree with him in the assertion that our parks fill the wants of the people to the degree they should. Not to depreciate the Park Commissioners, or the educated intellect that spreads out the landscape garden before us, we do feel that to many besides ourselves a most sensible want is felt for a Winter garden of some sort. We hope to see the time ere long when this necessary want will be provided, and when our parks shall number among their pleasant features a Winter retreat as well as a Summer resort. It is a feature of our climate that to those who love out-of-door exercise and rambles among the greenwood paths of our parks, only a small number can give them for their Summer enjoyment. They come to the various inquiries of our correspondents—"Can there be no means for giving us a small Winter garden, if for an experiment only?"

While the great mass of our citizens cannot indulge in the luxury of extensive green houses and covered gardens, why may not an association be formed for the creation of a Winter garden in some one of our parks? We certainly see no objection to the feasibility of such an undertaking, giving to the people a Winter garden as well as a Summer resort, on five or more acres of land. In this paper we shall outline our idea for suggestion only, proposing to thoroughly discuss the matter hereafter in all its bearings, its beauties, and its results, should it awaken any interest among our readers. Coming directly within the province of this paper, the question of recreation and study, we expect to hear many responses to our suggestion for a Winter garden in some of our parks.

We need a resort where, even in mid Winter the beautiful green of the tropics may be enjoyed—where the sweet denizens of Florida, of Brazil, the Orient, and the isles of the sea may give their fragrance and gladden the hearts of our people. The plan we suggest is not utopian; it can be realized, and we believe be made to pay for itself, a self-paying enterprise. Who is there that would not pay a

reasonable sum of money for admittance within the domain of our tropical world, our Winter garden, for an hour's ramble only?

With the many capabilities for improvement afforded by our Central Park, why not take advantage of some portion of it for the purpose suggested. It would not cost a very large sum of money to select in a proper location in the park, or any other grounds, a tract of five or six acres. Over this throw a light glass roof of the Paxton or McIntosh improved iron span—something of the Crystal Palace style—and you have a very compactly covered glass roof under the sides of which can, if necessary, have an inside area of ten feet or more, as a walk or drive way, with an inside glass, making a great saving of the fuel used for heating the garden. The whole could be double glazed if found necessary. Now with such a structure as this, with all its imperfections, what an amount of real happiness it would afford. Our ladies and gentlemen might take stock in a less promising undertaking, for aside from its pleasures, we can demonstrate to them that there is money in it.

We might go on to speak at length of the many plants and attractions of such a resort. We might name the azaleas, the laurels, and hundreds of other beautiful and rare plants, but reserve for the future a more concise and elaborate plan of what we think all the people want.

OLLIPHOD QUILL.

CHOICE PELARGONIUMS FOR WINTER BLOOM.—The habits of some of the zonal pelargoniums are admirable for Winter blooming, and the varieties to be chosen for this purpose are such as generally bloom the most freely. I always choose for myself those of a dwarf habit in preference to others, and can recommend them as best adapted for indoor and greenhouse culture. Among the best varieties, I would name among others equally suitable, the following, namely: Dwarf gold, a bright scarlet and a very fine bloomer, literally covering itself with showy puffs of brilliant flowers; vulcan, another scarlet of fine habits, and grows in trusses. Then I have grown with much satisfaction vesuvius, a rich red scarlet. This is a dwarf among the dwarfs, blooming freely, and very easily cultivated. Then we have the old and well known penny, whose rich scarlet, shaded with pink, are one of our admirers. This you will be sure to place in your window box, as it will almost take care of itself. Add two fine plants of pure white—the bride and the white swan—and you have all the whites you need. These two, I think, cannot be surpassed for indoor bloomers, and possessing all the requisites of good, hardy flowers, you may have confidence in them. There are others we have seen and admired for the purpose of indoor gardening and room culture, but we trust the above selection will give the best satisfaction to our lady gardeners, and having proved them ourselves we know whereof we speak. OLLIPHOD QUILL.

ANSWERS TO CORRESPONDENTS.

BELLE MAY, Ipswich, Mass., inquires the name of a fern she sends us. Many of our wild wood ferns are spared us until the cold days of December. On the day of this writing—December 3d—I gathered one of the finest specimens of the *Cinnidius*, or little dog fern. I took it from a very sheltered spot in the crevice of the rocks, where it was very luxuriantly growing at the foot of a huge birch tree, so longingly that I was fain to leave it untouched; but as I had your letter of inquiry in my pocket, I transferred this little fern to my basket for a more careful examination. The specimen you send me belongs to this class, and if you carefully remove the plant with considerable earth it will richly repay you for your pains. It will give you an abundance of seed next year, and the seeds will give you some fine new plants, or sprouts, of an entirely different kind, though they will still be of the little dog fern family. I have found that one of these ferns, taken up in the Fall, and placed in the centre of a shallow pot of earth, and surrounded with the "chequerberry" of our school girls, makes a most delightful and cheap parlor ornament.

J. L. B., Long Branch, N. J.—The seed of the sedges, to which your inquiry leads, cannot usually be obtained from seedsmen or stores. At least, we have never seen any for sale, or noticed any in catalogues issued by seed and nurserymen. There are an almost indefinite number of the plants and grasses, seed bearing sedges, belonging to the *Cyperaceae*. In the sedges you will find the seeds principally used for feeding by the rice, brant, or reed bird, to be of four kinds, and those are found generally together. First, the *Cyperus*; spikes flattened distinctly; many seeded; ripe June to September. Second, the *Oxyria*; grain oblong, pointed, and flattened. Third, the *Leptocarpus*; large grains, resembling rice, and sometimes known as wild rice. Fourth, the *Milium*; seeds large and free. All the above seeds, together with many other species of seeds intergrowing with them, on the river banks in Virginia, Pennsylvania, and all along the Southern coast, yield an abundance of good seed, which may be easily gathered by boats in the proper season. The seeds are dropped in due time, and float upon the waters to their destined anchorage on the creeks and inlets of all our navigable and unnavigable waters.

F. SINCLAIR, Fredericksburg, Va.—Box containing the three packages of different kinds of earth came to hand. A careful analysis; enables us to give you the following answers. The first is a shell marl, and contains a large percentage of carbonate of lime. As a fertilizer, it should be applied in liberal quantities; it is good for wheat or clover, or any growing grass; will pay well for hauling and care for spreading. The second is a white sand, and is a very good soil; has not any of the usual unaltered sand of this kind of earth; is from a location where only fine granules, or poor sand is found. This is of little value, any way; it can perhaps be mixed with clay lands, but as a fertilizer is worth little or nothing to the farmer. The third is common muck, with some shells, and a little peaty formation. This is valuable as a fertilizer, and can be used as a basis for retaining phosphates to advantage. OLLIPHOD QUILL.

WINTER GARDENING IN HIGH LATITUDES.—We clip the following from the *Montreal Witness*. Col. Rhodes is an old contributor to FOREST AND STREAM, and a mighty mouse hunter and angler as well as a gardener:—

"Col. Rhodes, of Quebec, deserves great credit for his enterprise and skill in producing in winter vegetable de-

from three to five tons each per day, in the season, making the total annual consumption in those Provinces about 30,000 tons. It is very doubtful if the supply will long prove equal to the drain upon it.

BASS AND TROUT FISHING IN FLORIDA.—Some weeks ago we quoted an old Florida authority on black bass fishing. A correspondent wrote us thereon this wise:—

"A matter attracting my attention in your paper, is a statement in the country here, that a single fish of the size of Ayres's Barram, imprint, 1873, describing the device which he calls a "bob," three hooks, set back and covered with parti-colored feathers. You say the "bob" is in use at the South to this day. In this you are quite correct, though the parti-colored feathers are seldom, if ever, seen. The fisherman, however, uses a small, round, flat, white, wooden spoon to a spinning lure, which closely resembles a minnow, as it is drawn lightly along the surface of the water. The description otherwise of "bobbing," as repeated by you from Barram, is to the life. When the fish is hooked, the fisherman uses the pole and reel, and runs the road train, and if fancy your fine jointed rods would pop like pipe-stems before the whirl he gives when he feels the steel. Even our tough canoes bend like a bow, and once in a great while fairly surrender to the shock. We fish also with live, bald (minnow) baits two feet below the surface, and with a small, round, flat, white, wooden spoon, a 12 pound trout, but this weight is rare. A good one being 5, and 7, and 9."

FISH IN SEASON IN DECEMBER.

—The fisheries of Prince Edward's Island have done remarkably well this Summer, especially in lobster packing. The lobster factories at Murray Harbor and at West Point have each done a large and profitable business. The proprietors of the establishment at Murray Harbor are preparing to extend their operations next season, and expect to put up not less than 100,000 cans. The lobsters preserved are of large size, averaging in weight from two to five pounds. Only those of good quality and condition are canned. There are now at least forty-seven canning establishments in Nova Scotia and New Brunswick, which use up

The system at Harvard embraces many of the features of the above. The whole University is divided among four clubs, two dormitories being assigned to a club. Each club has an average membership of fifty. Each member pays the first year \$15, payable in advance, to the treasurer of the club. The treasurer gives the money to a committee, who make payments according to agreement. Damages, the result of ordinary wear and tear, are repaired at the expense of the builder; but serious damages are assessed upon the student, or in part upon the student and builder, to such amounts as a committee of arbitration, consisting of two members of the club, one member of the building club and one other person shall determine. It is, of course, to the interest of the builder to keep the boats in good repair, that their years of service may be the longest possible. The arbitration committee have the right to reject any boat as unfit for service. A seat in a boat is furnished to every three members of a club, the boats being somewhat larger than those of the other clubs, and having three and four single sculls, with such change as each club may direct. On this basis it is found that the members of a club can each get a row at least once a day, and the practical workings of the club in this respect have been very smooth. It is probable that after the clubs get into successful operation there will be a reduction of the price of membership to make the system more generally available. The practice of renting boats to individuals and parties at rates somewhat higher than those which the members of the club pay. The changes above sketched would also make an

A. L. City.—Writing to buy a good and cheap shot gun, I inquired about the Remington single barrel breech loader, and a dealer in firearms told me that the Remington single gun was not worth much. I was the more astonished at this assertion, as I have seen it recommended in the sporting press as the best of its kind. I was told to buy a double barreled muzzle loader, or to disregard the dealer's assertion and buy a Remington single breech loader. I can get a Wm Scott & Sons' double barreled muzzle loader for \$25, neither do I wish to pay any more for a shot gun. Is the Dexter Smith's single breech loader any good or not? I have seen it recommended in the sporting press, and I am praising one style of gun at the expense of another, unless we know how to be dangerous to life. Another thing is that every sportsman has his own choice in shot guns. If we recommend any gun we do it on our own grounds. That can be proved only by exp. results, and that we cannot give you any information. And, Sir, I can tell you we will be purchasers in a few days, and that a gentleman here to know what style and make you want.

A WEEKLY JOURNAL.

NEW YORK, THURSDAY, DECEMBER 24, 1874.

To Correspondents.

All communications whatever, whether relating to business or literary correspondence, must be addressed to THE FOREST AND STREAM PUBLISHING COMPANY. Personal or private letters of course excepted.

All communications intended for publication must be accompanied with real name, as a guaranty of good faith. Names will not be published if objection be made. No anonymous contributions will be regarded.

Articles relating to any topic within the scope of this paper are solicited. We cannot promise to return rejected manuscripts.

Secretaries of Clubs and Associations are urged to favor us with brief notices of their movements and transactions, as it is the aim of this paper to become a medium of useful and reliable information between gentlemen sportsmen from one end of the country to the other; and they will find our columns a desirable medium for advertising announcements.

The Publishers of FOREST AND STREAM aim to merit and secure the patronage and countenance of that portion of the community whose refined intelligence enables them to properly appreciate and enjoy all that is beautiful in Nature. It will endeavor to no depraved tastes, nor pervert the legitimate sports of land and water to those base uses which always tend to make them unpopular with the virtuous and good. No advertisement or business notice of an immoral character will be received on any terms; and nothing will be admitted to any department of the paper that may not be read with propriety in the home circle.

We cannot be responsible for the dereliction of the mail service, if money remitted to us is lost.

Advertisements must be sent in by Saturday of each week, if possible.

CHARLES HALLOCK, Managing Editor.

WILLIAM C. HARRIS, Business Manager.

MERRY CHRISTMAS!

"WHEN rosemary, and bays, the poet's crown,
Are bawled in frequent cries through all the town;
Then judge the festival of Christmas near—
Christmas, the joyous period of the year.
Now with bric-a-brac all your temples strew,
With holly green and sacred mistletoe;
Now, heaven-born Charity! thy blessings shed;
Bless meagre Want upon her sickly head;
Bid shivering limbs be warm; let Plenty's bowl
In humble rooms make glad the needy soul!
See, see! the heaven-born maid her blessings shed;
Lo! meagre Want appears her sickly head;
Clothed are the naked, and the needy glad,
While selfish Avarice alone is sad."

The most important day in the Christian calendar has again made its annual round, and with it comes all those little kindnesses that render home the scene of particular enjoyment to the young, and of deep pleasure to all. Dear are its memories, and fondly is it greeted, for it brings a cheerfulness to every household in the land, to which many of them are often strangers. It is a day of rejoicing to all classes, but to the Christian it possesses an interest above its more social phase, for to him it is the anniversary of the birth of a faith that freed the world from a groping religious slavery, and gave mankind a promise of future life and a hope of salvation. Since the day that Christianity was heralded to the world, the shackles of mental and physical slavery have been gradually falling off, and the cause of man has been ever onward and upward. The Christian world therefore hails the return of that day with pleasure, and makes it a marked event in the year. To the most unimpressible nature it brings memories dear, for it is a compendium of the greatest hopes and achieved results of childhood's days, and is the representative of a period of open generosity, gracious courtesies and unalloyed happiness. Even to the old its return brings some social event which leaves a train of pleasurable emotion in the mind long after it has followed in the cycle of time. Throughout Europe the day is one of great rejoicing, and no matter how poor the family may be, their house on this occasion will be decorated with evergreens, many lights will illumine it, good cheer will be abundant and happiness will reign supreme. Though the wassail bowl, the boar's head and the yule log have long since been suppressed, and kissing under the mistletoe is no longer practiced, except in a few instances, yet the day has lost none of its interest; those departed pleasures are at least balanced by our

modern comforts, for, although the latter may lack the quaint romantic aspect of their predecessors, they more than compensate for this by their variety and quality. The sturdy swain and the fair young damsel must, however, regret the absence of that mistletoe bough, from which so much innocent amusement was extracted, and so many prophecies gleaned. In our own broad land Christmas is becoming a more important event every year, but in portions of New England it still retains the flavor the Puritans gave it, hence is not welcomed with the same warmth that it is in other sections of the country. This indifference is, however, being rapidly overcome, so this Christmas will, no doubt, be generally observed throughout the length and breadth of the land. This is as it should be, for our holidays are few enough, and as the day is above all others one of pleasure to old and young, and one of kindly greetings among all, we join in the general salutation, and bid our readers a Merry Christmas and many of them, and hope all may realize the fruits of that blessing which the angels uttered: "Peace on earth to men of good will."

THE BAD LANDS SOUTH OF THE BLACK HILLS.

THE GREAT are the attractions of the Black Hill country. While hundreds of venturesome miners are waiting till Spring to risk their scalps for gold, a devotee of science has braved both the storms of Winter and the most hostile Indians for fossil bones.

It has long been known to geologists that the region south of the Black Hills, through which the White River flows, is the basin of an ancient lake of Tertiary age, in which are entombed the remains of many tropical animals that once lived around its borders. Comparatively few of these remains, however, have hitherto been secured, but these were of great interest to scientific men.

There has always been one great obstacle to the exploration of these beds. The headquarters of Red Cloud and Spotted Tail, and their powerful bands—the Ogalallah and Brule Sioux, thousands in number—are on the White River south of the Black Hills, and these have hitherto guarded effectually the approaches to that wonderful region. These tribes, especially the former, although professing friendship for the whites, have for years been virtually hostile; and it is not too much to say that most of the Indian outrages of the past five years, between the Missouri River and the Rocky Mountains, although attributed to various other bands, have been committed by the Ogalallahs.

We have therefore until the present time been obliged to content ourselves with the meagre information and collections of the earlier expeditions.

Since Gen. Custer's reconnaissance to the Black Hills, the Indians have been especially jealous of any encroachment on their territory in that direction, and have threatened with death any white man who should dare to approach that region in search of gold. It required, therefore, no small amount of courage for any man to venture into the very stronghold of the Indians in quest of fossils. The statement that the explorer merely wished to pick up some of the bones with which the Bad Lands are strewn, met with little credence. Your Indian cannot comprehend why any one should want the bones of the giants that lived in the olden time, before the little men of to-day were created, and naturally supposes that the statement of the white man is only a shallow excuse invented for the purpose of gaining an entrance to the Black Hills, and seeking there the gold that all the white men want. To succeed in reaching these bone fields, then, it required courage, and something more. It required a clear, cool head, a calm, well-balanced judgment, and an energy ready for any emergency and capable of grasping the slightest advantage.

For the last five years Prof. Marsh has been engaged in the study of the extinct animals of this country, especially those of the far West. During this time he has described over two hundred species of fossil mammals, birds, and reptiles, among which the following are some of the more interesting: A large number of new Mososaurs, huge marine reptiles, veritable sea serpents, that lived in the cretaceous ocean, where now the Rocky Mountains are, but with small fore and hind limbs in the shape of paddles, and ranging from twenty to seventy feet in length; the first Pterodactyles, or flying dragons, that have been found in this country, some of them of gigantic size, having a spread of wings of at least twenty-five feet; the first fossil birds described from this country; among them a new sub-class of birds (*Odontornithes*), with teeth, and having biconcave vertebrae, the latter a characteristic feature of fishes; as well as a giant diving bird (*Hesperornis*), resembling in some respects our loon (*Colymbus torquatus*—Brün.), but which was about six feet in height. All these are from the cretaceous of Kansas. He has also described a new order of Perissodactyle mammals (*Dinocerata*), nearly or quite equalling the elephant in bulk, and remarkable on account of many strange features. The skull of these animals was armed with at least two, and perhaps three, pairs of horns, and they had enormous canines in the upper jaw, resembling those of the walrus. Another discovery of importance was that of fossil Marsupials, animals allied to the opossum, of fossil bats and of fossil monkeys, none of which had ever been observed before in this country.

About the 1st of last October, Prof. Marsh received information from Gen. Ord, commanding the Department of the Platte, of a new and very wonderful deposit near the Black Hills, and it became evident to him that a great opportunity for the acquisition of some of the won-

ders of this new country was at hand if the suspicions of the Indians could be allayed and permission obtained to enter the forbidden ground. In fact, the information was too important to be disregarded. Prof. Marsh started at once, and on reaching the West organized a party from the guides and frontiersmen that he had employed on former expeditions. Accompanied by a military escort from Fort Laramie, he started for the Bad Lands through the territory of the Sioux.

It is needless to repeat in detail the incidents of the trip. The determined opposition and hostility of the Indians, the council feasts and numerous presents given by Prof. Marsh to propitiate them, and, when all these failed, the stolen march by night across the White River, are told of in the daily journals. It is enough to say that the deposit was reached, and nearly two tons of fossil bones secured, notwithstanding the continued opposition of the Indians and the bitter cold, and that the party returned in safety. Some of the fossils are now in New Haven, and the rest are on their way and will soon be deposited in the Peabody Museum.

The most interesting of the forms found at this locality was the gigantic animal that Prof. Marsh has named *Brontotherium*. The first species of this genus was found by the first Yale scientific expedition in the bad lands of Colorado, which were discovered and first explored by Prof. M. and party during the Summer of 1870. The remains secured at that time, however, were few indeed compared with those obtained this Fall on the White River. Prof. Marsh has stated that on the first day he saw at least a dozen skeletons or portions of skeletons of this animal.

Brontotherium gigas (Marsh) was proportioned somewhat like the rhinoceros, but nearly equalled an elephant in bulk. The skull is about two and one half feet long, and was armed with a pair of huge horns, projecting from the nose. These horns are not placed one before the other in the median line, as in all living two horned rhinoceroses; but one on each side of the face transverse to the axis of the head as in the horned ruminants of to-day. The animal had short legs like a rhinoceros, a neck of moderate length, so that a proboscis was not required; but it could lower its head to the ground in feeding. It is probable, however, that the upper lip was somewhat prehensile, perhaps something like the snout of the present tapir. Another animal of this genus was *Brontotherium ingens* (Marsh), which exceeded the preceding in bulk by about one third, the skull being fully a yard in length.

In the locality south of the Black Hills Prof. Marsh evidently found an extensive sepulchre of these huge creatures. He has stated that in some places which he passed the Bad Lands were fairly whitened with their bones. He succeeded in unearthing many portions of the skeleton hitherto unknown, and, what was more important, he found in several instances the bones of the feet all occupying their relative positions, just as they laid when the carcass was covered with the mud. This was particularly fortunate, since in animals so remotely related to existing species as those under consideration it is very difficult to make out the relations of the bones of the extremities, and from the relations of these bones may be inferred in no small degree the zoological affinities of the animal.

Eootherium was another species that was largely represented in these beds. This animal was about the size of a tapir, but resembled the hog in many of its characteristics. An interesting animal found in the same formation was *Anchitherium*. This was a little horse-like animal, about the size of a sheep, and differing from the horse in having three toes, all reaching the ground. The middle and largest one corresponded to the single hoof of the modern horse. In another stratum higher up in the same deposit, were found multitudes of fossil turtles of various descriptions, ranging from six inches to two feet in diameter, and near these the Oreadon, an animal about the size of a sheep, and showing points of resemblance to the hog, the deer, and the camel, was very abundant.

All these animals belonged in one lake basin of Miocene age. Over these were deposits of a second lake which existed in Pliocene time, and abounded in remains of fossil horses, camels, and rhinoceroses. The remains of horses were especially numerous, and represented at least a dozen different kinds varying in size from that of a sheep to that of the largest modern horse. The animals entombed in this lake were all different from those of the older Miocene lake, and also quite distinct from any now living. In life they roamed about the borders of these fresh inland seas and daily came down to the water's edge to drink. Occasionally, no doubt, one of them became mired in the tenacious clays that formed the banks of the lake, and being unable to extricate himself was drowned. At other times, when crossing the rivers which poured into the lake at various points, the swift current would bear away one or two to the common tomb of the species. Thus gradually these relics of a far distant past were accumulated, which are now being brought to light through the labors of the devoted students of science.

VANITY FAIR TOBACCO.—Those sportsmen to whom the "Vanity Fair Tobacco" of Messrs. Kimball & Co., of Rochester, was such a solace in camp during the Summer and Autumn seasons, will find it no less acceptable as they gather around their Winter hearthstones to recount the adventures of the past. Read their advertisement and be happy.

State Fish Commissioners will oblige us by sending their annual reports as soon as published.

ARE DOGS PROPERTY?

THIS is a question that must soon be definitely answered and forever settled. The case of Manassah Smith, Esq., a prominent lawyer of Portland, Maine, whose dog was wantonly shot by a scoundrelly neighbor some months ago, is now before the courts, and the verdict we trust will go far toward securing a just recognition hereafter of this description of property and the rights of owners. Mr. Smith, it will be remembered, sued for damages, but failed to recover; whereupon, failing in legal measures of redress, he took satisfaction, as the saying is, out of the hide of his antagonist. For this personal indignity the dog-killer sues for \$6,000 damages! We should have preferred to see this case tried exclusively on its merits, and an appeal taken to a higher court, but we feel confident that the final result of the litigation will be to establish the same right of ownership in dogs as is vested in other domestic animals of far less value, and to increase the sense of security in the ownership of such property.

A valuable precedent, we observe, was established the other day at Manlius, New York, where a most intelligent and valuable dog belonging to Mr. Abraham Shoemaker, of that place, was wantonly killed by a scamp, against whom suit was brought before a Justice of the Peace, and judgment rendered for \$125. An appeal was taken, and a jury confirmed the judgment with costs. We shall look forward to the Portland case with great interest, but not with undue solicitude, for we feel that at no distant day dog owners will be recognised as having some rights that vindictive scamps are thus bound to respect, and that dogs themselves will be treated to that consideration, in kennel, in field, and in transit, which their high status in the animal kingdom entitles them to.

THE MILITARY CHALLENGE.

The challenge from Company E, First Regiment, California National Guard, to shoot any military team in the United States at 200 and 500 yards, which we published a few weeks ago, and which was promptly accepted by Company D, Twelfth Regiment, N. Y. S. N. G., has aroused a most desirable interest among the Guardsmen of the Pacific Coast, and several of them are now devoting a large share of attention to rifle practice, in order that they may not be unworthy of recognition in our national contests. As an indication of the interest manifested by the riflemen of the Golden State in the match between the two companies representing the most Easterly and Westerly portions of our continent, we may adduce the fact that the telegraph companies dispatched in full the terms offered by Company D, and at the same time gave due credit to our journal for its enterprise in bringing the meeting about, and publishing the conditions of the match. We have not yet received the answer of the Californians, but expect it by letter at an early day, and from what we know of their temper we shall expect it to be an affirmative one. These matches are productive of much good, as they give our Guardsmen an esprit necessary to their efficiency, and urge them onward by their desire to attain an honorable position in such contests. As riflemen, our National Guards will compare with any in the world, but they must not be content with this, for they ought to be the best shots on either continent, as they have both the means and opportunity to practice as much as may be desirable.

Rifle contests should not be confined to the Guardsmen alone, but they should also be participated in by our Regular Army. The officers of the latter do not seem to manifest any interest in these matters, at least we do not see them openly advocating them, so we must conclude that they are, to a certain extent, indifferent to the efficiency of their commands as riflemen.

It has been stated that Volunteers were far superior to Regulars as marksmen, but this statement cannot be accepted in its literal sense until experience has proved it. It is true that those in civil life who use the rifle are more intelligent and more attached to their weapon than the soldiers of the Regular Army, but this fact does not prove that they have greater experience than the latter, or that they know the power and quality of their weapon any better.

The fact that the Volunteers of England are better marksmen than their comrades of the line, cannot hold good in this country, as the conditions are almost entirely altered. There the Regulars have comparatively little practice, while they have much here, as they are often actively engaged with Indians or in pursuing wild animals. This, of course, will apply to those on duty in the West, and they embrace the greater number of the army. To test the matter of proficiency the Regulars should challenge a team of the Guardsmen to shoot at short or long ranges, and, if accepted, the question could then be decided in a particular sense at least. That they have not done it indicates, apparently, that they have no sympathy with such matters, or that they do not think themselves capable of successful competition. This would prove a timidity we should not like to accord them; yet if they do not take part in future contests, we must admit this, or else assume that they lack the very necessary spirit that characterizes good soldiers. Besides the lessons deduced from such a trial of skill, we could also learn the shooting qualities of the various military rifles, and the advantages or disadvantages each may possess. This would be an important addition to our knowledge of weapons; solve hope that our Regular Army will organize a rifle team, and by a match with their comrades of the National Guard prove the truth or falsity of the statements uttered against them.

CURLING CLUBS.

The curlers of Canada equal, if they do not excel in enthusiasm, the residents of old Caledonia herself, if we may judge from their recent meetings, held in nearly every portion of the Dominion. These were all largely attended by the lovers of the slippery game, many of whom were gentlemen of high professional and social distinction. It has been asserted that curling is the most democratic game of skill in the world, and this we can readily understand where we see the artisan and professional man, the humble peasant and titled noble, unite on the common ground of love for the exercise. A fellow feeling in this case makes all wondrous kind, hence all social barriers are overthrown when curlers meet.

In our own country the game is now rapidly assuming an importance one would not accord it a few years ago, for where we had one club then we have twenty now, and all are large in membership and devoted to their favorite Winter pastime. The coming international match will cause it to loom up more prominently, as it will then attract an attention from the public at large which it has not heretofore received. The effect of this must be to render it more popular among all classes of people, and to cause it to assume its deserved place in the list of athletic exercises. The clubs of New York were the first to engage in the enterprise of having an international "bonspiel," so this would prove that the natives of Scotia in this country do not lose any of their enthusiasm by their isolation from their native land.

WOODCOCK IN ENGLAND.—We recently quoted our English correspondent, Jackson Gillbanks, as authority that woodcock were not only marvelously scarce in some portions of Great Britain, but that they seemed to have become practically extinct in localities where they have been abundant hitherto. Since his letter was written a most remarkable irruption of these birds has taken place into the country, which might compare with the marvelous visitation of quails into the camp of the Israelites when they journeyed toward Canaan. We quote from *Bell's Life*, November 28: "The severity of the weather in Northern Europe, more especially in Norway, the bright clear nights, and easterly winds, have caused an immense quantity of these beautiful birds to arrive in this country, to seek shelter and food in our numerous and spacious coverts. A great number of them alighted on the Dover coast during the week, and after resting a short time, departed further inland." What else can this be considered than a God-send—this repopulating, by providential intervention, of the depleted coverts? and who will bless the occasion more than those who so lately bewailed their prospective loss?

—Mr. Bergh has organized a new society for the Prevention of Cruelty to Children. The objects of the society are definitely stated to be:—"To bring to justice those who shamefully neglect or cruelly ill-treat children. It is not our intention to labor in the interest of any religious class or political party. Our duty toward the children that we rescue will be performed when they are safe in the hands of a Judge, upon whom will rest the obligation of disposing of them wisely." The Board of Officers includes the following strong names: President, John T. Wright; Vice Presidents, Cornelius Vanderbilt, August Belmont, John J. Cisco, Peter Cooper, Wm. E. Dodge, James Brown, Henry Bergh, Eldridge T. Gerry, Robert L. Stewart and Theodore Roosevelt; Secretary, John L. Giffen; Treasurer, Wm. I. Jenkins; Counsel, Eldridge T. Gerry; and Executive Committee, James Gordon Bennett, Louis J. Jennings, Henry Bergh, Thomas C. Acton, Wm. M. Vermilyea, Burden B. Sherman, Jonathan Thorne, Joseph Seligman, Wilson G. Hunt and John Howard Wright.

OUR FLORIDA COMMISSIONER.—Our Florida Commissioner has about reached his objective point—Cedar Keys—and we presume will shortly send us his weekly communication. We desire in this connection to express our obligation and thanks to Gen. Eckert, Geo. H. Mumford, and other officers of the Western Union Telegraph Company, who have kindly instructed their agents South to extend to our commissioner such courtesies as will facilitate the object of our West Coast Expedition.

—Professor Cope, the eminent naturalist, has been kind enough to send us a report on the vertebrate fossils discovered in New Mexico, with descriptions of new species found—the latter being classified by himself. To the lover of paleontology this is an interesting volume, as it is both thorough and concise.

WRITE LEGIBLY.—As a great portion of our paper is put in type on the day and night of going to press—affording little time for revision—we suggest to our correspondents the importance of writing plainly, proper names and technical terms especially. A little care on the part of writers will prevent many errors which otherwise will occur, and for which editors, proof readers and printers are blamed.

POSTAGE FREE.—After the 1st of January, 1875, the FOREST AND STREAM will be mailed to its subscribers free of postage, with no additional charge therefor. The publishers prepay the postage.

—Quail can be found dead by the dozen in many parts of Kansas, owing to the scarcity of food. The peasant farmers are feeding them.

BREACH LOADERS.

OWING to the numerous letters of inquiry which we receive every week from sportsmen asking for our opinion as to the best style of breach loaders, their mechanism, charges to be used, the character of the powder and shot, and many other questions bearing on these subjects, we have concluded to publish sketches of the different kinds of breach loaders from time to time, so that every person can then judge for himself what sort of gun he needs; how he should use it, and what are its good and bad qualities. The analyses and assertions we shall copy from the work of "Glean," one of our most valued contributors, but we shall beg leave to differ from certain of his statements, and we call upon our readers to give us their opinions on some points also, that is so far as actual experience will permit. What we aim at in this case is conclusive truth, but ere we can hit it we must cause the varied experience of our sportsmen to be presented, that they may be compared and sifted and the proper deductions made. Ere entering into a discussion of this weapon it may not be uninteresting to glance at its early history. He says:—

"Breach loading guns are of great antiquity. In the Tower of London, Woolwich Museum, and in the Museum in Paris, besides the museums of the Continent, may be seen hundreds of such arms, centuries old, and of exquisite workmanship; thus once again verifying that there is nothing new under the sun.

"In Mr. Latham's essay, read before the Royal United Service Institution, (quoted in an able review in *Bolton's*), it is stated that 'breach, or, rather, chamber loading guns of the fifteenth century, are found in many of the Continental museums. In the Museum of Artillery, at Woolwich, there is a breach loading pierrier, or paterna, of the time of Edward IV., in 1471. This consists of a directing barrel, terminating in a square bar or frame of iron, and a separate loading chamber, with handle, which was fastened in its place for firing by a quoin or wedge of wood or metal."

"It is probably to the early part of Henry VIII's reign that we should refer the very curious pistol shields, or targets shielded with gounes," of which many specimens exist in the Tower; but no examples of the kind have been found in any foreign collection.

"The shield is probably intended to protect the gunner in firing from the small loopholes of fortified places, called *embrasures*, and the barrel generally occupies the centre of the shield, in place of the boss or spike which is usually in this position. There is a small aperture covered with a grating in the upper part, for the purpose of taking aim, and a handle in the lower half enables the gunner to direct the weapon. A separate loading chamber, containing the charge, is pushed in at the breech, and a cross-bar or frame, which turns on trunnions, is slid down and retained in its place by a spring or bolt to secure it while in place. If you compare this plan with that of the breach loading paterna, you will see how very simple is the adaptation of the method already in use for cannon."

"A larger weapon of similar date and construction, said also to have belonged to the king, but of inferior workmanship, is in the Tower. This has a much larger bore, .79, and is furnished with a secure screw down. The piece is .79, the barrel is three feet six inches long, and is styled in the early catalogues the 'fowling-piece' of that monarch."

"A breach loading trestle-gun (A. D. 1500) was hooked by an anchor about the end of the last century, and is delineated in the *Archæologia Britannica*. In 1497 breach loaders were used at the siege of Boppard, in Germany."

"By the records of St. Etienne, in France, it is shown that the French monarch, Henry II., shot with a breach loader in 1540.

"In 1661 the Marquis of Worcester took out a patent in England for a breach action on the cut-screw principle, which is thus described:—

"An 'invention to make certain guns or pistols which in the time of one minute of an hour may be recharged; the fourth part of one turn of the barrel, which remains still fixt, fastening it as forcibly and effectually as a dozen shrids of any screw, which, in the ordinary and usual way, require as many turns."

"This system has been subsequently repented, and the specifications describe the working parts to be a male and female screw, having a thread of a different pitch, the one at the bottom of the thread, whereby one slides within the other, and is engaged with a small turn."

"There are several specimens of this kind of breach mechanism in the Woolwich Museum, and, among others, one of German manufacture, of the date of 1700, with a combined lock to work with either flint or match."

"Abraham Hill, of the 'City of London' Esq., and Fellow of the Royal Society, in 1664 patented six different systems for breach loaders. The first described 'a new way of making a gun or pistol, the breach whereof rises on a hinge, by a contrivance of a motion under it, by which it is also let down and bolted fast by one and the same motion.' There are two specimens of this gun in the Woolwich Museum. Another plan of Mr. Hill's, 'for a gun or pistol which is charged by a screw at a hole under the sight or vizier, at the upper end of the breech, and shuts with a cartridge or roundish plate of iron, and without the sight of vizier.'

"Pope, in his diary of March 4, 1661, says:—'There are several people trying a new fashioned gun brought my Lord Peterborough this morning to shoot off often, one after the other, without trouble or danger.'

"But M. Lefaucheux, of France, is entitled to the honor of making the breach loader available as a sporting gun in modern days. By originating the cartridge, he virtually recreated the weapon. It was used quite generally for many years on the Continent in the shape in which M. Lefaucheux put it, before it was introduced into England. When, however, it was first taken to England, it was weak in mechanism, and did not shoot near as well as the English muzzle loader. In addition to which, the English powder was stronger than the Continental, and the loads were heavier. So that the 'French Crutch Gun,' as it was then derisively called, shot poorly, soon rattled in its joints, and was generally condemned.

"The English makers had the capacity to see that the

principle of the gun was desirable. They seized upon that, and, by applying their superior workmanship and better judgment to it—thereby increasing largely the power of the gun—they not only remedied its defects, but, little by little, made it perform as well as their own muzzle loaders. Of course this result was not all at once attained. It required much patience, experiment, and knowledge to reach the standard muzzle loader, and, of course, disbelievers asserted that by no amount of skill or time could it ever be made to shoot as the muzzle loader did. More powder was demanded and conceded for it, and then the results were equal.

"But it was in the hands of progress; and it went on, until now, after thorough trial and test, it ranks as the peer of the other.

"In considering the shooting of the two guns, an anomaly is presented as to the shape of a breach.

"With but few exceptions, all breech loading guns resemble closely that of M. Lefauchaux. His gun had the pin cartridge. The central fire cartridge, since invented, and now so extensively used, is merely a new application of the same idea. It involves no new principle.

"The general principle of the breech loader is this:—The barrels of the gun are movable at their rear end, and about upon the face of the standing breech. The ends of the barrels are smooth. The breech of the muzzle loader is also smooth. There is nothing upon the ends of the barrels nor upon the standing breech to resist the force of the gun-powder, or to hold the barrels in their place. The two hooks of the muzzle loader fitting into the stock are not there, nor anything like them. But the barrels are held in their places by means of a solid piece of iron attached to them underneath, called the "lump," descending into an iron bed on the stock, and the "action,"—the projections of the lump fit into corresponding recesses in the action, and are there held together by keys, wedges, bolts, and grips.

"Each maker has his own device for gripping, wedging, or bolting up the gun. The variations in the appliances and forms by which the barrels are held to the stock are as widely different and as great as the ingenuity of inventors and the space they can make them.

"The barrels play upon a hinge pin, and drop down at the muzzle, thereby throwing up the rear ends to receive the new and to reject the old cartridge. At every discharge the gun is opened and closed. The means by which the gun shall be thus opened and closed are equally numerous and various as are the means by which the parts are held together. Upon these mechanisms depend the safety, solidity, and value of the gun, and just so far as the variation in them goes, is the difference between them all. Whether it be that the barrels are held up by one process or the other, or whether they are dropped down by one lever or another, it is all a difference of movement, giving more or less security, but no difference of rule. It is at last the Lefauchaux gun altered, modified, and sometimes, but not invariably, improved."

COLORADO GAME LAWS.—We have received a copy of the Game and Fish laws of Colorado and the constitution and by-laws from the Denver Sporting Club, an organization that is doing most effective work in suppressing the outrages of pot-hunters and nitro-glycerine anglers. The officers of this club are Carlos Gove, President; H. A. Cummings, Vice President; H. W. Kerr, Treasurer; C. C. Davis, Secretary; James B. Thompson, Assistant Secretary. These gentlemen have had placards published for distribution, in which the penalties for destroying game and fish out of season are distinctly stated. The fines are as follows:

Quail, until Oct. 1, 1878, \$10; prairie chicken, Nov. 1 to Sept. 1, \$2 to \$10; mountain grouse and wild turkey, Dec. 1 to Sept. 1, \$2 to \$10; wild goose, wild duck, curlew, snipe, plover, lark, or dove, May 15 to Aug. 15, \$2 to \$10; insectivorous and upland birds, or robbing their nests, at any time, \$2 to \$10; buffalo, elk, deer, mountain sheep, or antelope, Jan. 1 to Aug. 1, \$25; for killing and leaving any edible part of buffalo, elk, deer, mountain sheep, or antelope to waste, \$25. The penalty for ensnaring, netting, entrapping, or taking by any other device, quail, at any time, is not less than \$10 or more than \$100. The penalty for killing or taking trout or other fish by any poisonous or deleterious drug, or by the use of any explosive substance, is not less than \$100. The penalty for obstructing any stream by a dam, weir, or other artificial obstruction is \$100. The penalty for fishing with any kind of net in any private pond, lake, or stream, without the consent of the owner, is not less than \$50 or more than \$200.

We are also under obligations to Freund & Brother, of Denver, for several courtesies. Their place is one of the most interesting in the West, as it is a perfect museum of the fauna of the West and the various kinds of shot-guns and rifles. Around the museum buffalo, elk, and deer heads, handsomely mounted, are grouped, and under them are ranged the Rocky Mountain sheep and goat, the different species of bears and cats indigenous to the region, and the numerous varieties of trout. Persons visiting Denver, wishing any information about the hunting and fishing of Colorado and the best resorts, should not fail to call on these gentlemen, as they have made the subject a special study. The Messrs. Freund have been always foremost in the efforts being made to propagate and protect the game and fish of Colorado.

WALKER'S "BATTLE OF LOOKOUT MOUNTAIN."—The grand picture of the Battle of Lookout Mountain, now on exhibition at the corner of Broadway and Fourteenth street, is, in our opinion, one of the finest battle pieces exhibited in this city. Not only does the spectator seem to be present at the great fight, but the soldiers appear to be instinct with life and imbued with that steady action indicative of veterans joining in a glorious strife. The figure of the old mountain looms up in solemn majesty, with its crest above the clouds, while the Union troops are seen winding in a long, serpent line up the steep slopes of the rocky paths, moving onward with undaunted courage, and overcoming all the obstacles that nature and a valiant enemy could oppose to them. The figures of Gen. Hooker

and the Chief of Artillery, Major Reynolds, stand prominently forward, and are excellent likenesses, while all the incidents are portrayed with a master's hand. The breast-works and rifle-pits of the Confederates, extending from the base to the crest of the mountain, show how strongly they were intrenched and what difficulties the Federal troops had to encounter on that eventful day. Every soldier should witness this fine work of art, and every one who can appreciate a noble deed nobly described should not fail to see it. The well-known eleventh son, Prof. Lawrence, ably describes the picture every evening at 8 o'clock and recites Boker's noble poem of the "Battle of Lookout Mountain" with an eloquence worthy of the subject and himself.

FLORIDA FRUIT-GROWERS' ASSOCIATION.—This active organization which elected its officers at Palatka in November, will hold its next meeting 24th January. It has already commenced a work of much importance to the State by recommending a botanical garden in which tropical fruits, flowers and plants are to be cultivated, and from which seeds may be distributed gratuitously to the poor. The importance of this step cannot be overestimated, for besides the benefit it will bestow on the residents it will also attract more attention to the State, and thus cause it to become the Italy of this continent. No portion of the country has a climate more suitable for the growth of tropical plants; hence it would indicate a most serious lack of enterprise if this advantage was not utilized. The report made by a committee appointed to investigate its feasibility states that the "enterprise will be a great auxiliary to the science of botany. The explorer in this field—the novice and the proficient—will here find subjects for study which have hitherto been excluded from their contemplation, and our children will have text books on this science far surpassing those previously in use.

In the wilds of Florida our great garden would be the attraction of civilization and refinement, and to the people, the sovereigns of the land, would be open a hundred avenues of delight, as the myriad paths leading among the gardens of Babylon, to gratify the senses of oriental sovereigns, who derived their titles, not as we derive ours, from a free American institution.

A more beneficent scheme for our country, or one more capable of expansion by hallowed influences, cannot be conceived, and it behooves this the first Convention of the Fruit-Growers of Florida to initiate and appeal to a common government for its promotion."

The officers of the Association are President, P. P. Bishop; Vice President, Harrison Reed; Secretary, Charles H. Walton; Assistant Secretary, J. W. Whitney; Corresponding Secretary, C. Codrington; Treasurer, C. Drew, Jacksonville.

THE BIG HUNT AGAIN.

Chicago, Ill., December, 1874.

EDITOR FOREST AND STREAM.—The appearance of the article of Dec. 3, in reference to the great hunt that is to be organized next May, has attracted my attention, and beg to say a few words, as a lover of hunting and fishing, in which sports I have spent my best days, being known throughout the United States and Canada as a shooter by gentlemen sportsmen. I wish them to know my views in regard to the hunting party to be organized to slaughter breeding birds and animals in the breeding season. Their flesh and skins, which are then worthless, would be left to rot on the plains. For my part, I think it the greatest outrage ever attempted in this or any other country. How any men, or party of men, calling themselves gentlemen, can engage in such cruelty, is beyond my comprehension. Where is Boker? Why cannot these gentlemen wait until the last of the season? They have then ample time for all the sport they wish before the season closes to give the Texans and Indians an opportunity to corral their animals previous to slaughtering them. If this great organizer and hunter, whose glory and achievements are heralded over three continents, hungers for blood, let him go to Hutchinson's Packing House, where they kill eight hundred hogs a day, and they will give him chance to take the fiery edge off his bloodthirsty appetite. Yours with respect,

J. FARNSWORTH,
Union Stock Yard.

BALLSTON SPA, N. Y., December 5, 1874.

EDITOR FOREST AND STREAM.—I notice in your last issue of FOREST AND STREAM an article in regard to a hunting party being organized, and thought perhaps you might meet with some of the promoters of the scheme, and might call their attention to the necessity of their having a number of portable folding boats as a part of their outfit. I claim that I have the only safe, durable, and perfectly portable boat manufactured. The frame, being of tough ash, cannot be easily broken, and is carried by individuals or on pack mules, and when necessary can be repaired on the spot, by simply lashing with strong twine, which can be done by any person, in any place; while on the other hand a metallic or wooden boat would require expert mechanics with proper tools to repair it when stove or broken. The frame, besides being folded for ordinary transportation, can be divided into several different sections or pieces, to be carried by individuals or on pack mules, and can be put together with a screw driver, the only tool necessary, and which may be done in a few minutes. The canvas cover can at any time be repaired with a large needle and some cotton twine, by simply sewing a patch on the rent, the same as a farmer would repair a bag. The canvas is of great strength and durability, and can be slung as a hammock, or used for a shelter tent, and various other purposes. The boat is an invention, is intended for the roughest usage without regard to beauty. Boats of the size to carry five to seven persons capacity would, I think, be the most suitable, and when lashed together will form a ferry boat or raft to ferry wagons, horses and materials across streams. Such a raft or lighter can be improvised in an hour's time, by lashing together with wads of burl, tent poles, or any material at hand. I will furnish such boats to the expedition at cost.

JOHN HEGEMAN.

EDITOR FOREST AND STREAM.—In the 31st November number of your paper I read with much interest your editorial headed "A Great American Hunt." The new idea of a great international hunting party to be composed of English and American gentlemen, meeting next summer to inaugurate a grand hunting and fishing excursion upon the great plains of the West, is certainly a most inspiring theme. Hence, I am not surprised that under this general view of it you, as well as others, have approved of it.

But for this I see you are taken severely to task by one of your correspondents; and as to Col. McNary, the projector of the expedition, he

stands already "impaled on a blason's horn, or hugged within an inch of his last breath by a grizzly, or kicked to pieces by a buck, or battled black and blue by a mountain bear." I fear the bare mention of the bad propensities of all these animals may have a disconcerting effect upon our English neighbors across the way, and hence I will add that the writer states that he wrote in a "heat," and hence I think there is no danger.

Nor are his views so harsh, when viewed from his own standpoint. He evidently sees game everywhere, slaughtered in piles mountain high. He says "it will be a most reckless, foolish, destructive slaughter, and it may be inaugurated a never ending series." Think of half a dozen such murderous armies sweeping over our plains and mountains every season for years to come! It may be "foolish," it may be "reckless," we admit. This depends upon how it is conducted. But there need be no fear of the "destructive slaughter." No, not any—I have been there.

There is no fear of "great slaughter," no, none. The rumbling wagons will wake up all the animals, provided they are asleep, and this is not often. The "band of music" will set them all a-bobbing, and the tooting bugles will set them a "scowling," and the "parks of wounds" will set them all a running; so good bye, ye slaughterers of game.

Thus stands the programme, so far as developed, and here I rest now, merely remarking, however, that such an expedition, if rightly planned and executed, may be one of the most interesting, and at the same time useful expeditions of modern times.

I hope, Messrs. Editors, you will watch the progress of this movement, and continue to give it your support, should you deem it worthy of it.

MAJ. H. W. MERRILL.

VISITORS TO FLORIDA.—A St. Augustine correspondent writes us under date of Dec. 14th:—

"The winter season for travel has now sensibly commenced. Strangers and tourists are arriving daily in unprecedented numbers, far exceeding that of any previous year. The hotels are doing an encouraging business, and all are well kept. For location, the St. Augustine Hotel, for elegance of furniture, the Florida House, and for the best table, the Magnolia Hotel. Beside these, there are numerous boarding houses, all conducted in good style. Your enterprise—the Forest and Stream—is universally appreciated and spoken of in flattering terms. Among the prominent visitors here are A. J. Alexander, of Ky.; Henry Ball, of Newburg; John P. Howard, of New York; Holmes Annandale, of New York; John L. Wilson, of Boston; J. W. Dunbar, of New York; R. P. Armstrong, of Nova Scotia; D. M. Edgar, of New York; James McCarrin, of Albany; J. Blackley, of Philadelphia; Chas. H. Royce, of New York; George Washington, of New Jersey; and a large number of others."

O. A. K.

About Friday, the 11th inst., the last iron rail of the St. John's R. R. was laid; thus connecting St. Augustine with Tocoi by as fine a rail road as there is in Florida.

A new steamer is to be put on the St. Johns River, which will get up a speed of eighteen miles an hour.

A steamer has at last been purchased for St. Augustine to be used for pleasure parties, and will visit the Beach hourly. It is a side wheel boat, and will accommodate about seventy-five passengers. Dr. Wescott is one of the parties interested.

Shot Gun and Rifle.

GAME IN SEASON FOR DECEMBER.

Moose, *Alces Michels*. Caribou, *Tarandus Rangifer*.
Elk or Wapiti, *Cervus Canadensis*. Red deer, *Cervus Virginianus*.
Quail, *Quercus* and gray. Quail, *Quercus Virginianus*.
Wild Turkey, *Meleagris gallopavo*. Pinnated grouse, *Turdus Cupido*.
Woodcock, *Scolopax rusticollis*. Wild Duck, *Geese*, Brant, &c.
Ruffed Grouse, *Tetrao canadensis*.

[Under the head of "Game and Fish in Season" we can only specify in general terms the several varieties, because the laws of States vary much, and it were not to attempt to particularize we could do no less than publish those entire sections that relate to the kinds of game in season. This would require a great amount of our space. In designating game we are guided by the laws of nature, upon which all legislation is founded, and our readers would do well to provide themselves with the laws of their respective States for reference. Otherwise, mistakes in such terms would only create confusion.]

GAME IN MARKET.—Owing to the approach of the holidays game has advanced in price during the last week. Wild turkeys, which are quite common, came principally from Illinois and Missouri. This abundance has reduced the price to 16 cents per pound, though the best conditioned bring a higher sum. Quails are very scarce, so bring from \$2 75 to \$3 per dozen. Ruffed grouse, which are quite abundant, sell at \$1 per brace; prairie chickens the same price, and venison at from 20 to 25 cents per pound. The animals killed in this State bring the former sum and those killed in Minnesota the latter. Canvas back ducks bring \$3 per brace; red heads, \$1 50; mallards, \$1; black ducks, \$1; teal, 75 cents; brant, \$1 75; squab pigeon, \$3 per dozen; English pheasants, \$3 per brace; English hares, \$2 50; Canadian hares, \$1; rabbits 75 cents.

NEW HAMPSHIRE.—There has been a large bear rumbling over the Northern range of Osipee Mountains the Northern range of Osipee Mountains. The bear was shot by a hunter named Merrill and weighed twenty-five pounds, with an ox chain attached to it that would hold a pair of six feet cattle to draw by, and yet his head snapped it in twain and left for other parts.

MASSACHUSETTS.—One hundred deer were shot in Sandwich and Barnstable woods during the month of November.

Old hunters say there are ten foxes on Cape Cod now where there was one a few years ago.

NEW YORK, Pond Eddy, Dec. 11.—One deer shot within ten miles of here, three miles back in the mountains from Pond Eddy, next station from Port Jervis, and two bears; a third badly wounded.

Long Island, Dec. 12.—The shooting at this place holds good, the weather fine, and ducks plenty; more birds than has been known in a number of years. We are visited by parties from New York every week; all have succeeded in getting good bags of duck. Walter Richmond, Esq., of the Richmond Bag Factory, of Providence, was here, and was killed one day 21 ducks with a gun. Colonel Bodine also visited me last week; carried away a flour barrel full of ducks; rabbits are plenty.

M. V. B.

MARYLAND.—Deer Park, Dec. 10.—Game is about the same as last week, and is it anything more plentiful. A great many deer have been killed near town, and they seem thicker than they have been for many years. I never saw

EDITOR FOREST AND STREAM:—

I send you herewith result of match at pigeons, between Mr. Carl Tucker and Mr. Ab. Tucker, members of the Carlew Castle Club, being Mr. Carl Tucker's first experience at trap shooting.

C. Tucker..... 1 1 0 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1—22
A. Tucker..... 0 1 1 0 0 1 1 0 1 1 1 1 0 1 1 0 1 1 1 1—17

If you consider the above worthy of notice, please give it a place in the FOREST AND STREAM.

SAND PIPER.

Billiards.

C. DIXON vs. UBASSY.—The two nights' match between these well-known professionals, which took place at Chris. Conner's private parlor, on Dec. 15 and 16, resulted in the success of Ubassy, who played with unusual skill and endurance. The match was 1,000 points up, at the three-ball game, on a carom table five feet by ten. The contest lasted over five hours, and resulted in a score of 1,000 to 830, in favor of Ubassy. The winner's average was 8.16-123, and the loser's 7.78-122. Ubassy's best run was 137, and Dixon's 91.

RUDOLPH vs. VIGNAUX.—Rudolph has issued the appended challenge to VIGNAUX:

No. 26 EAST FOURTEENTH STREET, }
NEW YORK, Dec. 17. }

MATHEW DELAUNY, Esq., President National Billiard Congress and Stakeholder.—Dear Sir: Desiring to challenge the winner for the championship of America and possession of the championship emblem, enclosed please find certified check for \$350 as forfeit, in accordance with the rules adopted for the government of such contests.

Yours truly, A. P. RUDOLPH.

WILSON vs. GUILLET.—There is likely to be a three-ball match in Brooklyn between Clark E. Wilson, a resident of that city now, and Louis Guillet. In a letter to the *Clipper* Wilson says:

I understand that Mr. Louis Guillet wants to play anyone in Brooklyn at the three-ball game. Allow me to say that I will accommodate him—game to be 400 points up, with three balls, for \$30 or \$100—at any time that suits his convenience. I am, respectfully,

CLARK E. WILSON,
No. 635 Fulton street, Brooklyn.

Chess.

THE CAFÉ INTERNATIONAL TOURNAMENT.—This series of chess contests does not advance toward its completion very rapidly, the second-class players not playing games as frequently as they might do. Thus far the record is as follows:

Players.	Games Played.	Won.	Lost.
Mason	13	12	1
Alberoni	45	35	10
Delmar	40	32	8
Perlin	33	27	6
Hell	37	26	11
McNichols	34	23	11
Dr. Barnett	28	18	10
Barnes	29	18	11

Mr. Perriu, who has been sick, has resumed his play in the tourney.

THE BROOKLYN CLUB TOURNAMENT.—The following is the record in this tourney up to Tuesday. * We give the names only of those who have won more games than they have lost:

Players.	Games Played.	Won.	Lost.
Dr. Barnett	13	12	1
Spence	12	10	2
Horne	10	8	2
Robinson	10	8	2
Philp	7	6	1
Perriu	6	5	1

THE PHILADELPHIA CLUB.—Mr. Reichheim, the noted player of Philadelphia, thus refers to the new chess club which has recently been established in Philadelphia on what promises to be a permanent basis. He says:

"The club now numbers ninety members, and is increasing from five to ten every week. A handsome suite of rooms has been taken on West Penn square, opposite the new public buildings. These rooms are located in the second story, and command a fine view. They are splendidly furnished, the expense for furnishing alone amounting to nearly \$1,000. The President, Mr. Joseph M. Bennett (one of the wealthiest men in Philadelphia, worth \$3,000,000), has donated a billiard table, which will occupy a room by itself. Some of our foremost citizens have joined, and the club is a splendid success! The officers are as follows: J. M. Bennett, President; George C. Helmbold, Emergent Bennett, Jacob Elson, James G. Whitehead, and James Roberts, Vice Presidents; G. Reichheim, Recording Secretary; B. M. Neill, Corresponding Secretary, and W. H. Sayen, Treasurer. More anon."

The three great chess clubs of the world are now the St. George's, of London; the Vienna, with a Baron Rothschild at its head, and the Philadelphia Chess Club. All success, unity, and permanence to the latter.

The Colleges.

—Each of the members of the Columbia College, who won the boat race at Saratoga last Summer, was presented with a handsome cup as a memento of the victory. The only souvenir of this occasion was a set of flags, which belongs to the college, and not to the individuals, so the last presentation was to give each a suitable and valuable prize, that all might have something to recall their first boating success. Prof. Van Amringe delivered a very appropriate speech on the occasion, which was loudly applauded. Upon one side of each is engraved "The Students of Columbia College and the School of Mines to the"—giving the name and position in the boat of the individual to whom the cup was presented. Upon the other side is engraved, "Victorious in the Intercollegiate Regatta of 1874, at Saratoga, over the crews of Wesleyan, Harvard, Williams, Dartmouth, Cornell, Trinity, Princeton, and Yale." After the presentation exercises, the students engaged in dancing to a late hour. The occasion also did a double service, as it was the formal opening of the new building for the School of Mines.

The Columbians will build a handsome boat house next Spring, as funds have been contributed largely by their friends.

—Professor W. D. Whitney, of Yale College, has been elected an honorary member of the London Philological Society.

—There are now no less than forty college papers printed in the United States. Nearly every principal seminary would seem to have its literary organ.

—President Potter, of Union University, has contributed \$500 toward the organization of the college boat club.

—Brown University had its boat house destroyed by fire last Fall. Eleven hundred dollars have already been pledged for a new one and several hundred more are expected. None of this amount has come from alumni, but all has been raised within this college, the faculty contributing largely.

—The college chapel at Yale will be ready for occupation by next May.

—The aggregate of gifts and legacies to universities and colleges in 1873, was \$8,238,141.

—Foot ball was very brisk Saturday the 12th; the college twenty played thirty picked men, beating twice; the third game was declared drawn because of the darkness—but fifteen of the "twenty" participated. A supplementary athletic contest was held in the gymnasium last Saturday afternoon. The programme included a two mile walk; Downs, '75, Seval, '76, and Wharf, '77, being the contestants. On the sixty-first round Wharf retired. Downs won in 17.23 1-4. Seval's time was 17.49, and Wharf's, for 1-3 4 mile, 16.23. Wharf was suffering from a blistered foot.—Middleton College Argus.

HARVARD UNIVERSITY, Dec. 18, 1874.

EDITOR FOREST AND STREAM:

The Harvard crew for the next season will probably be selected from the following:—

Wentworth, '75; Bacon, '76; Hall, '76; Brown, '76; Taylor, '77; Bacon, '77; Parsons, '78; Seval, '78; Morgan, '78; Ely, '78; Otis, L. S. S.; James, L. S. S.; Thayer, L. S. S.

This is perhaps a larger number than ever offered themselves for the "Varsity" before. They train very steadily, and if Harvard is not well represented next Summer it will be not from a lack of excellent material.

The class of '75 has filled her various offices as follows:—

President—Theodore C. Page.

Orator—Lester W. Clark.

Marshals—Vincent G. Bowditch, Abbott Lawrence and Henry S. Van Dusen.

Secretary—Warren A. Reed.

Chaplain—Richard Montague.

Orator—Henry W. Broughton.

Joy Orator—Albert S. Thayer.

Class Day Committee—Nathaniel H. Stone, John H. Appleton and Nelson Taylor.

Class Committee—James H. Hoag, Benjamin R. Curtis and Mauley A. Raymond.

The Chess Club formed by the students is quite prosperous under Mr. Burgey as President. As the Club has been organized but a short time it will play no match games till after the New Year's intermission.

The Old Club have been called to give up their trip to New York, Philadelphia, Baltimore, and Washington as the faculty disapprove of entertainments given by students, at which an admission fee is charged. Owing to the cold weather athletic sports receive but little attention at present, although a few still enjoy a short time at foot ball.

Mr. Notman has engaged to take the class photographs for '75. He has given general satisfaction, and is pleased very much by the manner in which the photographs of the Harvard and McGill foot ball teams were taken and finished by him last October.

Canada.

Mr. H. Collier and Mr. A. May, both of St. Catherine, returned a few days since from a shooting tour in Muskoka, where they spent the latter part of November. While on their expedition in that delightful sporting district they succeeded in killing sixteen deer and a large amount of other game.—*Canadian Sportsman*.

A number of sportsmen from Elora, who have been north in quest of deer, have returned with large quantities.—*Id.*

Mr. A. Dulmage and Capt. Hayes, American Consul, have just returned from a most successful hunt of four weeks in the township of Denbigh, county of Addington. They bring back with them thirty brace of partridges and thirteen deer. When the trappers learned of Mr. Dulmage's trip they visited him in numbers and sold him \$1,000 of furs. He is the Belleville agent of the Hudson Bay Company.—*Belleville Chronicle*.

The Amherstburg Echo says: "Some 158 squirrels were shipped from Bismarck station on Saturday for Buffalo. They were killed by some sportsmen from Buffalo."

New Publications.

CYCLOPEDIA OF RURAL SPORTS. By J. H. Walsh (Stonehenge). First American from the eighth English edition: Philadelphia: Porter & Coates.

This well known work has already won for itself a name and a place in many sportsmen's libraries. It tells us of many things we ought to know, but of which we have scarcely dreamed. Here you have a plain, concise and comprehensive epitome of shooting, hunting, coursing, fishing, boating, racing, pedestrianism, cricket, base ball, and a variety of the moral out of door games, as practiced in Europe and America. A vast amount of knowledge, concerning which every person loving these sports needs much or little every day information. The illustrations, numerous and fitting, are of much value to this work; they are by Wells and Hines, and are engraved by Dalziel and Hodgkins. In the preface to the seventh edition, the author notes the many and great changes in the "old shot gun and rifle" of the past, and points out the numerous improvements of to-day, noting all the changes. We recommend "Stonehenge" as a book of reference, and can give our numerous readers assurance that it is an exceedingly cheap and valuable work. In relation to our American sporting horses there occur some typographical errors, which we regret to notice in a book of this character. With this slight drawback we pronounce the work unexceptionable.

MAGAZINES.

Popular Science Monthly. December, 1874. D. Appleton & Co. This popular exponent of the higher class essays, lectures, &c., upon the most interesting and valuable subjects, is a highly creditable work, comes to us with a rich and varied freight of thirteen papers, and the scientific and literary articles are varied, vigorously written, and highly instructive. Where all subjects treated upon are of an order above common magazine articles, it would take too much space to do ample justice to all within the scope of our paper. We therefore give the following extract only, on ending the year in Sumner.

"According to the popular notion, which, in the main, is correct, the spawning season of the oyster embraces those months which have no *r* in their spelling, namely, May, June, July and August, the four warm months of the year. The fact is, however, that the oyster does not spawn during these four months; but is far more liable to spawn whenever the water is warm enough, and large numbers pass through the year without spawning, and these were not for the purpose of asserting them, would be available for food at any time. But the prejudice is universal against

their use during the *r*-less months. That they are not in as good condition then as during the cooler months, is reasonable to suppose; but that they are all necessarily unwholesome in the warm months, is far from being proved. The business of the oyster is to spawn, and to be "milky." This means the presence of an opaque fluid in considerable abundance, and which is to do with the wants of its young—very healthy, a part of this fluid.

Scribner's Monthly for January. The January number of Scribner is not without a Christmas flavor, containing, as it does, a Christmas sketch by L. Clarke Davis, entitled "My Night in a Stage Coach," a "Christmas Suggestion," and "A Christmas-Single Ride," the latter by T. R. Stockton. In this number begins Dr. Holford's new serial, "The Story of Seval," a business and a very good one. The first chapter is about Seval and his wife, and "How Miss Butterworth passed one of her evenings." In the second chapter "Mr. Belcher carries his point at the town meeting," and the reader is introduced to Jim Pinton. The first installment of Major Powell's account of his daring descent of the Colorado is here given, with striking illustrations by T. Mann and W. L. Sheppert, also the beginning of a series of "Old Letters," written from London in the time of William IV., and now for the first time published. The present installment is accompanied by an original portrait sketch of Rogers, the poet, "Travels in South America." The opening article of the *Monthly*, is effectively illustrated and interesting. How they catch turtles in South America is described in the following article.

"The turtle is the main source of food supply to the Couba, the forest and water furnish him, fish, flesh and fowl in great variety, but he cares for little else besides the turtle when he can procure it. Between August 15th and Sept. 1st, the water of the Icyral, the affluent of the Amazon, on which the Couba live, become less impetuous, in consequence of snow having ceased to fall on the summits of the Andes. Two species of sand are left bare, and the turtle biding at once commences. On a fixed day the Couba embark in canoes furnished with all necessary utensils, and travel up down the river for from thirty to sixty or even one hundred miles. When they discover on the shore the clay-murked farrow made by the turtle when walking, they call a halt, and having built at some two hundred yards from the water their camp or cabin, they patiently wait in ambush the arrival of their amphibious prey. Generally their foot-hold is so unobtrusive that their encampment hardly becomes more than a day or two the appearance of the water. On dark night, when moon and stars are shining, the Couba's eyes evaluate the river. Its waters fairly seem to boil. Thousand of turtles, crawling, crawling, crawling out of the river and spread themselves over the shore. The Couba's spears and javelins, and their leafy shields, and keeping profound silence, await the moment for action. The turtles, who separate themselves into detachments on leaving the water, dig rapidly with their four feet a trench over their heads, and always four feet broad by two deep. They apply themselves to their work with such zeal that the sand about them is blown up into a cloud in a fog. As soon as they are satisfied that the trench is from forty to seventy yards wide, and their heads will fill the trench, in this case of paddling feet more than one turtle, turtle and over by his comrade, rolls into the trench and is buried alive. Half an hour is enough to bury a turtle, and the Couba's moment of opportunity is now at hand to rush for the river. Now the moment has arrived for which the Couba have anxiously waited. At a given signal the whole band suddenly issue from their hiding place, and rush upon the turtles, and the turtles not to cut off their retreat, for they would themselves be trampled under foot by the restless squanders, but to rush upon their flanks, seize them by the hind legs, and throw them into the trench. The turtles, as they are dis-appeared, a thousand prisoners often remain in the hands of the assailants."

St. Nicholas for January is a perfect literary feast for our young people, but as we do not wish to lessen their appetite, we shall call for it only the following bit of natural history, which may prove interesting to the young readers of *Forest and Stream*.

"I saw an oyster once—about as flabby and limp a fellow as one could wish to meet. To be sure he had just been turned out of house and home, poor thing, and the spirit was pretty well out of him! I told him that I was here, and he said, 'How do you do?' and with that he crawled into his house. How can this be? and how does the case stand? Does the crab go in to catch the oyster, or does the oyster catch the crab? Is it a peculiar kind of crab, or is it a peculiar oyster, or if not, what happens? That is to say, if it's only a baby crab of the ordinary sort, what becomes of that oyster when the crab goes up? Watch him, and you'll see the other."

We have received the *Household Treasure*, of Cleveland, Ohio, and compliment it on its improved looks. It is filled with an excellent assortment of reading matter. We hope the *Household Treasure* will prove to its readers a mental treasure, and to its proprietors a financial treasure.

THE TERRIBLE EARTHQUAKE IN GUATEMALA.—Dr. J. Schuchmacher has given to the *Panama Star* the result of his observations in the region of Guatemala most affected by the great earthquake:

"After climbing over a low hill they came to the valley of Chimal, a little beyond for the terrible sight, the hills on their view. They had already seen awful cracks and fissures without number, and looked with awe and wonderment on the depths where thousands of trees had rolled down for many miles into the valleys beneath; but the stupendous cataclysm now before them overwhelmed their feelings with sensations indescribable. The whole valley, with houses, cattle, men, women and children living there, had disappeared—probably sunk and buried under the earth from every side fell together and buried up everything out of sight; God only knows how deep. Everything in this dreadful valley was huddled together in the wildest confusion, and so changed in its general aspect that the neighbors can no longer trace the least resemblance to the valley the earthquake had filled up. This terrible place our travelers had to cross on foot, leading their mules after them, whose feet every now and then would break through the thin sun-dried crust that had formed on the surface of avalanches of mud that crossed their route. They came to a place where a kind of upheaval had been going on which threw down great trees on all sides, but with their roots all converging towards a central spot, and the trunks disposed around like the nails of a circle. It seemed to them that here the subterranean forces had tried and failed to break through the strata. In another place a tree of six feet in diameter had been snappd across at two feet above its roots, which still firmly held into the soil, produced, no doubt, by the trunk and top acting and oscillating like a lever. This tree and hundreds of others laid prostrate were covered with living and gorgeous orchids, where a botanist could have collected some curious and new species, which, under other circumstances, he could only get at by the expense and labor of cutting the trees down. From such contemplations they had to move onward, and entered the gloom of the forests, abounding everywhere with an immense variety of *Lycopodiums*, vines, orchids and other epiphytes. The sense of danger prevented them carrying with them those beautiful and rare denizens of this region of dangers and death."

On reaching the summit of the Cerro del Tigre, they emerged into sunlight and a more modest system of vegetation. They found the whole of this mountain, or *cerro*, run everywhere and in all directions, the cracks and deep fissures crossing each other in the most perplexing manner. It was only with the greatest precaution that the animals could be kept from going to the right and left, and that from great avalanches of earth had slid down into valleys two thousand feet deep. Some smaller ones which they had to cross still hung over the abyss, held only by a pulk yet adhering to the rocks, trembling at every step the pulk took over it.

Prize List!

FOREST AND STREAM.

A Weekly Journal,

DEVOTED TO

Out-Door Sports

Hunting, Fishing, Yachting, Boating, Practical Natural History, Fish Culture, &c. &c.

It is the OFFICIAL ORGAN of

The Fish Culturists' Association of America.

The Publishers of FOREST AND STREAM

In order to stimulate the development of

MANLY AND ATHLETIC EXERCISES,

AS OF

FISHING, SHOOTING, ARCHERY, CRICKET, FOOTBALL, and CROQUET.

Offer the following prizes for clubs of three or more subscribers.

Single Subscription per Annum \$5

Starting Clubs.—Agents, and others interested, are advised that we do not insist upon their starting with full clubs to secure our rates. They can send three or more at a time, and on forwarding the required number within 90 days will be entitled to same premiums as if all were sent together.

HURST'S

Natural History

For Object Teaching in Schools,

PARLOR ENTERTAINMENT.

We are prepared to furnish the first sixty numbers of the first series of

Animals and Birds of North America.

To those will be added a second series of foreign specimens, and various Animals and Birds in grotesque attitudes, never before violating their natural instincts. We set these views as pictures only, but as studies from nature. One of the great modern elements in our modern system of education is object teaching. The scientific fact is that the store of knowledge transfers the animals and birds from their natural habitat to the rooms of the student, and the fire of his own house, where they cannot fail to leave a lasting impression of the form, color, habits, and locality of each specimen.

An experience of more than twenty-five years as Taxidermist of the New York State Cabinet of Natural History, and in gathering his large collection of natural history specimens, enables Mr. Hurst to combine in every view the locality of the specimen with its appropriate rocks, woods or water, and coloring from the original.

- 1. Wild Cat, or Bay Lynx..... Lynx baileyi

TESTIMONIALS.

CORNELL UNIVERSITY,
ITHACA, March 18th, 1870.
I must congratulate you upon your great success in this new educational enterprise. If we can arrange our arrangements so as to make them impart instruction to the mind, it will be a great step in education.

EZRA CORNELL.

WASHINGTON, D. C., March 18th, 1870.
I am much pleased with the success you have met with in giving to the stuffed specimens a very decided appearance of life.

I hope you may be able to continue the Series, and I do not doubt they will furnish interesting means of information and instruction in regard to the wild animals of New York.

SPENCER F. BAIRD.

STATE HOUSE, BOSTON, Mass., March 18th, 1870.
I have examined carefully the "Stereoscopic Studies of Natural History," and am much pleased with the results. I believe they will prove of very great value, both as objects for lessons and as a most interesting and instructive series of illustrations. The illustrations, position, and color of the different groups and the general treatment are most perfect. I cordially recommend them to all who are interested in the study of Natural History, and I trust you will meet the encouragement which you have earned.

EDWARD A. SAMUEL.

Curator of Zoology in Mass. State Cabinet.

PEABODY ACADEMY OF SCIENCE,
Salem, Mass., March 18th, 1870.
I have shown your Stereoscopic views to the Directors of the Academy and the editors of the American Naturalist. Dr. Peabody and Mr. May are much interested in them.

They concur with me in praising their truthfulness and the taste which you have displayed in surrounding the specimens with natural objects and scenes of characteristic nature. They are certainly better fitted, not only as parlor and drawing room illustrations, but as educational illustrations (or the use of schools and colleges, than anything we have yet seen.

A. HYATT.

CORNELL UNIVERSITY, PRESIDENT'S ROOMS,
ITHACA, March 18th, 1870.
I have received the Stereoscopic Views of objects in Natural History, and have enjoyed them greatly. They have surprised all who have seen them by their wonderful fidelity, both as regards the animals and the surrounding scenery. I think they can hardly be of great service to the study of Natural History, first by attracting students to it, and next by perfecting them in it.

Two stereoscopes are sold wholesale and retail by FOREST AND STREAM PUBLISHING CO., 17 CHATHAM ST., (City Hall Sq.) P. O. Box 2832.

American Wild Fowl Shooting.

BY JOSEPH W. LONG.

Describing the habits, habits, and methods of shooting wild fowl, with instructions concerning gun, blind, decoys and decoys; the training of water retrievers, &c.

This book is written in plain English, and in a most attractive style, is taken of duck shooting in all parts of the country. The habits and feeding grounds of the various species of wild fowl, and the habits of the water retriever, red-headed, buff-headed, and other kinds of ducks, geese, swans, &c., have been carefully and ingeniously studied, and will be given to the reader.

In thirty chapters the author has furnished information for the young, as well as for the practical sportsman.

"A book for sportsmen, by a sportsman."—Argus.

"Tells where to find game in the morning, in the afternoon, and in the evening."—Sun.

"Almost indispensable to the sportsman."—Arcadian.

Published by J. B. FORD & CO., 27 Park Place, N. Y. For sale by all booksellers and the leading gunsmiths. Price \$2. Sent by mail by the Publishers.

is particularly adapted to Meerschaum and Cigarette
Smoking; does not bite or make the tongue sore, is
unlike any other tobacco.

VIENNA, AUSTRIA, Nov. 30, 1873.

Messrs. Wm. S. Kimball & Co.,

Sir—A friend of mine sent me, with a transport
of Indian Shikhy, two pounds of "Vanity Fair," which I declare
to be the best Tobacco I ever smoked. We have very good
tobacco in Vienna—Turkish and Hungarian, but "Vanity Fair"
is the King of all, by its aromatic flavor and the right sort of
strength. My friend in New York got an appointment in
California, by last reason I apply immediately to you, begging
you to send me the tobacco enclosed in a duplicate, of "Vanity
Fair," and send me with the best tobacco in Germany. If there
is a German firm that sells your excellent "Vanity Fair," I
beg you to call on me and see how much I am interested in it.
Yours faithfully,
Dr. Jos. Hertz.

A SPORTSMAN'S HOME FOR SALE—

Within an hour's ride of the City of Philadel-
phia, an excellent Farm of 161 acres, two the stone
dwelling houses, two stone barns, with necessary out-
buildings. Beautifully situated, and in every particu-
lar a very desirable property, especially to those of
field sports. Ruffed grouse (pleasant), quail, hares
and rabbits, and foxes abound. A fine stream runs
